"The fift of October we were vnder foure degrees seuen and twentie minutes, the same day about noone, there was such a noyse in the Bough of our Shippe, that the master, being behind in the Gallerie, thought that one of the men had fallen out of the Fore-ship, or from the Boo-sprit into the sea, but as hee looked out over the side of the Ship hee saw the Sea all red, as if great store of blood had been powred into it, whereat hee wondred, knowing not what it meant, but afterward hee found, that a great Fish or a Sea monster having a horne had therewith stricken against the ship with most great strength. For when we were in Porto Desire where we set the Ship on the Strand to make it clean, about seven foot under water, before in the Ship, we found a Horne sticking in the Ship, much like for thicknesse and fashion to a common Elephants tooth, not hollow, but full; very strong hard Bone, which had entered into three Plankes of the Ship, that is two thicke Plankes of greene and one of Oken wood, and so into a Rib, where it turned upward, to our great good fortune, for if it had entered between the Ribbes, it would happily have made a greater Hole, and have brought both Ship and men in danger to be lost. It strucke at least half a foote deep into the Ship and about half a foote without, where, with great force it was broken off, by reason whereof the great monster bled so much."

More than a century later C. Mortimer, M. D., records this experience:

"Mr. Bankley shewed me the *Horn of a Fish* that had penetrated above 8 inches into the Timber of a Ship and gave me the following Relation of it: 'His MAJESTY'S Ship *Leopard*, having been at the *West Indies* and on the Coast of *Guiney*, was ordered by Warrant from the Honorable *Navy-Board*, dated Aug. 18, 1735, to be cleaned and refitted at Portsmouth for Channel-Service: Pursuant thereto, she was put into the great Stone-dock; and, in stripping off her Sheathing, the Shipwrights found something that was uncommon in her Bottom, about 8 Feet from her Keel, just before the Fore Mast: which they searching into, found the Bone or Part of the Horn of a Fish of the Figure here described: the Outside Rough not unlike *Seal-Skin*; and the End, where it was broken off shewed itself like coarse Ivory. The Fish is supposed to have followed the Ship, when under Sail, because the sharp End of the Horn Pointed toward the Bow: It penetrated with that Swiftness or Strength that it went through the Sheathing 1 Inch thick, the Plank 3 Inches thick, and into the Timber 4½ inches.'"(23)

Don Joseph Cornide, in his "Essayo de Una Historia de los Peces de la Costa de Galicia," 1787:

"This fish is taken in the seas of Galicia, where it is more common toward the Rio de Vigo, where it is well known that the Balandra (a small fishing vessel) of S. M. le Ardilla was pierced in its side and sunk by the arm of one of these fishes, which is preserved in the Royal Cabinet of Natural History."

In 1871 the little yacht Redhot, of New Bedford, was out sword-fishing, and a sword-fish had been hauled in to be lanced, and it attacked the vessel and pierced the side so as to sink the vessel. She was repaired and used in the service of the commission at Wood's Holl. (Prof. Baird).

Couch quotes the personal statement of a gentleman, who says:

"We have had the pleasure of inspecting a piece of wood cut out of one of the fore planks of a vessel (the Priscilla, from Pernambuco), through which was struck about 18 inches of the bony weapon of the sword-fish. The force with which it must have been driven in affords a striking exemplification of the power and ferocity of the fish. The Priscilla is quite a new vessel. Captain Taylor, her commander, states that when near the Azores, as he was walking the quarter-deck at night, a shock was felt which brought all hands from below, under the impression that the ship had touched upon some rock. This was, no doubt, when the occurrence took place."

The New York *Herald* of May 11, 1871, states:

"The English ship Queensberry has been struck by a sword-fish which penetrated to a depth of 30 inches, causing a leak which necessitated the discharge of the cargo."

The London *Daily News* of December 11, 1868, contained the following paragraph, which emanated, I suspect, from the pen of Prof. R. A. Proctor:

"Last Wednesday the court of common pleas—rather a strange place, by the by, for inquiring into the natural history of fishes—was engaged for several hours in trying to determine under what circumstances a sword-fish might be able to escape scot-free after thrusting his snout into the side of a ship. The gallant ship Dreadnought, thoroughly repaired, and classed A1 at Lloyd's, had been insured for £3,000 against all the risks of the seas. She sailed on March 10, 1864, from Colombo, for London. Three days later the crew, while fishing, hooked a sword-fish. Xiphias, however, broke the line, and a few moments after leaped half out of the water, with the object, it should seem, of taking a look at his persecutor, the Dreadnought. Probably he satisfied himself that the enemy was some abnormally large cetacean, which it was his natural duty to attack forthwith. Be this as it may, the attack was made, and at four o'clock the next morning the captain was awakened with the unwelcome intelligence that the ship had sprung a leak. She was taken back to Colombo, and thence to Cochin, where she was hove down. Near the keel was found a round hole, an inch in diameter, running completely through the copper sheathing and planking.

"As attacks by sword-fish are included among sea risks, the insurance company was willing to pay the damages claimed by the owners of the ship if only it could be proved that the hole had really been made by a sword-fish. No instance had ever been recorded in which a sword-fish had been able to withdraw his sword after attacking a ship. A defense was founded on the possibility that the hole had been made in some other way. Professor Owen and Mr. Frank Buckland gave their evidence, but neither of them could state quite positively whether a sword-fish which had passed its beak through three inches of stout planking could withdraw without the loss of its sword. Mr. Buckland said that fish have no power of 'backing,' and expressed his belief that he could hold a sword-fish by the beak; but then he admitted that the fish had considerable lateral power, and might so 'wriggle its sword out of a hole.' And so the insurance company will have to pay nearly six hundred pounds because an ill-tempered fish objected to be hooked, and took its revenge by running full tilt against copper sheathing and oak planking."

The Gloucester schooner Wyoming, on a last trip to George's Banks, records the New York *World* of August 31, 1875, was attacked by a sword-fish in the night time. He assailed the vessel with great force, and succeeded in putting his sword through one of her planks some two feet, and after making fearful struggles to extricate himself, broke his sword off, leaving it hard and fast in the plank, and made a speedy departure. Fortunate was it that he did not succeed in drawing out his sword, as the aperture would undoubtedly have made a leak sufficient to have sunk the vessel. As it was, she leaked badly, requiring pretty lively pumping to keep her free.(24.)

Another instance of a similar nature is this, which was recorded in the Liverpool *Mercury* about the year 1876:

"Mr. J. J. Harwood, master of the British brigantine Fortunate, in dock at Liverpool, reports that while on his passage from the Rio Grande, when in latitude 30 deg. 12 min. north and longitude 47 deg. 9 min. west, this ship was struck by a large fish, which made the vessel shake very much. Thinking the ship had been merely struck by the tail of some sea monster, he took no further notice of the matter; but, after discharging cargo at Runcorn, and coming into the Canada half-tide dock, he found one of the plank ends in the stern split, and on closer examination he discovered that a sword-fish had driven his sword completely through the plank, four inches in thickness, leaving the point of the sword nearly eight inches through the plank. The fish in its struggle broke the sword off level with the outside of the vessel, and by its attack upon the ship lost nearly a foot length of the very dangerous weapon with which it was armed. There is no doubt that this somewhat singular occurrence took place when the vessel was struck as Captain Harwood describes."

FOREST AND STREAM of June 24, 1875, recorded the following incident:

23. An Account of the horn of a Fish struck several Inches into the side of a Ship, by C. Mortimer, M. D. F. R. S. Philos. Trans. xl., No. 461, p. 863, 1741.

24. New York *World*, August 31, 1875.

"On Wednesday of last week a sword-fish attacked the fishing boat of Capt. D. D. Thurlow while he was hauling mackerel nets off Fire Island, thrust its sword clear through the bottom, and stuck fast, while the fishermen took several half-hitches around its body and so secured it. It was afterwards brought to Fulton Market, and found to weigh 230 pounds. Its sword measured 3 feet and 7 inches, and its entire length was over 11 feet. The stuffed skin will adorn the Central Park Museum."

The *Landmark*, of Norfolk, Va., also mentioned a similar occurrence in February, 1876:

"The brig P. M. Tinker, Captain Bernard, previously mentioned as having arrived here from Richmond, leaking, for repairs, has been hauled up on the ways at Graves's shipyard. On examination it was discovered that the leak was caused by a sword-fish, the sword being found broken off forward the bands, about sixteen feet abaft the forefoot. The fish, in striking the vessel, must have come with great force, as the sword penetrated the copper sheathing, a four-inch birch plank, and through the timbers about six inches—in all about ten inches. It occurred on the morning of the 23d of December, when the brig was eighteen days out from Rio, and in the neighborhood of Cape St. Roque. She was pumped about 4 o'clock in the morning, and found free of water. About 6 o'clock the same morning she was again pumped, when water was obtained, and on examination it was found that she had made ten inches of water. The men were kept steady at the pumps until her arrival at Richmond, and while there, and on her trip here."

Mr. Willard Nye sends me this note:

"A few years ago Captain Dyer, of New Bedford, struck a sword-fish from a thirty-foot boat, forty miles southwest of Noman's Land, threw overboard the keg, tacked, and stood by to the windward of it. When nearly abreast of it the man at the masthead called out, 'Why, here he is, right alongside.' The fish was then about 10 feet from the boat, and swimming in the same direction, but when he got where he could see the splash of water around the bow he turned and struck the boat about 2 feet from the stern and just below the water-line. The sword went through the planking, which was of cedar an inch and three-quarters thick, into a lot of loose iron ballast, breaking off short at the fish's head. A number of boats, large and small, have been 'stove' by sword-fish on our coast, but always after the fish had been struck."

A nameless writer in *Harper's Weekly*, October 25, 1879, narrates these instances, for which I am unable to give the original authority:

"In a calm day in the summer of 1833, on the coast of Massachusetts, a pilot was rowing his little skiff leisurely along, when he was suddenly roused from his seat by a thrust from below by a sword-fish, who drove his sharp instrument more than three feet up through the bottom. With rare presence of mind, with the butt of an oar he broke it off level with the floor before the fish had time to withdraw it. Fortunately, the thrust was not directly upward. Had it been so, the frail boat would have been destroyed.

"A Boston ship hauled up on the ways for repair, a few years since, presented the shank of a sword-fish's dagger, which had been driven considerably far into the solid oak plank. A more curious affair was brought to light in 1735 in overhauling His Majesty's ship Leopard, from the coast of Africa. The sword of this marine spearsman had pierced the sheathing one inch, next it went through a three-inch plank, and beyond that three inches and a half into the firm timber. It was the opinion of the mechanics that it would have required nine strokes of a hammer weighing twenty-five pounds to drive an iron bolt of the same dimensions to the same depth in the hull. Yet the fish drove it at a single thrust.

"On the return of the whale-ship Fortune to Plymouth, Mass., in 1827, the stump of a sword-blade of this fish was noticed projecting like a rog outside, which, on being traced, had been driven through the copper sheathing, an inch-board undersheathing, a three-inch plank of hard wood, the solid white-oak timber twelve inches thick, then through another two-and-a-half-inch hard-oak ceiling, and lastly penetrated the head of an oil-cask, where it stuck, not a drop of the oil having escaped."

Such instances could be found by the score, if one had the time and patience to search. The thing happens many times a year, and nearly as often affords a text for some paragrapher or local editor.

Captain Beechy in the narrative of the voyage of Her Majesty's Blossom, mentions the following incident which occurred in the Pacific, near Eastern Island: "As the line was hauling in, a large sword-fish bit at the tin case which contained our thermometer, but fortunately failed in carrying it off."

[TO BE CONTINUED.]

THE NEW SHIP OF THE FISH COMMISSION.

THE new iron steamship Albatross, which was successfully launched on Aug. 19, will be completed, as far as the contract goes, about Oct. 1, and will probably be ready for sea in December. Many newspaper statements have been afloat concerning the first work of this vessel, some having it that she will make her first trip across the Atlantic with the American display at the fisheries exhibition to be held in London next spring, and others assigning her to other duties. All these speculations are premature, as nothing has been decided on yet as to her first field, which will depend on the date of her completion. She may go into the North Atlantic to hunt up the winter abode of the mackerel, menhaden and other fishes, or may make her first expedition to the Gulf of Mexico.

The Albatross is being built by the Pusey & Jones Company, at Wilmington, Del., from the specifications of the eminent engineer, Mr. Charles W. Copeland. Passed Assistant Engineer C. W. Baird, U. S. N., is superintending the vessel.

The ship is 200ft. long on the L. W. L.; 27ft. 6in. beam, molded; 18ft. 9in. depth of hold; is to draw 12ft. of water and will displace at that draft 1,000 tons of water. The ship is of iron, with an iron deck house, iron decks—beneath the wood—at either end, and is tied and braced as strong as iron can make her, the iron plating running clear up to the rail so that the bulwarks are of iron from stern to stem. The keel is a bar 8x2¼, the two bilge keels are 16in. deep, 50ft. long, ⅝ thick, between 4x9 angle iron. The stern post is 7½x2½in., the stem is 7½x2¼. The frames are 4x3x7-16, spaced 21in.; the reverse bars are 3x3x⅜ on every frame, and extending alternately to the stringer plate and to 12in. above the turn of the bilge. The center keelson, on top of reverse bars, is 12x1¼x⅜, and 5ft. 3in. from that, on each side, are channel bar keelsons, 6x3½x7-16; the intercostal plates are ⅜, connected with 2½ angle irons. The deck beams are 7x3½x7-16, spaced on alternate frames. The main deck stringers, ties on main deck and hold stringers are all in due proportion. There are seven watertight bulkheads in the vessel, the water-tight compartments between them being connected to a main hold by separate pipes under the control of the engineer, so that he can pump out either compartment independently of the others.

The vessel is provided with a steam windlass, ordinary anchors and chains and 250 fathoms of flexible steel wire hawser, 3¼in. in circumference, to anchor in deep water. The main engines are compound, driving twin screws. The high-pressure cylinders are 18in. and the low-pressure 34in. in diameter, the pistons all having 30in. stroke. The valves are worked by Stephenson links, etc.; the reversing gear is worked by steam. The main cranks are set at an angle of 145 degrees. The surface condenser contains 2,150 square feet of surface, and the tubes are packed according to the established method of the Pusey & Jones Company. The circulating pump is the Davidson patent, the water end having a diameter of 16in. and a stroke of 15. The air pumps are horizontal plungers—single acting—one on each engine, having a diameter of 15½in. and 15in. stroke. The screws are 9ft. in diameter, 14ft. 10 n. mean pitch, 26in. long on line of their axis and have four blades.

The boilers are two in number, of the return flue kind, with water legs. They are 8ft. 6in front, 8ft. 6in. diameter of waist, 21ft. 6in. in length. Each boiler has two furnaces, and the aggregate grate surface (both boilers) is about 100 square feet. The donkey pumps (two in number) are of the Davidson make and are arranged to be used as both fire or bilge-pumps.

Through the side of the vessel, and about 8ft. above the load water line, will be a permanent ash shute of wrought iron, with a check valve in it and a hood—which can be screwed tight—at the top. A small steam engine to hoist the ashes and automatically dump them into the shute and return the bucket to the fire-room floor has been designed by the superintending engineer. By this arrangement but one man is required to discharge ashes, which, on many vessels, requires a whole watch.

The Albatross is to be ventilated by the aspiration method, *i. e.*, by exhausting the foul air from every part of the ship. This is effected by a No. 6 Sturtevant exhaustion, driven by a small steam engine, the suction side of the fan being connected by conduits to every part of the vessel, each opening being capped by a suitable register. This is from the designs of the superintending engineer, Mr. Baird, of the navy, who has been urging this system of ventilation for many years. The ship is to be steered by a "steam quarter master," a steam steering gear manufactured by the Pusey & Jones Company. It is essentially three half-trunk oscillating engines, set at angles of 60 degrees, and all working on the same crank pin. On the shaft is a chain holder, which carries the rudder chains. Like other improved steerers it has an automatic arrangement (so complicated as to beggar the descriptive powers of the writer) which closes all the ports when the angular motion of the crank shaft has equalled the angular motion imparted to the steering wheel by the hand of the real quartermaster. This machine is said to work well, and is guaranteed by the builders. There is a 2,000-gallon Baird distiller on board, which aerates, cools and filters the water, thus delivering it sweet and potable to the ship's tanks.

By a system of thermometers (which will be inverted and separate the mercury), the temperature of the sea at every 100 fathoms of depth will be registered. With these arrangements the giddy depths of the mighty ocean will be fathomed, and the catch placed under the microscopes and in the chemists' balances of the "scientific sharps" from the Smithsonian Institute who will be dom ciled on board. The Albatross will carry a seine boat thirty feet in length, with an immense seine of the latest and most approved make, which she will lower at sea and haul in shoal places or in the deep sea wherever the game is apparent and whenever the weather is conducive. There will be two steam launches, the one an ordinary boat, with steam engine and screw propeller, the other a kind of steam whale boat, with the screw working, at an angle, under the center of the boat, the shaft being provided with a universal joint, that the screw—two bladed—may be hauled into a well when crossing shoal places or pushed to greater depth when the sea is rough; this whale boat is a life boat, and is intended for all kinds of weather. Both steam launches are built by Herreshoff.

There will be a powerful electric light, with parabolic reflector, to illuminate the surface of the waters at night, and an incandescent electric light to illuminate at a depth of two hundred fathoms. There will also be provided two large laboratories, with every possible convenience for the microscopists, taxidermists and chemists, with lathes for preparing the cells on the glass slides, with every possible kind, shape, and condition of jars for keeping specimens; the fluids, such as alcohol and other essential oils: in fact, all that is necessary for the preservation of all creatures that inhabit the depths or surfaces of the sea, from a bacteria to a cetacean.

Like the strange bird from which it takes its name, the Albatross will make its home upon the rolling deep, its voyages lasting from two to four months, without any attempt at making harbor. The outfit of this vessel will be complete, unique, expensive will be a machine for sounding at great depths, with piano wire, its system of cords, sheaves and springs being so adjusted as to keep a uniform tension upon the sounding wire, without regard to the amount of motion imparted by the seas to the ship; with this machine depths of ten miles can be measured. At the bottom of the sounding line is a cup, which automatically scoops up its capacity of the bottom, and detaches the bulk of its iron sinker, so that in reeling in there is only the wire and the cup of sand to pull up. For large quantities of the bottom a trawl, at the end of eight miles of three-eighths inch diameter steel wire rope will be used, which will be hauled in by a powerful steam windlass.

CORRESPONDENCE RELATING TO THE INTRODUCTION OF AMERICAN CATFISH INTO THE RIVERS OF BELGIUM.

DEPARTMENT OF STATE,
WASHINGTON, Aug. 9, 1882.

Prof. Spencer F. Baird, U. S. Fish Commissioner:

SIR—I send you inclosed a copy of despatch No. 41, from Mr. Alfred Lefebvre, Vice-Consul of the United States at Ghent, Belgium, in which he states that the Belgium government, through correspondence with that consulate, has adopted measures for the protection of its fisheries and is desirous of obtaining your co-operation in an endeavor to introduce the catfish of our waters into the rivers of Belgium. I will take pleasure in forwarding your reply to Mr. Lefebvre.

Your obedient servant,
JOHN DAVIS, Assistant Secretary.

[ENCLOSURE.]

Mr. Lefebvre to Mr. Davis, No. 41, July 26, 1882.

CONSULATE OF THE UNITED STATES,
GHENT, July 26, 1882.

Hon. J. C. Bancroft Davis, Assistant Secretary of State, Washington, D. C.:

SIR—When Mr. Wilson was consul at this port he interested himself in a project for the improvement of the pisciculture of the country.

The industries of Flanders, and especially of Ghent, concentrated, exhibited as they are in large manufacturing establishments, situated on the banks of the rivers, and discharging their refuse into the water, render it unhealthy for the fish, and has resulted in their decreased numbers, if not entire disappearance in some neighborhoods.

Mr. Wilson compared its situation to the rivers of Delaware and Schuylkill in the neighborhood of the city of Philadelphia, and expressed a belief that the catfish so common there would thrive here. He conferred with Prof. Baird, who confirmed him in this belief, and in the correspondence which took place between them the feasibility of stocking these rivers with these fish seems to have been agreed.

Mr. Wilson opened a correspondence with the authorities of Flanders (which has been continued by me since his departure) and it, with other causes, attracted official attention to the subject and created much interest in it. Parliament took it up, a new law for the protection and propagation of fish is about to be passed (a copy of which I will send to the department as soon as it will have been printed) and a committee appointed having general charge of the subject. Hon. E. Willequet, member of parliament from Ghent, is a member of this committee, and, not wearying you with uninteresting details, I come to the immediate object of this dispatch, which is, that the committee desire to put Mr. Wilson's and Prof. Baird's scheme into operation and have, through Mr. Willequet, requested me to communicate through the department with Prof. Baird and secure his aid and co-operation.

Mr. Wilson and myself have had many conversations with Mr. Willequet, the governor of the province, and other authorities who are all in favor of the attempt.

I inclose a translation of Mr. Willequet's notes that they, and a copy of this dispatch, if needed, may be transmitted to Prof. Baird.

Arrangements have been made with the Red Star line of steamers for shipment of the young fish from New York to Antwerp, if they can be put on board, and I will see that they are taken care of on their arrival.

As you will perceive by Mr. Willequet's letter of the 22d July, if he only can get to know when the fish will arrive, he will have everything in readiness to receive and lodge them.

As to the work on pisciculture or ichthyology alluded to, I would like Prof. Baird to indicate one of the best and I will procure it for the committee of which Mr. Willequet is a member. I am, sir, respectfully, your obedient servant,

ALFRED LEFEBVRE, U. S. Vice-Consul.

[ENCLOSURES.]

1. Letter of Mr. Willequet, dated 1st July, 1882, with translation.

2. Letter of Mr. Willequet, dated 23d July, 1882, with translation.

CONSULATE OF THE UNITED STATES OF AMERICA AT GHENT.
Translation of a letter of Mr. Willequet, dated 1st July, 1882, to the U. S. Consul at Ghent.

MY DEAR MR. LEFEBVRE—I have the honor to belong to the committee which has charge to elaborate the rules to append to the new law upon fisheries.

In the meeting of yesterday the committee received communication of the letters sent by your predecessor at Ghent, Mr. Wilson, to the governor of the province. These letters, among other obliging things, make the offer to supply our province and our country with the eggs or live young fish of an American species, which, according to Mr. Wilson, would thrive wonderfully in the climate of our provinces.

Mr. Wilson has been called to another post. I dare say that the U. S. Consulate will preserve for our country, and especially for our Flanders, the good will shown until now, and I shall be very happy to be the medium to convey this kindness.

Please to honor me with the communication that you will think necessary to send me and accept, etc.,

E. WILLEQUET, M. P. for Ghent.

U. S. CONSULATE AT GHENT.
Translation of letter of Mr. Willequet, dated 23d July, 1882, to the U. S. Consul at Ghent.

SIR—I hasten to answer your letter, and will begin by thanking you and the government of the United States for the courtesy shown in this instance. I have taken notice of the communications of your predecessor, sent to the committee for the elaboration of the rules upon fisheries, and I am personally convinced of the efficacy of the indicated means to new-stock our rivers.

As soon as these rules shall be published, and this will be, along with the law, in about five or six weeks, I will take care to send you a few copies of both.

You will render good service to the public, first, by asking your government to let us have the young catfish of which you speak, and then, by letting me know the exact time of their arrival in Belgium, as it will be necessary to prepare for them, and this has to be done with care. I am in measure to make about this all necessary communications to the government of Belgium.

It would be fortunate also if you could indicate a work upon pisciculture or ichthyology which would allow us to study the question at the American point of view.

I am, etc.,
E. WILLEQUET.

PROTECTING FISH EGGS.—Kansas City, Mo., Aug. 11.—I have closely observed the habits of the fish that are found in our rivers, and have found a plan for increasing the yield, which is to protect the eggs laid by the mother with a netting (wire), which will protect them from other fishes and insects that eat the eggs.—H. Z. W.

The Kennel.

FIXTURES.

January 9, 10, and 11, 1882.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden, Conn.

BENCH SHOWS.

April 3, 4, 5 and 6, 1883. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Stayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

September 4.—National American Kennel Club Field Trials on Prairie Chickens, Fairmont, Minn. Entries for the Derby close July 1, for the All-aged, Sept. 4. Jos. H. Dew, Columbia, Tenn., Secretary.

November 12.—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. F. N. Hall, P. O. Box 834, New York, Secretary.

December 4.—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11.—New Orleans Gun Club Field Trials or Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

THE PENNSYLVANIA ASSOCIATION.—Pittsburgh, Pa., Aug. 26, 1882.—*Editor Forest and Stream:* On the 7th of last January, at a meeting of the Pennsylvania State Field Trials Association, it was resolved to donate two $50 cups to the N. A. K. C. for the chicken trials this fall, one to the Derby and one to Free for All, to be awarded to the best dog or bitch competing in the trials, owned and entered by a member of the Pennsylvania State Field Trials Association. The Pennsylvania State Field Trials Association is in a healthy condition, and we have many live sportsmen in the association. We will have our trials, as I have written, probably the second week in November. Members p Stakes only, a Derby and All Aged will be run. We contemplate an interesting occasion, as there are many fine field dogs in the hands of the members, and all are anxious to demonstrate his the best. I believe Pittsburgh can boast as many thoroughly trained dogs as any city in the Union. All arrangements and details for trials is in the hands of the executive committee, which will be reported later.—I. R. STAYTON, Secretary.

WELL-BRED POINTERS FOR SALE.—Any one in search of good pointer blood will do well to read the advertisement of Mr. G. De Forest Grant, who offers for sale a portion of the litter by Sensation out of Minerva. They are exceptionally well-bred, and will undoubtedly find ready purchasers.

THE FIRST OF SEPTEMBER.

TO MY POINTER.

'TIS the first of September, good Don;
And the wind blows fresh from the South:
The sky is o'ercloaded, good Don,
And the dewdrops are 'waiting thy mouth.
My gun and my bag are all ready,
My leggings are laced full strong;
All Nature seems shouting "Ho! steady!"
And the grouse has challenged us long.

'Tis the first of September, good Don,
And the test of thy worth has come.
'Twill be well to remember, good Don,
The lessons I've taught ye at home.
Be "wary and chary" and fleet,
Ambitious, nor baffled at all;
Obediently come to my feet,
"Down charge," or "'ware fur" at my call.

'Tis the first of September, good Don,
And, i' faith! I believe that ye know
What I mean when I say it, good Don,
And long 'cross the country to go!—
Just a moment, to buckle this strap
And another to light a cigar,
And ye shall awake from their nap
The "birds" in their stubble afar!

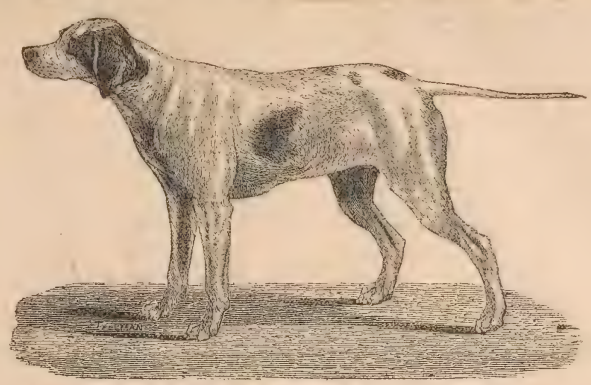
'Tis the first of September, good Don,
And my heart is nigh bursting with joy,
As I o'en now remember, good Don,
Fair "Annesley" and days, when a boy,
I started the covey a-feeding,
And shouted so loud and so free
To see my pet, Pore, unheeding
The brambles, pursue them to tree!

'Tis the first of September, good Don,
And many a "first," since then,
Has gone, and forever, good Don,
Yet here is the "first" again!
Away with all sorrow and care!
The air is as clear as my gun,
And the prospect for sport is fair
Ere the day is over and done.

'Tis the first of September, good Don,
And the maple beginneth to blush,
The covers turn russet, good Don,
And there broods over Nature a hush.
She listens, forsooth! for thy coming.
She waiteth to welcome thy skill;
Then away! while cicada is thrumming,
And the golden-rod waves on the hill!

'Tis the first of September, good Don,
No wonder you long to be free,
And plunge and strain in leash, good Don.
And appealingly look to me!
Now "steady!" the stubble is near,
And quite in your favor the wind!
I'll wait by the stile—never fear!
I'll wager a bone that you "find!"

O. W. R.



DOG PICTURES.

WE wish to express our thanks to the large number of our friends who have sent us pictures of their favorites, and to assure them that we appreciate their kindness. Not the least attractive feature of our sanctum is the goodly array of "counterfeit presentments" of canine celebrities that adorn its walls. Glancing around, the eye lovingly rests upon the graceful outlines of many a well-known form, and glad memories of glorious days of rarest sport that we have enjoyed with them afield fills our heart with a wealth of joy that words cannot portray. In fancy we see the beautiful forms endowed with life. Again we roam through the verdant valleys and over the beloved hills of our own New England. Almost we can see the verdure of the broad prairie waving in the gentle breeze, and seemingly we again inhale the balmy air "among the cotton and the cane." The jarring sounds of the busy world outside are sanctified to our ear, and the roar of the startled grouse, the tumultuous rush of the merry quail and the plaintive whistle of the shy woodcock fill the air with a sweet harmony that causes each responsive chord throughout our frame to vibrate with almost painful delight.

Cherished memories of the good old days are hovering halo-like around us. The magic spell of our familiar spirit is upon us, and woodland elves and woodland sprites, with their golden fetters, bind us a willing captive. Leading us through the shady aisles of their sylvan retreat, they bring us face to face with the old familiar scenes, and as we stretch ourselves at full length upon the green turf by the bubbling spring, they whisper in our ears pleasing reminiscences of the glorious sports of our early days. It was just here, where the thickly-growing alders are shadowed by the flaming maples, and the sparkling waters are murmuring as they force their way through the golden sands, that Nellie, glorious Nellie, who was resting by our side after a prolonged and unsuccessful chase after a wary old grouse, who had unaccountably escaped us on this our chosen vantage grounds, suddenly opened wide her wondrous brown eyes, and stealthily raising up, gently placed one fore foot upon our chest and the other upon our forehead, then, with an electric thrill that sent the hot blood tingling to our fingers' ends, she froze into a magnificent living statue. We were the especial favorites of the gods that day, for, although decades have flown, soul-satisfying memories of the incidents of that successful chase still cluster round our heart, and indelibly engraved upon memory's tablet is the wonderful picture of glorious Nellie.

KENNEL NOTES FROM WEST TENNESSEE.—Mr. Edward McDonald, who is a good handler of dogs and a sure shot, will leave Memphis on Sept. 15 for south end of Arkansas Grand Prairie, with two young setters of Capt. McFarland, two of W. A. Wheatley's, one of his own, and probably an Orgill-McComb pointer. These five setters are of the Joe, Jr., and Countess and Lady Clare Irish strains (three of them); the other two are cross-bred, by Chuck out of Guido's Countess, and are in training exclusively for private use. Twice a year four Memphis amateurs have several days' fine sport in the Arkansas prairie on quail, snipe, grouse and ducks, with a deer occasionally. Camille, by the greatest American field champion, Joe, Jr., out of Geo. W. Campbell's Buck, Jr., has a nice litter by McIntosh's Biz, divided between M. C. Campbell, W. A. Wheatley and A. D. Gibson, who bred Guido's Lily, the founder of the Orgill Flake-Lily pointers.—GUIDO.

A LONG JOURNEY.—Mr. Edmund Orgill, of Brooklyn, N. Y., on the 7th of August shipped a pair of pointer puppies, about two months old, to Mr. J. A. Wright, of Austin, Nevada, who writes that they arrived on the 13th safe and sound and in splendid condition. This speaks well for those who had the care of them upon their long journey.

MR. LUKE W. WHITE'S POINTER BITCH "LALLA ROOKH."

LALLA ROOKH.

OUR illustration this week is of the lemon and white pointer bitch Lalla Rookh, owned by Mr. Luke W. White, of Bridgeport, Conn. She is by Sensation's son (Sensation—Flirt) out of White's champion Grace. She won first in the puppy class last April at the Westminster Kennel Club's show, and the special for the best pointer puppy; she also with her dam won the Trainer's prize, doing excellent work, and fully demonstrating the value of the instructions contained in "Training vs. Breaking," as she was trained entirely in accordance with the rules there laid down. Her owner informs us that in her field education, now nearly complete, he has pursued the same course, and that he has never used any severity whatever toward her. She is entered in the Eastern Field Trials Derby, where she will undoubtedly make her mark if nothing befalls her. The cut is from a sketch by Henry Tallman, and is an excellent likeness, as she appeared at the New York show.

THE PRAIRIE CHICKEN TRIALS.

ON next Monday, September 4, the National American Kennel Club's First Field Trials on prairie chickens (pinnated grouse) will commence at Fairmont, Minn. The first event will be the Derby for setters and pointers whelped on or since March 1, 1881, for a purse of $450, of which $200 goes to first, $125 to second, $75 to third, and $50 to fourth. The entries closed July 1 with forty-five nominations, which should yield starters enough to make a very interesting race. The remaining event is the free-for-all for a purse of $500, of which $250 goes to first, $125 to second, $75 to third, and $50 to fourth. Entries for this stake close at 8 A. M. September 4. Judging from present indications there will be a large number of entries for this stake, and it will undoubtedly prove one of the most interesting and important events that has yet taken place. We are sorry to see that there is not an entry in the Derby from Minnesota. We have heard so much of the wonderful dogs owned in this State that we are anxious to see them and compare their merits with others. We trust that the free-for-all stake will bring them out in goodly numbers. We hear of quite a number of Eastern dogs that will be entered whose owners are confident that they can demonstrate that all dogs broken on Eastern game are not duffers when turned down on the prairies.

A number of valuable special prizes have been offered for the competitors in each stake.

A gentleman of Pittsburg, Pa., offers $50 for the best dog or bitch entered and run by the owner or club making the largest number of entries in the Derby.

The sportsmen of Fairmont offer $50 for the best dog or bitch (pointer or setter) in the free-for-all stake whose handler has not run a dog in a previous trial.

A gentleman of Burlington, Iowa, offers $20 for the best pointer entered and run at the trials.

The Pennsylvania State Field Trials Association offer a $50 cup for the best dog in each stake owned and entered by members of the association.

Many of the Eastern sportsmen will avail themselves of this opportunity to enjoy the sport of chicken-shooting. We can assure them of a hearty welcome from their brethren of the West, and that they will find plenty of birds in the vicinity of Fairmont. Ducks are also fairly plenty at no great distance. Fairmont is nearly in the center of the southern portion of the State, and is only a few miles from the Iowa line. It is on the Southern Minnesota Railroad, which is leased by the Chicago, Milwaukee & St. Paul Railroad. The latter road will issue excursion tickets at reduced rates and carry dogs, guns and baggage free.

The judges are Mr. Theodore Morford, Newton, N. J.; Hon. B. E. B. Kennedy, Omaha, Neb., and Mr. D. C. Bergunthal, Indianapolis, Ind.; all of whom are well known gentlemen of the highest probity, well qualified by experience to discharge the onerous duties of the position. We append a list of the entries for the Derby, with the description and pedigree of each dog, so far as we have been able to obtain them:

1. PRAIRIE WONDER. R. B. Morgan, Canton, Ohio.—Lemon and white English setter dog, April 2, 1881, by Prairie Joe (Charm-Ruby) out of Prairie Queen (Rake-Prairie Pearl).

2. PRAIRIE MOLLY. Sportsman's Kennel, Geneva, Ia.—Lemon and white English setter bitch, April 2, 1881, by Prairie Joe (Charm-Ruby) out of Prairie Queen (Rake-Prairie Pearl).

3. GUS BONDHU. D. C. Sanborn, Dowling, Mich.—Black and white imported English setter dog, May 11, 1881, by Dashing Bondhu (10,136) out of Novel (7,219).

4. GAZE. D. C. Sanborn, Dowling, Mich.—Liver and white English setter bitch, July, 1881, by Count Noble (10,134) out of Spark (Carlowitz-Magnet).

5. COUNTESS MAGNET. D. C. Sanborn, Dowling, Mich.—Liver and white English setter bitch, July, 1881, by Count Noble (10,134) out of Spark (Carlowitz-Magnet).

6. COUNT DAN. D. McKinney Loyd, Pittsburg, Pa.—Black and white English setter dog, July, 1881, by Count Noble (10,134) out of Nellie, (Belton-Dimple).

7. OLD WALT. J. A. Titcomb, Columbia, Tenn.—White and lemon English setter dog, April, 1881, by Lincoln (Dan-Lill II.) out of Daisy Dean (Pride of the Border-Ruby).

8. AMERICAN DAN. Joseph H. Dew, Columbia, Tenn.—Black, white and tan English setter dog, April, 1881, by Lincoln (Dan-Lill II.) out of Daisy Dean (Pride of the Border-Ruby).

9. DASHING BELLE. J. O. Donner, New York.—White, with liver ticked head, English setter bitch, March 23, 1881, by Decimal Dash (Dash II-Duchess) out of Bessie (Ranger II-Belle).

10. MATE. J. O. Donner, New York.—White and orange English setter dog, Sept., 1881, by Paris (Leicester-Dart) out of Fairybelle (Ranger II-Belle).

11. PRINCE. H. Widdicomb, Grand Rapids, Mich.—Black and white English setter dog, July, 1881, by Count Noble, (10,134) out of Nellie (Belton-Dimple).

12. COUNTESS NELLIE. H. Widdicomb, Grand Rapids, Mich.—Black and white English setter bitch, July, 1881, by Count Noble (10,134) out of Nellie (Belton-Dimple).

13. JOSEPHINE. B. F. Wilson and J. J. Snellenburg, Pittsburg and New Brighton, Pa.—White English setter bitch, March 15, 1881, by Knox's Duke (Belton II.-Nell) out of Hunter's Cora (Parson's Sam-Queen).

14. QUEEN LAVERACK. J. J. Snellenburg, New Brighton, Pa.—Imported black white and tan English setter bitch May 16, 1881, by Tory (Ned-Blue Belle out of Meg Merrilies (10,207).

15. REMUS. Willard Bros., Jonesboro', Ill.—Setter dog, May 22, 1881, by Tip out of Juno.

16. ACME. J. Palmer O'Neil, Pittsburgh, Pa.—Black and white English setter dog, April 17, 1881, by champion Thunder (Pride of the Border-Fairy II.) out of Bess.

17. MONTE CHRIST. W. C. Berringer, Pittsburgh, Pa.—Black and white ticked English setter dog, April 17, 1881, by champion Thunder (Pride of the Border-Fairy II.) out of Bess.

18. CARRIE J. W. B. Gates, Memphis, Tenn.—Black, white and tan English setter bitch, April 18, 1881, by Count Noble (10,134) out of Peep O'Day (Gladstone-Clip).

19. PINK B. W. B. Mallory, Memphis, Tenn.—Black and white English setter dog, May 13, 1881, by Gladstone (Dan-Petreh) out of Countess Key.

20. FRANK. David Furgesson, Milwaukee, Wis.—Black and white ticked English setter dog, June 15, 1881, by Carl out of Queen.

21. MINNIE. Dr. C. H. Tidd, Geneva, Ia.—Blue belton English setter bitch, Dec. 8, 1881, by Aker's Fred out of Allena May.

22. DOLL. H. A. Clock, Geneva, Ia.—English setter bitch. Dec. 8, 1881, by Aker's Fred out of Allena May.

23. DAVY CROCKETT. A. M. Weinhart, Chicago, Ill.—Lemon and white English setter dog, Oct. 20, 1881, by Sam II. (Don Cora) out of Fan.

24. ELSA. B. E. Hardy, Boston, Mass.—Black, white and tan English setter bitch, April 12, 1881, by Drake (Prince-Dora) out of Countess May (Dash III.-Countess Ada).

25. ZARINA. W. J. G. Dean, Hanover, Mich.—Blue belton English setter bitch, June 16, 1881, by Druid (Prince-Dora) out of Magnolia (Leicester-Sanborn's Nellie).

26. ZUDA. W. J. Dean, Hanover, Mich.—White and black English setter bitch, June 16, 1881, by Druid (Prince-Dora) out of Magnolia (Leicester-Sanborn's Nellie).

27. ROB ROY. H. Decker, Chicago, Ill.—Setter dog, July 17, 1881, by Rob out of Flash.

28. GILDEROY. Geo. C. Marsh, Chicago, Ill.—English setter dog, Nov. 4, 1881, by Druid (Prince-Dora) out of Princess Draco (Rob Roy-Livy).

29. FRANK. S. H. Turrill, Chicago, Ill.—English setter dog, May, 1881, by Blue Dash out of Fipp.

30. DOCTOR. S. H. Turrill, Chicago, Ill.—English setter dog, March, 1881, by Pembroke out of Royal Gift.

31. COUNTESS MOLLIE. John O. Ladd, Martin, Tenn.—White and tan ticked English setter bitch, July, 1881, by Count Noble (10,134) out of Spark (Carlowitz-Magnet).

32. DAISY QUEEN. Howard Hartley, Pittsburgh, Pa.—Black and white ticked imported English setter bitch, March 14, 1881, by Rock (4,280) out of Flame (Rail-Countess).

33. COUNT CAMPBELL. J. Hayward, Jr., St. Joseph, Mo.—Black and white setter dog, June, 1881, by Joe, Jr. (Elcho-Buck, Jr.) out of Belle of Nashville.

34. WINFIELD. Ariel Low, Jr., Chicago, Ill.—Setter dog, July, 1881.

35. FLIRT. A. S. Bishop, Pittsburgh, Pa.—Blue belton English setter bitch, Aug. 7, 1881, by champion Thunder (Pride of the Border-Fairy II), out of Minerva (Leicester-Nellie).

36. ST. ELMO IV. Dr. S. Fleet Spier, Brooklyn, N. Y.—Black, white and tan English setter dog, April 20, 1881, by St. Elmo (Pride of the Border-Jessie) out of Clio.

37. BON CARLISLE. Will Davidson, Bothwell, Ont.—Liver and white Nan werth Castle setter dog, May 24, 1881, by Bill Carlisle out of Nell Carlisle (Rall-Fan).

38. KATYDID. B. L. Hurd, Saratoga Springs, N. Y.—Black and white English setter bitch, May 19, 1881, by Guy Mannering (Pride of the Border-Fairy) out of Whirlwind.

39. DASHING DICK. J. R. Henricks, Pittsburgh, Pa.—English setter dog, April, 7, 1881, by King Dash (Belton-Floss) out of Skip (Dog Whip-Daisy Dean).

40. COUNTESS MAY II. Luther Adams, Boston, Mass.—Black and white English setter bitch, April 11, 1881, by Drake (Prince-Dora) out of Countess May (Dash III-Countess Ada).

41. DASHING RIP. S. W. W. Straight, Atlantic, Ia.—Setter dog, by Cline out of Nancy.

POINTERS.

42. PRAIRIE ROSE. J. J. French, Sparta, Wis.—Pointer bitch, April 4, 1881, by Rival Joe out of Queen Hamlet.

43. CAVALIER. James Stinson, Chicago, Ill.—Pointer dog, July 15, 1881, by Little Ruthan, out of Flight.

44. DOON. James Stinson, Chicago, Ill.—Pointer dog, June, 1881, by Sefton (Sensation-Lilly), out of St. Clisson.

45. BUSTER. Geo. E. Poyneer, Dayton, Ia.—Liver and white ticked pointer dog, October 21, 1881, by imported Bang (Price's Bang-Luna), out of Jean (Glenmark-Girl).

ST. BERNARD IMPORTATION.—The State Line steamer State of Nevada, which arrived on Thursday last, brought over the rough-coated St. Bernard bitch Regia, for Mr. R. Benson, of this city, for whom she was purchased by Mr. Wm. Graham, of Belfast, Ireland. She is by Mr. F. Robertson's Eiger, E. K. C. S. B. 10,610, who was imported by him from Switzerland. Her dam is Juno, imported by Lord Dufferin. Regia has been shown in the North of Ireland where she has won prizes, but we were unable to obtain a list of them. She is a magnificent animal of immense size, with plenty of bone and substance, and if placed upon the show bench in proper form will easily carry off the honors from anything that we have seen exhibited. She is in whelp to Mr. S. W. Smith's Rollo, winner of first at the late show of the Kennel Club, who is acknowledged to be the best living son of the grand old Hector.

RHEUMATISM IN DOGS.

SIR: I noticed the article by your correspondent, "Leather-head," on "Rheumatism in Dogs," and he appears not to mention any extreme case, and as one has very recently come under my notice, it may, perhaps, be of service to some if I mention a few facts in connection with it.

A bitch of mine, after her puppies were six weeks old, as is usual, was not inclined to keep with them, and before I had detected it, she had to get from them, taking up her position during the day near the kennel door, and on a stone slab, and this caused rheumatic fever. I first noticed that the hock joints were swollen, and she went lame. Within a few days she became quite set fast all round, and would not, or, rather, could not, eat. It next affected the brain, and made her hold her head all on one side, at times twitch it about as if she was in a slight fit. As soon as I detected her joints swollen I commenced to give her a mild aperient, and rubbed her well with an embrocation I usually employ in cases of lameness and sprains, but in spite of this treatment she had now become quite powerless to move her limbs or body, and for over a month I had to lift her about, and it seemed to be excessively painful when she moved at all. During this time I had your dose at all times nourishment she took, and I may here observe that whenever I gave her beef tea it appeared to be too much for her stomach, although I might add that made from Liebig's tins did not so much disagree with her as that made in the old-fashioned way. Milk, given very frequently, and in small quantities, was what I found did far better than anything else. The medicine I employed was supplied by Dr. Harrison, and the same, I believe, as usually employed in cases of rheumatic fever.

What aggravated the case was, she had inflammation of the lungs about a fortnight after she was first attacked, and at times it was thought she could not pull through. But as soon as I found what was amiss I applied strong mustard poultices to her chest, and when one did not afford relief I applied another. As may be easily imagined, she was, from all the suffering, and being unable to take anything but liquid food poured down her throat, reduced almost to a skeleton, and her joints remained much swollen for six weeks, but they are now quite right again, and she can move about with ease. The means I employed to get back her appetite was the giving of the tonic balls, as advised in Mayhew's book on dog management, recently published.

This is the most severe case of this kind that has come under my notice, and the condition to which it had reduced her made the doctor, who had large experience as a surgeon, give her up. I do not know the ingredients of the medicine he gave her, but should any of your readers desire to know, I have no doubt I could obtain it, as it was only supplied to me as a friend, and by one who is much interested in animals, and would be the last one to withhold anything that would be likely to serve others.

I agree with your correspondent that lameness is far too frequently attributed to simple kennel lameness, whereas it originates from other causes, which a more careful diagnosis would reveal. As this bitch is one I keep for my own use, I will add that she during the coming season develop any defects fairly attributable to this attack of rheumatism, with your permission, acquaint your readers with them.—G. Thorpe Bartram (Braintree).—*Bell's Life.*

DEATH OF CARLOWITZ.—We have received a letter from Mr. E. J. Martin, of Wilmington, Del., who informs us that the imported Laverack setter dog, Carlowitz, died from asthma and old age last Thursday. He was born in 1874. His sire was Pilkington's Dash, and his dam the celebrated Llewellin's Countess. He was imported in July, 1875, by Mr. L. H. Smith, of Strathroy, Canada. At the time of his death he was owned by Mr. James H. Goodsell, of New York. Carlowitz has been used extensively in the stud, and his progeny are widely distributed. A number of them have made their mark on the show bench. May he rest in peace.

KENNEL NOTES.

NOTICE TO CORRESPONDENTS.

Kennel notes are inserted in this column free of charge. To insure publication of notes, correspondents MUST GIVE the following particulars of *each animal*:

1. Color.
2. Breed.
3. Sex.
4. Age, or
5. Date of birth, of breeding or of death.
6. Name and residence of owner, buyer or seller.
7. Sire, with his sire and dam.
8. Dam, with her sire and dam.
9. Dam, with her sire and dam.
10. Owner of dam.

All names must be *plainly* written. Communication on one side of paper only, and signed with writer's name.

NAMES CLAIMED.

☞ *See instructions at head of this column.*

Nettie. By Mr. W. P. Bowers, Clinton, Mass., for liver, with white frill, cocker spaniel bitch, whelped May 24, 1882, by Mr. M. P. McKoon's sam out of his Glossy.

Bourne. By Mr. A. C. Krueger, Wrightsville, Pa., for black, white and tan beagle bitch, whelped June 2, 1881, by imported dog out of Fanny.

Dan Drew. By Mr. C. E. Waring, jr., Yonkers, N. Y., for lemon and white ticked English setter dog, whelped May 1, 1882, by William (Strong's Rock—Davis's Fan) out of Ruby II. (Gaines's Blue Blood—Bingham's Bess).

Dizzy. By Dr. Charles P. Knapp, Wyoming, Pa., for liver, with white on breast, cocker spaniel dog, whelped July 2, 1881, by Jet out of Fannie.

Diamond S. By Dr. Charles P. Knapp, Wyoming, Pa., for liver and white cocker spaniel bitch, whelped March 29, 1882, by Col. Stubbs out of Diamond.

Roderick. By Mr. Wm. H. Thayer, Bristol, R. I., for black, white and tan English setter dog, whelped July 18, 1882, by Dashing Monarch out of Isabella II. (Schuyler—Isabella).

King James. By Mr. Wm. H. Thayer, Bristol, R. I., for blue English setter dog, whelped July 18, 1882, by Dashing Monarch out of Isabella II. (Schuyler—Isabella).

Fly, Fan and Isabella III. By Mr. Wm. H. Thayer, Bristol, R. I., for blue and tan English setter bitches, whelped July 18, 1882, by Dashing Monarch out of Isabella II. (Schuyler—Isabella).

Flirt and Flora. By Mr. Wm. H. Thayer, Bristol, R. I., for black and white English setter bitches, whelped July 18, 1882, by Dashing Monarch out of Isabella II. (Schuyler—Isabella).

Cid. By Mr. S. E. Bungy, jr., New Haven, Conn., for black and white cocker spaniel dog, whelped April 13, 1882, by Bob III. (Duckclench—Nell) out of Mignon (Dart—Daisy II.)

BRED.

☞ *See instructions at head of this column.*

Fingrina—Peter. Mr. Theo. A. Gill's (Ashfield, Mass.) black pointer bitch Caspirna to Mr. D. W. C. Parker's Peter Black (Strong's Peter—Mab), Aug. 17.

Peggy—Jack. Mr. Louis C. Clark's (New York) white and tan fox-terrier bitch Peggy to the Borstall Kennel's Jack, Aug. 23.

Jolie—Buckeller. Mr. Theo. A. Gill's (Esopus, N. Y.) black and white setter bitch Jolie (Lathrop's Dick—Gen. Ely's Sylph) to Mr. W. A. Costar's Buckelew (Druid—Ruby), Aug. 11.

Jaunty—Bow. Mr. Edward Odell's (New Orleans, La.) imported pointer bitch Jaunty to his champion Bow, Aug. 22.

Queen—Bow. Mr. Jeff Waller's orange and white pointer bitch Queen to Mr. Edward Odell's (New Orleans, La.) champion Bow, Aug. 8.

Ferida—Prince. Mr. John G. Hockschier's (New York) lemon and white English setter bitch Ferida (Ranger II.—Daisy) to Mr. James H. Goodsell's Prince (Pride of the Border—Petrel), Aug. 8.

Belle—Max. Dr. J. Marill's (Poughkeepsie, N. Y.) lemon and white pointer bitch Belle (Frank—Nell) to his Max (Glenmark—Girl), Aug. 28.

WHELPS.

☞ *See instructions at head of this column.*

Lizzie Hopkins. Mr. A. P. Hayward's (Rock Hill, S. C.) English setter bitch Lizzie Hopkins (Gladstone—Clip), Aug. 13, five (all dogs), by King's Clyde (Scout—Vashti), three black, white and tan and two lemon and white.

Bellona. The Westminster Kennel Club's lemon and white pointer bitch Bellona (champion Bow—Beulah), Aug. 20, five four dogs), by their Sensation.

Lady Jane. The Borstall Kennel's (Morristown, N. J.) lemon and white pointer bitch Lady Jane (Gumbo—Fan), Aug. 23, ten (six dogs), all lemon and white, by their Rob (Rush—Romp).

Fairy II. Mr. Jas. H. Goodsell's (New York) Laverack setter bitch Fairy II. (Victor—Blue Daisy), June 27, nine, six living (one dog), by his Prince (Pride of the Border—Petrel).

Petrel III. Mr. Jas. H. Goodsell's (New York) Laverack setter bitch Petrel III. (Carlowitz—Petrel), July 3, nine, seven living (three dogs), by his Racket (Rattler—Leda).

Nina II. Mr. Geo. C. Creamer's (Hamilton, Mass.) red Irish setter bitch Nina II. (Red Hugh—Nina), Aug. 10, seven (six dogs), by Capt. Bixby's Ruby (Elcho—Rose).

Floss. Mr. G. W. Campbell's (Carter's Creek, Tenn.) red Irish setter bitch Floss (litter sister to the celebrated Joe, jr.), Aug. 14, eight (four dogs), by Otto.

SALES.

☞ *See instructions at head of this column.*

Rush—Young Juno whelp. Lemon and white pointer dog, whelped May 15, 1882, by Mr. Edmund Orgill, Brooklyn, N. Y., to Dr. John H. Meyer, New York.

Fanny. Black and tan beagle bitch, whelped Oct. 16, 1880, by Mr. August C. Krueger, Wrightsville, Pa., to Mr. James A. Kepner, Altoona, Pa.

PRESENTATIONS.

☞ *See instructions at head of this column.*

Duke of Locust Valley—champion Lou whelp. Gordon setter dog, whelped May 12, 1882, by Duke of Locust Valley (Grouse—Grace) out of Mr. Thos. H. Hitchcock's champion Lou, by the Borstall Kennels, Morristown, N. J., to Mrs. John C. Cobb, Boston, Mass.

Mac. Liver and white pointer dog, whelped April 1, 1881, by Glenmark (Rush—Romp) out of Girl (Maryland—Tell), by Jas. W. McDonald, Poughkeepsie, N. Y., to Dr. J. Marill, same place.

DEATHS.

☞ *See instructions at head of this column.*

Carlowitz. Liver and white Laverack setter dog, whelped 1873 (Eng. K. C. S. B. 4,260), by Pilkington's Dash out of Llewellin's Countess, owned by Mr. Jas. H. Goodsell, New York, Aug. 24, from asthma.

Gladstone—Shadow whelp. Black, white and tan English setter bitch, owned by Mr. Edward Odell, New Orleans, La.

Bow—Vick whelps. Pointers, whelped May 8 (five dogs, seven bitches), owned by Mr. John D. Watrous, Arcola, La.; all dead.

Bow—Queen whelps. Pointers, whelped May 16 (four dogs, seven bitches), owned by Mr. Edward Odell, New Orleans, La.; all dead.

Rue. Cocker spaniel bitch, owned by Mr. Geo. Laick, North Tarrytown, N. Y., July 24, from distemper.

KENNEL MANAGEMENT.

G. McA., Worcester, Mass.—As a sequel to a severe case of distemper, from which a pup seven months old is just recovering, one eye is wholly covered with a bluish film. Please advise what can be done, and what are the prospects for the recovery of the sight. The pup was treated with aconite and belladona, and during convalescence with quinia, ferri et strychnia, with beef tea and fresh eggs whipped up in milk. Ans. Drop a pinch of finely pulverized white sugar on the ball of the eye twice a day.

W. L. J., Boston, Mass.—The following, which we republish from our issue of May 5, 1881, we are assured by several who have tried it, is a good remedy for fleas: A strong infusion of quassia, made by suspending a couple of ounces of quassia wood chips, tied in a piece of muslin, in a bucket of water for three hours, occasionally stirring it, is useful in killing fleas; it is free from danger, and being almost colorless, is an advantage in washing white dogs. The infusion must be used instead of plain water, with either soft soap or hard soap, a good lather being made to penetrate the dog's coat to the skin. Some plain water should be poured over the dog to finish the washing and remove the quassia from the coat.

C. O. L., Methuen, Mass.—The 14th of this month my pointer dog refused food, grew thin, and discharged white saliva from his mouth, but none from the nose or eyes. I thought it was distemper, but he had no cough to pain. He grew worse, and died the 19th. At the last the discharge from the mouth was clear blood, and the odor was very offensive. He seemed thirsty, but could not drink; his mouth seemed glued together. Can you tell me what ailed him? Ans. From description of dog had an internal abscess between the jaws, which throat which prevented him from eating; the saliva, not being used, was discharged externally. When the growth broke down, blood and matter naturally came away. Matter exposed to air is always offensive. A piece of bone lodged in the throat might have been the original cause of the trouble.

A. D., North Middletown, Ky.—A pointer dog has been sick for some time; he has a bad cough, especially on getting up after lying down; vomits continually while coughing; nose warm and dry; eyes dim; is very thirsty; refuses his food; has no energy; when walking he carries his head close to the ground or hall between his legs; he has watery pimples between his legs the size of a pea. Ans. Your description would answer for a bad case of distemper, with chest complications, as evinced by the cough upon moving about; the vomiting may be merely the result of the cough; the pimples are probably due to eczema, consequent upon his general depressed condition. As you did not give the age, we cannot say positively. Your dog may be too old for distemper, and be the victim of chronic bronchitis. To give tonics, codliver oil, good food and fresh air is about all you can do.

Rifle and Trap Shooting.

PREPARING FOR THE MATCH.

CREEDMOOR, Aug. 22.—The American Military Rifle Team went down to the range at Creedmoor to-day to make arrangements for putting into practice the system of practice which is to govern the international match. A meeting was held in the club house, at which Col. Bodine presided, and an hour was devoted to a general interchange of views in respect to the guns, sights, and ammunition to be used. It was decided to pursue a regular system of practice on Tuesdays, Wednesdays and Thursdays over all the ranges to be covered in the match. The system will be observed as soon as the members of the team have shot together sufficiently often to enable them to understand the peculiarities of their guns. It was also decided that Sergt. Hinman, McNevin, Alder and Irlam should exchange the rear sights that have been using for those of a broader pattern. The advantage to be gained is that the guns can be held more nearly plumb by means of such sights. With the broad bar the bar can be placed on a level with the bullseye, then, in taking aim, the two uprights supporting the bar of the sight will admit a view between them of the two targets on the right and left respectively of the target aimed at. By holding the gun so that the bar is on a line with the centers of the three bulls-eyes, accurate aim may be secured. Col. Bodine said that, while he should not confine the members of the team to the use of guns of one manufacture, he would "very much prefer that they would unite in favor of using the same brand of guns."

At the close of the meeting the members of the team, excepting Atkinson, Smith and Ogden, who were absent with leave from the captain of the team, fired a few shots over the ranges at 800, 900 and 1,000yds. No official record was kept of their score, however

the two at the bottom are very poor indeed, almost the lowest that have yet been made in these matches. There is no remarkable total at the long ranges, and Mr. Hinman's is about the only one that can be described as good. The three totals of 99 points or over at the short ranges are very creditable, but even at these familiar distances five men fall below the qualifying limit of 85, and it is not harsh to say that the lowest two scores are unredeemably bad. Explanations are of course abundant to account for the shortcomings of individuals. Dolan had sickness in his family and slept but little; Griffiths' new gun and position pulled down his score; Pollard lost track of the elevation at 900yds. and had to waste four shots in finding it; he also forgot to alter it when he fell back to 1,000yds. McNevin also had trouble with his gun. All these are more or less valid excuses, but, as an old *habitue* of the range remarked when the shooting was over, "It's getting to be time for the men to settle down to solid work if they mean to win the match. The era of blunders and absenteeism ought to come to an end and the scores begin to go up instead of down under the influence of the co-operative system."

PISTOL SHOOTING.

Editor Forest and Stream:

As I am greatly interested in the scores made by pistol shooters, I will try to tell you of some shooting I have done. I kept an exact diagram of all the shots for a long time but have lost it, and so can only give a correct account from memory. I fired 38 consecutive shots on 7 different days, 3 shots the first day, and 5 shots on each succeeding day. Distance, 10yds. (30ft.) I started out to see what percentage of shots I could put in a 2in. circle. I put 17 of the 38 shots in a circle 1⅝in. in diameter, 23 shots in 3in. circle, 33 shots in a 3½in. circle, and 5 shots well in a 4in. circle. I do not claim to be an expert, but can seldom find a man who can do as well. The pistol I used was a 30 caliber Remington revolver (Smoot's patent), and the closest shooting revolver I can find, and I find all of that kind and size equally good. All the above shooting was off-hand.

"S. B. P.," in your issue of March 9, says he is shooting a .38 caliber Smith & Wesson, and asks if the ball is not too large for accurate shooting. I think it is, as I find that anything larger than a .30 or .32 calibre pistol cartridge causes too much recoil in a light revolver. As for the average revolver, I consider them almost worthless, all the cheaper grades being fit only to make a noise and, perhaps, for the use of the didn't-know-it-was-loaded class of shootists. G. M.

ARMSTRONG'S GROVE, Iowa.

Editor Forest and Stream:

Now I believe there are many like me that have an unusual liking for the pistol, as a means for amusement. I think that if the readers of the FOREST AND STREAM would exchange their ideas and experience, it would give them new ideas in regard to the "little guns."

I have shot and handled many different makes, from the smallest 32c. to the large 45bs. army revolvers. Now I believe that the makers of several different grades do not know in what a good revolver consists. In saying good, I do not allude to the appearance or conveniences, but the construction. I find the principal fault is in the weapon itself—they use too much ammunition for the weight of the arm, or if the pistol is heavy enough the barrel swedges the ball too much, and anything but good shooting is the result. Now I have put such weapons into a vise, where it was impossible for it to recoil, and it would shoot quite accurate. I find that one of our celebrated makers constructs an arm with many complicated parts, with a hinge to get loose and shaky; then another makes the solid frame and calibers it for a larger and powerful cartridge, better adapted for a seven-pound rifle. One more subject and I am through; that is in regard to cleaning. I use the Ballard Marlin 32 short cartridges. I have shot many cartridges in my revolver and neglected cleaning it; I found I was, instead of unproving, shooting very bad, and was nearly vexed enough to throw my pistol at the target, when a thought, without a very careful reweighing, revealed to me much powder crust. I at once proceeded to give it a thorough cleaning and resumed my practice at the same target—fruit cans, white stones, etc.—and to my happy surprise I found every shot to be true. Since then I pay every attention to keep it clean and smooth, and always find it reliable.—J. W. B.

RANGE AND GALLERY.

SMALL-BORE SHOOTING.—The Amateur Rifle Club, at Creedmoor, on the 23d, shot for the Champion's Cup at 800, 900, and 1,000yds; 15 shots at each range. The winning scores were as follows: J. W. Todd, 206; Major G. Livingston Morgan, 199, and H. O'Neill, 192. There were 458 entries for the Championship Marksman's Badge match, which was contested at 200 and 500yds' range, 5 shots per man at each distance. The leading prize was captured by H. T. Lockwood on the score of 46. The ten silver medals offered by the association were awarded as follows: 46, G. T. Lawrence; 45, Sergeant Hall, 22d Regt. Frotningham, 45; S. W. Merritt, 44; L. J. Elliott, 43; H. S. Higgins, 42; J. K. Green, 42; J. A. Tackaberry, 41; W. L. Candee, 41; E. W. Price, 41. There were 156 entries in the Qualification match, which was also at 200 and 500yds' range, 5 shots per man at each range. The prize-winners and their scores were: Capt. J. L. Price, 47; J. S. Shepherd, 46; A. G. Perham, 46; J. James, 46, and E. W. Price, 46.

CHANGE OF DATE.—The Board of Directors of the National Rifle Association, at a meeting on the 22d, authorized Col. Bodine, the captain of the team, to "spend as much money as he finds it necessary" for the expenses of the team. It was decided to charge an admission fee to the range at Creedmoor to members of the association as well as the general public during the two days of the International match. A letter was received from Sir Henry Halford, in which the latter expressed the hope that as the team would probably arrive on Sunday, there would be no public demonstration on its arrival. A communication was received from the Long Island Railroad Company, stating that it could not furnish facilities to carry the large number of passengers to Creedmoor on the second day of the contest, if the match is shot on Friday and Saturday. A cable dispatch was therefore sent to Sir Henry Halford, asking him if he objected to having the match begin a day earlier.

GARDNER, Mass., Aug. 24.—At the last meet of the Gardner Rifle Club, at Hackmatack Range, the inch ring and Creedmoor target combined was used; distance 200 yds., off-hand. The following is the score:

	R.	C.	R.	C.	Totals.	
A Mathews	87	46	94	47	181	93
G F Ellsworth	86	47	87	45	173	92

J Dodge	81	43	90	46	171	89
F H Knowlton	87	46	78	45	165	91
Geo H Heywood	79	45	72	42	151	87
G O Goodale	75	44	53	40	128	84
C Shumway	60	42	65	44	125	86
C Sumner	38	40	64	43	102	83

WORCESTER, Mass., Aug. 25. Yesterday members of the Worcester Rifle Association and others went to Pine Grove Range for their regular meet. The wind was from 11 to 1 o'clock with occasional shower. The following is the score. F. A. Hatch used a military rifle, and was allowed four to be added to the record with the Massachusetts target, and two to be added to the Creedmoor record as given below:

Massachusetts Target.

M G Fuller	11	11	8	11	12	9	11	9	11	12	—105
C D Eames	12	11	11	9	11	8	9	10	12	11	—104

F A Hatch	4	4	3	3	4	5	4	3	5	2	—37

THE AMATEUR RIFLE CLUB.—Your article of the 24th, reflecting on the amateur Rifle Club should not go unanswered. Before calling the team "a party of junketers" it would have been wise and more courteous to us, as representatives desirous of maintaining that "proud record" in all respects in other ways as well as before the butts, to have learned some of the inside facts which led to the sending of the teams to Boston and to Hamilton. We think, if you were fair-minded, you would see something more to be proud of in the club taking sure defeat manfully than in refusing to fight at all. The part has indeed been glorious! Victories with hardly a defeat have been very many. Shall we live in the past? You forget that the children who learned at our knees have grown. They have shown themselves men, foemen worthy of our steel. Shall we say to them, "We dare not fight; we are old, our Agamennon cannot come; Achilles won't 'fight; Patroches is slain"? Let us be Greeks indeed! Let us die fighting! rather than be Trojans and lamenting, go about saying, *Ilium fuit, nos fuimus Troes.*—A. R. C.

AMERICAN TEAM RIFLES.—New York, Aug. 24.—*Editor Forest and Stream:* Reading your editorial in issue of this date on "The American Team," the writer notices the remarks, "This is really a test of American against English made very sharp." It seems to be a gauging of the Hepburn against the Halford rifle." Looking at the highest fourteen scores and comparing them with your "list of men * * * and rifles used," on page 73, he finds that eight men (of the fourteen) used Sharp's guns, and averaged 83¾, and that six men used Hepburn guns and averaged 480. The highest individual score is 509 (see page 73), with Sharp's rifle. To him it would seem that it looks now more like a test of the Sharp's, though he has no desire to in any way disparage the Hepburn. Wherein is he wrong?—E.

THE TRAP.

THE HENDERSONVILLE TOURNAMENT.—It was my fortune to have been present at the recent trial of skill which took place at Hendersonville, N. C., on the 15th, 16th and 17th of the present month, and to have participated in the sport. My score was neither the best nor the worst which was made—occupying that position which is aphoristically said to be the safest—*in medioxe;* still I came quite as near hitting all the balls as your compositor did in the last number, when he made me say "a mere looker-on in Venice," when I wrote it "Vienna," as Shakespeare wrote it. For some cause, the number of sportsmen who attended was much smaller than was expected, and we were obliged to organize temporary "teams" out of such material as could be had. With us, such are called "scrubs." Usually, they have quite as much fun as the regulars, and sometimes manage to break as many balls. During the first day's struggle we had but four teams, and the second day five. The shooting, as you will see, was not first-rate; but it is only just to say that the ground had something to do with the result. Unfortunately, a valley was selected, and when the sun was obscured by clouds the balls were quite hard to see by those whose vision is so dull as my own. Below are the scores:

First Day, Aug. 15.

Henderson.		Graintic.		Spartanburg.		Composite.	
Dantzler	7	Johnson	3	Blossingame	7	Steele	10
Ewart	8	R Farmer	9	Patterson	10	McCullough	6
M S Farmer	8	T Dantzler	10	Thomson	8	Nolen	4
Barrett	6	Sing Farmer	9	White	8	Salley	8
Jeffreys	8	Pringle	5	Stoney	8	Trenholm	7
	37		33		38		39

Second Day, Aug. 16.

Palmetto.		Composite.		Spartanburg.		Henderson.	
Hall	10	Steele	7	Blossingame	5	M S Farmer	8
Smoak	6	Nolen	8	Patterson	8	Dantzler	5
Cannon	9	Trenholm	6	Thomson	7	Ewart	6
Saunders	8	Jordan	8	White	8	Jeffreys	4
De Brahl	10	Salley	10	Stoney	6	Barnett	7
	43		39		34		30

Graintic—Priagle, 3; A. Farmer, 9; Johnson, 6; Riggs, 9; McCullough, 5—32.

Third Day—First Match.

Palmetto.		Henderson.		Spartanburg.		Composite.	
Hall	8	Favor	7	Blossingame	8	Steele	6
De Brahl	8	Dantzler	8	Thomson	7	Trenholm	6
Smoak	7	Johnson	8	White	10	Nolen	4
Saunders	9	Ewart	8	Erwin	5	Jordan	10
Cannon	9	Riggs	6	Pulleen	8	Salley	8
	42		37		38		34

Third Day—Second Match.

Palmetto.		Composite.		Spartanburg.		Henderson.	
Hall	9	Salley	8	Blossingame	8	Dantzler	8
De Brahl	0	Nolen	6	Erwin	8	Ewart	8
Smoak	8	Steele	9	Thomson	9	M S Farmer	10
Saunders	8	Trenholm	8	White	8	Johnson	6
Cannon	8	Jordan	10	Patterson	7	McCullough	6
	44		41		40		38

Most of the guns were 12-bore and choked. Your correspondent used a Tollay cylinder, 12-bore. When he missed it was his fault.

WELLS.

PROVIDENCE, Aug. 23.—The fourth competition of the Narragansett Gun Club for badge, took place yesterday at the club grounds, Old Washington Trotting Park. We have a new club house nearly completed, and the partial shelter it afforded during the heavy showers of yesterday was duly appreciated by the boys. The house is going to be quite a model affair for a shooting box. It was designed and built by our veteran member, Mr. Geo. S. Crandall, assisted by members of the club, and will be all finished before the next club shoot.

P H Baker	10101	11111	11011—15
E W Tinker	10110	11011	01100—13
E W Cary	11101	01111	11101—17
W H Waterman	11111	11111	11111—20
W H Sheldon	11111	11010	11110—17
O B Baker	10011	01101	00110—0000—8
W G Crandall	11111	11111	11011—19
G T Anthony	11111	01111	01110—01001—14
G J Crandall	10111	11100	11111—11111—17
E Devolve	11101	10111	00111—10010—13
J B Valentine	11111	11101	10111—01111—17
L Bennett	11001	10111	00010—11100—11
G T Crandall	11111	11010	11101—11111—17
S D Greene, Jr	11111	11110	11110—11111—19
F O Wheoskey	10111	11111	11001—11111—17

Master W. H. Waterman, of Pawtuxet, winning badge with a clean score. The winner is the junior member of the club and shot with a 8⅛ and a half pound sixteen-guage Parker gun. Then followed sweepstakes at clay pigeons with the following results:

First Sweep.

E Devolve	0 0 0 0 1	0—1	W H Sheldon	1 1 1 1 1	1—7
G W Cary	0 1 1 1 1	1—6	W H Waterman	0 0 0 0 1	0—2
Geo Anthony	1 1 0 1 1	0—5	J B Valentine	1 1 1 1 1	1—7
P H Baker	1 1 0 1 1	1—5	O B Baker	0 1 0 0 1	0—3
S D Greene, Jr	1 0 1 1 1	1—6	F O Wheoskey	0 0 0 1 1	1—4

Ties on 1st, Valentine 0, Sheldon 1, miss and out. Sheldon first money, Green and Cary divide second.

Second Sweep.

Valentine	1 1 1 1 1 1	Cary	1 1 1 1 1 1
Anthony	1 1 1 1 1 1	Sheldon	1 1 1 1 1 1

Sheldon won first money, breaking 8.

MERIDEN, Conn.—Ten of the members of the Winsted Gun Club had the pleasure of meeting with a team of the Parker Gun Club on their grounds at Meriden, Conn., on Aug. 28, and were again victorious, although the shooting was much better on both sides than the previous match shot in Winsted, both matches being remarkably close throughout:

Parker Gun Club.		Winsted Gun Club.	
Birdsey, E	21	Adams, A W	20
Baker, I L	25	Beach, G W	23
Strong, G A	19	Blakeslee, V A	22

CENTRAL ILLINOIS ASSOCIATION.—The fourth annual convention and tournament of the Central Illinois Sportsmen's Association, for the propagation and preservation of fish and game, to be held in city of Jerseyville, Illinois, September 12, 13, 14 and 15, 1883. The tournament will be held on the grounds of the Jerseyville Gun and Fishing Club. The premiums amount to one thousand dollars. Two last days open to the world. Secretary's address, James Eads, Jerseyville, Ill.

MOBILE, Ala., Aug. 16.—Medal shoot of the Gulf City Gun Club; 20 balls, handicap. Jas. Alexander and W. T. Vass tied on 17 balls; the former at 21yds. and the latter at 24. In shooting off the tie Alexander won: Alexander, 1101111111—9; Vass, 1101111110—8.—U. SEE.

Yachting and Canoeing.

FIXTURES.

Sept. 1, 2, 3.—Hera, Lillie Private Matches.
Sept. 3—Beverly Y. C., Third Championship Match, Marblehead.
Sept. 3—Jeffries Y. C., Club Match.
Sept. 3—Royal Nova Scotia Y. S., Mayor's Cup and third prize.
Sept. 4—East River Y. C., Fall Matches.
Sept. 5—Dorchester Y. C., Third Championship Race, Cat-Rigs.
Sept.——Hull Y. C., Club Championship Sail-off.
Sept. 4—Quincy Y. C., Fifth Club Match.
Sept. 5—Jersey City Y. C., Ladies' Day.
Sept. 7—Royal Canadian Y. C. Club Race.
Sept. 8—Royal Canadian Y. C. Open Matches.
Sept. 9.—Toronto, Y. C., Matches.
Sept. 10—Merrimack Y. C., Open to All Match.
Sept. 10—Quaker City Y. C., Harbor Cruise.
Sept. 16—Dorchester Y. C., Open Races, Cat-Rigs.
Sept. 16—Royal Nova Scotia Y. S., Three Classes, one prize each.
Sept.——Royal Nova Scotia Y. S., Yacht dinghies, sailing race
Sept.——Royal Nova Scotia Y. S., Charlottetown, P. E. I.
Sept. 19—Jersey City Y. C., Ladies' Day.
Sept. 21—Quaker City Y. C., Harbor Cruise.
Oct. 1—Quaker City Y. C., Closing Cruise.
Oct. 3—Jersey City Y. C., Ladies' Day.

VIXEN'S VICTORIES.

IT is not intended here to detract from the well-earned laurels of the Vixen in her two recent races with the cutter Maggie off Marblehead. Those races were well sailed and gallantly won on conditions accepted by both competitors, and therefore no one exists for disputing the destination of the prizes or for robbing those instrumental in bringing about the victories of the just credit which is their due, for to Mr. Tams, who had Vixen in charge, a good share of the latter's victory is to be attributed. But both races have, upon the face of matters, such an influential bearing upon the question of type that it is of importance the real value of the victories so far as they can affect that question should be thoroughly understood and their true measure got.

The first day's success of the sloop can be disposed of readily enough without abstruse investigation upon reciprocal principles. We find the Vixen disposing of a cutter, her equal in relative perfection, by something like twenty-four minutes, in the R. Y. C. match, off Marblehead, Aug. 14, over a thirty-mile course, fifteen miles to windward and return. In the same race, we find, in the class above, the cutter Oriva accomplishing an exact counterpart with the sloops. Leaving Gracie and Fanny out of consideration as really belonging in a separate class, being just twice the size of Oriva, two other sloops remain, Active and Addie, both well known, and though not by any means to be rated among our fastest sloops, at all events a good pair, representing a fair average of our fleet, rather nearer the top of the pile than the bottom. The Addie having been built by Kirby, of Rye, one of the foremost of his profession, while Active is known as a very fast boat down wind. Addie is 59ft. on load line and Active 50.2ft. Both were beaten by the cutter by twenty-five minutes in round figures. Whatever, therefore, the Vixen may be cited as proving for the sloops can be offset by the performance of Oriva. If one race proves anything, the other cannot be denied equal import, and since the sloop had it her own way in one class, and the cutter in another, surrounding circumstances being as near like as possible, further discussion of their merits as sailing between Maggie and Vixen may be dismissed as possessing no influence upon the question of design.

The next day, Aug. 35, however, the 15-tonner and the sloop sailed a private match with the result a repetition of the first trial, ending in favor of the sloop by about twenty minutes. Can this be accounted for on other grounds than superior speed? If it can, then the second trial can carry no more weight in comparing types than the first. In the first place we demur to the equity of sailing two such widely different forms on length measurement. Vixen is 44ft. 11in. on load line, according to the "Yacht List" of 1875, and Maggie 40ft. 7in., according to Kemp. Other authorities differ in the inches, but practically both were of the same length. By referring to the cuts in our last issue it will be seen at a glance that the sloop is by far the larger and more powerful boat, and that the allowances to the cutter for the same reason that no one would pretend to race a 30ft. canoe and a 30ft. sloop on even terms. Counters not included, Vixen's bulk runs up at 1,800, and that of the cutter at 1,400, as near as can possibly be without her lines at our disposal.

The figure given last week has been deemed too small by several good authorities, and the benefit of the doubt we grant herewith. These revised figures rate Vixen at about 19 tons, taking Maggie as 15. The distance sailed was forty miles. For the difference of 4 tons some can be allowed to the cutter in equity according to R. A. scale Further, all accounts and witnesses agree that Vixen struck the incoming freshening breeze first, and was at once lifted clear away from the cutter, so that she lead by 3 miles at the turn. Just why pause should be taken for this bit of luck is difficult to determine, but probably a mile and a half is none too much; considering that the sloop met the steady increase in the wind's strength all the way out, and established much of her lead before the cutter had fairly felt its influence of the equal breeze. Allowing a couple of eight sails at the time, and over 11 minutes are accounted for. Add to this some four and a half due on tonnage, and the actual outsailing of the cutter dwindles away to between 4 and 5 minutes, a horse of somewhat different color.

All hands otherwise agree that Maggie's canvas was not worked as smartly as aboard the Vixen; and we add that the cutter did not seem in true form, for the day previous she was beaten by Hera and Addie, both of whom she had disposed of without great difficulty in similar weather on the previous occasion. Some of the above data are of course open to difference of opinion. Be that as it may, we think enough must be conceded to substantiate our position that the race cannot be accepted as either an equitable trial, nor yet reliable or decisive as to lessons upon the question of type. In no wise, however, do these conclusions detract from the merits of the race in other respects, nor can the Vixen be upbraided for accepting terms her opponent saw fit to agree to. If we are asked for an explanation of Maggie's second defeat, it would be covered by the words "outclassed" and "the most perfect sloop day on record" and "a lucky slant for the home boat."

MATTAPOISETT REGATTA—AUG. 26.

THE annual matches for prizes subscribed by the residents of the town were sailed Aug. 26, with an excellent list of entries. Prizes consisted of a silver cup to first yacht home in first and second class, and cash from $30 to $5 in other classes, and for best corrected time in first two classes also. Courses, 13 miles for large boats, and 13 for smaller classes. Wind strong from southwest. Yachts were present from Providence, Fall River, Falmouth, New Bedford and other ports, and some very interesting racing was witnessed. Richmond, Nina, Index, Eucie and Anita were ruled out for sailing the wrong course. Tester rapsized and Thesis picked up her crew. Regatta committee—J. C. Rhodes, R. Holmes, James Clark. Summary as under:

FIRST CLASS—OVER 40FT.

Name and Owner.	Actual. H. M. S.	Corrected. H. M. S.
Hesper, W. H. Forbes	2 42 56	2 17 52
Windward, G. O. Shattuck	2 42 41	2 19 05
North Star, A. Dorr	3 13 07	2 46 18

SECOND CLASS—OVER 30FT.

White Cap, John Malcolm Forbes	3 03 40	2 27 56
Ariel, F. E. Bacon	3 10 23	2 32 09
Isabel, J. G. Chapman	3 15 27	2 37 38
Kismet, W. Abbe	3 21 13	2 38 23

THIRD CLASS—OVER 25FT.

Olimpse, C. Atkinson	2 50 18	2 23 46
Painter, D. L. Parker	2 48 16	2 47 45
Ilderim, R. S. Regan	3 06 48	2 54 45
Maud, Tobey's Island		2 58 30
Sunlight, Brown	Withdrawn.	

In fourth class for catboats over 23ft., seven finished, Mattie taking the prizes. In fifth class, over 19ft., eleven finished, Gipsey being winner, and in sixth class, over 15ft., seven finished, Gem taking first on time.

MONTAUK—HALCYON.

Editor Forest and Stream:

The statements made in the *World* and other New York papers concerning the Halcyon having been hauled out for the recent Marblehead regatta are entirely false. Halcyon carried away the step of her jibboom in Newport, and arrived at Nahant on the 12th. She there had a new step fitted by the next day. She was not hauled out nor was she stripped. She was boarded before the race by the judges, and the information was imparted to the owner of the Montauk officially that Halcyon had not been hauled out as reported. In spite of this the Montauk refused to sail. This ought to go on record in correction of the contrary. The Montauk can sail well enough without the aid of such untruthful bolstering. K.

BEVERLY YACHT CLUB—AUGUST 26.

THE annual open matches sailed under the auspices of this enterprising and sporting club off Marblehead, August 26, brought out the largest fleet ever started under racing colors in the world. Alongside of such racing New York efforts seem like picayune business, not worth notice. There were 148 entries, 114 boats started, and 104 finished, a fleet of such magnitude in numbers that fancy cannot depict the scene witnessed when the signal was given. It is said New York is the yachting center of this country. Perhaps it is with regard to the luxurious and inordinately sumptuous furnishing of large schooners, but as for sport, Boston is so far ahead that comparison is unnecessary. It will be many years before we gather 114 in a bunch, and a long time before officers in New York display the liberality and disinterestedness we have to record in favor of Messrs. Walter Island Jeffries, T. B. Chabot, Joseph S. Fay, Jr., George H. Richards and Charles F. Minot, to whose untiring energy and good sense the success of this regatta is to be largely attributed. More than two hundred yachts were underway to start, and to send off and the population for miles around streamed to the shores, occupying outlying rocks, housetops, and all standing room on docks and piers, deeply interested in what was passing before them. Old Cowes habitues would have been regaled of squadron week, such a hold has yachting taken upon the masses in the East. If you wish to be enchanted with nature you must go to Naples. If you wish to see a live match take train for Boston.

While yachting seems all but dead in New York, races follow in the East with such regularity one upon the other and the starters run in such numbers that it becomes almost impossible, even at this short distance, to keep track of the doings. Names familiar as household words appear time and again, and many yachts now make a system of "round" trips from the East to the West which is inspiring to New York for want of the opportunity. There is Lilly and Hera, Viking and Shadow, Magic, Anna, Nimbus, Mavis, Beetle, Gem, Banneret, Expert, Seabird, and hosts of the small fry who figure time and again in a season, who may be said to be the very soul that is the East a "record" is a record indeed, and yacht racing has graduated from the meaningless trifling, from the mere by-play it is in New York, to a pastime followed in business-like manner with business-like purpose and result. There may be less loud ostentation and tonnage may be more modest in the East, but for sport approaching what we have been accustomed to see in British waters, we say decidedly Boston has taken the lead in America, and a very long lead at that. Yachting as understood in the East is almost unknown in New York waters. Sailing and racing by owners themselves, like the old time and sport involved are far different from the sand-bag tossing among the open machines here, or the vanity of the pointless attempts at competition originating with the owners of big craft who can hardly tell peak from throat or the purpose of either. There is no man who owns a 30-ft. little five-ton sloop so he be a sailor, rather than the banker or merchant buying 200 tons simply because it is the fashion, and dawdling two short months in the Sound with his nose turned up at what he thinks "a little boat." The small yacht has been the sporting power of New York, FOREST AND STREAM excepted, has not yet got beyond accepting tonnage as a criterion of merit, and until the small yacht here receives the place and consideration due her, the East may be expected to hold the lead won through the energy of amateur sailors. Classes and courses for the Beverly matches were as follows:

All schooners over 21 and not over 40ft. shall form a separate class. The first class shall include sloops, cutters and cats measuring over 30ft. and not over 40ft. on water line; those measuring over 25ft. and not over 3.0ft. shall form the second class; over 21ft. and not over 25 shall form the third class; over 17ft. and not over 21 shall form the fourth class, and those of 17 and under the fifth class. In the first, second, third and fourth classes separate prizes will be awarded to centerboards and keels. Sails will be carried as follows in the fifth and fourth classes: Schooners, mainsail, foresail and jib. Sloops, mainsail and jib. Catboats, mainsail. No restriction in regard to sails in the first, second, third and schooner classes. Yachts allowed to carry men as follows: 40ft. and over, two men; over 36ft. and not over 40ft., three men; over 32ft. and not over 36ft., four men; over 28ft. and not over 32ft., five men; over 24ft. and not over 28ft., six men; over 20ft. and under 24ft., seven men; 20ft. and not over 20ft., eight men. Penalty for dead weight allowed during the race. No entrance fee will be charged. Yachts having certificates of length on water line, from the measurer of any yacht club, will report their length then to the chairman of the regatta committee; all others should be at the starting point in time to be measured; the club reserving the right to measure any yacht, and in case of conflict of measurement to take its own. Judges—Daniel Appleton, James H. Blake, Geo. A. Goddard, W. Lloyd Jeffries and Luther G. Pitman.

Note especially in the above the fact that no shifting ballast was allowed. This abominable practice interfering with free modeling and raising the cost of racing to an extravagant figure has all but gone out of existance in Boston waters, and we hope New York will soon follow. Recently a Long Island yachtsman, in the age in shifting matters, ventured to attribute the failure of regattas in New York to the prohibition of shifting dead weight. Possibly the success and popularity of races sailed under such a prohibition in the East may give it a quota of common sense to be needed with their ballast the yachts race upon their merits; with sand bags a match degenerates into a competition of foolhardiness, the most reckless in the crowd having the best show for the prize, to say nothing of the expense of such a system of trying how not to do it. We are glad to note a tendency to follow closely the custom in this as in many other matters. Courses were as follows:

The first and schooner classes sailed over the following course: From starting point, leaving black buoys Nos. 5 and 3 on starboard hand; from Moore's rock, Tinker's island, Roaring Bull and Pig rock stakes on starboard hand; Egg rock on port hand; Half-way rock on port hand; black buoys Nos. 8 and 5 on port hand, to judge's yacht; 15½ miles.

Second class: From starting point, leaving black buoys Nos. 5 and 2 on the starboard hand; Tom Moore's rock, Tinker's island, Roaring Bull and Pig rock stakes on starboard hand; Egg rock on port hand; Halfway rock on port hand; black buoys Nos. 8 and 5 on port hand, to judge's yacht, 13½ miles.

Third class: Leaving black buoys 5 and 3 on starboard; Half-way rock, stakeboat anchored off southeast breakers, red buoy No. 2 on Gale's ledge; Bowditch's ledge beacon, and red buoy No. 6 on port, to judge's yacht, 10½ miles.

Fourth class: Leaving black buoy on Selman's berth on port; black buoys Nos. 3, 5 and 7 on port; stakeboat off Curtis' point on starboard; Bowditch's ledge beacon on starboard; red buoy No. 6 on port, to judge's yacht—seven and a half miles.

Fifth class: Leaving black buoy on Selman's berth on port; black buoys Nos. 3, 5 and 7 on port; stakeboat off Curtis' point on starboard; Bowditch's ledge bacon on starboard; red buoy No. 6 on port, to judge's yacht

The races were all in cash, ranging from $35 to $8. Two in schooner class, three in all others, with a fourth added to fourth and fifth classes. Flying start, one gun to prepare and a gun to send away each class, five minutes to cross, Vice-Com. Hovey kindly placed the schooner Phantom, N. Y. C., at the disposal of the judges. The day was a red-letter one, with a brisk breeze blowing in from seaward E. by N., and turning up quite a little rumble outside, bringing open water qualities into play, and this was the result. While Hera, a deep keel sloop with outside ballast, was beaten by Beetle, a comparatively small boat with inside ballast, the cutters Beetle and Mavis acquitted themselves most excellently, tanning their class in good style, and calling forth from the Boston *Globe* the following pertinent observation:

"It was in this class that the American keel yachts had for competitors cutters built after the style of the Maggie and Madge. The American yachts fared very badly, owing to the heavy sea, and the cutters, being able to make more headway through the billows than the beam boats could with them, carried away the first and second prize among the keel yachts."

Mr. Hemmenway is to be congratulated upon the excellent performance of his nobby little ship, Beetle, a type of cutter we can, from our own experience, commend for a keel boat of her class. Mr. Whitney's cutter, Mavis, much of the same type, is as good and able, as well as fast a little yacht, as any one could wish. She took third prize in exceeding good company, including the famous Gem and several larger boats. Mavis has been phenomenal in her work with the famous process a she came out of harbor under storm sail with topmast housed, and she figures with the select in our sanctum. Hera came to the line in a new fit by McManus, but her old antagonist, Lillie, again scooped the prize by a moderate margin. It is said these two are matched for a series of three in September for a big purse, so some interesting work is still ahead. Hera seems to us a trifle too full in body for driving, and we should prefer her chances in light weather, but Lillie is always so well handled that under all circumstances she is an uncomfortable boat to meet in her class. Anna and Nimbus quite handily as well as the big Anna and Ellie and Alert, Anna taking third money, however. Bessie won among schooners pretty much as she liked. In second class it is noteworthy that the keel cutter Beetle made better time than any of the center-boards. In third class Expert beat Rebie, and Sea Bird came in for third in a fleet of fifteen. Among the keels Banneret won with miles to spare. Among the small fry Joker, Janet, Amy and Wave tanned the prizes in pretty close order out of twenty-seven arriving at the finish, and Vesper and Charlotte made a close thing of it among the keels. There were thirteen below 21ft., among which the well-known "square-sided" Flora Lee added another first to her long list of winnings. The official times given below may need some revision, but the winners are in doubt only in the case of the Mavis, requiring remeasuring to settle. Summary as under:

FIRST CLASS—KEELS.

Name and Owner.	Length. Ft. In.	Start. H. M. S.	Cor. Time. H. M. S.

HULL Y. C.—AUG. 19.

THE annual open matches of the club were sailed Aug. 19, off the club house in Hull. Five classes, first class not filling. Second class, for centerboard and keel yachts, 26ft. to 30ft.; third class, for keels, for centerboards and keels, 21 to 26ft.; fourth class, for keels and boards, 17 to 21ft., and fifth class, under 17ft. No restriction to sail, except fifth class limited to plain lower sail. Anchor start. Courses, for second class, from judges' line, passing Barrel Buoy, leaving it on the port, to Yellow Barrel, marked "H. Y. C." off Straw's berry Hill, rounding and leaving it on starboard, to Yellow Barrel, marked "H. Y. C." off Bumkin Island, leaving it on starboard, out Hull Gut, to Bell Buoy on Harding's Ledge, leaving Toddy Rocks Buoy on port; Point Allerton Buoy on starboard, rounding and leaving Bell Buoy on the port. Returning leaving Point Allerton Buoy and Toddy Rocks Buoy on the port, to Hull Gut, then to judges' boat, passing between it and red flag—twelve nautical miles. For third and fourth classes—From judges' line to West Gut, passing out and leaving Pettick's Island on starboard, thence N. E. by N., three-quarters of a mile to Black Buoy on Wilson's Rocks, leaving it on the starboard, thence to Hunt's Ledge Buoy, off Teddy Rocks Buoy, rounding and leaving it on the starboard, through Hull Gut, to the judges' boat, passing between it and red flag—seven nautical miles. For the fifth class—From judges' line, passing Barrel Buoy, leaving it on the port, to Yellow Barrel, marked "H. Y. C." off Strawberry Hill, rounding and leaving it on starboard, to Yellow Barrel, marked "H. Y. C.—N. W." off Bumkin Island, leaving it on port, to Barrel Buoy off Great Hill, leaving it on starboard, to Yellow Barrel, marked "H. Y. C." off Pettick's Island, leaving it on starboard, to judges' boat, passing between it and red flag—six nautical miles.

The judges, Messrs. C. A. Perkins, Peleg Aborn, T. F. Patterson, C. B. Churchill, J. H. Conant, Samuel Appleton and F. H. Griffin, were aboard Mr. Hancock's sloop Madcap, kindly placed at their disposal for the day. We note here how little of the money of Eastern clubs is squandered in useless accessories, such as steamboat and brass band hire and champagne luncheons. Club funds are devoted to encouraging legitimate sport rather than to afford a spree and a holiday to "guests," reporters and hangers-on in general. The same might be accomplished, much to the benefit of yacht racing, in New York. The wind was very light from northeast at the start, then fell away and came out from the east. It continued to veer to southeast and commenced blowing fresh. In the schooners, Bessie, a Pierce built boat, got away with her larger sister in pretty hollow style. In second class the Herreshoff boat Nymbus beat her lot with ease, and Lillie, as usual, took first honors among a long string of good keels, including Viking and Hera. In third class Mr. Forbush put Seabird before in a manner recorded in these columns. There were Amy and Joker, Wild Fire, Wave Crest, Thysbe, Scamp, Herald, Nonpareil and others, a sporting lot tooled by sporting owners, and whose doings afford one pleasure to follow. Would we had a like army of little flutters near home, but in these waters it is sandbags or "luxurious" schooners.

The race from start to finish was carried out with the punctuality and thoroughness for which the officers of the Hull Y. C. have become well-known. The only accidents were the carrying away of Lillie's topsail halyards which lost her an excellent chance for the prize in her class, and Glance tossing her topmast over the side when off Strawberry Hill. The fleet was accompanied by several tugs with spectators from Boston. In the evening the club grounds were illuminated, the residents and boats in harbor following suit, and fireworks, music and an evening dinner brought Hull's great yachting festival of the year to a happy close. Owing to protests in fourth class keels, second and third prizes have not yet been awarded, otherwise the winners are in accord with the times given below:

SECOND CLASS SCHOONERS.

	Length. Ft. In.	Actual. H. M. S.	Corrected. H. M. S.
Bessie, C. P. Curtis	27 02	3 32 32	2 56 44
White Cloud, H. H. Smith	29 00	3 59 05	3 25 22

A LONG CRUISE.

Editor Forest and Stream:

At 11 o'clock this morning Dr. Charles A. Neide, Secretary of the A. C. A., and Capt. S. D. Kendall, both members of the Lake George Canoe Club, left the Canoe Islands bound for the Gulf of Mexico. The object of the cruise is geographical exploration and the promotion of canoeing, or single-handed cruising. The craft owned by these gentlemen though diminutive, are the very best of their class. Dr. Neide's cruiser was built by J. H. Rushton, and completed only a few days ago. It may be described as follows: Canoe Aurora, model Princess, lap strake, cedar; length, 15ft.; beam, 31in. at bottom of top streak; 30in. at deck; depth amidships, 11in. to gunwale; 13in. to crown of deck; at bow, 10in.; at stern, 18in.; two masts; lateen rigging.

Capt. S. D. Kendall's canoe is a marvel in the matter of construction. She is the result of herself, made the paddle, sails and oars, and has invented and constructed the best set of infolding outriggers that can be found in any light craft. The hull is constructed on the "up and down nailed carvel system." She is smooth outside and inside, her shell being of cedar veneers, dressed to a thickness of one inch wide by one-fourth inch thick. These strips are nailed upon the light ribs, or timbers, and galvanized brads are driven perpendicularly through two strips and into the third streak below. These brads are three inches apart. The ribs are of red elm, set three inches apart. The deck, though only one-fourth of an inch in thickness, is, by this system of nailing, made so strong that a man weighing 175lbs. can stand and step about upon it. The keelson is ten inches wide and one-inch in thickness, tapering towards the bow to the thickness of the planking. Weight of canoe with oars, paddle, spars, sails, rudder, and hatches, one hundred pounds.

This canoe is the last one of several built by this amateur canoeist, and there is an immense amount of work and thought represented in the details of a most interesting little craft which is appropriately named "Solid Comfort."

As these gentlemen are to undertake a long cruise, and in canoes fitted for comfort and for cruising purposes, not for racing, they have

followed the example of English, Canadian and United States canoeists who have made many and long cruises on rough and broad waters—they have taken along the auxiliary motor, the light oar and the outrigger. The ritualistic canoeist may take his light paddling Rob Roy canoe, by rail or steamer, to the heads of water courses, and then paddle and float down stream, always avoiding the ascent of a strong current, and when he has accomplished his few days of summer cruising on gentle waters, will berate his hardworking brother for following every connecting water-course, be it lake, sound, or the ocean itself, because the experienced cruiser knows that the limit of easy travelling canoe for any cruises has been passed. A roomy, comfortable cruising canoe, with all its outfit, and provisioned for an independent cruise in regions where the hotel refuge of the ritualistic paddler cannot be found, is generally too large and too heavy for the paddle on rough and broad waters, such as the North American continent offers to the lover of nature.

Messrs. Neide and Kendall are old cruisers, and have earned their laurels on both fresh and salt water. They will haul over into Lake Champlain from Lake George, cruise to Whitehall, thence through the canal to Troy, on the Hudson River. Then they will cruise on the Erie Canal westward to Buffalo on Lake Erie. The coast of Lake Erie will be worked as far as Cleveland, Ohio. From Cleveland the canoeists will proceed to Cincinnati on the Ohio River, where they will be kindly received by the members of the Cincinnati Canoe Club.

From Cincinnati they will descend the Ohio and Mississippi to New Orleans, and will cross that city to Lake Pontchartrain and the Gulf of Mexico. They will then continue along the coast eastward and southward until they have passed Cape Sable on the extreme southwest coast of Florida. If time permits the canoeists will push their explorations around the southern end of Florida through Card's Sound and Biscay Bay to Cape Florida, and from that locality proceed northward on their homeward journey. HORICON.

CANOE ISLANDS, Lake George.

BEVERLY Y. C.—AUG. 19.

Editor Forest and Stream:

The seventieth regatta of the B. Y. C., the first open race of the season, took place off Tobey Island, Monument Beach, Aug. 19. The sloop North Star of the E. Y. C., through the kindness of Mr. Dorr, used by the judges, Messrs. Geo. H. Richards, A. H. Hardy and W. Lloyd Jeffries.

Course for sloops and cats over 23ft. sailing measurement was: From judges' yacht off Tobey Island buoy, leaving Scruggs Rock buoy and Bird Island buoy on starboard and return, 11 miles. Course for small cats was: Leaving Black buoy No. 3 on starboard, Abiel's Ledge buoy No. 1 and Dry Ledge buoy No. 12 on starboard, 7 miles. The race was open to all boats not over 37ft. sailing measurement; and great interest was taken in the race, some of the best known boats from Providence and other places being present.

In the morning the wind was strong N. E., but it gradually died away, until at the starting time, 1 P. M., it was very light. The first gun was fired promptly at 1. Although several boats were in sight, beating up, they did not arrive till quite late.

The first boat over was the Curlew at 1:09:08, followed by Ariel and Nomad, the latter 46sec. after time; the Isabel seemed to have gone to sleep and crossed the line among the catboats 6min. 35sec. late.

After running down a couple of miles the boats struck a S. W. wind dead ahead; and from here on the wind kept shifting from one point to another, one boat being rail down while the next was becalmed. The summary is as follows:

SLOOPS OVER TWENTY-NINE FEET.

	Measurement.	Actual.	Corrected.
	FT. IN.	H. M. S.	H. M. S.
Curlew, T. W. Robinson, Wareham	29 2	2 44 01	2 35 32
Nomad, J. S. Fay, Jr., B. Y. C	30 7	2 43 23	2 36 06
Ariel, F. E. Bacon, Jr., B. Y. C	35 4	2 40 08	2 26 48
Isabel, J. C. Chapman, N. Y. C	33 2	2 42 21	2 29 02

It was found that Ariel and Curlew had carelessly sailed course 1, not 2, as shown on the judges' boat. No. 1 being the reverse of No. 2. Both were ruled out. The first prize given to Nomad second to Isabel.

CATBOATS OVER TWENTY-THREE FEET.

	Measurement.	Actual.	Corrected.
	FT. IN.	H. M. S.	H. M. S.
Mattie, J. H. Arnold, Marion	28 10	2 41 38	2 32 39
Myrtle, G. E. Phinney, Monu't Beach	27 4	2 47 20	2 36 47
Violet, Daniel Crosby, Monu't Beach	27 6	2 47 55	2 37 37
M. Delorey, M. Delorey, Providence	28 10	2 47 04	2 38 05
Tantrum, J. M. Codman, B. Y. C	25 00	2 53 36	2 40 21
Alcyone, S. D. Phinney, Monu't Beach	27 10	2 51 30	2 41 29
Mistake, S. Perry, Monument Beach	24 2	2 55 48	2 41 46
Lucille, A. F. Smalley, Osterville	24 3	2 56 14	2 42 13
Mascot, F. E. Bacon, Jr., B. Y. C	24 6	2 57 18	2 43 35
Annie, David Ellis, Monument Beach	23 00	2 59 36	2 43 58
Eleanor, Richard Codman, B. Y. C	23 9	2 59 36	2 44 47
Thorn, H. Stockton, B. Y. C	24 00	2 58 00	2 45 39
Iris, E. A. Baugh, B. Y. C	24 2	3 59 36	3 45 31
Madeline, Eben Holmes, Marion	24 5	3 01 40	2 47 57
Moonaky, Igna's Sargent, Jr., Waquoit	26 10	2 58 32	2 50 37

Annie was 5min. and Rival 4sec. late at start. Mattie takes first and Myrtle second prize.

CATBOATS OF TWENTY-THREE FEET AND UNDER.

	Measurement.	Actual.	Corrected.
	FT. IN.	H. M. S.	H. M. S.
Phosie, Benj. Gibbs, Onset Bay	21 2	2 26 45	2 25 13
Clara B., E. A. Bangs, B. Y. C	20 5	2 29 53	2 27 37
Gem, I. Thomas, B. Y. C	19 6	2 41 13	2 37 55
Dolly, A. S. Hardy, B. Y. C	22 6	2 38 28	2 28 04
Mystery, H. Stockton, B. Y. C	21 11	2 40 48	2 29 58
Ripple, F. E. Bacon, Jr., B. Y. C	20 4½	2 42 17	2 30 01
Edith, J. F. Bullard, Marion	18 5¾	2 49 13	2 34 48
Minnie, F. Tudor, Monument Beach	17 11½	2 49 51	2 34 59
Comola, C. Curry, Monument Beach	Started.	Not timed.	
Indev, R. Smith, Fairhaven	Started.	Not timed.	
Sprite, J. W. Clark, Mattapoisett	Started.	Not timed.	
Bessie, — Smith, New Bedford	Started.	Not timed.	

Phosie was 46sec. late; she wins first and Clara B. second prize. On the whole, the race was not a fair test of the boats, the rear boats bringing up a wind several times and flukes being frequent. TILLER.

LEAD AND DEADRISE IN 1853:

Editor Forest and Stream:

I have been very much interested in the "new departure" in yachts so ably supported in FOREST AND STREAM. In 1853 I had built in Philadelphia a sloop yacht 29ft. keel, for use in the Jersey sounds. Of course she could not draw much water, but I had a pretty sharp bottom and dared her above the water line. She drew 3ft. aft, but in shoal places I took six old fifty-sixes from the stern and put them in her eyes, and thus tipped up the stern 6in. She was low rigged, her sail keen and cut flat, hoisted; I had a large top sail that was set from the deck for light winds in going through the "thoroughfares." She was quite fast, and for her build an excellent sea boat, but I was surprised at the difference that half a ton of coal made in her sailing. She would lay a point nearer the wind, and I could hold on, until the water was up to her trunk, then let go her sail, low water, so she came. She was nearly non-capsizable. The lead was laid on each side of the well in her timbers, and fastened there, and was in addition to her other ballast. Now, if it had been in her keel the effect would have been much greater. I used to take my wife and children in her, and feel perfectly safe, but before I had the lead I did not. After I put in this lead I tried her in a shoal bay in a heavy northwester. If I had capsized or filled her she would have been in only 3 or 4ft. of water, and with that wind the bay went nearly dry at low water, so that I gave her every chance to do her worst that day, but I found that she was safe. I find in her old "Log" that I had 1,065lbs. of lead.

JOHNSON TOWN, Va. OLD FOGY.

EARLIEST AMERICAN VESSELS.

Editor Forest and Stream:

I learn from some old private papers that the first vessel built by our forefathers was called the Blessing of the Bay, built in 1631, launched only 4 small great rejoicing. She was of thirty tons burden and cost £145 sterling.

The second vessel was built in Boston in 1634, of about fifty tons, and called the Desire, and commanded by Capt. Perce, who came over in the Ann. She was the first vessel that crossed the ocean from this side.

The third vessel built was the barkentine Rebecca, built at Salem in 1635, of fifty tons burden. She was the second vessel that crossed the ocean from this side. She made a remarkably quick passage of eighteen days. Her great beauty and originality in form created a great public interest, and hundreds flocked to view her. She brought back fifty passengers to Boston. G. F. W.

BARNSTABLE REGATTA.—A public regatta for catboats was sailed off Barnstable, Mass., Aug. 22, with the following result: Isabel, Capt. Hopkins, won in second class, in 45m. 23s., second money going to Lillie, Capt. Goss, over a course of eleven miles. In third class, Banner, Capt. Beale, won in 1:05:20, second prize going to Nappie, Capt. Smith.

NEW BEDFORD Y. C.—An excellent match was sailed in Buzzard's Bay, Aug. 24, open to second class schooners and first class sloops. Alice from Boston arrived too late to sail with the schooners, crew being used up in the passage. Judges, G. M. Crapo, E. P. Haskell, Jr. and H. M. Chase, aboard the tug Nellie. Interest ran high in the fight between Peerless and Boston's former crack, the sloop rigged Fearless. Both crossed with main gafftopsails, Fearless with fore-topmast housed. Wind was fresh from southwest, and Peerless worked down to the Hen and Chickens and rounded first at 1:33:30, Fearless at 1:42:15. From there it was a case of ballooners to the mark near Quick's Hole. About half way the jibtopsail of Peerless went over the side, and the other schooner got into a similar scrape, both losing time in landing the lost canvas. Peerless jibed around the mark at 2:28:50, Fearless at 2:32:20. With booms to starboard quick time was made for home. Peerless essayed spinaker, but this had to guy too sharp and took in the sail. She was first home, but lost to her sister on allowance. The sloops made a good race, Windward holding the cutter Hesper well on the beat out, rounding the Hen and Chickens at 2:55:55, the cutter at 2:23:30 and the Hen at 2:51:46. Running free there was no change, the Lone Rock buoy being jibed around by Windward at 2:53:55, Hesper 2:55:05, North Star not taken. The first two made a dead heat of it, the prize going to the cutter on allowance. Fearless takes $100 and Hesper $75. Summary as under:

SCHOONERS.

	Start.	Finish.	Actual.	Corrected.
Fearless	11 04 43	3 17 07	4 22 24	3 59 09
Peerless	11 02 38	3 19 49	4 17 11	4 02 50
SLOOPS.				
Hesper	11 04 08	3 54 34	4 50 26	4 49 14
Windward	11 03 36	3 54 03	4 50 26	5 50 26
North Star	11 05 04	4 25 38	5 20 34	5 15 31

ROYAL NOVA SCOTIA YACHT SQUADRON.—Aug. 21.—The 3-tonners sweepstakes race was sailed on the afternoon of Aug. 19, in a light, but steady breeze from north. The yachts entered were:

Yacht.	Rig.	Tons.	Owner.
Mariquita	yawl	2	W. Wallace
Mascot	sloop	2	H. M. Wylde
Marie	sloop	3	W. H. Troop
Velnar	cutter	3½	F. C. Sunichrast

Marie did not start. The others were sent off at 2:30 P. M., Mascot leading, Velenar second, Mariquita last. Velenar got to the front and led all through the race, sailing very well. Mariquita carried away her jibsheet deck-block on starboard side, and lost a good deal in consequence. It was a dead beat up to Dartmouth Ferry buoy, a deadness thence to Fort Clarence buoy, a free reach to Point Pleasant, and a beat home. The race ended:

	H. M. S.
Velenar	4 36 20
Mascot	4 45 51
Mariquita	4 47 07

Velenar allowed the others 1m. 45s. each, and therefore won easily. The next squadron fixture is for Saturday, September 2, when the Mayor's Cup, open to all yachts of the squadron, and three class prizes will be raced for.

MOSQUITO RACE.—The vast fleet of "wee-ums" congregating about City Point, South Boston, had a grand sporting time of it, Aug. 23, for the fishermen's match of the season. Wind blew from southeast, water rather choppy for such small fry. Course about three-quarters of a mile. Two cash prizes in each class. Start from an anchor. Judges, T. S. Condon, J. F. Buckley and Oscar Bingham. Mascot is a new boat and promises well when her trim has been got.

FIRST CLASS.

	Length.	Corrected.
		M. S.
Daphne, H. Roberts	13 08	43 40
Lizzie, H. McDonough	13 03	51 28
Sport, J. Ridell	13 08	53 37

SECOND CLASS.

Egeria, William Condon	11 08	47 53
Mascot, F. O. Whitman	12 01	48 00
Herald, Charles Smith	11 11	54 04
Trinket, W. H. Buckley	12 10	51 20
Clyde, J. Page	12 08	54 29
Starlight, J. Winniatt	12 10	dis.

QUINCY Y. C.—The third championship regatta was sailed in Quincy Bay, Aug. 23. Joker lost her board, and Amy won the the race and championship with it, though Thisbe made very close play. Fiora Lee takes championship in third class, having all three races of the series, Fiora Lee coming in second. Second prizes were awarded also in each class. Wind strong from southwest:

SECOND CLASS.

	Length. Ft. In.	Actual. H. M. S.	Corrected. H. M. S.
Amy, E. W. Baxter	21 06	1 31 39	1 05 02
Thisbe, S. A. Freeman	21 10	1 39 40	1 05 31
Nautilus, H. M. Faxon	18 01	1 47 06	1 16 43
Herald, Charles Bullard	18 07	1 36 48	1 17 24
Wildfire, H. A. Keith	18 02	Not taken.	
Niobe, L. M. Clark	20 01	Not taken.	
Joker, George Coffin	20 05	Lost centerboard.	

THIRD CLASS.

Dandelion, C. F. Adams, 3d	17 05	1 21 56	0 56 03
Flora Lee, S. A. Freeman	17 03	1 27 06	1 01 53
Cricket, W. A. Cary	17 04	1 30 08	1 04 30
Zip, G. W. Morton	16 09	1 33 42	1 07 26

DORCHESTER Y. C.—The club sailed the second championship match for catboats Aug. 22, off the club house. Wind fresh from southeast, shifting to southwest during the latter part of the race. The first of the series had been won by Fiora Lee. Judges, H. Davenport and George Gertin. Course five miles. Start flying to single gun. Gretchen carried away halliards off Old Harbor buoy, Magnet and Amy hauled out. Thisbe won after a close contest with Joker. Result as under:

	Length.	Actual.	Cor.
Thisbe, S. A. Freeman	21 08	1 10 29	0 44 50
Joker, George Coffin	21 00	1 11 55	0 45 22

Amy, E. W. Baxter	21 06	Withdrew.	
Magnet, C. Barnard	14 10	Withdrew.	
Gretchen, E. P. Sharp	16 10	Disabled.	

PHOTOS.—We have received from David M. Little, 24 Franklin street, Boston, another instalment of fine yacht photos taken by the instantaneous process, which we commend to all interested as exceedingly handsome, perfect and and instructive. Among the lot we mention a broadside view of the noble cutter Hesper under full sail, the cutter Mavis under storm sail with topmast housed, broadside views of Phantom schooner and steamer Adelita, showing the handsome spars they put into steamers in the East, also schooner Brenda under low sail in good sailing breeze, an excellent three-quarter view of the American schooner rig, Vixen running free under balloon sails, winning her race with the Maggie, sloop Valhalla, schooner Halcyon with spinnaker and topmast staysail winning the Marblehead schooner match, and Baxter Sigurita, luffing round to get in the winning line. All these photos represent the yachts taken from actual life while underway, some of them driving along rail under. They are as clear and perfect in detail as though taken at anchor, although exposed only one one-hundred-and fiftieth of a second to the rays of the sun. For list and prices see our advertising columns.

HULL Y. C.—Gem, recently returned to the East, Fairy (Vice-Com. Perkins) and Myrtle having challenged the club for the pennants in second, third and fourth classes, a race was appointed for Tuesday, August 22. Gem and Fairy in second and third class took the pennants, no competitors appearing. In third class three yachts came to the line. Corsair was barred, having on board those not belonging to any club, against the Corinthian rules in force. Course 5½ miles, wind light from southeast, then baffling. Judges, J. H. Conant, Peleg Aborn and C. B. Churchill aboard Commodore Lambert's sloop Anna. Result as follows, Myrtle taking the pennant on time:

FOURTH CLASS-CENTERBOARDS

	Length.	Actual.	Cor.
Myrtle, C. H. Poor et al	19 06	1 37 55	1 15 53

THE CRUISING CLUB.—The officers of this (London, England) club have decided to offer a prize to such member of the club as shall, in the opinion of the officers, have carried out the most enterprising, skilful and successful cruise of the season of 1882. In awarding the prize, regard will be had to the nature, size and accommodation of the yacht, boat or canoe, in which the cruise shall have been carried out, the method of camping or sleeping out, etc., so as to give an equal chance to the owners of small and large craft. Competitors must send in accounts of their cruises to the rear-commodore, signed with their names, before the 1st November, 1882, and the winning cruise will be published as such in *Hunt's Magazine*.

SAGITTA.—The collision between this sloop and the schooner Varema while working out of New Bedford harbor in company with the New York Y. C. fleet has not been correctly reported. Both were on starboard tack, the Sagitta leading and holding a closer wind. Varema overtook the sloop, and finding she could not weather, attempted to run her lee to take, poking her jibboom through Sagitta's mainsail, and causing other damage necessitating a vexatious delay for repairs. It is altogether too common for large vessels to ignore the rights of smaller yachts, in the belief that the latter will keep clear rather than risk collision. The rule of the road should be strictly observed as a matter of pride, to say nothing of the law. Too many skippers lightly assume the responsibility of disregarding the rules to save a little trouble. Ordinary consideration and courtesy should prompt large yachts to go through the lee of small ones, unless at undue risk of sacrifice to themselves.

SWEEPSTAKES.—A sweepstakes was sailed in the bay last Thursday between three shifting ballast boats, Mimic, Mistake and Mary Keegan, all about 28ft. long. Entrance fee $30. No restriction as to ballast or housing out; lower sails only. Flying start off Frank Bates' pier, South Brooklyn. Course: around Robbin's Reef buoy, thence around stakeboat off Coney Island point and home, sail over twice, twenty miles. Time of race limited to 6 hours. Wind light from southwest. Mistake took the lead, finished first round at 5:44 with Mimic second at 5:57:40 and Keegan third at 6:15:10. The latter withdrew after fouling the mark and was towed home to her moorings up the Hudson. Mimic finally gave up and the clinker of "the judges" made it 3825, too late to make it a race, so the match will be resailed. Judges, Peter O'Brien and Chas. E. Vaughn.

HERRESHOFF'S LATEST.—We have in a previous edition given a description of the new Permalia, one of the Herreshoff high speeds, built for Mr. Mark Hopkins, of Port Huron. The Toronto *Globe* gives the following concerning a race with a fast lake steamer, Aug. 18. "The much talked of race between the steamer City of Cleveland and the new yacht Permalia took place to-day. The run was made from the Star Island house to St. Clair, a distance of about 27 miles, resulting in the Permalia beating the steamer nearly half a mile. The yacht is a grand success throughout, both in speed and comfort. There are prospects of another race next Thursday, on the down trip of the Cleveland."

ANNASONA.—Should this famous 40-ton cutter pay us a visit next year, we know only two yachts likely to give her a good match under fair conditions, the Fannie in smooth water or the Mischief in average weather. The bumpy water the cut-or would suit it all to herself. Annasona is 68.45ft. stem to post; 11.9ft. beam and 9.6ft. deep in aft about 10ft. draft, and rates 40 tons Y. R. A. measurement. Says *Bell's Life*: "The Annasona, with a new bowsprit, took the Cowes Town Cup, and proved herself to be undoubtedly the best boat of her rig and size that ever answered to the starting gun. Probably Mr. Hedgeworth may now put his last year's notion into shape, and take her to New York."

HUNT'S YACHT LIST.—We have received a copy of this standard English publication, which will be found of service to all interested in foreign yachting. The volume has been much enlarged, its advertising pages alone being quite a study. Colored burgees of home and foreign clubs, a list of yachts, with owners, builders, colors, clubs, etc., and various useful information printed in handy form, make up a very useful book of reference. Published by Hunt & Co., 119 Church street, London. Price, six shillings.

STEERS.—The *London Field* republishes a letter from Anne Steers, which first appeared in its columns in 1870, stating that George Steers, her brother, and the builder of the schooner America, was born in Devonshire, and learned his trade as shipwright in England before emigrating to America. It seems more than likely that Steers was following in the American model his early notable conceptions, the ideas imbibed in younger days while in England, where the "wave-line theory" of Scott Russell was being actively discussed in ship-building circles.

INDEPENDENT Y. C.—The club sailed a match in Newburyport harbor, August 21. Venus, Wm. McKenzie, of Gloucester, won $30 in first class, course 12 miles, time 2:40. In second class Carrie May, John Goodwin, of Salisbury, won $20; course 12 miles, time 2:49. Yankee Maid, Moody Bros., won $15 in third class; course 8 miles, time 1:51. In fourth class the purse of $10 went to Carrie H., John Rhodagrass; course 8 miles, time 1:57.

CUTTER SOLD.—The cutter Nellie Burket, now on a cruise East, has been sold to Thos. Wilbur and others, of Boston, for $1,200. Her dimenstons are as follows: 39ft. over all, 33ft. water line, 11ft. beam, 7ft. 6in. draft.

ROYAL NOVA SCOTIA.—Subscription to outport members has been fixed at $3. J. B. Crowe, sloop Guinever, Boston, has been elected a member. Mr. Crowe is now residing in Lunenburg, N. S.

PROTEST DECIDED.—In Hull regatta, August 16, in the matter of protest by Inez against Charlotte in fourth-class yachts, Inez failed to appear, and second prize was awarded to Charlotte.

LLOYD'S.—We have received first supplement to the 1882 "Register," giving particulars and corrections of a number of yachts, and changes in name and rig.

Answers to Correspondents.

INSECTS, Indianapolis.—For your museum use corrosive sublimate as an insect preventive.

A. F. B., Clear Creek, Neb.—You may procure the wads by writing to any of the dealers in sportsmen's supplies advertising in our columns.

F. H. L., Rock Hill, S. C.—The choice between the guns you mention is much a matter of individual taste. Each of them we believe to be a reliable and satisfactory arm.

J. M. A., Chicago, Ill.—1. Go to Yankton, Dak., there consult the local sportsmen, and you will readily find the right place to pitch your camp. 2. For quail use No. 9 or 10 shot.

F. W. W., Montrose, Pa.—What is meant by the expression, "24 inches high at shoulder, standard measure?" Ans. 12 inches to the foot, with no allowance in favor of a prejudiced owner.

Z. T., Topeka, Kan.—Please give the address of Mr. Chas. E. Shaw, owner of the mastiff Turk. Ans. Mr. Shaw's address is Chilton, Mass. He is not the owner of Turk. Mr. W. H. Lee, of Boston, Mass., owns him.

C. H. B., Lowell, Mass.—To increase the attractiveness of your pond and to lure the wild fowl, should advise you to try the wild rice. Seed may be had of Chas. Gilchrist, Port Hope, Ont., and the fall is proper season for sowing it.

WYANOAK, Westboro, Wis.—1. Consult the book "Florida for Tourists, Invalids and Settlers," by Geo. M. Barbour. Published by D. Appleton & Co., New York. 2. For Florida map procure Althorp's; price, $1.50; for sale by C. Drew, Jacksonville, Fla.

D. P. A. Jr., Ridgefield, Conn.—Where can I buy and what will be the average price of colored pictures of hunting, fishing, dogs, horses and sports? Ans. Send to Currier & Ives, 115 Nassau St., for their catalogues. Pictures range in size from 18x17 to 25x38, and cost from 20 cents to $3 each.

T. M., Brooklyn.—I have three rods, one of lance wood, one of split bamboo, and one of cane, which have not been used for a number of years. I would like to know what I should do to them to prevent their breaking, which I believe will happen the first time they are used, on account of their dryness. Ans. The cane rod may break, but we do not think the others will. If the ferules are loose take them to a rod maker. If not, then place them in the cellar or other damp place for a week or two. The varnish on the rods has probably kept them from drying too much. The ordinary Southern cane, when left in a natural state, without varnish, will dry sometimes in one season so as to become very brittle.

E. G. D., Providence, R. I.—1. How late can one go the Adirondacks and yet enjoy good fishing and hunting? 2. Can you give me the names of a few good trustworthy guides who can be depended upon? Ans. 1. The best rifle to take there? I have in mind a Winchester .38. Will that do for accuracy and penetration? 4. How much ammunition will be required for a stay of two or three months? Ans. 1. It depends upon the season. The woods are usually best in October. Trout are out of season then. 2. Guides are local, and if we knew where you were going we might answer. 3. Yes, unless you wish to hunt bears. Then take a 44 or 45. 4. That depends on how much shooting you want to do. If you shoot small game with a rifle you will need more than if you only kill what deer you want. You can best judge of the amount needed.

GOLD PENS.

Pencils, Holders, Cases, Etc.

THE CALLI-GRAPHIC PEN.

A GOLD PEN and RUBBER HOLDER, containing ink for several days' writing. Can be carried in the pocket. Always ready for use. A luxury to persons who care to preserve their individuality in writing.

Price, $1.25.

TARRANT'S SELTZER APERIENT

Fighting Fire with Fire. This may be a good policy on a blazing prairie, but it will not answer with the fevered human system. Irritating medicines exasperate and intensify all complaints of the stomach or the bowels. Never take a drastic evacuant for indigestion or constipation. Administer instead TARRANT'S SELTZER APERIENT, which is at once a febrifuge, a cathartic and an invigorant, and has a soothing and healing effect upon the disordered viscera.

The Colt Club Gun.

It should be remembered that while we are the chief distributors of the regular Colt Guns, we are sole agents in New York for the Colt Club Guns. The marvelous performance of these guns in pigeon and glass ball trap shooting is so well known that no word of commendation is necessary. Every genuine Colt Club Gun has the rubber heel plate with the words "The Club Gun" around a circle, within which appears the rampant colt beautifully embossed. We are also agents for the new Harrington & Richardson Hammerless Guns, which at about half the cost surpass all imported hammerless guns. Address

P. O. Box 1114. H. & D. FOLSOM, 15 Murray St., New York.

The Maynard Rifles and Shot Guns.
NEW OFF-HAND TARGET RIFLE, MODEL OF 1881.
PRICES REDUCED.

WITH PISTOL GRIP STOCK, TIP STOCK, AND SWISS BUTT PLATE.
For Hunting and Target Practice at all ranges, the "MAYNARD" more completely supplies the wants of Hunters and Sportsmen generally, than any other Rifle in the world, as many barrels can be used on one stock; and for accuracy, convenience, durability and safety, is not excelled. Send for Illustrated Catalogue describing the new attachment for using rim and centre-fire ammunition.
MASS. ARMS COMPANY, Chicopee Falls, Mass.

The Parker Gun.

Again Victorious at the late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Show Rooms: 97 CHAMBERS ST., N. Y.

"Challenge" Brand	167.40
"Paragon" Brand	229.00

10-bores extra.....$10.80

TERMS:

A Draft in full with the order.

NO AGENTS.

IMPORT DIRECT FROM

PIONEER WORKS, BIRMINGHAM, ENGLAND,

And also No. 1 Conduit St., Regent St., W., London. One minute from Regent Circus.

For the above sums the guns described can be placed on the cars in New York, all paid, in eight weeks from order reaching us. A comparison of these prices with those charged in the gun stores for really fine English guns, of first-class quality, will result in your ordering direct from the manufactory.

It has come to our knowledge that common guns are being sold in the States bearing our name. As we make only fine guns, genuine "Tolley" guns have engraved on the rib:

"J. & W. TOLLEY, MAKERS, ST. MARY'S SQUARE, BIRMINGHAM."

WILLIAM READ & SONS,

13 FANEUIL HALL SQUARE, BOSTON,

DEALERS IN FINE GUNS.

AGENTS FOR

W. & C. SCOTT & SON.

Furnished by us to Capt. Bogardus who for years has used none other than the SCOTT GUN, and won with it the championship of the World.

None genuine unless bearing the full address, W. & C. SCOTT & SON.

Their New Gun.

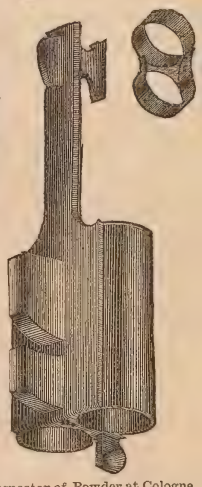
$85.00 With Latest Improvements.

Description.—Top snap, double bolt, extension rib, pistol stock, rebounding locks, snap fore stock, large solid strikers, low hammers when cocked, horn butt plate, Damascus barrels, choke bored. 20-bores, 5½ to 6lbs.; 16-bores, 6½ to 7lbs.; 12-bores, 7 to 9lbs.; 10-bores, 8 to 11lbs.

To meet a want for a really fine, good breech-loader at a medium cost, Messrs. Scott & Son have now put this gun into the market at above price (a great reduction from the figure such quality has hitherto been offered at), and the demand thus far shows that it is thoroughly appreciated.

Every Gun Warranted in Shooting and Sent on Trial.

Scott's Hammerless, with Crystal Apertures and Block Safety Attachmemt, All Sizes, Constantly in Stock.



If to be sent C. O. D. on trial, inclose in every case $3.00 as a deposit for expressage in case gun is not taken, which, if too much, we will return the difference. If you send whole amount with order, we will include at no charge, a waterproof gun case; and if gun does not suit on receipt, you can exchange, or we will return your money on return of gun, less expressage. Hence there is no risk in inclosing whole amount.

SEND STAMP FOR OUR GUN CIRCULARS AND SECOND-HAND LIST.

SOMETHING NEW!

The Pieper "Diana" Gun.

This is the only gun of European manufacture made entirely by machinery. The system is entirely new, and actual tests have shown that for accuracy and strength it has no superior.

The reinforce lumps and bolt loop are of one piece of wrought steel. The tubes are finished to gauge and are put together *without heat* so that they are perfectly straight and always shoot to center. This is only found in very high cost guns made on the ordinary system, as the best barrel filers are necessary. The locks are finely finished and of the best steel, and all the joints are closely fitted; all the parts are interchangable.

A public trial was made in Cleve, Prussia, in August, 1881, to which the best continental makers sent their finest guns. The trial was for closeness and penetration. 4 is excellent, 3 is good, 2 is fair, 1 ordinary. The gun of Mr. Roedel, of Prague, was made on the Pieper system. The result was as follows:

	30yds.	45yds.	60yds. Total.
Size of shot..	2 4 6 8	2 4 6 8	2 4 6 8
H. Pieper, Liege	3 3 4 4	4 4 4 3	4 4 4 4—45
Roedel, Prague	3 3 3 3	4 4 4 4	3 3 4 4—42
W.W.Greener, Birmingham	4 4 4 3	4 4 3 3	3 2 3 3—40
N. Bodsen, Liege	3 4 2 4	4 3 3 4	1 1 3 1—38
C. Bartels, Wiesbaden	3 3 3 4	4 3 4 4	1 3 2 3—37
Sackreuter, Frankfort	2 3 3 4	4 4 3 3	3 3 1 3—36
Camphausen, Crefeld	1 4 2 3	3 3 4 2	3 3 3 3—31

	30yds.	45yds.	60yds. Total.
Size of shot..	2 4 6 8	2 4 6 8	2 4 6 8
A. Jannsen, Liege	2 3 3 3	4 4 3 3	1 3 2 1—32
Beermann, Munster	3 2 1 2	4 4 2 4	2 2 3 2—31
Brunn, Birmingham	3 3 2 2	3 3 4 4	2 3 2 3—30
Witte, Zutphen	3 4 2 3	1 1 1 1	3 2 3 2—27
H. Jansen, Wesel	1 2 1 3	4 3 2 2	2 1 2 3—25
Heuse-Lemoine, Nessouvaux	2 3 1 4	1 2 3 2	1 2 2 2—25
Cordes, Bremerhaven	2 1 1 1	3 3 2 1	1 2 2 1—20

Attested by the Jury, Klimm, Royal Inspector of Forests, Keyssler, Royal Inspector of Forests, Heise, Inspector of Powder at Cologne, G. Hahn, record keeper. It will be noticed that the Pieper guns are especially effective at long range.

Mr. H. Pieper has appointed the undersigned sole agent for the United States and Canada, and offers the goods at prices far below their real worth, in order to speedily introduce them into this market.

PRICE LIST.

The Kennel.

Miscellaneous.

FOR SALE.—A choice lot of black breasted red game fowls.

A good and well-trained rabbit beagle, 3 yrs. old. A first-class bull-terrier bitch 3½ yrs old.

Address FRANK ARMSTRONG, 1096 Dean street, Brooklyn. aug31,2t

FINE SETTERS FOR SALE CHEAP.—A PAIR of Irish setter bitch pups, five months old, having the blood of the champion Rodman's Dash, Plunket and Moya, and one beautiful setter bitch, three years old. W. B. PEET, Station M., N. Y. City. aug31,2t

Champion "Fire Fly" in Whelp.

For Sale.—The well known Irish red setter bitch champion Fire Fly (Rufus ex Friend), winner of many prizes and a great beauty, thoroughly broken and noted for her speed, nose and perfect style when at work, and a perfect retriever. She is the dam of many very handsome field dogs by Elcho. She is now in season, and will be bred to my grand stud dog Larry (Elcho ex Rose), and sold for $140, as I shall raise no puppies this year. This is a great bargain, as her puppies are in demand at big prices, and this litter will sell for double my price. Sold for no fault. Address W. H. PIERCE, Peekskill, N. Y. aug31,1t

BLACK COCKER.—JESSIE, V.H.C. 1881. FULL pedigree; $25. Six pups, ten weeks old, $5 each; or bitch and pups, $30. Address DAVID C. FRANK, 873 Broadway, N. Y. City. aug31,1t

Discontinuation

—OF—

"THE BLUE STAR KENNEL,"

—OR—

THE COCKER SPANIEL KENNEL,

FRANKLIN, N. Y.,

As a Public Kennel.

Health and increasing private business compels that on and after November 1st, 1882, the above kennel will be closed as a public kennel. Present kennel stock must be reduced, and after the above date a private kennel of four or five choice specimens of this breed will only be kept. Private breeders, public breeding kennels and sportsmen will find this a chance rarely offered to secure extra grand cocker bitches with best of pedigrees, both broken, and grown and unbroken, at a price below actual value. Correspondents enclosing stamp will get printed pedigrees and prices of stock offered as per above. Address M. P. McKOON, Proprietor Franklin, N. Y. aug31,tf

Richmond County Training Kennel.

Dogs carefully trained for all purposes. Live quail kept in stock. Gentleness and kindness are my methods. Terms reasonable. ISAAC W. EMMONS, Proprietor, New Dorp, Staten Island, N. Y. june22,tf

WANTED.—TWO SETTERS OR POINTERS TO give daily field practice from October 1st to January 1st. I guarantee to take or handle but two dogs in a season. Twenty-five years experience. Best of reference given. Address G. H. BURNHAM, Eastford Conn. july27,6t

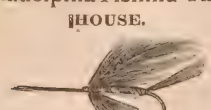
FREE.

5 pictures of noted dogs, specimen pedigrees, and recipe for cure of mange in dogs or scratches in horses, free for ten cents in stamps. Spike collar and book, $2. 100 printed envelopes, post paid, 75c. E. & C. VON CULIN,

aug10,tf Delaware City, Del.

DRUID, DASH III. AND LEICESTER STOCK, dog and bitch, six months old, black and white, with ticking, are very handsome and will make something fine; carry heads well up. Will sell cheap if taken at once.

Address J. A. ROCKWOOD,



aug17,3t West Medford, Mass.

FOR SALE.—SIX SETTER PUPS, (THREE dogs and three sluts), dam the fine red Irish setter Lady Suffolk, from imported stock. Sire the noted setter Bob. Two of the dog pups are perfect matches. The above pups will be sold at reasonable prices. Apply personally or by letter to JAMES HAWKINS, 29 Congress st., Newark, N. J. aug31,1t

FOR SALE.—PART OF A LITTER OF WELLbred setters, whelped July 5, sire Mr. E. E. Hardy's Roll (Dash III.-Countess Ada), dam Clarine, who is litter sister to Pollux, winner of the Eastern Field Trials Derby, 1881. Also part of a litter of cocker spaniels, whelped on the same date, by imported Conquest out of J. Kirby Perine's Nell. Address FRED. H. HOE, Tarrytown, N. Y. aug24,4t

THE ANGLER'S

AUTOMATIC REEL.

MANUFACTURED BY

LOOMIS, PLUMB & CO.,

SYRACUSE, N. Y.

The following letter is from Dr. Geo. F. Gale, of Brattleboro, Vt.:

GENTLEMEN:—Have just returned from Moosehead Lake, Me. I cannot express the degree of satisfaction and pleasure I have found in the use of your automatic reel. Would not exchange it for all the reels I ever saw for fly fishing. Am confident I saved many fish that would have been lost with any other reel, particularly one large trout weighing three and one-half pounds which I played fifty minutes before he would come to the net. He fought hard and long, making many furious spurts from and towards the canoe, but it made no difference. I kept my finger on the brake and it was simply impossible to get a slack line. Mr. Childs, who fished with me once, has one of your reels, says that nothing would induce him to go back to the old crank reel. Yours truly,

GEO. F. GALE.

THE CLIMAX PATENT GUN CLEANER

is the most practical cleaner and oiler for breech-loading arms ever invented.

It operates on an entirely new principle, and it is astonishing how quick and well it will clean and oil a gun. Each cleaner is packed in a neat box with full directions for use, and will be sent to any address, postage paid, on receipt of $1.50.

Illustrated Circular sent free on application.

In ordering give calibre of gun. All orders and inquiries to be addressed

TIM POND AND THE SEVEN PONDS.

The best trout fishing in Maine. The mountain and Lake scenery is unsurpassed by any in New England. The buckboard road has been repaired and improved, new cabins built, and everything put in first-class order. Good accommodations to all those seeking rest, recreation and pleasure. Round trip excursion tickets will be sold at low rates to Smith's Farm, in Eustis, and buckboard teams in waiting to carry passengers and baggage from farm to ponds. Good board, camps, blankets and boats, and guides if wanted. Terms reasonable. Everything in readiness.

Address KENNEDY SMITH, Eustis, Maine.

Hotels and Resorts for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1. The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

A. B. LEET, Gen'l Pass'r Agent,
Grand Rapids, Mich.

Chesapeake & Ohio R'y.

THE ROUTE of the SPORTSMAN and ANGLER TO THE BEST HUNTING AND FISHING GROUNDS OF VIRGINIA AND WEST VIRGINIA,

Comprising those of Central and Piedmont Virginia Blue Ridge Mountains, Valley of Virginia, Alleghany Mountains, Greenbrier and New Rivers, Kenawha Valley, and including in their varieties of game and fish, deer, bear, wild turkeys, wild duck, grouse, quail, snipe, woodcock, mountain trout, bass, pike, pickerel, etc.

Guns, fishing tackle and one dog for each sportsman carried free.

THE ROUTE OF THE TOURIST,

through the most beautiful and picturesque scenery of the Virginia Mountains to the White Sulphur Springs and other famous summer resorts.

The C. & O. R'y is reached by rail at Huntington, W. Va., from the West, Northwest and Southwest; at Charlottesville, V., from the North and East, and at Richmond, Va., from the South.

The completion of the Peninsular Extension in the summer of 1881 affords

THE ONLY ALL RAIL ROUTE TO THE "YORKTOWN CENTENNIAL,"

and establishes a continuous rail line, via Richmond, Va., and Huntington, W. V., between the mouth of Chesapeake Bay and the Pacific Ocean.

Kay's Chip

—OR—

EXPANSIVE SHOT CONCENTRATOR,

With Perforated Case.

In our latest device for concentrating shot, we have substituted a special wire for expansion, where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.

By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device balls the shot by the expansion of the wire after leaving the gun.

100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.

Address all orders to A. B. KAY & CO., Newark, N. J.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE.

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg, "Sea-Shooting."—FFg, and FFFg. The Fg, for long-range rifle shooting, the FFg, and FFFg, for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg, coarse, FFFg, fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

NOTWITHSTANDING THAT THE FOREST AND STREAM has been permanently enlarged to twenty-eight pages, the subscription price remains the same as before.

OUR AMERICAN TEAM.

THE present week will close the practice of the American Team, and by the end of next week the match will have been decided. It is difficult to predict a victory for either side. There are grave points to be criticised in the make-up of the home team, in its methods of practice, in its choice of arms, and in its preparation for the work in hand. The prospect does not become more rosy as the date of the match draws near. Our team does not seem to pull well together. The scores run up and down in a jagged way, and the top man of to-day is the bottom man to-morrow. This means that there is a great deal of independent practice going on; that the men are not holding in with one another, and while each is no doubt doing his best right along, the team system is entirely wanting.

It is doubtful whether or no the team system can be applied with this team, and that after all we will have to drop back to the English system of allowing each man to do his best, and calling the aggregation of the scores a team total. That is not the way that previous American victories have been won, and it will not improve the American chances if we are to throw aside our old winning habit and adopt a much cruder system. The first requisite for a well organized team, one that can work together, is a fixed point of departure. They must hold alike. It is of no use to have an elaborate table of the variations between the several rifles, if the men do not use the weapons in the same way at each shot. In the small-bore matches, the holding was perfect. It was "dead on" all the time, and this being known, one rifleman could follow another with certainty when the proper allowances had been made. The back position enabled all this to be done with ease, the men could hold their rifles with vise-like accuracy shot after shot. One rifleman we recall who was excellent in many ways, was left off the successive American teams simply because of his bad habits of "holding for wind" to various points of the target instead of making the allowance on his sights and wind gauge. Though individually he was an excellent marksman, he could not be safely trusted as a team man, and did not shoot on any of the teams.

In the make up of our International Military team we fail to see that there is the fixed point from which to make calculations. The men do not hold steady—the prone position is not now and never was a steady position. There is a certain amount of snap shooting in it. That is, the foresight of the rifle goes wavering about over the target face and then at the right instant the trigger is pulled. Some riflemen are more steady than others, but there is not that fixed holding on the bull which was a feature of our American team shooting from the back position. There are difficulties connected with the taking of the back position with military rifles, but they are not insurmountable. Many excellent marksmen use it in matches similar in condition to the International match. The committee on the organization of the team should have recognized the importance of position in carrying out a team discipline, and should have made it a requisite of admission to the team that the back position should be used. A few months' practice would have enabled every member of the team to have shot from the back position at the second stage, but now it is too late to change. The match must be fought through with the men as they now shoot. We do not see that much can be done in the way of team drill under these conditions. The practice thus far of the men may not be a good criterion, as the shooting is yet nothing more than an active rivalry for place on the team. In our next issue we shall be able to give the record of the men as chosen. The rivalry should then have ceased, and if the scores do not show a marked improvement we may conclude that there is no basis for Col. Bodine to establish team practice as contradistinguished from the mere practicing upon the same day and over the same ranges of a company of shooters. Without the application of this team drill it is not unlikely that we have seen the best our team is capable of, unless perchance the spur of the actual match shall lead to some unexpected displays, but this pressure may bring unsteadiness and poor scores instead of firmness and fine shooting.

We should have been much more easy as to the result if we had noted the application of the team principle, had seen the men catch step together and move along, each getting aid from and giving assistance to his comrades. If that plan can be carried out the final team should have been made up long ago, if not, then the present desultory practice is about all that can be done.

SPORTSMEN'S OUTFITS.—A full directory of the sportsmen's goods trade is comprised in our advertising columns. The firms there represented are well established business houses, most of them of long standing, and all reputable and reliable. The sportsman who is in need of any article to complete his outfit, from a gun to a box of wads, or from a rod to a fish hook, may obtain it by communicating with these dealers. It is, of course, considered the more satisfactory way to purchase in person what is needed, especially if the article be a fine gun or rod involving the outlay of a considerable sum of money. But this is not a necessity. The firms to which we refer annually send out in response to mail orders tens of thousands of dollars' worth of goods, and it is a significant fact that dissatisfaction on the part of the purchaser is the very rare exception. We know of no other class of goods in which the purchaser at a distance can be so sure of receiving fair dealing as he is when ordering a shooting or angling outfit, or any part of one from these firms. An important rule to be observed by the party giving a mail order is to be as explicit as possible in his directions and explanations of what he wants. This will obviate possible misunderstanding and greatly assist the dealer in supplying the right article. In nine cases out of ten where the purchaser is not suited, the fault lies with himself for having been vague in his instructions.

AN ACTIVE FISH AND GAME CLUB.—Chagrin Falls, Ohio, has a fish and game club which does not confine its attention to the mere killing and capturing of fur, fin and feather, but is wise enough to devote a portion of its energies to keeping up the supply for future needs. In another column we print a letter from the secretary of the club, Mr. J. J. Stranahan, on their success in the culture of black bass, and we learn that now they have young bass to distribute, thus proving the success of the experiment of introducing them to the waters of their ponds. They will now attempt the propagation of the finer species of catfish. It is sincerely to be hoped that the public will afford the club all the encouragement and assistance necessary to continue this excellent work.

FORMING LOCAL CLUBS.

WE sometime ago took occasion to refer to the method of work adopted by the Michigan Sportsmen's Association. The work is briefly this: The association sends out an agent, who visits the several towns in a given district, talks with the residents, invites them to meet him, and when they have come together explains to them the object of the association and the purpose of the game laws. He is as a rule successful in arousing sufficient interest to insure in each village thus visited the formation of a game club, which takes its stand on the side of game protection. The present representative of the association, who is now doing such work on the northern shore, is Hon. Cyrus W. Higby, of Jackson. Mr. Mershon, the secretary of the association, who is now in this city, tells us that the Michigan plan is working well, and good results are following Mr. Higby's labors.

This is certainly one of the most efficient methods of inducing among the people an appreciation of just what game protection is and what it is not. The spirit and intent of the restrictions imposed on the capture of fish and game are largely misconstrued by the general public, particularly in the frontier sections of the country. Game laws are regarded as enacted in the interest of a few, and are thought to be an infringement of the rights of residents and land owners. Obviously, then, in an intelligent scheme of game protection the first essential is to remove this misconception, and to secure that appreciation of the justice of the game laws, which a clear understanding of them is sure to effect. When this has been accomplished the rest is a comparatively simple matter. We shall watch with interest the progress of the Michigan Association, because we believe that they have adopted the right course.

SEA SALMON OR LAND-LOCKED?—We were recently shown a salmon taken by Mr. E. A. Green, of Newark, N. J., from the Marguerite, which the fishermen of the Saguenay region declared to be a "winninish." The fish was brought to our office for identification by that enthusiastic angler, Mr. T. S. Morrell, of Newark. It was apparently a salmon of about six pounds weight, but its extremely pointed snout gave it a peculiar appearance, and its coloring was some like that of a land-locked salmon. After a careful diagnosis we incline to think it merely an abnormal specimen of *Salmo salar*. The "winninish" is not now recognized as distinct from the land-locked salmon, and the latter fish is structurally a *S. salar* whose habits have been changed, and a slight change in coloration has followed. In other words, it is merely a variety and not a distinct species. Dr. Ferber has also brought us two small land-locked salmon from Loch Lomond, twelve miles from St. John's, N. B.

SEA TURTLES NEAR NEW YORK.—A few weeks ago a friend told us in conversation that many green turtles were caught near Sandy Hook this season. We have known of an occasional one being taken on Long Island, and even in Great South Bay, but not of frequent occurrence enough to be considered worth more than a passing notice as stragglers from the Gulf Stream, and we thought no more of what our friend said. Last Monday while Mr. Francis Endicott, the well-known president of the Staten Island Sportsman's Club, took three of them while fishing for striped bass from the lower end of the island. The turtles, which were small ones, of about eight or ten pounds weight, were taken on the shore of Staten Island and were in good order. Now that we know of this fact, we are prepared to believe that they are of much more frequent occurrence than is generally supposed.

THE MOODUS DOG SWINDLER.—We understand that the Moodus dog swindler, who formerly advertised under the names of Howard, Fowler, Chester, Gleason, etc., is again at his tricks. He has been advertising from Middletown, Conn., under the name C. E. Pollard, and we understand that another *alias* is "Rev. S. C. Fowler." This fellow—whatever his real name may be—is an arrant rascal. If any of his victims care to take steps to punish him, we can give them some additional information about him.

BOSTON PRESS SHOOT.—The annual shoot of the Boston Press Rifle Association will be held at Walnut Hill, September 28. The match promises to be an interesting one. Representatives will be on hand from the *Herald*, *Globe*, *Journal*, *Star*, *Post*, *Transcript* and *Advertiser*. Last year forty-six newspaper scribes shot at the targets. This year it is probable that there will be seventy-five entries, each man eager to get a "beat" on all the other papers.

ADIRONDACK SURVEY NOTES.

VIII.—A STATE PARK—RANDOM SHOTS.

UNLESS something is done by the State of New York to preserve the grand old woods as a public park, its glory will depart within the next ten years, and it will become worthless for purposes of recreation or as a means of supplying water to our rivers and canals. The lumbermen and bark peelers are fast destroying its value for these purposes, and the grand system of mountains, whose heavily wooded sides prevent the sun from evaporating the rainfall, will become bleak and barren rock. All along the Hudson this is the case already, and no new growth takes the place of the old forest whenever it has been entirely removed, the ground being too dry to favor its growth, and the unsightly stumps remain only to mark what was once good timber-growing land. The science of forestry, so well understood and practiced in some parts of Europe, seems to have been entirely neglected here, and men cut and slash by wholesale, leaving the future to take care of itself, so that they reap one harvest.

Thirty years ago there was plenty of water in the Hudson below Troy at all seasons, and sail vessels could tack at will in most places above the city of Hudson. Now a steamboat channel is all that remains in midsummer, and this is so scant that the river is lined with stone dykes to keep the water in the channel. Few are so ignorant to-day as not to know that the clearing off of timber tends to dry up the springs which flourished on the shaded, mossy sides of hills where rain and snow-fall was protected from the sun, hence it needs no elaborate argument to show that this region, which is the source of the Hudson and its main branch, the Mohawk, as well as of streams flowing into Lake Champlain and the St. Lawrence, and which is of no value whatever as an agricultural district, should be preserved as a public park. The practice of selling land to lumbermen, who make a first payment and then skin off the timber and decline to pay taxes on it, thereby allowing it to revert to the State, should be stopped at once, unless our legislators are willing to see the water highways closed. The State does not know, and cannot learn until the survey is completed, how much land it owns here, or where it is located, and unscrupulous men take advantage of the fact to cut timber on lands not their own. In no other country would this be tolerated for a moment.

The preservation of these forests is not alone a question concerning the sportsmen and others seeking recreation, it is one which affects the commerce, as well as the health of the whole people of the State.

There are still places enough in the Adirondacks where one can go and not find cockney hotels and people whom it is desirable to avoid, if he will leave the beaten track, places where he will find good woodland fare and hospitality, where no telegraph brings news of hourly stock quotations on Wall street, or where he will be oppressed with Saratoga style. Why those who desire these things come into the woods, which should be sacred to silence and blue flannel, is a wonder; they certainly are not in sympathy with the spirit of the wilderness, and seem as much out of place as our old friend "Leatherstocking" would be in a drawing room. Old Natty would be astonished at them, and like me would suggest that their "gifts were not for the woods." But they don't respect the honest old man, and it is a question if many of them know who he was. One man talks of laying out a race course in the woods. O, Ichabod, Ichabod!

It was an evil day when the level of some of the lakes was raised for the ostensible purpose of affording more water for the canals, but partly to facilitate the driving of logs down the streams, and a line of dead timber disfigures many as beautiful sheets of water as are to found on this planet, and which it will take a century to restore to their former comeliness. The raising of the water has injuriously affected the fishing by destroying breeding grounds which are not to be found along the new shores with their decaying vegetation and mold-covered bottoms.

To a man who loves the woods and nature in her wildest forms, who loves to look upon a landscape and imagine that no human eye has seen it before, or at least not an eye belonging to a white man, these things are all a profanation of the temple. The steamboats which go puffing up and down the lakes from Blue Mountain to Raquette are bad enough, but the slashing of timber and the damming of the lakes is worse. A lover of the woods goes there to escape civilization with its railroads, telegraphs and its money-making ways, and when he gets a glimpse of any of the birds or beasts which are ranging in his sight without being aware of his presence, he loves to note their movements and habits. It gives him a feeling of satisfaction which the gilded youth who needs the constant support of all the appliances of civilization, including hourly reports of the stock market, has not the faintest conception of. I readily fall into sympathy with the men who have visited the woods for the past thirty or forty years, and who have come from a love of the vast solitudes which railroads and good wagon roads are now rendering too easy of access to the ordinary tourist, and who are finding that the charms of their old haunts, *their* woods are gone. To them I will whisper that there are still places where they can leave the vanities of the world behind them; where the gilded youth dare not yet venture, and which even the old guides do not know. This may seem to be a strange statement, but this very year Mr. Colvin has found ponds which his oldest and keenest woodsmen, who hunt and trap in that district all winter and guide in summer, have been compelled to admit were "new water." This will all be announced in due time and in the regular manner, but leaving them out for the present, there are other places where the tourist does not go.

The guides take sight-seers by the main water courses, which are the easiest to travel, and these are so distributed as to make aquatic highways in several directions almost across the woods. Between these will be found comparatively unfrequented tracts containing small lakes, which the guides know and few beside themselves visit. Here one can camp without fear of interruption, and will see none except it be some one having his own tastes and habits, who will bid him "good day," and perhaps accept an invitation to halt, eat a trout or a venison steak, smoke a pipe and then pass on. Such chance meetings often ripen into future acquaintance in the case of two persons for whom the woods were made, and neither feels that the other is intruding, which all lovers of the woods feel in the case of an invasion of tourists who merely "do" the woods because it is the fashion.

I have spoken of the desirability of getting beyond all reach of civilization and its messengers, the mail and the telegraph, and to some this may seem carrying it farther than they would wish to go. I can best explain my desires on this point by quoting another. I once went into the woods with a gentleman having large commercial relations and great interests at stake. We were to be gone some time, and a man in his employ was to bring in some provisions at the end of the first week. The instructions to the latter were: "When you come in don't bring either newspapers, letters or messages, except on family matters. I am on a vacation of four weeks, and I don't propose to be disturbed by business. Even if banks fail and I am financially ruined I don't want to know it, and I have no wish to be bothered with it. When I come out I will resume business." He had the correct view of a vacation in the woods, and cast off his business for the time and enjoyed himself as he could not have done had he allowed his worldly cares to annoy him. He was a man who could endure his own society and did not need to carry his commercial relations with him. How few can do this! And how few have enough in them to interest themselves. Byron's lines on solitude are so to the point that I must quote:

> To sit on rocks, to muse o'er flood and fell,
> To slowly trace the forest's shady scene,
> Where things that own not man's dominion dwell,
> And mortal foot hath ne'er or rarely been;
> To climb the trackless mountain all unseen,
> With the wild flock that never needs a fold;
> Alone o'er steeps and foaming falls to lean,
> This is not solitude; 'tis but to hold
> Converse with nature's charms, and view her stores unrolled.
> But midst the crowd, the hum, the shock of men,
> To hear, to see, to feel and to possess,
> And roam along, the world's tired denizen,
> With none who bless us, none whom we can bless;
> Millions of splendor shrinking from distress,
> None that, with kindred consciousness endued,
> If we were not, would seem to smile the less
> Of all that flattered, followed, sought and sued;
> This is to be alone; this, this is solitude.

The few who feel thus will not suffer from lack of the superfluities of civilization and will find more companionship in the hills than in Wall street. F. M.

Editor Forest and Stream:

In your issue of the 24th inst., "F. M." in his sixth article of the "Adirondack Survey Notes" strikes the key note to the protection of game.

The remarks of the different guides, as given by him, on this question, are particularly striking and truthful, and show plainly how the matter is presented to them, and what vile means are resorted to by men who claim to be honorable and law-abiding citizens, outside of the game laws. But the day is near at hand that will brand the "venison thief" (as the FOREST AND STREAM styles him) with the same iron that is applied to the horse thief.

This putting men upon their honor is the true principle, and the man who bribes, or threatens guides, into "crooked" work, not only disgraces himself, but commits treason to his neighbors and all honest sportsmen who wait for the open season. And my experience has been, that the "higher toned" the violator, and the greater claim he made to honor and integrity when at home, the quieter he wants it kept, and the smallest hole is large enough for him to crawl through when he is caught.

The Adirondack survey party of which "F. M." was a member, set a splendid example, and its effect will be lasting. Many of the guides have been trying to do what they knew was right, but were meeting with poor encouragement in many instances from honorable (?) sportsmen. And to have Mr. Colvin's party with them, encouraging them in a practical manner, as well as by good fair argument, it has put new life into them on this question, and the last time I was on the Fulton Chain, they were pretty well prepared to meet those who had a disposition to violate the law; in a manner that if there was any honor in them, would bring it out. I hope every fair-minded sportsman will read Mr. Mather's article mentioned above, and if he has ever been a violator of the game laws, let him size himself up, and meditate upon the honor he has gained or lost in the operation.

Your valuable paper has taken good ground on this question, and its influence is being felt. Already we find many men who in years gone by slayed and killed at all seasons, who now hold up both hands to have the law enforced, and regret what they did in the past; and with help in various directions, we begin to see a decided increase in the deer in the Adirondacks. I hope that when tempted to shoot game out of season, every sportsman will counsel his honor before pulling the trigger. WM. P. DODGE.

PROSPECT, N. Y., Aug. 29.

QUAIL SHOOTING.—From all that we can learn the coming season will be a very fair quail year. Reports of an abundant supply of birds come to us from many quarters, and shooters are generally anticipating good sport.

The Sportsman Tourist.

"PISECO" ON LAKE COMO.

HOMBURG LES BAINS, Prussia, Aug. 14.

Dear Forest and Stream:

When I bade you good-bye last November, and you bade me "bon voyage," I had not an idea that the promise I then made would remain so long unfulfilled; for my previous experience of European life having been confined to the seaports alone, I had but little doubt but that I should be able to contribute considerable to your fish department at the least, and my plans not being definitely made, embraced a little out-door work in the Swiss Mountains, the German Black Forest and the Lochs of Scotland.

But, like many well-laid plans, mine ganged aglee, and a bit of Roman fever in the family last winter assumed the upper hand, and has shaped my subsequent proceedings, until now, it having at last held up raining, and being cold and cheerless as no previous spring and summer have ever been in Europe—at least so all the landlords assure me—I have settled down for rest and recuperation in this most delightful retreat, where I drink the waters, bathe daily in "mineral pine extract" mixture, and, I trust, am getting rid of some of the effects which have followed, very naturally, my many days of wading icy brooks in our home forests, and campings out in Alaska mountains.

A great preventive of too strong prickings of conscience for my broken promise is that, like the needy knife-grinder, "Lord bless you, sir, I've no story to tell," for however rich a stock of data suitable for a journal devoted to art, as is the FOREST AND STREAM to nature, might or may have been accumulated in my wanderings through the galleries and museums of Germany, Italy and Austria, I shrink from making them public, through an inward consciousness that Badaeker, Murray and Harper, with their facts and figures, and a host of itinerary literary tourists, with their vivid flights of imagination, have already so thoroughly exhausted the powers of description that mine would prove but a "twice told tale," and worse, a badly told one, for I fear that I am not romantic.

I brought with me, as you know, my fishing gear, but, wisely counseled, stored it carefully away in Paris last November, and there it has lain until this month; and I have not missed it, nor have I once wished that I had my Parker along. Either or both would have cost more in transportation than all the fish I have seen caught or game killed would pay for. I have seen fishing enough on the banks of the Seine, the Danube, the Rhine, Rhone and Loire, and the wharfs and quays of the Geneva Lake, besides many smaller or less known waters, and as I should judge from personal observation, constantly dotted with patient anglers, all armed with long bamboo poles and with floats. Never have I seen one of these fishermen make any movement which would indicate even a bite.

Only once previous to my arrival here have I made any attempt to fish and but once to hunt. The latter first, as it is a very short story. At Heidelberg a young Englishman, whose acquaintance I made at table d'hote, gave me a glowing account of his sport a few days before, when in the forest near by he had killed two deer. I thought to make an effort, but found obstacles. First I must take out a yearly license to hunt, at I believe 100 marks, the privilege of carrying a gun being expressly included; next to either join with others or else myself hire a sufficient number of men and dogs to range through the preserve and drive deer to me; then, all this being accomplished, to butcher at ten yards' distance any unfortunate animal that might be scared toward me.

In further conversation with this young gentleman, who was rather of the Oxford under-graduate, æsthetic style, I asked, "What dogs were used?" "Why, hunting dogs, to be sure." "Yes, but what kind?" "Oh, I don't know what you Americans call them, but we call them setters." Do you blame me for more than half fancying that if that young man had brought home any venison he had bought it? Or, as we used to express it in Sitka, when a particularly good result had been obtained—or claimed—by an indifferent shot, "He has met an Indian."

My attempt at fishing proceeded to greater length. I actually went. It was at Bellaggio, on the Italian Lake Como. Badaeker describes the trout in the lake as very excellent, and growing to a weight of five and twenty pounds. The head waiter assured me that some very good-sized and fine-flavored trout that we had for dinner, were obtained in the lake, and in the kindest manner accepted a retainer, and agreed to make all arrangements by which I the next day would be enabled to have a good day's fishing. These were to include a suitable boat, bait and gear, and experienced fisherman.

The day dawned showery, just right for fishing, and with high anticipations and accompanied by a couple of young friends, I was at the wharf at the appointed time. There lay the boat, a trim little rowboat, elegantly fitted up, with cushions, awning, curtain, etc., and in a little box in the stern sheets a lot of little gear, just big enough to use in perch or minnow fishing.

It struck me that my friend the boatman had insured himself against fish-soiled cushions, and us against sport. If the Italian language which I made use of was not grammatical, it was vigorous, and produced, evidently, the sought for impression, namely, that we were not so sufficiently verdant as to suppose for an instant that he had any intention of rowing us over any spot where there was the least chance of our capturing any fish that could by any possibility be expected in its dying struggles to shed a scale or drop of blood upon any of his tasteful fixtures; and that a common regular fishing boat, such as the fishermen use, and provided with suitable tackle, would be good enough for us. Surrounding boatmen, not being themselves pecuniarily interested, gave strong backing to my protest, and the old fellow yielded gracefully, and the intimation that the amount of his *buona mano* would depend entirely upon our luck—being limited to a "single franc if unsuccessful, to be raised upon to ten for a five-pound fish, and twenty for a ten-pounder"—started him in a hurry for substitutes.

In an hour we embarked in a great comfortable boat with two rowers, and sheltered by an awning on a frame resembling the cover of one of our western prairie schooners. So comfortable did it all look, and the day had cleared up so pleasantly that lady members of the party, having done the Villa Carlotta, and admired the beautiful grounds and the statuary—which includes a magnificent frieze by Thorwaldsen, and the original "Love and Psyche," worth a fortune, while their owner has to depend upon visitors' fees for an in-

come—joined us, and were very welcome, not only for their society but for the prudence displayed in bringing with them a good stock of sandwiches, with which, less than with fishing, our trip was made enjoyable. It isn't much fun to fish by proxy, and this we had to do, as you may see when I describe the method.

The first process toward getting ready consisted in the attachment to the upper after frame of the awning of an immense wooden reel—immense looked on as a reel, for it was fully fifteen inches in diameter, and in general appearance was more like a log-line reel than like for a fish line. It was provided with a friction brake and stop, and on its barrel was wound four hundred metres of line wire. A leaden weight of about an ounce was attached to the end of this wire, and it was then paid out. At ten metres a loop came in sight to which by means of a toggle another wire ten metres in length, to which a large hook baited with a small fish was attached.

This process was continued until all of the twenty lines were attached, and trolling astern at depths varying from two hundred to ten metres below the surface—a fresh sinker being toggled on between every second and third line, the depths of course dependant greatly upon the speed.

After about an hour thus devoted to getting underway, we began fishing in earnest.

One problem, based upon difficulties which I have at times encountered, when through faults in handling perceptible to my guide alone, I have in Adirondack lakes lost some large fish, presented itself, and I longed for a solution—it was this. Supposing a large fish struck and hooked himself on the outer and deepest hook, how could he, by any of the accepted rules in regard to such matters, be expected to keep up the connection during the period which must necessarily elapse while the fisherman reeled up nearly three hundred yards of wire by means of a crank, which, I was quite sure, would not take it up in less than twenty minutes, even if no further obstacles than those presented by the necessity of disconnecting and caring for each of the other lines, and probably the sinkers, of which there were eight or ten, presented themselves. And a ten-pound laker, I should judge, would in such contingency prove a considerable obstacle. And again, there was no provision whatever to relieve the dead strain, no spring of the pole, or giving a bit of line to depend upon. Unfortunately I had no opportunity of forming any better opinion, for except that we had a delightful row, and enjoyed hugely the beautiful scenery as we passed around Bellagio Point, and swung into Lake Lecco, our trip was a failure, and very soon recognizing the situation and accepting it, we concluded that to consider ourselves fishing required a lively imagination, and we devoted ourselves to the lady who had accompanied us, and the sandwiches she had brought.

As usual, there were any number of excellent reasons why no fish could be caught that day and why they should not be expected, which reasons would have been more acceptable if given before we started.

Well, I've added two more to the list of lakes I've fished in, but my score book shows a blank.

Several men who, armed with spears, were watching the shoals at the mouth of several little creeks we passed, they hidden behind large rocks, were more successful, for although none were speared in my sight, several good sized trout were held up for our inspection as we passed, and but for the gashes in their backs, which would have unfolded a tale, I rather fancy that I shouldn't have returned empty-handed.

I have used up so much of your space and my time in describing to you this unsuccessful trip, that I will reserve until I again feel in the mood—which will probably be on the next rainy day—on account of several successful ones which I have made among the mountain streams in this vicinity, during which I was able to settle very definitely a question which had been agitated in the London *Field*—viz., whether, first, the streams in Swiss Nassau contained trout, and secondly, whether, if they did, said trout could be taken by the fly.

Both questions I settled in the affirmative, and with the aid of my little rod, made especially for brook fishing, made the best day's work on record here. PISECO.

THE PACK WELL SHUFFLED.

BY A. MULE.

I WAS sitting on the steps of the court house the other day in the midst of a little knot of village worthies, discussing crops, checkers, pocket knives and other regulation themes of village gossip, when some one said:

"There comes McP——!"

"Where?" I asked, not seeing him anywhere.

"Not in sight yit, but thar's his advance guard!" and he pointed out a straggling dog or two standing idly in the square.

In a few moments a confused mass came round the corner and presented to view a solid acre of dogs—all busy about nothing—all sniffing, fighting, trotting along, but managing to keep going ahead all the time. There were at least fifty in the pack, of all sizes, all ages, all colors, all breeds, all tempers. Here a gigantic but dignified Newfoundland paced along looking like a big cypress among bushes; here a hard-featured desperate old fighter, of no particular breed, jogged on with head down and sulky look; there a dozen or so terriers skipped about on three or more legs as they happened to fancy, but all with an earnest cast of countenance, as if on serious business, and nearly all bearing the scars of honorable combat with bruin. As they entered the square they separated a little, each on his own hook looking up a strange dog.

Behind the dogs came their master. Shelb. was mounted as usual on his "old mar" that nobody on earth would own but him—and bent upon getting a little redeye for himself—a bottle of snuff for the old lady, and having a jaw with society in general.

The old mare is said by the oldest inhabitant to have once been a bright yellow sorrel, but this has long since given way to a grizzly brindle of no color whatever. She has but one eye, of course—that sort of "hoss" never has but one. No man ever knew her when she didn't have a colt trotting behind her, and she is in short the ugliest, rawboned, worst-tempered devil in the State. What she lacks in looks, however, she makes up in gaits. She has every gait ever seen with a horse, and several of her own invention besides. Being opposed to monopolies, she travels none of these long enough to tire her rider, but changes just as fast as her laziness and a touch of stringhalt allows, and indeed some of her friends have been heard to openly brag that she "goes all the gaits and goes them at once!"

Shelb. fairly dotes on the old mare, and swears she makes up in virtue what she lacks in looks. He hunts on her altogether, and somehow can convey his wishes to her in a private language of their own. She will browse for a day just where he left her; she will dodge trees and vines as well as a man, and knows how to get through cane like a wild turkey. She will come to Shelb's horn but not budge for another, and, in short, she is his bosom friend and up to all sorts of swamp tricks.

One of the boys stole her once and entered her at the county fair, giving her pedigree as "by Sleight of Hand out of Kentucky Stable," and she took the premium for an "aged and experienced cow." But Shelb. offers to ride her a race of ten miles through the canebrake with any horse, and I've no doubt she would win.

The old man got off his horse, turned her loose, and came up to where we sat. He was cordially greeted, and of course had at once a dozen invitations to drink. These he declined, as he rarely indulges away from home, thinking liquor is not healthy unless taken with a little tansy in it.

After a while the crowd drifted away and left old Shelb. and me to a comfortable chat.

"Why do you always carry so many dogs with you?" I asked.

"Well," said he, "the fact is I couldn't keep them at home without tying of 'em. And besides I think it does a dog good to take him out from home occasionally. When cooped up in one yard all the time a dog is apt to get as foolish as one of these country boys that never left his mammy. When he goes into the world he gets licked by strangers and fooled by females, and generally gets taught manners.

"Manners! Why, do you think a dog has manners?" I said.

"A dog is a dog," said the old fellow, "and he ain't got man manners nor feelins, no more than a paw-paw has pecans. But he has got plenty of dog idees, and some are just as different from others in them as among mankind. Now," said he, whistling up a heavily built dog, "there is old Brindle, who is not only my best start dog and a good fighter, but a perfect type of the honest flat-footed farmer. He don't run in and grab at every little piece of meat he sees, nor he don't yell out when he gets a point on a track unless he is sure, and altogether he is a square dependable sort of a fellow without any show or nonsense.

"This long-legged critter now is entirely different. He is too smart by half, sorter like some of these young penfeather lawyers. He is always trying to poke his long nose into everything first man, and that's the way he got that scald on his back trying to palaver my old nigger cook. He would run for Governor if he had a chance, or constable, or anything. And he is always getting set down, because everybody knows he is a genuine smart Aleck.

"That white and black dog over there is one of them good fellers you often see that's always anxious to oblige everybody and yet don't oblige nobody. If you just look at him his tail goes to waggin' like it would come off, and out in a hunt or wherever there is anything to be done, he is the foremost man there, swaggering and strutting around full of advice but never by accident doing a lick of hard work.

"You see the little fellow—the one with only one ear? Well, he's the doctor. Whenever anything goes wrong there you will find Doc. looking as wise as Satan, and sympathizing with everybody. Of course he licks all the sores on the other dogs, but he will also show the deepest interest in the settin' hens, and will look raptures over a new-born calf... I expect to see him dropping medicine out of a spoon yet.

"That bright, nervous little devil is a regular game cock. He ain't more than a mouthful for many of the pack, and yet, by hokey, I believe they are hait way afraid of him. He never hesitates a second but jump any dog that gives him sass. I believe he would tackle an elephant if he just had a stepladder. His tail you see is curled so tight that his hind legs just touch the ground and I reckon that sorter keeps him turned up so high. He is the best fighter I've got, for he is so little and so active that a bar can't do anymore with him than a flea.

"No sir-ree—a dog has got just as much character as a man, only he don't show it the same way. A new dog I had once was mighty green in the woods and never had seen a 'coon. One day he tackled one in a bush behind me and the varmint bit him in the paw. I'm blessed if that dog didn't say, "Oh Lordy!" so plain that I jumped round and asked who was thar!

"There came a fellow to my house one evening to stay all night. Well, he was full of science about dogs and wanted to teach me all about it. So he showed me how to tickle a dog's foot to make him kick. That great big hound over there was lying snoring before the fire and he tried him. The dog kicked furiously and we had a good laugh. But presently the teacher became so interested that he got on all fours, bent his face down to get good sights and stuck his straw into the dog's hind foot. Good lord, how that dog did kick him on the nose! Over went the teacher agin the wall, the dog run off scared and I got something to catch the blood out of the man's nose."

"You must—"

"Hold on, Col.!" said he, taking me by the arm, "just come this way a little!"

"Why, what's the matter?"

"My mar is eating Doctor Nellip's oats out of his wagon and I don't want to see it!" said he, smiling.

So we got out of of sight where our honesty was not called upon to check the old mar's appetite.

MARYLAND GAME AND SHOOTING.

PARTRIDGES (*i. e.*, quail) will be numerous in this part of the State this year, judging from the frequency with which the young coveys are seen running across the roads and the well-known "Bob White" notes of the old birds in the stubble fields. The young rabbits, too, are very numerous, the law passed a few years ago for their protection having had the desired effect. Caroline county, which is apparently the most popular section of the peninsula for small bird shooting, now has complete game laws, and the extermination of her quail, rabbits and rails, which only seemed to be a matter of a few years, has been postponed, we hope, for many years. In former years the beginning of the partridge season would be marked by the appearance of scores of sportsmen from New York, Philadelphia, and other cities and towns, and thousands upon thousands of these birds were daily railroaded out of the county to those and other markets. By an act of the last Legislature sportsmen who are non-residents of the county, before shooting game within its limits, are required to procure a license from the clerk of the circuit court, costing in all $5. The same act also requires a license of all shippers of game to market, costing $25, which will have the effect to put an end to the gunning-for-market business, pursued by many worthless characters who did nothing else. The act also postpones the date for the beginning of quail shooting till November 1, ten days later than formerly, and rabbit shooting till November 1, twenty days later.

An entirely new and important feature of the law is that which provides for the protection of the rail birds. The season for the shooting of these birds, which annually come here in myriads, commences September 20. It is predicted that there will be a decided falling off in the non-resident participants in this sport when the law requiring license becomes known. The water rail has already made its appearance in considerable numbers, and by dropping a stone in the rank, wild oats, now almost ripe, a dozen "tutes!" from the concealed rail will greet the ears, telling you they are there. The law-makers did not forget the wild duck nor the muskrat either, and the season for the former begins September 10, and the latter December 1.

HOWARD MALONE.

DENTON-ON-THE-CHOPTANK, Aug. 29, 1882.

THE VANISHED HOUNDS.

EVERY old hunter and woodsman is, or has been, the owner of dogs. He may have been a still-hunter and opposed to hounding deer, and may even have been guilty of shooting or hanging the hounds he caught on the trail. But, all the same, he had his still-hunt dog that he held above price, and whose memory he cherishes as that of a lost brother. We may have owned scores of dogs, each of them with more or less good qualities, each with his own peculiar traits and characteristics; but every one of us can call to mind the particular dog that stood out in a has-relief of canine perfection—the dog whose like we ne'er shall look upon again. The dog that had a corner of our blankets, or cuddled up to our backs on a cold night, while his canine companions were relegated to a bed of damp leaves outside the shanty. The dog that always came to the front when the others were at fault—that always ran his track to the end, and always found his way back to camp in time for next day's race. Such a dog was Buffie. A pure hound, with a most marvelous voice, and plenty of it. Ears, 22½ inches from tip to tip. Color, a bright Maltese blue, fringed, feathered and evenly marked with orange. The handsomest hound I have ever seen.

But his voice was irrepressible. He ran foxes by day, and gave free concerts at night in the most persistent and aggravating manner. Training, breaking, and a regular course of beech sprouts failed to impress him with the value of silence. At last Mrs. Nessmuk called my attention to an article in a medical journal, entitled "The Importance of Sleep."

I saw the point, and turned the dog loose, to run at large, after the manner of village dogs generally. He chose his stand in the center of a flower bed, under the windows of my friend Dr. R., where he kept it up pretty steadily for a few nights; but it came to a crisis with him. One morning we found him in the back yard, stiff and stark, with all the indications of strychnine about him.

Even his staunch friend and admirer, "Hawkie," admitted it was a case of "jestifiable pizenin';" and, though I felt like Mrs. Gummidge's lobsters, "a disposition to pinch the world in general," I held my peace, and only sought relief in a rhyming lament, after the "Lallans" of Burns.

I trust I am not vindictive. But if I can inveigle such readers of FOREST AND STREAM as understand "the Scottish dialect of the English language" into reading what follows—well, it will be some comfort:

PUIR BUFFIE.

Gae tell to n' the hunters roun'
That Geordie's heart is sair cast down.
Wi' hirplin' step he treads the groun',
An' hingin' head.
Buffie, the wale o' youthfu' houns,
Puir Buffie's dead!

Let ilka tod frae Butler hill
To Allan's swamp an' Merrick rill
For vera joy bark loud an' shrill
Wi' muckle glee.
Puir Buffie's lyin' stark an' still,
Out owre the lea.

Had he been slain in open day
By hoof or horn o' stag at bay,
I wadna hae the heart to say
It did him wrang.
It's joost the foulness o' the play
That gies the pang.

Na doubt but he at times might draw
Ae sned o' beef wi' thievin' jaw,
Or aiblins on fine nights might blaw
About the street.
But if that faut's agen the law,
He couldna' see't!

Perhaps he might, in pleasant weather,
Wi' ither tykes sometimes forgather
To fyke on grocers' wares: but whether
He did or not,
In spite o' a' their scauldin' blether's
A triflin' faut.

He maks the fourth o' langeared friens
Wha followed me o'er hills an' glens
Until they met untimely ends
By murder sair.
Their fauts were something less than men's,
Their virtues mair.

But, Buffie dog, a lang fareweel.
Na doubt ye were a roguish chiel;
But, aiblins there's anither field
Where thou an' I
May chance to find a cantie bield
Ayont the sky.

Where thou an' Nig, wi' twa three more,
Wha hae been murdered lang before.
Maun hae yer huntin' frolics o'er
In shadowy race:
Whyles a' thae murderers hing out owre—
Anither place!

NESSMUK.

Natural History.

USE OF A COLLECTION OF INSECTS.

"WHAT is the use of all these collections?" asked a visitor of an attendant at the Museum of Natural History in the Park. The speaker was a farmer. He had enjoyed the big museum, was interested in the curious animals, and acknowledged that it was a "big show," but out his way taxpayers were not in the habit of building museums worth half a million merely to rest the eye on. "Well," said the attendant, "every one of these collections has a certain work to do, as a part and parcel of our public school system. In the collection of fishes you will find all those that are of use to man. The young at various ages, the eggs, in fact, everything about them that will be of value to the practical fisherman or fishculturist. The library on this subject is perfect, showing every possible device for their capture, and the uses they are put to in every country in the world.

"In the collection of building stones and woods that represent the quarries and vegetable fauna of almost every section of the globe, the builder, carpenter and stone-mason finds valuable hints and information that individually he could not obtain. The collections of fossils and minerals are of great value to the miner and chemist. The shells have their economic value; in fact, every collection here, outside of its value as a general educator and a show, has a special end in view. You are a farmer. Here is a collection that will show almost every insect in the world that is injurious to vegetables, and its manner of working, while the books on the subject in the library give perfect information when to expect them, the precautions to be taken, how to tell the various kinds, etc. In other words, if you are troubled with potato bugs, locusts, or what not, New York shows you these pests in all their forms, and gives all information as to the best preventatives free. It is a part of her public school system.

"Many of the insects injurious to vegetation are so minute that a microscope is needed to distinguish them as they lie in the cases, and the smaller they are the more injury they seem capable of doing. The *Calandra*, or wheat weevils, are among these. They do immense injuries in granaries by boring a hole with their snout into the grains of wheat, or barley, or rye, and depositing therein an egg, from which proceeds a white maggot, which devours all the farinaceous substance, so that nothing remains but the hull. These creatures live in this condition about thirty days, when they metamorphose into white cocoons, from which, after about ten days, the perfect insects proceed, the females of which immediately deposit their eggs, each laying about one hundred and fifty. Strange to say, they came originally from Europe, being imported in grain. It is some satisfaction, however, to know that they are now being sent back with interest. Farmers who deal largely in peas are troubled with a minute brown beetle, ornamented with white spots. When the peas are in blossom and begin to have pods, the females deposit their eggs upon them, and we find, therefore, a very small maggot in almost every green pea, the existence of which can only be perceived by a small dot upon it. In almost every seed pea, also, we find a perfect beetle, or at least an aperture from which it has already crawled out. In some parts of Europe they put their seed peas into hot water before planting, for the purpose of killing these beetles; and several of our scientific American horticulturists, according to Dr. Harris, advise to keep seed peas in air-tight vessels over one year before planting them, or at least not to plant them before the end of May.

"A curious beetle, much larger, with triangular antennæ terminating in a knob, and a long snout upon which is a hairy crest like the mane of a horse, is another of the family that devastates the palm trees of the southern countries, and, strange to relate, they are eaten in St. Domingo; they are roasted upon a wooden spit, or broiled, and eaten with dried and pulverized bread, seasoned with salt and pepper, and considered by many epicures as the *ne plus ultra* of delicacies.

Our turnips are subject to the attacks of several insects; and few are so destructive to these crops as the little jumping beetles, (*Haltica nemorum*) called by the farmers "the fly" and "black jack." Kirby and Spence record that in one year in Devonshire these insects did damage to the turnip crops to the amount of £100,000.

The *Scolytus*, a small round beetle, is said to have nearly destroyed the elms near London, and in one of the mining districts of Germany, not supplied with coal like similar districts in our own country, but dependent for fuel on the forests of fir-trees, a species of *Hyburgus* began to increase about the year 1780 to such an extent as to destroy in a few years whole forests. The working of the mines was in this way materially affected, as the proprietors had no fuel to carry on their operations. The effect of their ravages is to interrupt the course of the descending sap, and admit wet between the bark and the wood, so that decay of the tree quickly ensues. The *Hylesinus fraxini* attacks the ash, and the *Scolytus pygmæus* the oak. The latter small beetle killed forty thousand trees in the Bois de Vincennes, near Paris.

In the shield lice, almost invisible to the naked eye, we find another foe to the farmers. They resemble scales more than anything else, and like their relatives, the cochineal, it was a long time before they were known to be insects. Probably hundreds have passed through their orchards day after day, without noticing this insect, although myriads have been in sight. Many well-educated farmers have seen their peach trees covered with brownish warts, and have suffered them to wither and die, without dreaming that these warts were live animals, sucking the sap, the life-blood of the tree; and yet these motionless excrescences have laid waste whole orchards, have devastated the fairest of bushes and the most fruitful of trees, and in place of fragrance and verdure have left naught but desolation and decay. They are essentially noxious insects, which, if unmolested, multiply immensely, and hence should be carefully sought upon the branches of our trees, and, as often as they make their appearance, destroyed at the point of the knife. Their color very nearly resembles that of the branches upon which they alight, usually a brown or a black, but sometimes a reddish or violet, and hence they scarcely ever attract attention unless looked for. The branches of peach trees are their particular resort, and may often be seen covered with them, making the branches look rough and knotty and the leaves and fruit dirty and black, from the rain washing upon them from the bodies of these filthy creatures.

If your pet oleanders droop and appear dry and parched, examine them carefully, and you will find flattened upon the leaf, appearing a part of it, one of this voracious family that seems to gorge itself with the life sap of its victim.

The cochineal is a red shield louse, and when Plumier, in 1692, first stated that it was an insect, he was laughed at. Another of the family that we find here that represents a great commercial interest is the *Ficus religiosa*, found in the banyan tree, where it secretes from its body a hard gummy substance, adhering to the branches like a crust, and well known in commerce by the name of shellac. This substance is a most invaluable material in the manufacture of varnishes, sealing-wax, beads, arm-bracelets, necklaces, waterproof hats, etc., and is extensively used in dyeing. Mixed with a very fine sand it forms grindstones, and added to lamp or ivory black, being first dissolved in water and a little borax, it composes an ink of a very good quality, and, when dried, not easily acted upon by dampness or moisture. Notwithstanding the vast amount of this substance that is constantly consumed in manufactures of various kinds throughout the world, still this little insect produces it so fast and so abundantly, that, were the consumption of shellac ten times greater than it is, it could readily be supplied. Others are found upon our currant bushes, peach and apple trees. Harris describes a method of destroying these pests by introducing among them an insect that lives upon them—the lace-winged fly. It is of a pale green color, and has four wings resembling delicate lace, and eyes of the brilliancy of polished gold, as its generic name implies; but, notwithstanding its delicacy and beauty, it is extremely disgusting from the offensive odor that it exhales. It suspends its eggs, by threads, in clusters beneath the leaves where plant lice abound. The young, or larva, is a rather long and slender grub, provided with a pair of large curved and sharp teeth (jaws), moving laterally, and each perforated with a hole through which it sucks the juices of its victims. The havoc it makes is astonishing, for one minute is all the time which it requires to kill the largest plant louse, and suck out the fluid contents of its body.

The maggots of the genus *Syrphus* also live upon them, and Mr. Kirby says, that on examining his currant bushes, which but a week before were infested by myriads of aphides, not one was to be found; but beneath each leaf were three or four well-fed maggots, surrounded by heaps of the slain, the trophies of their successful warfare. He also says that he has found it very easy to clear a plant or small tree of lice by placing upon it several larvæ of *Coccinella* or *Syrphi*. Here are several large sphinx caterpillars, inflated with air, and a smaller one, blue and orange with black dots, that would be recognized by grape raisers as inveterate enemies. These caterpillars begin to appear about the middle of July, and others are hatched afterwards, as late, perhaps, as the middle of August. When not eating they generally rest upon the under sides of the leaves, and, although many may be found on one vine, they do not associate with each other. They live on the common creeper as well as on the grape-vine. They eat all parts of the leaves, even to the midrib and stalks. When fully grown and at rest, they measure an inch and a quarter, but stretch out, in creeping, to the length of an inch and a half or more. Towards the end of August they begin to disappear, and no more will be found on the vines after September. They creep down the vines in the night, and go into the ground, burying themselves three or four inches deep, and turn to chrysalids without making cocoons.

Locusts of all kinds and in all stages are here, and their powers too well-known to dwell upon; from the earliest times they have been the dread of culturists, especially in the East, and no remedy has been found. In the south of France at one time, people made it their business to collect them and their eggs, the latter being turned out of the ground in little masses cemented and covered with a sort of gum in which they are enveloped by the insect. Rewards were offered and paid for their collection, half a franc being given for a kilogramme (about two pounds and three and one-quarter ounzes avoidupois) of the insects, and a quarter of a franc for the same weight of their eggs. At this rate twenty thousand francs were paid in Marseilles, and twenty-five thousand in Arles, in the year 1613; in 1824 five thousand and five hundred and forty-two, and in 1825 six thousand two hundred francs were paid in Marseilles. It is stated that an active boy can collect thirteen to fifteen pounds of eggs in one day. The locusts are taken by means of a piece of stout cloth, carried by four persons, two of whom draw it rapidly along so that the edge may sweep over the surface of the soil, and the two others hold up the cloth behind at an angle of forty-five degrees. This plan was also tried in N. H., but with poor results; the only remedy seems to be those that nature gives—a parasitic worm, *Filaria*, and numbers of red mites.

Among the flies are many that are injurious to wheat, barley, rye and oats. The maggots are about one-eighth of an inch long and as many as twenty have been found on one grain. After a shower of rain they have been seen in such countless numbers on the beards of the wheat as to give a yellow color to the whole field. These insects prey on the grain in the milky state, and their ravages cease when the grain becomes hard.

In a case we find some eggs of the corixa that are used by the Mexicans as an article of food. The natives cultivate a species of sedge called "tulé," on which the aquatic insects deposit their eggs, the place being one of those great marshy lakes called the Lagune of Chalco. These sedges are collected into bundles and floated on the water, where the insects are attracted to them as places on which to deposit their eggs. The bundles lie for about a month in the lake, when they are removed from the water and dried. The myriads of eggs are beaten from them into a large cloth. They are then cleared and sifted, and put into sacks, and sold to the people, who make of them a kind of cake or biscuit, which they call "hantlé."

Such are a few of the insects that it would be well for our agriculturists to familiarize themselves with. Almost every large museum, notably the Smithsonian, and the American Museum, have all their collections arranged for practical use and value to the laborer as well as the man of science.

C. F. H.

CROW SENSE.—Brighton, N. Y., Sept. 4.—The droll antics of a pet crow, owned by a neighbor, have amused me not a little, and the following exhibition of its intelligence seems deserving of record. A few days since Jim was given some dry crusts of bread for his breakfast. After making several unsuccessful attempts to devour them, he seized one in his beak and hopped upon a chair, then on to the sink, and finding a basin containing some water, dipped the crust into the water until softened, then removing it, ate it, and jumped down and got the other piece, and after softening it as before, finished his meal.—W. W. C.

PERFORMING SEALS.

AN interesting account of the docility and intelligence of the seals in the Westminster Aquarium is given by Mr. W. B. Tegetmeier, in a late issue of the London *Field*. He writes:

The performers are two in number, male and female, both of the common species (the *Phoca vitulina* of Linnæus). The male, which is the larger, has been about three years in the collection; the smaller female about two. Some time since, their tameness and attachment to their keeper suggested to the directorate the idea of training them to perform tricks for the amusement of the visitors, which has been most successfully accomplished. They are exhibited in the large tank which was constructed for the white whale, and has been recently devoted to the exposition of the natatorial powers of Miss Annie Beckwith. At one end a small tent has been erected on a platform raised a couple of inches above the water. From the upper surface of this the seals can glide into the fluid or return at will. Their first performance was a violent tugging at two bell pulls, to give notice to the visitors. The bells were in hideous discord, and the noise was continued far too long for the comfort of the auditors.

The bells removed, the animals took, at the command of their keeper, their stations on two inclined boards, which raised their heads and fore limbs above the general surface of the platform. To one hand-like forefoot of the male was attached a cymbal, with which it struck another conveniently placed in front, while the female was playing a tambourine by striking it with very great rapidity. The musical discord was varied by the keeper holding a banjo to the smaller performer, who evoked hideous sounds by rapidly scraping across the strings with her nails. This done, the audience were informed that the animals were about to indulge in smoking. Short pipes about six-inches long were placed in their mouths, from the bowl of which issued flames one or two inches high. On my first visit both animals held these flaming pipes in their mouths; but on my second the male declined, having been alarmed by the too near approach of the flames to his face.

Various articles, as baskets, logs of wood, etc., were then thrown into the water, and were quickly and easily retrieved and brought to the keeper's hands by both the animals.

The next performance consisted in both animals climbing up, by the aid of their fore limbs, a ladder rising from the surface of the water at an angle of about 45 deg. After diving into the water from the top of the ladder, the animals shot themselves by the impetus of their rapid motion on to the platform, and, seizing a couple of short cords attached to revolvers, fired a rapid succession of shots.

The performance concluded by a remarkable exposition of the strength possessed by these animals when in the water. A small boat capable of holding three children, whose united weights must have been eight or nine stone, was dragged very rapidly around the tank by the two seals in succession. A small collar was placed over the head, to which traces were attached that were secured to the boat.

The strength displayed by the seals was remarkable; the little boat, pulled by the muscular strength of one animal, threw off the water from its bows as if it had been propelled by a vigorous sculler.

The exhibition was to me of a peculiarly interesting character. The animals manifested a great degree of intelligence and docility, in keeping with their high cerebal development. Nevertheless, they have their peculiar mental idiosyncrasies. One of their characteristics is extreme susceptibility to alarm; the slightest alteration or fright will throw them out of work, and it is difficult to reassure them. Their training was effected by a system of rewards, without any punishment, and the visitors may notice a piece of fish dropped into the mouth of each after the performance of every trick. The amount of fish devoured by these two animals is about 30lb. per diem. The oleaginous Clupeidæ, herrings, pilchards, etc., are preferred; but failing these, whiting, haddocks, etc., are given, these being carefully cut open to assure the absence of any fish-hooks, which have repeatedly caused the death of captive seals, and possibly of wild ones also.

WASPS AND KATYDIDS.—Johnsontown, Va., Aug. 27.—I was much interested in the account of the wasps in the FOREST AND STREAM, and I will contribute my mite. Some years since a neighbor and friend of mine was very much surprised at bringing up in his well bucket with the water dead katydids, and this continued for some time, much to his annoyance. One day, however, being at the well, he saw a mud-dauber wasp bring a katydid and drop it into the well. After that he saw the same thing a number of times, as did also the rest of the family. The common brown wasp catches the green worms that infest the cabbages and carries them off. I saw a wasp take one from a cabbage this morning. From where I sit, I see the two goslings and the rooster together as usual. The goslings are now the largest. A note about them was published in your issue of Aug. 10.—OLD FOGY.

HE RECEIVED THE SNAKES.—Room of the Director of the Museum, Buffalo, Aug. 24.—*Editor Forest and Stream:* My wish to procure live rattlesnakes, which you so kindly inserted in your paper, has procured me four correspondents and enables me to make satisfactory arrangements in this matter.—JULIUS POHLMAN.

WEIGHT OF OPOSSUMS.—Tiffin, O., Aug. 26.—Opossum very scarce here. Caught one three years ago, weight, twelve pounds. Largest I ever saw.—F. M. H.

WHAT THEY SAY ABOUT IT.

It is no mean compliment to be able to say truthfully that FOREST AND STREAM is altogether the ablest and most readable of the several journals published in this country devoted to such out-door sports as hunting, fishing, yachting and kindred pastimes. The *Evening Post* says, justly, that "its correspondence is full of interesting reminiscences of sportsmen, and deserves special praise for the earnest effort it is making to secure the enactment of wise game laws and their enforcement." We are glad to know that its good qualities are appreciated, and that it enters upon a new volume enlarged to twenty-eight pages—a sure sign of deserved prosperity.—*Albany Evening Journal.*

A cent placed at compound interest when Adam was a day old would amount to a sum more than equal to a globe of solid gold the size of the earth. Without the use of logarithms what a lot of work with an Esterbrook Ledger Pen would be required to make the calculation.—*Adv.*

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

GAME IN SEASON IN SEPTEMBER.

THE following schedule exhibits the game now in season. (Also, in parentheses, seasons which open during the month.):

Alabama—Doves: (15th, quail).
California—Deer, doves; (15th, grouse, rail, quail, wildfowl).
Colorado—Deer, elk, antelope, mountain sheep, buffalo, bison.
Connecticut—Wildfowl; (12th, rail).
Dakota—Grouse, quail, snipe, curlew, plover.
Delaware—Woodcock, rail, reed.
District of Columbia—Woodcock, ruffed grouse, wildfowl, pinnated grouse, plover, reed, snipe.
Georgia—Wild turkey, quail, deer.
Idaho—Sharp-tail and pinnated grouse, deer, mountain sheep and goat, elk, antelope, buffalo, wildfowl.
Illinois—Woodcock; wildfowl, pinnated grouse, deer, wild turkey.
Indiana — Woodcock, wildfowl, pinnated grouse.
Iowa—Woodcock; wildfowl, pinnated grouse, elk, deer.
Kansas—Pinnated grouse.
Kentucky—Woodcock, deer, wildfowl, wild turkey.
Maine—Ruffed grouse, woodcock, wildfowl, plover.
Maryland—Ruffed grouse, woodcock.
Massachusetts—Ruffed grouse, woodcock, wildfowl, doves.
Michigan—Ruffed and pinnated grouse, woodcock, wildfowl, snipe.
Minnesota — Grouse, woodcock, quail, wildfowl.
Mississippi—(15th, meadow lark, deer).
Missouri—Woodcock, plover, meadow lark, dove, pinnated grouse, deer; (15th, wild turkey).
Montana—Fool hen, grouse, ptarmigan, buffalo, elk, antelope, mountain sheep & goat, moose, wildfowl).
Nebraska—Grouse.
Nevada—Elk, antelope, mountain sheep and goat, deer, grouse, quail, woodcock, wildfowl.
New Brunswick—Woodcock, wildfowl, snipe; (15th, moose, caribou).
New Jersey—Reed birds, rail, squirrel.
New Hampshire—Woodcock, plover, ruffed grouse, quail, deer, caribou, moose, wildfowl, squirrel, rail.
New Mexico—Grouse, ptarmigan, quail, deer, wild turkey, elk, antelope, mountain sheep, buffalo.
New York — Woodcock, ruffed grouse, deer, wildfowl, squirrels.
North Carolina—Deer.
Nova Scotia—Woodcock, wildfowl, snipe; (15th, caribou, moose).
Ohio—Woodcock. ruffed grouse, wildfowl.
Oregon—Grouse, quail, wildfowl, deer, moose, mountain sheep, elk, antelope.
Ontario—Woodcock, snipe, hares, wildfowl, pheasants, partridges, grouse, prairie fowl.
Pennsylvania — Woodcock, wildfowl, plover, rail, reed birds, snipe, squirrels.
Quebec—Deer, caribou, woodcock, wildfowl; (15th, ruffed grouse).
Rhode Island—Woodcock, ruffed grouse, wildfowl, plover, robin, meadow lark, hare, squirrel.
South Carolina—Deer; (15th, wild turkey, ruffed grouse, quail, doves, woodcock).
Tennessee — Deer; (15th, ruffed grouse, snipe, quail, meadow lark, woodcock, wild turkey).
Texas—Deer, ruffed and pinnated grouse, quail.
Utah—Elk, deer, antelope, mountain sheep, grouse, quail, wildfowl.
Vermont—Ruffed grouse, woodcock, wildfowl.
Virginia—Ruffed grouse, wildfowl, woodcock, deer.
Washington Territory—Deer, elk, mountain sheep, grouse, antelope.
West Virginia—Pinnated grouse, deer, ruffed grouse, wild turkey.
Wisconsin — Woodcock, grouse, quail; (15th, deer).
Wyoming—Buffalo, elk, antelope, mountain sheep and goat, deer, ptarmigan; pinnated, sage and sharp-tail grouse, ruffed grouse, wildfowl, plover, curlew, snipe.

A WOLF HUNT ON THE PRAIRIE.

SEVERAL years ago, when this country was very thinly settled, it was infested with large gray wolves. Not in a manner that many who never lived on a prairie of vast expanse would suppose; but the wolves were very thick for a prairie country. In a timbered country, when wolves are thick, they are described as chasing any belated traveler by the whole drove, and a new one would turn up at every big bush. In a thinly settled prairie country one wolf to the square mile (640 acres) is considered very thick, and they are thick enough to do a great amount of damage to the poor settler who is striving to get a living with no more capital than a team, two or three cows and a few fowls. This is the way we were situated nine or ten years ago, and the settlers came to the conclusion that they would have a grand wolf hunt. Accordingly meetings were held in every school house and a person elected to meet and form a part of the "grand council." This council laid the plans, formed the rules and named the day that this grand hunt was to take place.

In a thinly settled prairie with its one (not very near) railroad, miles are the same that yards are in a thick settled place with its numerous cross railroads, telegraph lines and so, consequently my readers must not be surprised when I say that this organization extended over a circle of country thirty miles in diameter. There were no hedges and fences then and we could ride anywhere, while now hedges and wire fences are so thick that it is impossible to cross the country in any direction that you choose.

Every preliminary had been arranged by the "grand council" that would insure a perfectly safe and thorough hunt for the extermination of wolves. Each school district had its appointed leader or captain, and orders to form in line at a point ten miles from a given center at a distance of about 200 yards apart, and at 9 o'clock to "forward march" and move toward the center in good order, making all the noise possible in order to drive the wolves to the center of the ring. This hunt was to be the "o'-casion" of the season. It was the whole theme of conversation for four weeks before the day arrived. Every man and boy that could secure a mount and carry a gun or club was expected to go, and a great many ladies went in carriages. Many of my readers in this section will remember this hunt. Parties were present from Fort Scott, Uniontown, Mound City, Garnett, Colony, Carlysle, Neosho Falls, Iola, Humboldt and Osage Mission.

The eventful day arrived at last. It was in early April, and old Sol came out warm and bright, promising a warm and agreeable day for the great slaughter that was to be. At 9 o'clock our district had arrived and formed in line, closing the gap between the one north of us and the one south of us. Every man and boy that I had ever seen or heard of was in line, well mounted, armed, and with all the dogs that could be scared up.

There was the Methodist preacher, mounted on his cob, carrying a formidable hoe-handle and followed by his inevitable black and tan rat dog; the old sportsman, with his "blooded Morgan" horse, armed with Winchester rifle and followed by his intelligent pointer and deerhound; the old farmer on his Norman stallion, carrying a long and heavy double shotgun, and followed by a huge Newfoundland dog; and last, but not least, the fourteen year old boy, mounted on a wiry Indian mustang, carrying relics of the late war in the shape of either the 48-inch, 10lb., .52-caliber pumpkin-slinging guerrilla rifle, or the 40-inch, smooth bore, shot-scattering musket, with its nut-cracking lock, and followed by curs of all descriptions, chief among which was the "thoroughbred" bird dogs, which consisted of a cross between the bulldog and the spaniel, or, maybe, rat dog.

I was on the west side of the circle, and started direct from our house. I had loaned my shotgun to an unarmed neighbor, and my two Smith & Wesson's improved .44-caliber revolvers to two friends of mine, while I carried a 27-shot repeating rifle. I was mounted upon a Morgan stallion of Canadian descent, a perfect thunderbolt for agility and speed, and a perfect tornado when once allowed to gain his full speed. On my left was a Texan named Dep. Coe, and on my right one of my neighbor's boys.

The word to start was given, and we had proceeded about a mile, when to the left of me my pointer came to a full stand, and just as I noticed him up popped a jack rabbit and took off in front of Coe. Dep. comprehended the result on the dogs if this rabbit was allowed to continue on his meteoric course; so, quickly dismounting, he leveled his Winchester and fired, knocking the rabbit over in a double somersault. This was the first blood on our side. Every few minutes, somewhere along the line, the boys would flush a gang of prairie chickens, and it was pop, boom, bang; and this, together with the noise the dogs made, was enough to scare any animal toward the center of the living and fast closing circle.

When about four miles from the center and near an old cornfield I observed two large does making railroad time toward the space between the boy on my right and myself. I loped my horse toward the place that they were heading for and the boy on my right did the same. It was $50 fine to shoot at a deer at this time of the year, as they were heavy with fawn; consequently I only thought what I could do if it was in the proper season, and admired their struggles to reach the point they were trying to make before we headed them off. I shall never forget the sight of their noble efforts to escape. With heads and tails erect and spreading hoofs and nostrils, they "streaked it," one behind the other, with bounds twenty feet or more apart, straining every nerve and muscle to reach the opening before they were intercepted. After they had passed us I could have dismounted and shot them both with my rifle as they ran directly away from me in a straight line.

We had gone about two miles further when word went around the ring that seventeen deer had escaped at once in one place, and that the ring was full of wolves. At 12 o'clock we had arrived at the place designed for us to halt at, and the members were only from ten to thirty feet apart. We were a little ahead of the opposite side and were ordered not to move forward any further, and no shooting was to be allowed in the ring. In a little while all had gained their positions, and it was time to open the ball.

The circle of mounted men was one mile in diameter and we were all on a slight ridge which gradually sloped toward an old deserted house in the middle, which had an immense white flag nailed to a long pole which was itself nailed to the roof of the deserted shanty.

The spectacle presented was grand. There were 700 mounted men about thirty feet apart each, all in plain sight of each other and overlooking the center, each man mounted, armed, and followed by from one to ten or fifteen dogs. There were several large packs of trailing hounds, one pack of staghounds in the throng, also a pack of fine imported English greyhounds.

Every man, every horse and every dog was excited up to the highest pitch, and each man believed he could outrun or outshoot his neighbor. Every one of us, even the Methodist preacher, thought he was ably prepared to kill a score of wolves, and each rider declared that he had seen more than fifty wolves into the ring, and that one or more had most miraculously escaped the deadly aim of his gun and the fangs of his brave dog.

Now the ball has begun.

A shout is heard away on the other side, and upon looking that way a large doe is seen about 200 yards from the circle loping around towards us.

Every eye is turned toward her, when suddenly we see four puffs of smoke, and directly we hear the far-away boom of four heavily loaded guns. Thus it is all the way around, first, little puffs of smoke, then the heavy boom, then in a few seconds more, boom, boom, and you might imagine you were about to see a battle fought.

As the deer nears us unscathed, our excitement is intense, and we have forgotten all about the rules or the game law. Others have shot at her by the score, and why not we? As the deer got abreast of me she came to a full stop and seemed to be studying the situation. What a temptation! I could easily hit her, but where would the bullet go? That was what checked me. My rifle was ably capable of killing not only the deer but a horse or man on the other side. My comrades all shot and hollered to me to shoot but I would not. Soon the deer ran a short distance, then turned in a small circle and made for the ring to my left with all the speed she could command.

She ran towards the preacher and he raised his hoe handle, but she cleared his horse and himself all but his hat and hoe handle, and away she went with J. R. Griffets and his pack of greyhounds in pursuit, but she left them so quick that they "threw it up" after running about a mile.

Then came a "*Ough! Ough!*" and upon looking around we saw a pack of bloodhounds trailing towards the center.

This was the signal for every dog in the ring that would not mind his master, to run into the middle after the hounds. In a moment more we saw a wolf jump up and run with a hundred dogs in pursuit, all yelling to the top of their lungs.

The wolf was a very large one and he ran around the circle about 200 yards from the men.

There was no shooting now. As the wolf came around, fresh relays of dogs darted out from the circle of mounted men and the excitement was intense. Twice the wolf stopped and faced his foremost pursuers who discreetly ran around him, but when the bulk of the howling mob came up he turned tail and ran again. With the next stop he made, he was in the mouths of fifty dogs in no time.

While these dogs were chasing this large wolf, several other wolves were seen near the center, and in a short time the bloodhounds gave tongue again, and two more wolves ran around the ring, to be caught and chewed up in a short time. This game was kept up till twenty wolves had been killed, and all the dogs were almost exhausted. The excitement caused by this chase can be imagined but never described. After the twenty victims had been killed there was a lull, and most of the dogs were glad to lie down, when suddenly a huge gray wolf ran out behind the dogs and ran directly toward me. After him came all the dogs that could stand. We dare not shoot for fear of killing some one of the dogs. He broke through the ring, and with a shout we all started after him, with no definite idea of how we were going to kill him, but after him we went pell mell. In a few seconds my equine cyclone had gained the lead, and the way his iron-shod hoofs beat the ground was a caution. I gained rapidly on the wolf, and when about ten feet from him I thought I would stop and shoot him, but I might as well have tried to stop a locomotive as this horse when fifty more were thundering in his rear. I gave one pull, and before I could pull again I had run over the wolf, knocking him down, and before he could gain his feet again eight or ten more had run over him and used him up entirely

My whirlwind carried me on a quarter of a mile after the rest had stopped, and seeing no more in the field to run with he concluded he would let me stop him, which I did, and loped back to where the crowd was, each declaring that he himself had been the cause of the wolf's death.

Thus ended our wolf hunt, and although we did not slay hundreds, as many believed we would, we killed twenty-one and let none get away. After it was all over a freak seemed to strike every one to ride to the center of the ring, and consequently one hundred strange horses and men were jammed up in the middle, each striving for he knew not what, but trying to make more noise than his neighbor.

Imagine the effect.

Every old horse was squealing, pawing and kicking all the time; mules were braying and dogs were barking, and the noise and racket of these strange animals will never be forgotten by those present. C. J. W.

FAIR LAWN, Kansas, 1882.

HUNTING ON THE YELLOW MEDICINE.

THE Yellow Medicine Creek comes into the Missouri River on the west side just above the bend, as it is called. The shape of this bend is not unlike an ox-bow drawn in at the ends. Across the narrow part it is only about one and a half miles, while around the whole bend it is from thirty-five to forty miles; steamboat men differ on that point.

About the mouth of the Yellow Medicine is one of the most broken tracts of land that can be found along the river, gumbo hills being the preponderance of soil. A gumbo bluff is a chalkstone bluff (so called by the people here) burnt some time in the past ages, probably by ligenite in the soil, taking fire from some cause. The chalk rock seems to be a deposit, which has been compressed under an immense pressure until it has become a solid rock, which is rather soft and easily acted upon by the air and frost. It is constantly crumbling and falling down until it forms perpendicular sides 150 and 200 feet high. When it has been burnt and forms the gumbo it is a curious formation. The outside has a coal-tar look, while the inside will show the original gray perfect chalkstone. The action of the air and frost on this substance dissolves it into a dark gummy earth, and it is very sticky when wet. I used to think that the clay soil of Texas was sticky, but it is no comparison to gumbo. I don't know of anything much more adhesive, unless it be the good pine tar of North Carolina. You can easy collect from five to ten pounds upon your boots when wet. When dry it bakes like the clay soil of Louisiana and Texas. The bluffs are from 300 to 400 feet high above the river along the Yellow Medicine, and the waters in the past ages have washed them away till they are completely cut up into dry creeks and cañons. The best description that I can give you of the general appearance of the country is to refer you to a photograph of the moon's surface, and by that you can get a faint idea. As a friend of mine says, there is ten acres to an acre in the Missouri bluffs, and I think that you will have to double the amount at the mouth of the Yellow Medicine.

The main creek of the Yellow Medicine extends up through the country forty to fifty miles. The lower part is quite heavily timbered with cotton wood, oak, ash and box elder. It is a very crooked stream and has quite a number of branches, and each branch and the main creek have hundreds and thousands of tributaries and cañons leading into it, which bring down torrents of water when the snow melts, or in a heavy rain storm. Along the main creek and its larger branches there are nice bottom lands between the bluffs, many of which are as fine grazing lands as I ever saw. What kind of an agricultural land it would make I don't know, but should judge far better than most of the lands about this section of the country. Some of the bottoms are covered with the gumbo that has run down from the hills, and that is poor enough. Nothing grows on it but the prickly pear cactus, and that grows there to your sorrow if you happen to have your hunting dog along with you, as every once in five minutes or so you will have to dismount and extract the thorns from your dog.

We hunt this country on horseback with either the Indian or Texas pony. If a person has patience enough and good muscle, the Indian pony is the best hunting horse; but he is too lazy for me; he is so used to an Indian's heels which go perpetually like a trip hammer on his sides, that the exercise is too much for me.

When there is snow on the ground we take a fresh trail and follow it through the bluffs till we come up with the deer feeding or lying down; and if you are careful enough and work the trail quiet enough the chances are that you can get a good shot.

As to the outfit, in the first place you want a good Winchester rifle. And I think, take it all in all, that for general hunting purposes the .38 calibre rifle is the best one that a hunter can use. It uses the same amount of powder that a .44 calibre does. The lead is a little lighter I know, but you can use it for ducks, geese, chickens, etc., and the ball does not tear your game into mince meat. And more deer are killed at less than 200yds., and I might safely say 150, than at greater distances; and at that range the .38 is as accurate as a large-bore, and powerful enough to kill your deer (if you hit him).

The next thing required is the horse. A person who never hunted in this country don't know what an Indian pony can do. I t ink that the next thing to a deer or mountain sheep on the Missouri bluffs is an Indian pony. You start on a deer trail, and it may take you the first thing over the highest pinnacle of gumbo and through and across creeks and cañons, over ditches from two to twenty feet deep, and you often have to follow it from five to ten miles over such a country as that before the deer find a place that suits them to lie down in. It is wonderful to see the Indian pony sit his hind feet under him and slide fifty or one hundred feet down the side of a nearly perpendicular gumbo bluff. And when he gets to the bottom perhaps you find a cut creek anywhere from five to ten feet deep, and now to cross that is the question to a greenhorn. Not so to a hunter. He finds a place where there is a little gully, and slides his pony down onto that, and from that maybe sends him into the bottom of the creek, then looks for another such projection on the other side, spurs him up, and he scrambles to the top quicker and easier than his master can.

When you get to the crest of a hill, you dismount, throw the bridle reins over his head, and leave him there on the side of the bluff, the wind, it may be, blowing a gale and

the thermometer below zero. You may be gone as long as you will, and he is there when you come back. You poke your head over the crest of the hill and look sharp for your deer, and the chances are that you see the trail taking a straight course over the next ridge, and the same performance will follow over again. Or it may be with your glasses you will see the deer lying down in the tall grass. Then you take a general view of the country near him and you will see some ridge by which you can approach near enough for a shot; and if you are down the wind, you want to work your way around till you can come up against the wind, and, it may be, you will have to take a long distance to do it, but it will pay you in the end, for if you undertake to work down the wind your deer will be going over the nearest gumbo bluff before you get a shot; but if you are careful and work up the wind you will hardly ever miss getting a shot; and a good quick shot will get from two to four deer out of a band of five or six before they get away, but you don't want your single-shot rifle to do it with.

I have seen four deer killed and another shot through twice by my friend D. W. Spalding, in a band of six deer, and the furthest one away not more than 80yds. from where they started. Where would your single-loading rifle be in that case? Before you had fired more than two shots the deer would be out of sight over the next bluff.

The next thing in your outfit is your dress. I will tell you what mine is, and I think I have as good an outfit as I have seen in this part of the country. I have one of William Read & Sons' dog-skin shooting jackets that I had them make to order. It is lined with white flannel, and made reversible, so that I can wear it leather side out (which is dead grass color) or the white side, so it works either with snow or without snow. Corduroy pants, reinforced with buckskin, cut short just below the knee, and buckskin leggings made tight to the leg and worn under a pair of Thomson & Son's hunting boots, with a corduroy vest, good heavy underclothes, and a flannel shirt complete the rig. On my head I wear a little tanned buckskin cap with a large shade visor, and over that when there is snow on the ground I wear a white flannel hood that buttons across my chin and leaves only my eyes and mouth exposed.

With this dress I can stand most any weather, though if the weather is extremely cold I wear buffalo leggings and arctic overshoes. I carry my buffalo coat strapped to the back of my saddle, as after a day's hunt one may find himself a long distance from camp, and may not get in till after dark, and then the heavy coat comes handy; but during the day you will find that the dog-skin coat will be warm enough. I have hunted with it when the thermometer was below zero, and wet and cold have no effect. I have been out all day in a rain with snow, and came in and taken no other care of it than to hang it on the back of a chair and let it dry, and in the morning it was as limber as ever. On a cold morning I have sat in a cornfield, my back up against a corn shook, shooting geese, also all day in my canoe on a lake, shooting ducks, and be warm enough. I cannot praise it too much; only in brush it is worthless, not worth more than a kid glove would be, as the brush and thorns tear the surface.

Hunting on the Yellow Medicine is very hard when there is no snow on the ground, as there is so much country for deer to hide in that it is more by chance that you find a deer. I made a short trip there a while ago, but had very poor luck, as the snow all went off before I got ready to go, and as we had an extremely hot day the day we started and the next, and the snow was all gone before we got a chance to hunt any. I only saw two bands of deer, three mule deer and five white-tailed. I had a half-breed Indian with me who is a good one on a trail and a good shot. We trailed them two or three miles across Medicine Creek, into a deep, steep cañon, and while on the ridge the half-breed discovered three deer as he said, and before I could see them he fired at them and missed them. I got a shot at a buck running, missed him the first time and killed him the second time. The half-breed shot at the same time and brought down the second buck. I hit another one hard as they were going up the side of a bluff a short distance off.

We hunted all the next day and did not see a single deer, though we saw lots of sign and followed the trail of four for three or four miles till we lost it in the high grass. The next day I had promised to come home, and so we only got the two bucks. Another time we might have seen a dozen bands, as we probably saw tracks of more than fifty deer; but, as I said before, it is a great deal of chance if you find deer in the country without snow.

We had bad luck in our camp. A few years ago the Red Cloud Indian agency was located at the mouth of the Yellow Medicine, and the military built there a root house, and a fine camp it has been to many a party. I spent a week in it a year ago and the thermometer was below zero all the time that we stayed there, and we were comfortable as in a house. It was dug into the side of a hill, was about 20 feet wide and 40 long, made of hewn logs and covered with earth and was very warm; the greatest trouble was with the smoke. We built our fire inside to cook, and the smoke was supposed to pass out of the ventilator, but it did anything but that at times. Still with that difficulty it was a good camp. I started for it again last on this trip, and when I got there I found that the whole center of the roof had fallen in, dirt and all, and the doors were gone, so we had rather an open camp for winter. But we found both ends standing and made our camp in one end, and found it quite a camp after all, though rather lucky for us that it was not as cold as the winter before. My experience this last winter was rather hard in that respect.

As this was the second trip that I have been cheated out of what I supposed I would find—a good camp—I made a trip to Beaver Creek, and at the mouth of it there was a log house that had been used by wood-choppers a year ago, and in the fall it was standing all right. But when I got there on this winter trip I found that the Indians had torn it down, so we had to sleep entirely out of doors. We made a good fire out of the logs and lay down beside it, and I was as "warm as toast." I have slept under the side of a log stack with the thermometer below zero in this country on a hunting trip, and slept warm, too, with a pair of blankets, buffalo robe and buffalo coat. But still, as the man said about the crow, "I don't hanker after it."

I have said nothing about the "chuck," which here means eatables. There is such a variety now of canned goods that a party must stock themselves, but I would advise them to take along plenty of coffee, sugar, hard-tack and bacon. That will come in if you get snowed in in a blizzard, after you have eaten up all your canned goods; and you can save your venison (if you have any) to bring home. I have subsisted a week on it. With your saddle for a pillow you can sleep warm out of doors in a very cold night before a good fire, and sleep sound too, if you have followed deer over this country twenty or twenty-five miles; particularly if the ground is muddy or the snow is deep. I suppose many people would say a man is a fool that would sleep out of doors for the sake of a few deer.

I have spent several winters in warm climates; two years ago in Havana, Cuba, and like a warm place as well as the next man, but I can tell you that the excitement of a deer hunt in this country will pay for the discomfort of a cold camp, hard-tack and bacon. If you don't believe it come out here sometime and I will give you a trip to try it on.

LOWER BRULÉ.

A TEXAS TURKEY HUNT.

WE were located in Comanche county, Texas, that being then a frontier county. To go beyond it was to risk losing one's scalp, to adorn the belt of a Comanche warrior. Game was very plenty, such as deer, antelope and turkeys, with wolves, and all sorts of small claw-feet. The habits of the turkeys were uniform in that country, and this made hunting them a systematic work. They frequented the water courses, which in the late summer and fall were very scarce. Wild turkeys must have water; the Comanche county birds resorted to the brooks at about ten o'clock every morning. From that time they would sit in the shade until late in the day, and then would feed until their roosting time, which was just before dark, when they all start for the trees. The hunter could easily tell the roost by examining the large trees along the margin of the streams and pond holes, and noticing the large quantity of manure that had accumulated under the trees. I have known the entire flock to be killed while roosting on the same tree.

My companion Ezra and myself ventured out one day to see the sights and find a roost. Our prospects for a big bag of turkeys were very good. We found two large pecan trees with the unmistakable signs under them. We selected a spot some distance from the roost, in a dense thicket of live oak brush, and soon had our little camp pitched, horse picketed out on grass and the hounds secured. Supper being soon ready, and all things in proper shape, we started for the roosts, Ezra using a heavy double-barreled muzzle-loader, and I a breech-loader, 10-bore. I gave Ezra his choice of the trees, with the understanding that we must shoot the turkeys flying to the tree or immediately after they had alighted on the limb, but under no consideration was either of us to leave our blind to bring in wounded or dead turkeys until dark or until the turkeys had ceased coming.

Long before dark we silently repaired to our stations, and just about sundown we could hear all sorts of sounds coming from over the bluff on the opposite side of the creek. We knew at once that the turkeys were coming, and none but a hunter can understand our feelings while in breathless silence we sat with our trusty gun in position ready to send forth its deadly contents. But Ezra grew uneasy; he feared they had, from some hidden nook or corner, discovered us; but a motion from me kept him quiet, and soon an old gobbler stepped up on the bluff to reconnoitre, and after standing a moment, he moved leisurely back out of sight. We could see at once that all was well, and the only thing for us was to be quiet until nearer dark. As the shades of evening drew near the noise made by the turkeys increased, and one unaccustomed with their gobble would suppose that a turkey pow-wow was going on. Soon all was quiet. Occasionally a put-put could be heard. The time had come that they must seek the night shades of a roost. Ezra was still impatient; but in a moment the whirring of wings was heard, and over the rocky bluff came an old gobbler, the leader of the gang. He steered for Ezra's tree, and in an instant the old muzzle-loader was brought to bear on him, and before he reached the tree a deafening sound rent the air, and a splash in the water showed first blood for Ezra. Then the fun commenced. Those who are unaccustomed to wild turkey shooting might suppose that after the first shot all the turkeys would leave, but it is not so. They will start for the roost, but a shot will sometimes turn the turkey following off from his course and out of range of a shotgun; but they all start for the roost from the ground. Turkeys followed in quick succession, and a constant roar of guns could be heard, mingled with the fall of turkeys. Some of them would sail over and disappear in the darkness of the night.

After they had all flown over we came together to compare notes and found that I had brought down eight and Ezra five. My advantage he laid to my breech-loader; he said he would never be seen at a turkey roost again without a breech-loader, which promise I think he always kept. In looking about for turkeys we found eight more, three that he had shot and five that I had killed. We then returned to camp and had for supper turkey breast steak cooked in butter, which was not at all unacceptable to two such hungry hunters.

The programme for the morning's hunt was then talked over. We decided to get up at daybreak and go to the roost and call up all the turkeys we could and shoot what we could, gather our dead turkeys shot in the evening, then come back to camp, get our breakfast, and then turn the dogs loose for a deer hunt. We retired to rest to dream of our coming sport on the following day. I awoke at daybreak and found Ezra gone. I felt for the little bottle on his side of the blanket, and that was gone too. I saw his point in a moment and gathered my gun and started for the roost, and on reaching it I found Ezra hunting busily in the weeds. He had five turkeys piled up under his tree and claimed that he had shot them all the evening before. "But," said I, "you only claimed five in all, and you found three last evening." "O, well," said he, "I must have killed two to two shots." I was compelled to give it up. He had me. Said I, "Where is the bottle?" "Well, I just set it back in the weeds to make you hunt for it." "Well, Ezra, this is all too thin; I see through it all. So you have beaten my breech-loader after all. But I'll be even some how." Returned to camp, Ezra found the bottle, and honors were easy.

Breakfast over we laid aside the shotguns and shouldered our rifles, turned the dogs loose, and were off now for a deer chase. Deer were plenty. The old lead dog soon opened on a cold trail, and at the sound of the dogs, Ezra, who was on foot, made quick time for the point of timber near the sand rough. Every dog is now eager for the start, but old Dime cannot be hurried; he will take his time, and all the dogs must come back to assist him in his windings for the trail. There they all go, pell mell. The deer is up yonder in the bush. I see his white flag as he leaps over the oak bushes. Now he has struck the open ground, and the dogs are in sight, every one of them doing his best. Some of the rear dogs cut "cross-lots," while others run the trail. Here comes the horseman at full speed with his oft-repeated "hurrah, pups." Now they circle. Ezra is at his post, but the old buck won't leave the grove; he circles to the left and comes around to the starting point, and is headed off by me on horseback.

Hark! Listen! The dogs are coming directly toward me up the bluff. Here he comes, with every dog in full cry. One glimpse of his horns shows that he is coming close. The rifle is brought to bear at an open space; but the buck is too sharp, he has dodged into the bush, and gives the horseman a wide berth. But my companion may get him, for he is going straight for the point where Ezra stands. Every minute the sound of his rifle is expected, but the dogs pass on away out of hearing into the ten-mile sand rough. Ezra comes up. "Why didn't you shoot?" "Shoot!" said he. "How can a man shoot a deer when he is flying 30 rods a second? Those dogs run like lightning." The dogs came in about noon.

The next morning Ezra tried the old buck on the still hunt. He wore his breeches out crawling, and finally ran on to a small deer, but would not shoot it. He wanted bigger game; but it ran and scared the buck so Ezra didn't get him after all.

The next night it rained and Ezra would not leave camp. I killed five turkeys on the roost, and in the morning Ezra tried the old buck again. This time he crawled into a gang of turkeys, and they flew and frightened the buck. Ezra would not allow me to put the dogs on him; he wished to "Indian him," he said, and kill him or let him go. So we got no deer, and left for home.

P. M. S.

CARTHAGE, Missouri.

ADIRONDACK GAME RESORTS.

WE took the New York Central and Hudson River Railroad to Albany, and from there to Saratoga, then to North Creek; from this place we went to and stopped at Indian Lake, which is about seventeen miles from the depot. My cousin being very fortunate, happened to meet an old guide by the name of Elijah Camp, whom he had had guiding for him four years ago. He had a commodious log house on Little Moose Lake, twenty-two miles further on in the interior, where we could find the best of hunting and fishing. We immediately set forth and were conveyed by a buckboard to his house. After a few days we started for Sly Pond, some five miles distant. The name of this body of water was very appropriate for we had to climb a mountain two miles high in order to get to it, then it was with much difficulty we found it, it is so very secluded; but we were fully repaid for our trouble. The first night while hunting we had four shots, getting three deer. We came back to our guide's house and waited till the venison was consumed.

About a week after I started with my guide Elijah and his son Sam, for the Cedar Lakes. Arriving there we camped over night and hunted on Beaver Pond, some eighty rods distance from our camp, a very pretty little body of water, surrounded by deer grass and lily pads—I had two shots at deer that evening. The next day started for Pillsbury Lake, only two miles distant; on that lake I saw seven deer in the lake all at once, and shot two. From there we went to Little Rock Pond, Whitney Lake, Sampson Lake, Little Mud Pond, and the Alder Lakes. There is fine trout fishing in these lakes, especially in Whitney Lake. From there we went to Big West Canada Lake, Mud Pond, and South West Canada Lake. The is also fine lake trout fishing here with good deer hunting in Mud Pond. We went from there back to the house, rested a couple of days and I started with another guide by the name of Philander Shaw, to try our luck trout fishing on Cedar River, which is only two miles distant from Camp's house. I caught forty-eight inside of an hour, they being all a good size, some weighing a pound apiece. The average distance from Mr. Camp's to the lakes and ponds I have mentioned will not exceed seven miles. Mr. Camp has good waterproof bark camps at all these places. This saves much trouble for a party. He also has plenty of good deer hounds and boats, and everything comfortable and handy; his carries are well cut and smooth, which is a great advantage.

My next trip was down to the Moose River region, or Big Indian Clearing. My guide, Wallace Thayer and I, stopped at Mr. Brown's, which is nine miles from Camp's cabin. I visited the following lakes, which afforded good trout fishing and deer hunting—I first went to House Pond, which is only ninety rods from Mr. Brown's, and saw and heard three deer in the water. This pond affords excellent shooting when the weather has been warm and dry.

I next camped on Beaver Lake. This lake is the one that Mr. Colvin, the surveyor, camped at, and while he was out fishing a bear came into his camp and knocked down everything. This lake is one of the best deer ponds in the country—a party counted twenty deer all in at once one afternoon. The surrounding country abounds in bears, foxes, hedge-hogs, ducks, loons, and occasionally a panther. There are also the three Mitchell Ponds, being full of good sized trout; then Bear Pond, which is a good resort for deer. Mr. Brown has two salt lakes near his house affording fine deer shooting. After visiting Squaw Lake and the two Shanty Ponds, I tried my luck trout fishing on Otter Brook, Moose River and Sumner Brook; I caught four trout out of the last brook mentioned, in a cozy little hole; they lasted my guide and self two days, eating them at each consecutive meal.

To parties going to the Adirondacks, I freely endorse the places I have been to; they will find Messrs. Camp and Brown very entertaining, and willing to do everything in their power to promote the pleasure of a trip. Here is a list of guides; parties will find them very obliging and willing to do everything that can be asked. They are: Elijah Camp, Philander Shaw, Walter Hutchinson, Josiah E. Brown, O. Cross, and Wallace Thayer; their P. O. address is Indian Lake, Hamilton county, N. Y. I name these guides as being responsible, knowing from my own experience during my trip there, they are well worthy of any one's confidence. I had a shot at a panther, and I shot seven deer while in the mountains, which is very remarkable.

C. H. R.

NEW YORK, August 25.

TENNESSEE.—Nashville, Aug. 28.—Deer are reported as very numerous among the Cumberland mountains. A party of hunters went out from McMinnville last week and killed eleven. This is in violation of the law, but most of the hunters about here have none of the true sportman's regard for open and close seasons. Doves are unusually abundant, and large numbers are being bagged every day.—J. D. H.

"SOMETHING NEW."—Photographs of the crowned heads of the world, finest assortment of Mrs. Langtry, and all the other English beauties, and also all actresses and other celebrities. CHARLES L. RITZMANN, 943 Broadway, New York City.—*Adv.*

"BACHELOR BOB WHITES."

Editor Forest and Stream:

I would like to get an explanation of an incident in natural history which came under my notice many years ago, if any of your readers ever met a like accident, phenomenon or premeditated hatred of the fair sex. I am at a loss what to call it. We named them at the time "bachelor birds."

Our attention was first drawn to the matter in the fall of 1861. Mr. and Mrs. Bob White were holding a lawn sociable on the beautiful Chatahoochee bottom lands in middle Georgia, my brother and I, with Cato and Bob, being the only guests and partakers of the festivities. The afternoon was fast waning, and the accumulating weight (not in the hat) in the game sack, from the many little attentions pressed on us by our royal entertainers, we thought it time to retire, and making our best *salaam* we backed out, with many promises to call again. To shorten our way home we struck into the woods and over the river hills. When about half way up the hills, with dogs at heel, on entering a belt of oak timber the dogs became rigid and firm as the rocks beneath the old hills we stood on. At the word "Go" a bevy of about forty or fifty, with some scattering birds, whirred up. Four of the scattering loiterers came to grass and proved to be male birds. From the appearance of the flight in the gloaming all appeared to be male birds, no further notice being taken of it at the time.

A few days later, when on our way to make good our promise to call again, we headed for the same bevy, which we found in the same belt of timber, where for half an hour Robert gave us a free entertainment, until getting wearied of his part of the sport he retired into a belt of black-jacks, where we left him to rest his weary pinions and throbbing breast, wending our way to the bottoms to continue our part of the engagement in the family mansion. What birds we got on the hill being male birds, as well as all the birds seen. We frequently paid them a visit on our way back and forth, but we never got a female bird from them, nor did we ever find them in the open, always and at all seasons in the woods; and their numbers increased annually.

In 1863 and 1864 ammunition was hard to get, powder and shot could be had in Atlanta in exchange for lead, but lead being as scarce a commodity as the powder and shot, the only resource we had left was to open the paper cartridges prepared for the old muzzle-loading muskets, transfer the powder to the powder-horn, and beat the balls out flat and cut them into slugs to feed the gray squirrel, our friend Bob being placed on the retired list. In our squirrel excursions we frequently waded through Bob, but left him in peace to his own reflections—no doubt he felt insulted at the seeming neglect and the cold shoulder turned on him.

We—that is, my brother, the dogs and myself—frequently talked the matter over, and came to the conclusion that these were "bachelor birds," who, for some reason best known to themselves, had become inveterate haters of the fair sex, foresworn female society, or had seen the abuses piled on their numerous family, and the uses to which they were applied, and rather than raise broods to fill the pot of the pot-hunters, they preferred to live a life of seclusion and retirement in the deep, dark woods.

In the spring of 1866, when that section was beginning to straighten out the snarl of the big rough-and-tumble, at dinner, one day, my wife thought she would like a small piece of quail. Necessity knows no law, and to wish for a quail in those days was to have it. Along in the afternoon I thought I would call around and see if any of my old friends were still in the woods. I had not visited them in two years. I found the birds largely increased in numbers, and brought a pair of them home in my hand. For three years, until the fall of 1869, at all seasons, when rusting for a shot, I would lie to that piece of woods and brush the rust off, and never got a single female bird, nor did I ever see a female bird in the flight. If any of your numerous readers have ever met with a like incident we would be pleased to hear of it. THOS. CHALMERS.

HOLYOKE, MASS.

PENNSYLVANIA DEER HUNTING.

I HAVE been hunting deer in the counties of Centre, Clearfield, Elk and Cameron for thirty years, from one to three months each year. I have a deer park at my place, and with my hunting in the woods and watching the deer in the park I think I know about as much of the habits of deer as there is any use of a man knowing. The country named is very much broken along the streams. Back toward the summit the ground is level and a large country covered with yellow pine timber. The country on and around the summit has a large number of small springs. The deer in the summer time lie by these; in the winter season the go to the ravines, where the large timber and laurel abounds, and late in the season you will find them on the hills near the river. They are hunted here in several ways: Still-hunting, ridge-hunting, sick-watching and hounding. I term hounding deer to start a hound after a deer and run it into the water. If that deer is not molested in any way except being chased by that hound it will be back on the ground from where it was started in twenty-four, or not more than forty-eight, hours from the time it was started. There is very little hounding done in our section. Still-hunting will drive deer from their grounds sooner than any other kind of hunting. One still-hunter will cause more deer to leave their ground than the best hound dog ever put after them. You get after a deer as a still-hunter does, and follow him until the deer knows you are after him, and he will leave the ground and will seek new ground if hunted hard, and the worst part of this still-hunting is done when the snow becomes deep, with heavy crusts, and the deer cannot get away from the hunter. There is where the still-hunter shows his skill. He steals up on the poor deer, takes a rest and fires, bringing his deer to the ground, then exclaims that still-hunting is the only way deer should be hunted. That is giving a deer a nice chance for his life. Now, put a hound on that same ground and when he gets the track he lets out a bawl, and, if near his deer, you will see the game in its first stage. Then is when the hunter nerves up. If he has no nerve to stay him he is "a goner" instead of the deer (I have been there). That deer may run along a line of men, and among that number there will be some with guns who attend county fairs and break ten balls thrown from a trap in succession, take first premiums, and with all these wonderful feats which they have performed will fire two shots at the deer and then be mad because the deer wont give them a chance to shoot at it all day. On the deer goes, until the dog gets tired. He stops and comes back. The deer will stop as soon as he finds the dog is not close to him, and he will also return to the ground where he was started.

We have a special act for our county, allowing a man to hunt as he may see proper, and we make it a point not to allow deer to be killed only except in season, as our judge is a hunter and wants the law enforced. I have watched deer through all kinds of winter storms. They seem to know when a storm is near, as they will lie in some secluded place; they will work to the steep side-hills, or get down in the heavy timber, or behind a rock or log, any place to be sheltered. I put up a shed for my deer to get under during the storms, but they prefer lying alongside the fence. When deep snows fall, they lay still and allow themselves to be snowed up, merely keeping their heads out of the snow.

Now my theory on hunting, and the only sporting way to hunt is to have dogs which do not run too long, and post your men on high ground, and take their shots; then have a good party, and good camp, a good set of dogs, and if a man is a hunter that is the way to hunt, and I will guarantee he will enjoy himself. My party shot twenty-seven deer last fall, and we hunted easy and we had an elegant time. I never hunt for the market, neither will I hunt with a party who does. G. R. B.

CENTRE COUNTY, PA.

"NIPKINS."

THE average darkey is very superstitious, and Tom was no exception to the rule. Though nineteen years of age, he was as ignorant almost as when he first saw the light. His fear of darkness was something laughable; it was almost impossible to induce him to stir abroad after dusk, so great was his terror of "Nipkins," as he called him. On a bright moonlight night he would sometimes venture out, but took great care to give the bushes where the shadows lurked a wide berth.

"Suppose old 'Nipkins' did catch you, Tom, what would he do?"

"Ef he cotch yo?"

"Yes!"

"He don't never tech no white folks."

"Well, how about darkeys?"

"Ef he cotch nigger?"

"Yes!"

"Well, sometime he get fool nigger loafen roun', den look out! Ef on de boat he tak all de clo's offen 'em, make 'em clum to de mas' hed, and den sometime he mak 'em dust roun' en clar de deck up till he sweat."

"Who sweats? 'Nipkins' or the nigger?"

"Nigger sweat! De ole feller set en look on, and ef yo don't kep er up rite smart, he tak en chuck yo over, en mos' drowned yo. Don't never kill nobody tho'; lets up jes en de rite time."

Our little sloop was moored alongside the meadow bank, in one of the cosiest coves on Sinepuxent. Closed on three sides, it opened toward the bay that stretched shimmering in the moonlight for miles. We were on deck after supper, enjoying that glorious time "just before turning in." Not a cloud in the sky, and one of the fullest of full moons sailing up the heavens, the smoke from our pipes floating in a soft blue wreath around us, so still was the air. The occasional splashing of a black duck as he hunted for food on the shoals, and the spasmodic honk, honks of a huge gang of wild geese out on the still water were the only interruptions to the quiet, which was rendered still more impressive by the rolling of the surf on the outer beach, subdued by the distance, but lending a rich undertone to the whole scene.

"Have you your sink-box along, Billy? I am going to have a crack at the geese one of these nights when they come in on that sand bar. Tom, you go there to-morrow just before sundown and sink the box not over forty yards from the point of that bar. You hear?"

"Ees, sir," says Tom.

The bar referred to ran out nearly one hundred yards into the bay—a hard spit of white sand, bare at all times, and a favorite spot for the geese, who came in at night to preen. And, as Brunt said, "If it was against the law it was also against human nature to sit on deck and see that bar glisten in the moonlight and covered with geese without 'cutting loose' at them." So it was arranged that Tom should sink the box just before sunset; then after a comfortable pipe Brunt would walk to it (about half a mile), stretch his manly form therein, wait for the geese and "blaze away."

Evening came. "Tom, is that box all right?" "Ees, sir; jes cum from fixen it."

Supper over, Brunt is so uneasy to start that he knocks the ashes from his half-smoked pipe, dons his boots, and, being ferried over the inlet, off he goes for the sink box. The moon comes up, and the geese come in. We sit on deck and watch them swim up to the bar, saunter slowly out, flap their big wings, and with an occasional grunt of satisfaction begin their toilet. "'Bout time suthin' went off, isn't it?" says Billy; "been gone a long time now. Tom, did you put plenty of hay in that box?" A woolly head sticks out of the companionway, and the stereotyped "Ees sir" is heard. "Bummer's gone to sleep; that's what ails him." An hour passes; the geese are still visible on the bar. "Hallo! Hallo!" comes over the water from the other side of the inlet. "Send the boat, will you, pdq." Tom is afraid of "Nipkins," so I paddle over. "What's the matter, old man?" "Matter! Why, I tried a short cut, fell in a hole and lost time; moon rose; geese all ashore; and after crawling fifty yards on the meadow, trying to sneak into the box, working like a hog to do it, too. I came to the edge of the meadow, and there, right under my snoot, that nigger had stuck the box, within three feet of shore." The truth was, Tom had been caught by dusk before he sunk the box, and "Nipkins" being in his mind, he just hurried her over the meadow, and slapped her in right by the edge of the bog. Brunt does not swear, but like Paddy's owl, he did a devil of a thinking that night; and between the fear of an outburst of righteous indignation inside the cabin and "Nipkins" outside, Tom was completely demoralized.

DICK.

CONNECTICUT.—Hartford, Sept. 4.—*Editor Forest and Stream:* I notice in the *Courant* to-day a note to the effect that "hunting for partridges and quail has begun, but the birds will be in much better condition and feather later in the month. The law is not 'off' until October 1. Rail shooting is legal on and after the 12th inst., but it is reported that gunners are already at work along the Housatonic, and find birds plenty. Down Essex way must be a good place for 'coon hunting. A correspondent writes that the 'coons are making havoc among the cornfields, and the farmers are making desperate efforts to exterminate them." It may be of interest to your correspondents who want to commence shooting immediately to know where they can do it a month in advance of the season.—W. H. K.

OHIO GAME NOTES.

I AM constrained to express my extreme appreciation of the fourth paper of your "Adirondack Survey Notes." Your ideas of the man who violates the game law are just mine, though I have never expressed them so tersely, nor have I been so well pleased with anything that I have read on the subject. The whole article is first-class and worthy of commendation to every person concerned.

Our prospects for quail are very discouraging. In many localities last fall and winter there was not a bird to be found. This spring, however, they came from somewhere, and after pairing, were to be seen and heard in goodly numbers in many places. I was hopeful then that we should have a fair supply this fall, but I am told by the farmers, and my own observations confirm it, that they have never seen so few young birds. This must be attributed to a level country and excessive rain.

In your issue of August 24, "Byrne" refers to the disappearance of quail in July and August. This corresponds with my own observations, though his theory as to the cause is different, but well worthy of consideration.

I confess that I have never been able to satisfy my mind with a solution of the problem, but I give you my ideas: Owing to the increased care in farming there is now in this section, but little cover left for quail; and the timber, too, which seems to be so great a desideratum, has to a large extent disappeared. Add to this the increased amount of shooting to which they are subjected, and there is reason enough to suppose that they come into this open country to breed, where they are less apt to be disturbed by vermin, and then when the young are old enough to in a measure take care of themselves, shift back to the dense coverts of some wilder locality. This habit of birds going out into the open country to breed, is one that I have observed for many years, and is true even of the wild turkey. It may be simply instinct, but I have learned to regard birds as possessed of far more intelligence than they are accredited with, and were I in need of any other theory than that of present necessity, to account for an exodus of the birds, I should find it in their recollection of the safer resorts whence they came, and perhaps an intelligent anticipation of the danger to come in the open season.

I have also thought that many birds are poisoned through the now prevalent use of Paris green in farming.

What I have said of quail will also apply to the ruffed grouse. But however we may account for the disappearance of birds from particular localities, it is in vain to shut our eyes to the fact that there is in general a serious reduction of their numbers that can be attributed to nothing else under the sun than trapping and excessive shooting. D. G. J.

OHIO, Aug. 29, 1882.

DUCKS AND "MUD-HENS."—A correspondent of the Sacramento, Cal., *Bee* advocates the systematic destruction of the "mud-hen," on the ground that this bird destroys the food of the ducks. He says: "This letter will be entirely devoted to an evil that I presume few sportsmen on this coast notice, but which is doing more to destroy your now good but declining duck-shooting than would be done by any amount of shooting out of season. This evil is neither more nor less than the protection of "coots" (commonly called mud-hens), which are found by thousands all over the State, and especially between San Francisco and Sacramento, and in the bay between Oakland and San Francisco, where millions are found feeding every day in the year. These birds are of a blueish black color, a trifle larger than the teal duck, and have a white bill. Their feet are also not solidly webbed, but have a slight gristly web on each side of every toe. They are simply hogs in their way, eating constantly and incessantly, and as they feed entirely on all kinds of food that ducks do they must eat away the grass, roots and seeds that keep your duck's, the same as sheep would eat away pasture from cattle if left alone in one field. One instance I remember where these aquatic hogs ate away feed from one of the best duck marshes that ever came under my notice, in 1868, in Indiana. Two miles from my home were five little lakes with thousands of acres of marsh land that afforded the best duck-shooting one can imagine, and for several years we had enjoyed the sport of excellent bags, ranging from 50 to 200 ducks per day to a good shot. In 1868, in the spring, I went over to the lake one day and saw what I thought were ducks by the acre. I hurried to my old stand, but no flight came, and I was puzzled. I took my boat and made up my mind I would scare them up, leaving a companion in the blind where the ducks passed from one lake to the other. I rowed out to my acres of ducks (as I supposed), and noticed I could easily get within shot of them, so I began shooting into the flock, not waiting to pick them up until I got through. After following and shooting for some time, I began to gather them in, and to my surprise I found them entirely different from ducks. The result was that I found they were "coots," and unfit for use. Since that year these lakes have been the home of the coot, and I do not think that two good experienced sportsmen could bag twenty ducks any day since in those lakes; and I could refer to many lakes and marshes where the same destruction of duck-food has ruined the finest shooting in the country. Now, then, for the remedy. That is, simply, for every hunter to shoot mud-hens as fast as they come within range. They are fair shooting for sport, and as many hunters don't care for the game simply for the meat, they can have as much fun shooting mud-hens as ducks, for then the tiresome work of carrying them home does not come in. I have had many days' sport shooting them with a .22 and .32 calibre rifle. It takes a good shot to hit ten straight on the water with a rifle. Try it. Some will say they should not be killed in the bay. This is a great mistake, as ducks are equally good scavengers; and my word for it, you will see a duck come for every mud-hen and gull killed, and they will get nearly or quite as tame and breed there by the thousands if you will only kill off the birds that are eating away their pasture. Organize club hunts, and shoot nothing but mud-hens and gulls. Also, every sportsman that goes on a hunt should kill every mud-hen that flies by him, end every hawk possible, and in three years your marshes will be alive with ducks and other game birds, instead of the miserable, stinking hogs of coots. I would any time let a duck pass without a shot if there was a coot in range and give him the charge in place of the duck. Try it, brother sportsmen." [We incline to think that the writer of the above has not fairly tried the merits of the bird, which he so roundly berates as worthless for the table. We know that a prejudice exists among many sportsmen against the "mud hen" who have never eaten it. We have found them a very fair bird for the table.]

WHAT IS IT?—Omaha, Neb.—In the 24th of August number of FOREST AND STREAM "Homo" gives us an interesting account of plover shooting at Long Branch, at some period of time antedating the erection of the Stetson House, whenever that enterprise may have taken place. It is always interesting to read the story of success in field sports, and the best point of "Homo's" article is that he wrote at all. For whatever in a man's sporting life is worth remembering is also worth telling to others. If every sportsman would write down in his own way the most noteworthy incidents in his experiences in the field and publish them, he would add immeasurably to the enjoyment of his sporting brotherhood, although he may not be able to emulate "Homo" in perspicuity and force of diction. One thing, however, detracts from "Homo's" otherwise pleasing story. He fails to give any adequate idea of the particular species of the birds he so skillfully brought to bag in those old-time Long Branch potato patches. He calls them "grass plover" to be sure. But what is a "grass plover"? We find several species of plover out here on the great Western prairies, where there is more grass to the county than in any other country on the globe. But I have never heard that any of these species of plover subsist on grass. Possibly the great prevalence of this agrarian product, or the circumstance of a Vermont birth, may lend a tinge to my greenness, and yet in my limited reading of standard ornithological works I fail to find any reference to any species of birds by the name of grass plover. It is not of so much importance to sportsmen whether Wallack, Adams or Booth ever hunted these birds at Long Branch or elsewhere, as whether they were golden, black-bellied, killdeer, ringed, ruddy, sanderling or Wilson's plover, or a new species that the keen eye of the ornithologist has failed to discover.—BOB WHITE.

NEW HAMPSHIRE.—Dover, N. H., Aug. 31.—Ruffed grouse are exceedingly scarce, unless you go back in the country several miles, and lucky is he that gets first shot before the flocks are scattered. The scarcity of our ruffed grouse can be accounted for by the fact that persons calling themselves sportsmen go out for woodcock and who shoot the young birds almost before being feathered. Here every urchin large enough to carry a gun out of the city goes to the woods and fields and shoots everything in sight, thus bringing to all sportsmen of honorable intentions the dislike and almost hatred of our farmers who are very accommodating and willing to allow all honorable persons the right to gun their premises. This class of gunners who depredate upon our farmers in this manner, break down fences, leave pasture bars down, so that finally their victims have been compelled to seek in redress the protection which our State laws accord to them, thereby excluding the real sportsman from the pleasures of a day's sport with the rod and gun. Even while I am writing this the farmers around our neighboring lands are getting ready to post their premises, owing to the severe drought which has caused the woods and timber lands to be very dry. Only last week a careless shooter, probably using paper for wadding, set fire to the woods at Dover Point, a noted summer resort, compelling a force of twenty men to fight it two or three days in order to stay the fire.—GRANGERS' RIGHTS.

"SUMMER BEAR YARNS."—Wellsboro, Pa., Aug. 25, 1882.—*Editor Forest and Stream:* Yours enclosing slip from *Boston Herald* just received. And so the *Herald* reprints, without credit, our bear talk, under the head of "Summer Bear Yarns." Bismillah! It is evil. It would be better were the name of the author or the paper from which it was—selected, appended to the sketch. Now, I like the *Herald*. I do not agree with people who call it a "literary Algerine." I think it a spicy, well made paper, conducted with ability—especially the scissors department. But if, in the near future, the editor should happen to strike anything from my pen in FOREST AND STREAM which he thinks worth repeating in his journal, will he kindly remember not to forget that journalistic comity demands quotation marks, a mention of the paper from which it is—borrowed, or the name of the author.

> Which I rise to remark that it seems only fair,
> When you quote from an author the same to declare;
> And not to go stealing the thunder of those
> Who haven't got thunder enough for home use,
> Let alone having any to spare.—NESSMUK.

MASSACHUSETTS BAY BIRDS.—Boston, Aug. 30.—For the last ten days I have been enjoying bay bird shooting in the vicinity of Plymouth, Mass. The first few days black-breasted plover, winter and summer yellow-legs were quite plenty, but towards the latter part of my visit they seemed less abundant. Now and then a few willets, chicken and piping plover were shot, but the main flight has not yet put in an appearance. Old residents say after a good easterly storm one can get more curlew and golden plover, etc., than could be comfortably carried. I need not mention the large flocks of sanderlings and ring-neck plover we came across, as some gunners consider them beneath their notice, but were they to see in what fine condition we found them, I do not hesitate to say that they would shoot quite a mess of them. One may find good shooting from Scituate to almost any part of the Cape. Those who wish to try the shooting grounds take Old Colony R. R.—FRED LEWIS.

PENNSYLVANIA.—Boiling Springs, Aug. 28.—There is a prospect of an abundant crop of quail. "Bob White" may be heard every morning and evening. Pheasants (ruffed grouse) are going to be very plenty on our mountains near here. We advise any person wishing to have good quail and pheasant shooting to visit Cumberland Valley. There are four railroads running through the valley, by which any point may be easily reached. Boarding may be had at any place for three dollars a week. Pine Grove, an almost inaccessible mountain, is full of deer.—E. S. S.

Thompsontown, Juniata Co., Pa.—Quail are fairly plenty; ruffed grouse on the increase; about the usual limited number of wild turkeys.—JUNIATA.

MASSACHUSETTS.—West Sterling, Sept. 4.—The law on partridges was "off" last Friday, and our local sportsmen are after them. But there are no reports of any large bags as yet—all complain of the scarcity of the king of game birds as in other sections of the country. The indications are good for some quail shooting next month; several fine coveys having been flushed in this vicinity so far. Gray squirrels are also quite plenty this fall, so it is probable that the new breech-loaders have not been purchased in vain. The prospects are that we shall have some fine fox-hunting this fall, as they are quite plenty here, and those who delight to hear the music of the hounds in full cry after sly reynard on a still frosty morning, with a chance of carrying home a fine brush after the day's sport, can have their wish gratified. We have no regularly organized club here, but we know what the laws are and mean that they should be kept.—C.

PRAIRIE CHICKEN GROUNDS.—The following points are recommended to prairie chicken shooters—all reached via the Chicago and Northwestern Railway: Iowa.—De Witt, Cedar Rapids (hotels: Grand Hotel, Northwestern Hotel, Coleman House), Tama, Nevada, Ames, Boone, Ogden, Marshalltown, New Jefferson, Denison, Dunlap, Wall Lake, Sac City, Battle Creek, Mapleton. Minnesota.—Rochester (hotels: Cook House, Pierce House), Owatonna (hotels: Arnold House, Park Hotel), Wascca, Mankato, Kasota (hotel: Railroad Hotel), St. Peter (hotels: Nicollet House, Commercial House, Northwestern), Redwood Falls (hotels: Commercial Hotel, Exchange Hotel), Tracy, Marshall, Lake Benton. Dakota.—Watertown, Brookings, Volga, Desmet, Huron.

NEW YORK.—Medina, Sept. 4.—Woodcock shooting has been very good in this locality. I hear of bags of from twenty to thirty-two birds being made in a day, to two guns. A few quail have been seen this season, the first in several years, none have been killed that I have heard of; fifteen years ago they were quite plenty. A pair of blue herons were shot up the creek, three miles south of this place a few days since. It was considered quite a lucky strike by the successful hunter, as he has been trying for three years past to get a good specimen to have mounted.—SAL NITER.

THERE'S MANY A SLIP, as some Chico, Cal., deer hunters found the other day. One of the party had brought down a big buck, and the other sportsmen coming up "they gathered around the deer as it lay on the ground, and one of the boys was probing the wound and another drawing his hunting knife plunged it through the deer's throat, but his knife being too dull to sever the head he asked for another one, when, to the surprise of all present, the deer jumped up and escaped. They followed his blood for a long way, but found no deer."

MASSACHUSETTS.—North Andover, Mass., Sept. 1.—The season opens to-day for ruffed grouse. The prospect for good sport was grand earlier, but now everything has dried up and the birds have taken to the swamps or other inaccessible places, and we do not look for any shooting until rain comes. We have had no storms, not even showers worth mentioning since July 5. Wells and springs are fast drying up, and fields and pastures are as brown as a berry; even the forest leaves are scorched and withered.—E.

MEREDITH HOLLOW, Del. Co., New York, Aug. 31.—I am rusticating on one of the dairy farms of Delaware county. The game of this region is not very abundant. There are some ruffed grouse, but judging by what I hear, less than in former years. I have found no woodcock, but this is not strange, the land hereabouts being very high and dry. Quail appear to be like the snakes in Ireland. Squirrels are plenty, and make a very good pie when properly compounded.—PICKET.

ROCKLAND COUNTY.—New York, Sept. 4.—In Rockland county, this State, where I have been for a few days, I found that there has been quite some woodcock shot, and are still being shot, with indifferent success. The outlook for quail seems to be very good throughout the county, and any quantity of rabbits and squirrels.—R. B. S.

RAIL SHOOTING.—Bristol, Pa., Sept. 2.—Rail-bird season opened poorly. Reeds not yet ripe. Thirty-eight birds to high boat on Stewarts' flats. High boat on Bristoland Burlington marshes scarcely a dozen birds. Few reed birds flying. Rail in very poor condition. Likely to be another flight of rail by middle of month.—C. E. S.

OMAHA, Neb., Aug. 27.—Prairie chickens are said to be scarce along the line of the C. B. & Q. R. R. No other game to be seen at present.—Yo.

OHIO.—Tiffin, Aug. 26.—Quail plenty this fall, more so than usual. No woodcock to be found in a day's tramp, or squirrels.—F. M. H.

VIRGINIA DEER.—Deer are reported by a correspondent to be very abundant this year in Sussex county, Virginia.

Camp Fire Flickerings.

"That reminds me."

WE were out for woodcock, and as we were crossing the open between two covers our dogs surrounded a woodchuck, and encouraged by us we were making considerable noise, which attracted the attention of the old farmer and his son, and they left their work and came over to see the fun. As this was new game to the dogs, they were rather awkward in handling them. Fred, wishing to help them, aimed a vicious kick at the rodent, which missed its object, and striking poor Dan under the chin fairly lifted him off the ground. When the howls and laughter had subsided, the farmer's boy remarked: "That reminds me of how dad did for old Bose. He was the goll darndest woodchuck dog that you ever see. One day he got a chuck in a stone heap, and dad and I took a crowbar and went to help him. We pried out one or two stones, when the chuck stuck up his head and dad let drive at him with the crowbar full chisel. Just then old Bose spied him and made a dive, and the crowbar struck him between the ears and killed him dader than Julius Cesar." "Yes," added the old man, "and the funny part of it is old Bose don't know to this day but what the woodchuck killed him!"

SPRINGFIELD, Mass.

When I was a young steamboatman on the raging Mississippi, running from St. Louis in the Keokuk trade, the good steamer Di Vernon with Capt. Matson commanding, was one of the finest and largest side-wheelers in the river.

The mate at that time was "Old Hughey," a large, broad-shouldered, fat Irishman, who had the reputation of being the terror of the roustabouts, for when he opened his broad mouth they had to "get up and dust around."

One day while the steamer lay "tied up" at the levee landing, some of the men were at work in the hold, and Hughey just then needed more help on deck; so striding to the forward hatch he looked down and bellowed out:

"Hello, down thar."

"Aye, aye, sir," answered the men from below.

"How many of yees is thar down thar?"

"Three of us, sir."

"Well, the half of yees come up here." DORSAL FIN.

CHICAGO.

We were all seated about a roaring log fire. Nothing had been said for several minutes, when the solemn stillness was broken by the lonesome hoot of an owl near us. "That reminds me," said the Professor. "You know that family of Hurds? Well, one time the old man went out to the swamp to cut cedar, and not returning at night his wife became worried, and, accompanied by her two daughters, started to find him. They got well into the woods, and all at once were brought to a standstill by 'To who-o-o!' 'Hark, girls!' says the old lady. 'That's an owl,' says one of the girls. 'An owl! No it hain't, neither. Don't you suppose I know your father's voice? To who-o-o, Mr. Hurd?'" F. C. P.

LINCOLN, Maine.

A friend of the writer lately asked a genuine Florida "cracker" "if he ever went a fishing," and received the following characteristic and pointed reply: "Sometimes I goes a fishin' and sometimes I doesn't!" C. H. C.

GLENCOE, Florida.

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.

Lake trout, *Cristivomer namaycush.*
Siscowet, *Cristivomer siscowet.*
Grayling, *Thymallus tricolor and T. montanus.*
Rainbow trout, *Salmo iridea.*
Clark's trout, *Salmo clarkii.*
Dolly Varden trout, *Salvelinus malma.*
Salmon, *Salmo salar.*
Land-locked salmon, var. *sebago.*
Quinnat salmon, *Oncorhynchus chouycha.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (N. Y. pickerel), *Esox lucius*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*
Yellow perch, *Perca fluviatilis.*
Striped bass (Rockfish), *Roccus lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Ambloplites.* two species.
War-mouth, *Chaenobrytus gulosus.*
Crappie (Strawberry bass, etc.), *Pomoxys sicromacumatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus bullaris.*

SALT WATER.

Sea bass, *Centropristes atrarius.*
Striped bass, *Roccus lineatus.*
White perch, *Moronc americana.*
Sea or porgie, *Stenotomus argyrops.*
Tautog or blackfish, *Tautoga onitis.*
Bluefish or taylor, *Pomatomus saltatrix.*
Weakfish or squetague, *Cynoscion regalis.*
"Sea trout," *Cynoscion carolinensis.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*
Spanish mackerel, *Cybium maculatum.*
Drum, *Pogonias chromis.*
Lafayette, *Liostomus obliquus.*
Red bass, etc., *Sciaenops ocellatus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

My purpose was to give you some directions concerning roach and dace, and some other inferior fish, which makes the angler excellent sport; for you know, there is more pleasure in hunting the hare than in killing her; but I will forbear at this time to say more, because you see yonder come our brother Peter and honest Coridon: but I will promise you, that as you and I fish and walk to-morrow towards London, if I have now forgotten anything that I can then remember, I will not keep it from you.—*Izaak Walton.*

SHRIMP-CATCHING IN SWATOW, CHINA.

SWATOW, China, is in the Kwang Tung province, about two hundred miles from Canton (the capital of the province). The harbor is very spacious and thoroughly sheltered. The Haw River, carrying a considerable volume of water, empties into it at its upper end, and two or three smaller streams discharge into it at different points. As all these streams carry more or less detritus, they help to maintain, and even extend, the enormous mud flats that spread out from the shore a distance, varying from a few yards to a mile or more, at low water.

A large proportion of the inhabitants of the villages around the Bay of Swatow are fishermen, among whom, as with most of the poorer classes of Chinese, the struggle for existence is so horribly sharp that every possible chance of earning a few cash or securing a mouthful of food must be seized instantly. Hence it is that even the "nasty blue mud" is carefully searched for any stray shrimp, mud-worm, or other living thing it may hold.

There is a good deal of amusement to be derived from watching a Swatow shrimp-catcher skimming over the surface of the mud on his "mud-toboggin" (I coin the word, since none that I think of so nearly describes the implement); and not a little excitement, too, as the slightest movement seems sufficient to plunge him headlong into the soft black mud.

The shrimper strips to a simple breech clout, and ties his queue in a tight knot on top of his head, fastening it with a wooden bodkin. If the day is very warm and the sun unusually fierce, he wears a huge hat (made with a frame of thin bamboo strips, filled with dried bamboo leaves), tied securely under his chin. Round his waist he ties a wicker bottle of about half a gallon capacity, with small mesh to drain the water off from the contents, and having a small, rather long neck to prevent any particularly lively shrimp jumping out. His hands are thus left quite free to manage his "toboggin," and to capture any of the small game he is after.

The craft is made of a thin board about six feet long by ten inches wide, slightly curled up at the forward end. About two feet from the bow is a slight "gallows-frame," just high enough for the shrimper to lean on. He stands on one foot, balancing himself by the frame, and with his other foot pushes himself over the surface of the mud, by an adroit turn of the foot (something like the slight turn of the paddle-blade of a skilful canoeist), propelling himself nearly in a straight line. He will skim rapidly over mud so deep that, were he to attempt to walk, he would sink to his neck and probably be quite smothered, changing from one foot to the other while under way, turning sharp corners, stopping and backing, his feet and hands all the time slippery with mud, yet I never saw a misstep or fall. It requires long training and constant practice to enable one to use this

"mud toboggin" at all, and many and amusing have been the failures of adventurous young foreigners. I have several times been nearly smothered in the soft deep mud before I would confess that it wasn't intended for me ever to use one.

The principal part of the "catch" of these fishermen is a tiny shrimp about an inch long, but they let nothing pass them, their bottles containing worms, small shellfish, and various other inhabitants of the mud. The slightest evidence of life is sufficient to catch the eye, when (if moving rapidly) they stop by sticking the foot, that for the moment is doing duty as propellor, deep into the mud. This causes the "toboggin" to swing round as a pivot and "heave to." If the mud is comparatively shallow they will leave their craft and dig for whatever may have attracted their attention, if not, then they kneel on the "toboggin" while digging.

K. GOODRICH.

SHARKING AT NANTUCKET.

THE hunting of the shark, by its excitement and colossal dimensions, about corresponds to the noble chase of the buffalo or the grizzly on shore, and is an experience well worth traveling to Nantucket for. Every self-respecting tourist carries home a shark's jaw or some of the shark's curved teeth as trophies, and small boys have their wonderful pockets filled with assorted teeth and scraps of shark's skin, on which they sharpen their knives as on so many whetstones. To catch a shark you stop the boat while out blue-fishing and drop the line down in those shoal places off-shore where the sharks chiefly lie in wait, but the blue-fishing company generally object to this and prefer to stay by their original spot. A better way, and one partaking more of the typical island flavor, is to sail down the harbor to the little peninsula of Wauwinet, and, crossing the narrow strip of sand, re-embark on an old whaleboat and at a mile off-shore, drop anchor at the favorite summer resort of the sharks.

Hunting the shark is the nearest approach to "sitting on a mountain to bob for a whale," since the Norcross boys present you with 200 feet of stout clothes line and an iron meat hook for tackle, and impale eight or ten perch on the long-barbed hook for bait. When our nine lines were streaming out from the boat's side, and each one was braced for the coming struggle, first one female head and then a second was bent in pensive attitude by the gunwale. My own head was swimming, and sea and sky were rolling together, when a shout from the man in the bow drove every notion and sensation away, and we all stood up and shouted with excitement. The rope came slowly in, and soon the big fish was floundering on the surface, churning the water white all around, and drenching us with the spray. The Norcross boy seized a club, his brother held the line, and after a succession of blows on his pointed nose, the shark was hauled aboard, its jaws wide open and its ravenous career ended.

After the first catch there was a subdued excitement all around, and no one thought of the ground swell again. The Harvard prize man announced that he thought he had a bite, and, hauling his line cautiously, he found a little yellow crab clawing at the tempting bait. The shout of laughter was drowned by my own shriek of victory, as there came a jerk from the other end of my rope. It may be cruel and murderous sport, but there is a savage excitement in waging war against such wild beasts, and pulling in that shark was equal to holding a runaway horse. With braced feet, it hand over hand, the line gradually shortened and the body of the shark was seen darting around in the water. "Look out or you'll land him in your lap," cried the yachtsman, "and if he comes in some of us will have to get out." The little boys danced, the men shouted and the ladies stood up and shrieked in chorus with me, while the shark lashed the waters with his mighty tail and sent the spray all over us and the boat seats. The Norcross boys took the line and drew my prize in, hammered him on the head with a club, and putting another hook in his back, pulled him over and stretched him out. There he lay, his nose at one side of the great whaleboat and his tail hanging over the other, nine feet long from tip to tip, a good-for-nothing lump of a fish, weighing 800 pounds.—*Nantucket Letter to the St. Louis Globe-Democrat.*

BASSING IN PINE LAKE.

PINE LAKE, Michigan, has no reputation as ground for black bass, though Intermediate Lake, only three miles away, is famous for these fish as well as for pickerel and maskalonge. As interesting angling literature as I have read is the series of letters from the "Camp of the Kingfishers' upon Intermediate Lake, in FOREST AND STREAM. But the best sport of the "Kingfishers" was, I am sure, no better than I enjoyed last Saturday afternoon on the "South Arm" of Pine Lake.

The entire day was one of "'speriences." It began with an attempt to reach the fishing-grounds by means of a sail-boat. This came about from the offer of a young man, electrified apparently by some four-pounders I had brought in, to take me there with his boat, if I would only show him where the "there" was. We accordingly started Saturday forenoon and arrived in Charlevoix at 1 P. M., having missed the fishing-ground by about four miles. I was more than ever of the opinion that when I don't care where I go and whether I go anywhere I'll take a sail boat, while the young man was so disappointed with his boat, that he didn't fall in with my suggestion to take the afternoon steamboat directly to the fishing grounds. As for me, I was determined that my "hoppers" so laboriously secured should not be wasted, so the 3:30 P. M. boat found me embarked with skiff towing behind. (By the way, if anyone would be in a frame of mind to sympathize with the old hen in her surprise and disappointment when she misses the grasshopper she was so sure was her's, let him try to gather in enough of the lively insects in question, for a fishing trip.)

With my embarkation began a new series of "'speriences" and it would have brought tears to your eyes to see me struggle to prevent my skiff from going under the stern of the steamer as the latter backed off from her dock. Fortunately, a fellow passenger seized me by the arm and saved my boat from the screw, and me from a ducking. Of course the boat was half full of water when I reached my fishing ground, but a few minutes' diligent bailing made that all right, and I was ready for work. The bass was ready, too, it seemed, as I struck one soon, and was kept busy until the steamboat returned. I'll attempt a description of the capture of but one, a four-pounder, not because he was the largest, (I have taken much larger) but because he was the most active. I was anchored in thirty-five feet of water, as deep as my anchor rope would commend. Outside, the bottom dropped off very suddenly to a great depth, and I was fishing in this deep water with perhaps twenty yards of line. Inside there was a mass of pickerel weed and other aquatic plants. My rod is an eight-ounce split bamboo, made on the Henshall pattern. The fish in question seized my bait with a rush, and it hardly needed the strong snap I gave him to set the hook in. His very first move was characteristic. Instantly he struck for daylight, and leaped into the air with a spring that said, "Whoop, here I am, catch me if you can." It was the best leap I ever saw for a bass. He put all his fresh power into it, and fairly tumbled back into the water. I am sure he went four feet in the air.

From this first sample of his vigor and spirit I was prepared for a grand rush. I was not disappointed. My habit is to hold my fish very snug so that it is rarely indeed one makes a run of thirty yards, but this one carried out full fifty yards, fighting for every inch, and at the end rose rapidly, making another grand leap into the air. This run had been made away sternward of the boat, but still in deep water. Now he returned instantly over the same course, and his speed was such that I had to ply my multiplying reel with desperate energy to keep up with him. When just opposite me, he turned and darted under the boat toward the weeds. Of course I "gave him the butt," and my first thought was, not to let him have an inch of line, but his fierce tugs convinced me that the chances were good that my rod would shut up like a jack knife, so I let my line slip slowly under my finger. Unfortunately for my chances, I was standing at the bow when he made his rush under the boat, so that I could not pass the line under that end without fouling the anchor rope, so that for a few seconds the line sawed and hissed ominously over the keel; I soon passed to the stern, and so got out of that predicament. But in the meantime, the bass had buried himself deep among the weeds and seemed inclined to stay there. However, he did not sulk very persistently. A strong pull started him again, and once more he rose in his wrath. This time the thirty yards of line was hung (as it were) with a washing of weeds. Another rush under the boat carried him into deep water.

And now began some tactics that have succeeded more than once in my experience with black bass. Swimming near the surface, he kept turning on the hook, this way and that, rolling, too, over on one side and then on the other. No other device causes me so much anxiety. But this fish was too securely hooked to escape even in this way. Twice after this he darted under the boat, but was too nearly tired out to reach the weeds. A third feeble rush was made, but I drew him up near the surface, and holding the landing net in his course, I lifted him gently in out of the wet. This was but one of many tussles with big fish that afternoon, though no other was so prolonged and exciting as this. I shall not attempt the expressions of surprise that I had caught such fish in Pine Lake, that I had caught them with such bait, that I had landed them with such tackle, etc. A native came paddling by while I was struggling with one. He was overflowing with sympathy and surprise, and, when I finally "scooped up" my fish, broke out, "Well, I'd rather fish than eat, and I've been fooling 'round this point for years, but I never caught no such fish as that." I must tell you of one singular thing that occurred, and with that close this, to me, unexpectedly long letter. For a few minutes during my fishing I threw my line into the shallower water among the weeds. There I had a nibble that I thought must be from a perch or rock bass. I snapped sharply, and sure enough found I had hooked a rock bass, or rather two, the line passing through the lip of one, while the hook was fast in the side of the other.

CHARLEVOIX, Mich. T. R. WILLARD.

LIGHT AND HEAVY RODS.

YOUR light vs. heavy rod discussion is really instructive and amusing reading, as it brings out so many interesting and comical stories, that would hardly be put on paper without some such incentive.

For my part I see the justice of both sides of the rod discussion, and my rod case always contains both light and heavy rods that I use as the humor takes me, or as my experience teaches me will give the best sport at each varied fishing resort, the size of the trout and the peculiarities of the water being taken into consideration. My heavy rod saved me three noble brook trout weighing 3¼, 4¼ and 5¼ lbs., in an unfrequented lake near Bonney's Seven Chain Lake resort (Adirondacks), last May, when no tackle on a 6-oz. rod would have been reliable. But the next evening on Seventh Lake, with leaping trout all around me, anything but a light rod would have seemed a profanation. There is one idea connected with this discussion that I have not seen brought in, and that was embodied in the excuse the sometimes guide, always around old coon, Capt. Parker of Forked Lake, gave me when I suddenly came on him, fishing with a heavy pole, and large hook, in Constable's Eddy, Raquette River, one May morning several years ago.

"Honest John," my guide, whispered: "Ask for some worms and lift the boughs when I run you close." I did so, and saw over twenty brook trout stacked crosswise, not one under a pound in weight and several about three pounds. Naturally indignant I expressed my opinion very freely of a guide that would thus skin all the best holes early, before his sportsman customers came; when in reply I received this bit of wisdom: "I am spring poor; I go out to Blue Mountain Lake this afternoon, and trout bring twenty cents per pound at the hotels there. I take my biggest hook, that nothing but the biggest trout will take, and catch my required weight of fish in the fewest possible number, leaving the pools full of the sizes you fools can catch with your light tackle." I also have heard Alvah Dunning say he never uses a small hook, as then he never is tempted to keep small trout; and many guides argue, with truth on their side, that if none but large hooks were used, and all trout under say one-half pound returned to the water, that the trout in the lakes and streams would be inexhaustible; but that the small hooks and light tackle used by fancy sportsmen catch anything that comes along, and thus, to catch ten pounds, destroy what would be one hundred pounds or more in a few years. Looking at it from this point of view, when I afterward fished Raquette River I used a heavier rod and found fine sport, after my trout were hooked, in leading them to some pool where John could get the landing net under them, and then go back and get another. Whereas any one with experience knows that if a two-pound trout is hooked by a six-ounce rod and allowed to thrash around for half an hour or more, running up and down the river, through the water in every direction, tangling lines if any one else happens to be fishing there, that the fish are more or less scared and many less will be caught. All the talk and fine writing on some one fish that "took an hour to bring to net" sounds very nicely and looks well in print, but a show of a dozen such on a platter looks better in camp, and fills a place that otherwise has to be filled either by the canned beef brought in, or from the well-baited buoy that has often to be resorted to.

Now I have had many years experience in the Adirondacks, and can truthfully say (and for five years "Honest John" can vouch for me) I have never taken a trout in an unsportsmanlike manner, and yet have never eaten a meal there without them. I have never taken in any canned meat, but no party I have ever been with has had to resort to buoy fishing. Still, I am sure that the fanciest sportsman living could never call me a "trout hog," which, by the way, is a well coined word. Although I have often given fish to other camps that were poorly supplied, I can call to mind no time that I ever caught fish that were not used.

Your correspondents are covering about all the ground, and to me their letters increase in interest with every number. "Splasher's" "Deer Hunting in Michigan," almost confirms my long deferred resolution to still hunt deer in the Adirondacks this fall, instead of hounding them as I have done for past years, but when I remember the rough mountains and diverging streams that even the guides dare not still hunt on a dark day, except in some sections, and where the chance of always getting around to camp at night is more uncertain than on the level ground and straight running rivers of Northern Michigan, it discourages me, but sometime I surely shall have a trial at it. "H. D. W. L.'s" "Put Yourself into Condition" is also timely, though we in the country keep ourselves in fair condition, if we have sense enough to think at all on the subject, which, I am sorry to say two-thirds the business men never do either, in city or country. It seems unaccountable to me that men cooped up in offices every day, with no exercise, and necessarily poor appetites, can go on year after year without thinking a radical change necessary. If they would read your paper it seems to me that it would imbue them with the desire to at least try what others seem so thoroughly to enjoy.

M. S. N.

JOHNSTOWN, N. Y., August 28, 1882.

A TRIP TO NORTHERN MICHIGAN.

HOW pleasant the change from the busy, bustling city to the quiet of the green woods. The singing murmur of the trout stream, or the dash and hurtle of the broader stream. So we found it toward the close of the fishing season. The brain was stretched to its tension with the continued wearying rush of a city life, and the body run down and needing rest.

The Eastern Express from Chicago and the Grand Rapids and Indiana sleeper gave us a quick passage and a good night's rest. Bright and early in the morning we were put down almost in a grove of magnificent maple trees at the site of Summit City. A city here meant the abnormal quiet of the woods. The only sound greeting us was the screaming of the roosters and the clucking of hens, while the clear fresh morning air toned up the system, and, confess it we must, it made us hungry enough to devour a dry crust.

We found a place for breakfast, and then pitched a tent, and prepared to go into camp. The wife and twelve-year-old boy had accompanied us, and, for the first time in their lives, attempted a life under canvas. We were eager to go fishing, and after getting things into shape downed a fishing suit and started for an unknown trout stream. I mean to us unknown because it was in the woods, and to find the way through even the roadways in these dense forests is something of a task. Following the directions given, we after a four-miles tramp happily struck the creek—a veritable Michigan stream, brush grown, full of bends and turns, full of sand drifts and holes, overhung with brush, and log-covered; but we soon rigged up and made the first cast. The third one was made, and a lively trout struck with some earnestness and vigor. We struck promptly and landed a half pound brook trout, high-colored and game, and as handsome as a picture. We fished on until the shades in the woods warned us the sun was trending downwards, and we had five miles to walk. We had caught enough for a nice breakfast. A dozen trout in two hours' fishing on an unknown stream we considered good, especially at the close of August.

We have spent days on these trout brooks and have fished the Boardman River, the Manistee River feeders for the famous grayling, and enjoyed taking this splendid game fish. We have seen some fine fish taken from these stream, and have visited the region of the lake chain emptying into Lake Michigan at Elk Rapids. The streams here, as attested by ye scribe of the Kingfishers' Camp, maintain their old time name. Can you ask for anything better than this? The guests of George Dyer, at Elk Rapids, caught during last season 8,000 black bass, and over 3,500 trout. This season up to August 21, the guests of the same house had caught 10,037 speckled trout and bass. Elk Rapids is indeed a fisherman's home, where gentlemen can take their families with them, and the youngsters are as happy as clams at high water. Geo. Dyer and his good lady and daughters are soon in the confidence of the children. There is nothing fussy or restrained about the place, but the guests are surrounded with children, and enjoy their company.

My visit to Michigan has been a very pleasant one. For eight summers we have fished through various portions of this northern region, and come home each time more enraptured with its many beauties; its clear, cool air, its lovely nights, and its many trout streams; but above all, its pleasant social people. The hotel keepers in this region do not attempt to "skin" you, but charge moderate prices, give you the worth of your money; make you feel at home, and cordially invite you to come and see them again. And come you will if the fates will permit, for at these places are found gentlemen with like tastes who yearly, when the dog-star ascends the summer sky, turn their steps to this cool, northern region, and bring their families with them to enjoy the rest and quiet of this land of brooks and streams.

NORMAN.

CHICAGO, Illinois.

CANADIAN SALMON.—Ottawa, Canada, Aug. 28.—Fishing parties are preparing to camp out, and several American parties from Boston and New York have arrived, and start for the interior lakes to-day, where trout and other good fishing can be found. I saw a gentleman from the vicinity of Combermere, on the upper Ottawa, who informed me that the deer were reported by the woodsmen to be more plentiful than they ever had been known to be for many years, and duck hunting is reported as splendid. I think when the superior hunting and fishing to be found in this part of Canada are better known, there will be a large influx of parties in here during the seasons. Some five hundred American excursionists visited Ottawa on Saturday last and were highly pleased with the place. Ottawa is becoming a favorite place for tourists and visitors.—W.

RIVERS AND FISH OF NEVADA.

[A paper read before the California State Sportsman's Association.]

WHILE not attempting to enlighten any one as to the rivers of Nevada, their source, course, volume and sink, I may be permitted, from the inland seas receiving their waters, and from the evaporation constantly going on, to revert to Nevada's waters as unlike all others outside of the Great American Basin.

Perhaps the rivers of no State or country received their names from more celebrated travelers, explorers and soldiers than Nevada.

Prior to the discovery of gold in California, Humboldt, the great scholar and traveler, journeyed down the longest and largest river emptying into our inland sea, which river to-day bears the name of this most distinguished savant.

It was the articulation of the "Pathfinder's" trusted guide that caused General Fremont to write "Truckee" as the name for the grand river that drains Lake Tahoe.

It has been my pleasure to ascend the summit from which Kit Carson, the celebrated scout and Union soldier, first viewed Carson Valley, and gave the silvery stream, coursing through rich meadows, his own name; a name then and since, both in history and romance, so proudly mentioned in discoveries and war, that has followers, knowing the daring and purity of their commander, compared the dashing waters, fresh from the snow banks of the Sierras, to the intrepid scout that fulfilled every mission, led them from dangers, and halted only when ready to quench their thirst from the cooling waters of the Carson.

Walker River has its source in the Sierra Nevada Mountains. Her several branches after leaving California run through Esmeralda county, where the main Walker forms and empties into Walker Lake. The river took its name from an old mountaineer and trapper, who, as early as 1844, had penetrated these mountain fastnesses, set his traps along the river bearing his name, traversed the adjacent valleys, little thinking the "toll-road fiend" would at some future day demand tribute, or the "Railroad Gazetteer" would index "Railroad Crossings of the Walker."

These four comprise the main rivers, if I may not mention Reese River, whose floating palaces and ferryboats having been hauled off and placed on the dry-dock to give way to the iron horse, are now in a state of majestic decay, while their human freight, the "Pioneers of 1863," look from their prosperous city in the Toyabe range with as much delight, upon this historic river, as did the Israelites upon Jordan, or De Soto when he first gazed upon the Father of Waters.

The three branches of the Owyhe uniting in Idaho rise in Elko county, as well as the Breauncan, one of the tributaries of Snake River; these flow northerly into and through the Columbia, discharging their waters into the Pacific.

On our southeastern border we have the Colorado skirting the boundary of Lincoln county for about 125 miles. In this county the Muddy, Vegas and Rio Virgin have their rise, flow south and empty into the Colorado. The Amargosa rises in Nye county, flows southerly and wastes her waters in the lap of Death Valley. None of these rivers, other than the Humboldt and Colorado, receive any considerable tributaries from Nevada. The great salt, nitre and borax deposits found east and north of the Forty-mile Desert are within the territory receiving the waters of the Carson and Humboldt rivers.

Here the absorption and evaporation is so great that during the fall months but little of the large volume of water carried down these rivers can be seen. Enough, however, and its saline character has justified me in stocking them with salmon, believing the salt water required by these fish will here be found. In the Maggie, Mary and Pine creeks, the principal tributaries of the Humboldt in Nevada, are found the best quality or finest flavored trout. The same may be said of the trout in the Humboldt. These fish, from one-half to six pounds in weight, in color and shape resemble more the speckled trout of Northern Pennsylvania, or from streams flowing into the Susquehanna than any of the several species west of the Rocky Mountains. A more warlike "biter" cannot be found, and the beautiful valleys and wild mountain gorges through which these streams course make a day's angling most enjoyable. A more choice repast cannot be served than from these delicious, white-flaked, firm trout, sure to be ready for the "pan" when the evening camp fire is lighted.

Among the most peculiar and least known fish of Nevada is the "Cauewe," native of and found only in Pyramid and Winnemucca Lakes. This fish belongs to the sucker persuasion, averaging about four pounds, and when first caught and properly cooked is not unlike our Lake suckers, but after remaining out of water for four or five hours it is worthless for food. During the month of March, the only season of the year when these fish are seen, large numbers are taken and cured by the Indians. It is at this time of the year that one of the natives' holidays is most observed. Indians of all ages participate in this required duty, made traditional by the yearly reunions of their forefathers.

In 1877 it was my good fortune to have the opportunity of introducing into the Nevada Legislature a bill creating a Fish Commission, stocking the waters with fish, and to provide a fund for the purpose of carrying out the provisions of the measure. The Governor signed the bill, and to punish me for introducing such a measure, appointed me Fish Commissioner, without salary, or the hope or expectation of fee or reward.

One thousand dollars was appropriated, and for this sum I was enabled to make such favorable reports that at the next session of 1879 four thousand dollars was appropriated, and at the session of 1881 two thousand more was granted for the years 1881-2. Of these several appropriations less than three thousand has been expended, over one hundred and eighty plants have been made, besides a hatching-house has been furnished, fish cans purchased and nearly one million fish have been hatched and distributed. So far I have hatched only McCloud River salmon, McCloud River trout, land-locked salmon from Maine, and the eastern brook trout. While this small expenditure would seem to indicate but little work in the interest intended to be benefitted, it must be remembered that while our streams are grand, the business is new, and our waters, from their saline character, peculiar, hence experiments had to be made, and in doing so failures and mistakes had to be guarded against.

Other States, having several fish commissioners, with large appropriations and thousands of miles of rivers to stock, bring all the rivalry and combined energy from their various sections into thorough investigation of the work. Large and interesting volumes are compiled, and the most readable and beneficial information derived from them; but the most noticeable in their work is the benefit made apparent by the variety and great numbers of superior food fishes brought within the reach of nearly all our people. Believing it better to "go slow than make mistakes," I have confined the planting of Nevada streams, other than the several kinds of trout heretofore mentioned, with catfish and perch, our muddy streams seeming to invite this character of fish. Most gratifying results have been observed. Reports from nearly every plant are at hand, and the increase and general healthy character of the young fish assures me that in every instance I was in novice mistaken as to the nature of the water and the adaptability of fish introduced.

The most destructive element to fish in Nevada so far is the great quantity of sawdust annually discharged into the Carson and Truckee rivers. There being no effective law to prevent it, all attempts at remedy have proved futile, and until some strong reciprocal laws between California and Nevada can be adopted and enforced, no relief from this practice can be hoped for. The large amount of capital invested in the manufacture of lumber will hardly give way to the comparatively insignificant revenue or employment derived from the fish business, hence without kindly consideration protection by the lumber interest in the absence of needed laws we must expect instead of an increase a gradual diminution in the rivers above named and their tributaries.

From the poisonous substances used in quartz mills on the upper Carson much injury must result, particularly to the young fish, as the spawning beds are in this locality, but as it is within the boundary of California, the Fish Commissioner of Nevada is powerless in suppressing the evil and can only report its existence. Other than this no complaints against deleterious substances have been made.

The fragmentary remains of a Chinaman found on the Humboldt River, and considered unfit by his countrymen to ship to the Flowery Kingdom, together with the fact of dead fish floating near by, and exploded giant powder cartridges scattered about, evidenced the Celestial's merited death. Had our Chief Magistrate witnessed this violation of sagebrush law by one of his Cabinet advisers, he probably would have placed his John Hancock to a different and more popular document than his late veto message. HUBE G. PARKER.

THE GOVERNOR RESPONDS.

SOME time ago I wrote that Col. Geo. F. Akers had resigned his position as Fish Commissioner for Middle Tennessee, but had never learned who of the many aspirants for the position had been honored with it until I saw the following letter, which has been published:

"NASHVILLE, August 25.—Dear Sir: Gov. Hawkins did me the honor to appoint me Fish Commissioner, and having learned that your highest aspiration in regard to fishing is to yank out by main strength and awkwardness a slimy catfish from one of the sluggish muddy streams of West Tennessee. I, preaching a higher gospel of piscatorial art, send you the accompaning fishing-rod, trusting that its aesthetic proportions may teach you that there is something better than catfish fishing, add that when you have once landed a game black bass, that you will emerge from the slime and become a respectable fisherman. Yours truly, EDWARD D. HICKS."

Whether the new commissioner will be as energetic as his predecessor time alone will show. That he is an ardent fisherman and partial to the game varieties his own words are evidence.

Catfish in the waters of Tennessee other than Reelfoot Lake have always been classed with the game varieties, affording, according to piscatorial critics, quite as much sport to the angler as the bass, though probably the fishing grounds of our illustrious Governor have not been frequented by those gentlemen; and hence they know but little of the breed of cats which require the yanking process to get them out of the water. Now, however, that a prominent member of the Wisconsin Angling Club, a leading spirit in the Cumberland Angling Club and a noted breeder of Devon cattle, has assumed command of the non-lucrative but important office, the Governor may be enticed to quit his coarser modes of angling and in the future adopt the 10-oz. bamboo, silk line and reel, and forever abandon the unsportsman-like tackle hitherto used by him.

Quite a large party have been to the Collins River lately, and there had splendid sport, annoying the unaccommodating landlord of Crisp's Springs by camping out near his grounds, and filling his tavern with the odors of savory fishes, cooked by experts taken from the city. He almost felt like condescending to have his rigid rules about cooking fish laid aside, but the campers told him to condescend if he pleased, but they counselled to the contrary, as his conversion to civility had been too slow in coming, and that in the future his former guests, like themselves, would take the tented field for their abode in preference to his inhospitable hostelry.

The famous catfish eater I wrote you about some time since, is at present in training for a grand oyster feed, as soon as the weather gets cooler and the bivalves cheaper. He will attempt the no very easy task of consuming 124 oysters between the hours of 6 A. M. and 6 P. M., every day for one month, reserving for himself the privilege of having them prepared as he pleases. The bet is for a sum of money against his pledge to eat a peck of the oyster shells in default of accomplishing the feat.

Andy Meaders will furnish the oysters, and as he is confident that the champion fish eater can get away with the 3,720 oysters in the time specified, has invited a number of gentlemen, and your old contributor, to a supper on the evening of the 30th day, at which the boss eater will consume one hundred additional oysters and six quail on toast as a finish up of the wager.

Later.—The Governor has responded to the letter of Mr. Hicks, as follows:

"EXECUTIVE OFFICE, NASHVILLE, TENN., Aug. 24, 1882. —E. D. Hicks, Esq., City.—Dear Sir: Your note of this instant and trout rod referred to have been received. The rod is indeed a beauty, and permit me to return my thanks for the same, and to assure you it will never be used by me to 'yank slimy catfish from the sluggish, muddy streams of West Tennessee.' I regret that, being a fisherman, you are not better informed as to the nature of the streams in that section of the State, and the character of the fish found therein. (As to the character of these streams, particularly in Carroll county, my home, see Mr. Killebrew's 'Resources and Advantages of West Tennessee,' page 18.) I also regret that you have been so woefully misled as to the nature and extent of my piscatorial aspirations. My experience in the delightful pastime of angling has not been confined to what you denominate 'the muddy, sluggish streams of West Tennessee,' though even there we have a fish which is 'gamer' than any black bass that ever 'rose to a fly,' and to land one of which requires more skill, steadier nerves and quicker judgment than the capture of a dozen bass. I have 'cast' my line in some of the clear, rippling streams of the West 'peopled' with game fish moving through their crystal waters, or, anon, rushing as if on the wings of the wind to some deep, dark and shady pool, and the sight of which, as they darted hither and thither, has made my sportman's heart to expand and glow with confident expectation that soon, perhaps, a half dozen or more, 'turning' one to five pounds each, would grace my basket. But the beautiful rod sent me by your kindness would have been of little practical use then—it has no reel nor line; in fact, there is accompanying it but little of the paraphernalia which renders such rods so efficient in the hands of practical fishermen. Again, I have made 'casts' in the pearly streams of East Tennessee—that secluded mountain land, the Italy of North America and the Eden of our sunny southland—where, truly to gladden the bounding heart of the disciple of Izaak Walton, 'jocund day stands tiptoe on the misty mountain top,' and where, in drinking in the beauties of nature and the sublime and awe-inspiring grandeur which breaks upon the vision at every turn, one is constrained to exclaim, with a heart swelling with pride and every instinct of his being aglow with legitimate enthusiasm, 'This is my own beloved Tennessee.' I am sure the poet who wrote 'I would not stay alway,' etc., was not an East Tennessean and had never even visited that enchanted land, as I have done—never made incursions upon the denizens of her gloriously beautiful streams which reflect back to heaven the myriad rays of sunlight falling upon their rippling surfaces, as I have done. But I imagine no bass was ever taken from with a rod, however 'aesthetic' the proportions, which was so sadly wanting in the appurtenances to a complete trout rod as the one sent. Permit me to again thank you for your highly appreciated gift—naked as it is. Very respectfully—ALVIN HAWKINS." J. D. H.

MISSISSIPPI COAST FISHING.

I HAVE fished at Alexandria Bay, Lake George and many of our West Mississippi lakes, and have read of your Northwestern fishing in FOREST AND STREAM, but none do I think can compare with the coast fishing of South Mississippi, both for variety and quantity. Dr. Lewis and Col. Pollock, of Greensville, Miss., Commodore Hansing, of New Orleans, La.; Captain J. T. Lay and son, B. M. Lay of Winona, Miss., left the Montross House, Biloxi, for Ship Island (a distance of twelve miles) early on the 20th of July. Now Biloxi is such a pleasant place that only the true lovers of fishing would ever find time for such sport. The walks and drives are magnificent, both on account of the delightful sea breeze and the perpetual shade, for the town seems to have been built up in a grove of large live oaks and willows.

Early on the morning of the 20th we left the piers in a neat little schooner, the Mary, and had only a tolerable wind. Reached Ship Island at eleven, and in half an hour we were on the Government piers with bait and tackle. For the first fifteen minutes we had very little encouragement. We could not understand why shrimps on ice did not suit them, but soon we found that it did please the mackerel, "trout" and bluefish. After they began to bite we could not get them off fast enough, although we had one man who did nothing but unhook them.

We fished off the Government pier in water forty feet deep and with very lone lines. At first we caught bluefish, weighing from one pound to a pound and a half. Next the "trout" began to bite and continued until we left. They weighed from two to five pounds. We were not expecting mackerel to bite, especially in water as deep as we were fishing in, but they did bite, and very ravenously, too, average weight five pounds. Line after line was lost and two rods broken, one a fine jointed rod, the other a large bamboo. One of our party had to quit after losing his rod, as we had only one extra one along. It fell the Commodore's lot to be a looker-on.

Sometimes all four of us had a fish at the same time. The boatman was in his little yawl and had his fish car alongside, ready to put the fish in as fast as possible. We did not attempt to pull the fish up on the pier as they were too heavy, but we pulled them along on top of the water to our boatman who was well skilled in taking them off. He never lost a fish after once getting the line in his hand. While tiring our "trout" down and as they came to the top of the water, we usually saw one, and sometimes more, after their brother or the bait he had in his mouth. We decided that we had taken enough, and at three o'clock we began to get things into the schooner.

While we were getting our buckets in Dr. Lewis got hold of a "jack fish" (noted for their strength and considered almost catch proof); but the Doctor was fortunate enough to have a reel with one hundred yards of very small silk line. We could see the fish in the clear blue water, and the smaller ones as they darted out of his way as he came charging toward them, for the water was alive with small fish of all kinds. It took the Doctor twenty minutes to tire it down, and then all the skin was off his thumb and forefinger, where the line had run under as it came off his reel. I had never seen such a strong fish before. It weighed about thirty pounds. That wound up the day's fishing. Going home we were caught in two squalls, and when within about one mile of the shore we were caught in a dead calm. The Commodore and Dr. Lewis were put in the yawl and sent ashore with the mackerel to be broiled for our suppers.

At length a small breeze sprang up, and we reached our starting place. There was a large crowd to meet us, having heard of our success. The fish car was pulled out and rolled down to the end of the pier; the fish were then counted, and were as follows: 83 "trout," 37 Spanish mackerel, 29 bluefish, and a number of smaller fish of less note. After giving our hotel as many as it wanted, we gave the others to any who wanted them. As soon as we had washed and changed our dress, supper was announced, and you who have been fishing or hunting all day with nothing to eat except a small snack, can imagine how we enjoyed our broiled mackerel, cooked exactly to our taste, and the Montross House is famous for fixing fish so not even the most fastidious can grumble. I never have visited Shandalier Islands, but am told that the fishing is better than at Ship Island, especially for redfish. B. M. L.

WINONA, Miss.

MAD RIVER.—Greenborough, N. Y., Sept. 1.—Trouting on the Mad River for the week just passed has been poor, the river and its branches being very low. Parties catching many thousands for fish stock farms have done a great deal toward the poor luck on this pretty little river.—W. H. R.

Remember if you wish to buy a fine gun and save money, go to C. L. RITZMANN, 943 Broadway, New York.—*Adv.*

THAT CAMP ON THE SUSQUEHANNA.

MY description of the camp on the Susquehanna has been subjected to inspection and correction by critics, W. H. M., one of the party, insists that the bait with which I made the double haul mentione i in my last was crawfish, and crawfish only: but, like the man who hid under the bed from an angry spouse, I won't give in while I have the spirit of a man, but will still maintain that one of the hooks was baited with worms, though I acknowledge that W. H. M. did bait the hooks that time.

My last was so egotistical that I fear the boys feel slighted, so pray bear with me while I do them justice. Webb undertook to row to church one Sunday, thereby setting the rest of us a noble example; but like all good boys and men he fared badly, for as he stepped from the boat to the shore a false step threw him into the water, wetting one side of him completely, and spoiling what was intended to be a killing rig-out, for, be it known, he desired to create an impression. What must have been his feelings when placed in such a plight. But it must be told to his praise, he went to the church all the same.

One evening, desiring to replenish the camp stores, Webb and W. H. M. rowed over to Port Deposit, and tying at McCulloch's Landing, went down to the town. On their return they found their boat gone, having been taken by some darkey who wanted to try fishing by moonlight, so they were compelled to wait until his dusky highness concluded to return. While they waited the pastor of one of the churches drew near, and hearing loud words, and perhaps impreeations, and being unable in the uncertain twilight to distinguish their faultless attire, concluded they were there for no good, and the next morning he informed Mr. McC. that he saw two tramps trying to steal one of his boats. Whether he recognized the voice of one of his tramps in the voice of the drenched tenor, on the following Sunday, deponent sayeth not.

Fishing under a burning sun has its disadvantages, especially if, as did the writer, one wears a narrow-rimmed hat, for much to his disgust, being an ex-G. T. of the heaviest calibre, he sported the reddest nose to be seen within five miles of camp. Of course the usual base insinuations were made, notwithstanding the fact that Port is a prohibition town. They even suggested that the scribe had indulged in a row to Lapidum, a town half a mile across on the other side of the river, where there is a saloon to every family, and where the dissenters of Port are wont to congregate. I merely state these facts in order to deny them.

Webb improved the shining hour by sketching and water color painting, and the last evening in camp he tried the hardest to catch a sunset, but I fear that darksome clouds interfered with him very much. Our veterinarian doubtless devoted many idle moments in studying the anatomy of the various denizens of the deep that we ensnared. I know he passed many happy moments conversing, in what was to me an unknown tongue, with a pretty German lassie from Baltimore, while I, compass in hand, took courses and angles, and foresights and backsights, but of all the sights I ever took, the backsight I now take toward our late camp is the sweetest. JEFFERSON.

BALTIMORE, MD.

THE FISHLESS SCHUYLKILL.

MR. JACOB LEISERING of Mauch Chunk, Pa., one day last week took thirty-five sheepshead at Barnegat, N. J., between dinner and supper call. This count is the largest that has been made for years at the inlet. From reports that reach me through returning fishing parties, weakfish have never been more plentiful on the New Jersey coast. The following article, taken from the Philadelphia *Evening News* of the 25th ult., I send you as giving very nearly the truth regarding the Schuylkill River fish and fishing. The writer however, could not have lived in Philadelphia ten years ago, or in Uncle Thad Norris's time, or he could oftimes have seen him angling for striped bass (our rock fish) in the Schuylkill river, near the fall of water that comes over the dam at Fairmount. Fish of all varieties were plentiful then, and many rock were taken running from five to ten pounds in weight with minnow bait. Your correspondent knew of no better place fifteen years ago than the one referred to. The correspondent of the *News* is correct in saying that nothing in the shape of a fin exists in the Schuylkill from Fairmount to Flat Rock. The mills of Manayunk empty all their dye stuff into the river seven miles above Philadelphia, and render it untenable. Above Manayunk, where manufactures are rare, black bass seem to thrive, and since their planting have increased greatly. At Flat Rock they are sometimes caught, but the farther up the Schuylkill one tries for them, the more success is met. Below Fairmount dam and as far down as the mouth of the Schuylkill, the gas works and coal oil refineries have so poisoned the water that should any fish enter the river and be caught on its upward way to the head of tide water, its flesh can be readily detected as that of a Schuylkill River one, by the flavor or taste of gas tar. We think, however, that should the correspondent of the *News* try his luck above Flat Rock, near Conshocken or Norristown dams, he would find that black bass on favorable days would be found in numbers and size that would test his skill. HOMO.

The enclosure is as follows:

Did anybody ever catch a fish in the Schuylkill?

Did anybody ever see anybody catch a fish in the Schuylkill?

Is there a fish in the Schuylkill?

Most singular questions to ask, because fish are popularly supposed to inhabit the water and there is a good deal of water in the Schuylkill, and yet after exhaustive inquiry and a thorough weighing of the evidence, the writer most veritably believes and positively asserts that from the mouth of the Schuylkill to Flat Rock dam there isn't a fish in the Schuylkill bigger than a minnow, except gold fish, a thoroughly worthless fish either for sport or eating.

It has been the good fortune of the narrator of this singular fact to be a resident of Philadelphia for now nearly fifty years. During these years, in boyhood and manhood, he has plodded the banks of the Schuylkill times almost innumerable in his holiday hours, and has witnessed the hapless endeavors of countless fishermen to draw a fish out of this strange river. He has seen them fish with every contrivance, from the wrapping-twine line and bent pin of the boy to the most fantastic and expensive contrivance turned out by manufacturers of fishermen's wiles, and never yet did he see a fish caught in the stream, nor has he been able to find anybody who ever saw one caught. The wharves from Girard Point up to Fairmount are daily used by boys and men in the vain endeavor—with dipsy lines, cork lines and all sorts of bait—to coax the finny tribe from the swift-flowing tide. But the finny tribe are not to be coaxed, because they are not there.

Visitors to Fairmount who cross the race bridge on their way to the abutment of the dam can always find more or less men in boats in the heavy current that swirls out of the pumphouses into the sideway. They are generally equipped with rods and reels of the most approved pattern and bait with minnows. They and others before them have been doing this thing for a half century without the slightest result. There must certainly be a cause for this persistence.

It is because in 1833 a rockfish was caught by a boy in this very spot with a hook and line.

And there are and have been since hosts of unhappy men endeavoring vainly to catch another rock.

On last Saturday a *News* man stood looking upon this waste of time and energy. There were eight men in six boats, all sitting patiently watching eight corks bobbing and drifting in the turbulent water. An old man who, by his appearance, if ever industrious, hadn't made much out of it, sat on one of the benches watching the fishermen.

"Do these people ever catch any fish?" he asked.

"No."

"How do you know?"

"I ought to know."

"Why?"

"Well, I've been coming out here almost every day in fair weather for twenty years and I never saw one caught."

From Fairmount dam to the Falls, on both the banks within the park limits, can be found, any day up to ice making, scores of people engaged in the same profitless pursuit as those at the waterworks. There is an old chap who, in the cove above Sweet Briar and hard by the Landsdown ravine, has as a rule a dozen lines with sinkers well out in the pool, the shore ends attached to stout twigs buried sufficiently in the edge of the towpath to hold the lines and give by bending the evidence of the slightest nibble. It is safe to say that that singularly patient man never saw his twigs bend to anything but the breeze. His lines lay out until he pulls them up, like the child does his johnny jump-up to see whether it has taken root. He finds his bait all nipped away by minnows or worn off with chafing against the stony bed of the river, and he dreams that big black bass have done it, and baits his lines again, and will catch fish about the crack of doom in that river, and not before.

Then there is one of the brightest and cheeriest men in the world, who furnishes hotel news to the newspapers, who, having wasted his youth in hauling up an occasional perch or sunfish in Newtown and Timber creeks, in Robeson's bailiwick, has been persuaded in the mellowness of his ripening years that it is his mission to catch a fish in the Schuylkill. And he has devoted his Saturdays for fourteen years to the endeavor. He can be seen on any Saturday on the west bank of the river, under Girard avenue bridge, patiently trying to catch that fish. He believes it's there, and he's bound to have it. He has been ridiculed; he has been wept over and prayed over, but nothing can rid him of his infatuation. And he is but a type of the Schuylkill fishermen—a class whose faith is sufficient to remove the Alleghenies, if that faith could only be transferred from the Schuylkill to the mountains.

TOLEDO'S CHAMPION.—Mr. J. E. Gunckel again comes to the front and challenges Moore, Baker, Leffel, Winfield and Petosky Lorenz. At Ten Mile Creek, in front of the boat house, Mr. Gunckel landed thirty-one pike and black bass out of thirty-four bites, and used nothing but dead minnows. At one time he caught and landed three pike, using two poles, and on one line having two hooks. Justice Rike came on the ground and saw Mr. Gunckel catch some fifteen; the others were caught in the presence of four bridge builders, who are now putting up a new iron bridge over the creek. Mr. John Kramer, who has lived on the banks of Ten Mile Creek for many years, said the string of fish Mr. Gunckel caught was the finest he saw for five years. Mr. Gunckel says he actually got tired hauling them out.—*Toledo (O.) Telegram, Aug.* 28.

EF HE'D ONLY KNOWED IT.—"Uncle Sam," said a colored boy to black Samuel, a negro who used to bottom chairs for Colonel Sandy Faulkner, "whar yer gwine?" "Gwine fishin', chile; why ye ax me?" "Did yer know that Aunt Tildy is dead?" "Go on, chile! Is dat a fack? Yer doan mean ter say dat my wife is dead?" "Yes, sah." "When she die?" "Dis mornin'." "Wall, I'se sorry I wan't dar! Tell 'em to go an' make 'rangements, dat I'll be back agin de funeral. I'se done dug worms for bait now. Wish I'd knowed it sooner."—*Arkansaw Traveler.*

OHIO.—Tiffin, Aug. 26.—The disciples of I. Walton are using red flannel on black bass with good success.—F. M. H.

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS ELEVENTH ANNUAL MEETING.

MATERIALS FOR A HISTORY OF THE SWORDFISH.

BY G. BROWN GOODE.

[CONTINUED.]

PUGNACITY OF THE SPEARFISH.

The spearfish (*Tetrapturus albidus*, &c.) also strikes vessels. I am indebted to Capt. William Spicer, of Noank, Conn., for this note:

Mr. William Taylor, of Mystic, a man seventy-six years old, who was in the smack Evergreen, Capt. John Appleman, tells me that they started from Mystic, October 3, 1852 on a fishing voyage to Key West, in company with the smack Morning Star, Captain Rowland. On the 12th they were off Cape Hatteras, the wind blowing heavily from the northeast, and the smack under double-reefed sails. At ten o'clock in the evening they were struck by a "who" (*sic*), which shocked the vessel all over. The smack was leaking badly, and they made a signal to the Morning Star to keep close by them. The next morning they found the leak and both smacks kept off to Charleston. On arrival they took out the ballast, hove her out, and found that the sword had gone through the planking, timber and ceiling. The plank was two inches thick, the timber five inches, and the ceiling one and a half inches white oak. The sword projected two inches through the ceiling, on the inside of the "after run."(25) It struck close by a butt on the outside, which caused the leak. They took out and replaced a piece of the plank, and proceeded on their voyage.

J. Matthew Jones, Esq., of Halifax, N. S., in his delightful little book, "The Naturalist in Bermuda," records the case of the Bermudian schooner Earl Dundonald, arrived in the port of Hamilton, which was pierced by one of these formidable fish off the coast of British Guiana.

In the museum of Charleston College, Charleston, S. C., is preserved a fragment of the snout of a bayonet-fish, apparently *Tetrapturus albidus*. By the kindness of the curator, Dr. G. E. Manigault, I was allowed to examine it and copy the label, which reads as follows: "The brig Amsterdam, bound to Charleston, owned by F. C. Bray, was struck in the Gulf Stream by a monster or swordfish, which caused the vessel to leak considerably. By great exertion she was kept free, and gained the port in safety."

Messrs. Foster, Waterman & Co., of Boston, presented to the Boston Society of Natural History, in 1869, a plank of Southern pine perforated by and containing a portion of the sword of a swordfish (*Histiophorus*) from the side of the ship *Pocahontas*, owned by them. (Proc. Bost. Soc. Nat. Hist., xiii, 1869, p. 64.)

ATTACKS OF THE SWORDFISH UPON WHALES.

One of the traditions of the sea, time-honored, believed by all mariners, handed down in varied phases in a hundred books of ocean travel, relates to the terrific combats between the whale and the swordfish, aided by the thrasher-sha k. The swordfish was said to attack from below, goading his mighty adversary to the surface with his sharp beak, while the thrasher, at the top of the water, belabored him with strokes of his long, lithe tail.

An early explorer of the Bermudas gives the following version of the story, with tone so fresh and enthusiastic that we might well believe him to have seen the occurrence with his own eyes. The passage occurs in "News from the Bermudas," a pamphlet dated "Burmuda, July, 1609," and reprinted in "Force's Historical Tracts," vol. ii:

"*Whale, Swordfish & Threasher.*—The swordfish swimmes under the whale, & pricketh him upward. The threasher keep above him, & with a mighty great thing like unto a flaile, hee so bangeth the whale, that hee will roare as though it thundered, & doth give him such blowes, with his weapon, that you would thinke it to be a crake of great shot." (26.)

Skeptical modern science is not satisfied with this interpretation of any combat at sea seen at a distance. It recognizes the improbability of aggressive partnership between two animals so different as the swordfish and a shark, and explains the turbulent encounters occasionally seen at sea by ascribing them to the attacks of the killer-whale, *Orca* sp., upon larger species of the same order.

There can be little doubt though that swordfish sometimes attack whales just as they do ships. The habit is mentioned by Pliny, and is the motive for one of the *Visions of the World* of Edmund Spenser:

> Toward the sea turning my troubled eye
> I saw the fish, (if fish I may it cleepe)
> That makes the sea before his face to flye
> And with his flaggie finnes doth seeme to sweepe
> The fomie waves out of the dreadful deep.
> The huge Leviathan, dame Nature's wonder,
> Making his sport, that manie makes to weep:
> A swordfish small, him from the rest did sunder,
> That, in his throat him pricking softly under,
> His wide abysse him forced forth to spewe,
> That all the sea did roar like heavens thunder.
> And all the waves were stained with filthie hewe,
> Whatever thing seems small in common eyes.*
>
> [*Spenser's Visions of the Worlds Vanitie, 1591.]

I give also a few lines from an old play quoted by Scott as a heading to one of the chapters of the "The Antiquary":

> Who is he?—One that for the lack of land
> Shall fight upon the water—he hath challenged
> Formerly the grand whale; and by his titles
> Of Leviathan, Behemoth, and so forth
> He tilted with a swordfish.—Marry, sir.
> Th' aquatic had the best—the argument
> Still galls our champion's breach.*
>
> [*"Old Play," Antiquary, chap. xxx.]

Baron Lahontan, in a letter from Quebec, November 8, 1683, described an engagement between a whale and a swordfish which took place within gunshot of his frigate. He remarks:

"We were perfectly charmed when we saw the swordfish jump out of the water in order to dart its spear into the body of the whale when obliged to take breath. This entertaining show lasted at least two hours, sometimes to the starboard and sometimes to the larboard of the ship. The sailors, among whom superstition prevails as much as among the Egyptians, took this for a prestige of some mighty storm."(27)

Another early observer wrote:

"Concerning the Death of the Whale, which hath been related to have been stranded upon *New England*, it is not very improbable but that it may have been killed by a certain *Horny Fish*, which is said by Mr. *Terry*, in his East India Voyage, to run his Horn into the *Whale's* Belly; and which is known sometimes to run his Horn into Ships, perhaps taking them for Whales, and there snapping it asunder, as happened not long since to an English Vessel in the West Indian Seas."(28)

"In the month of August, 1861," says Couch, "near Westra, one of the most northerly islands of the Orkneys, an individual of the smaller species of whales, known as the herring-hog, was attacked by a swordfish; and when thus compelled to leap out of the water, which it did to the height of six feet, it was observed that the sword had been thrust into the whale's body behind the pectoral fins. Its leaps continued, and then it was perceived that a thrasher was assailing it on the sides."(29)

Captain Crow, quoted by Parnell, relates the following incident as having occurred on a voyage to Memel: "One

25. A hold under the cabin.

26. The following is a fair example of the average newspaper paragrapher's treatment of the subject:

"*Combats of the ocean.*—Among the extraordinary spectacles sometimes witnessed by those who 'go down to the sea in ships' none are more impressive than a combat for the supremacy between the monsters of the deep. The battles of the swordfish and whale are described in Homeric in grandeur. The swordfish go in schools like whales, and the attacks are regular sea fights. When the two troops meet, as soon as the swordfish have betrayed their presence by a few bounds in the air, the whales draw together and close up their ranks. The swordfish always endeavors to take the whale in the flank, either because its cruel instinct has revealed to it the defect in the carcasses—for there exists near the brachial fins of the whale a spot where wounds are mortal—or because the flank presents a wider surface to its blow. The swordfish recoils to secure a greater impetus. If the movement escapes the keen eye of his adversary the whale is lost, for it receives the blow of the enemy and dies instantly. But if the whale perceives the swordfish at the instant of the rush, by a spontaneous bound it springs clear of the water its entire length, and falls on its flank with a crash that resounds for many leagues, and whitens the sea with boiling foam. The gigantic animal has only its tail for its defense. It tries to strike its enemy, and finishes him at a single blow. But if the active swordfish avoids the fatal tail the battle becomes more terrible. The aggressor springs from the water in his turn, falls upon the whale, and attempts, not to pierce, but to saw it with the teeth and garnish its weapon. The sea is stained with blood; the fury of the whale is boundless. The swordfish harrasses him, strikes him on every side, kills him, and flies to other victories. Often the swordfish has not time to avoid the fall of the whale, and contents itself with presenting its sharp saw to the flank of the gigantic animal about to crush it. It then dies like Maccaneus (*sic*), smothered beneath the weight of the elephant of the ocean. Finally, the whale gives a last few bounds in the air, dragging its assassin in its flight, and perishes as it kills the monster of which it was the victim."

28. An account of whale-fishing about the Bermudas by an understanding and hardy *Seaman*. Phil. Trans. abr. ed. ii, p. 844.

29. History of British Fishes, ii, p. 174.

morning during a calm, when near the Helrides, all hands were called up at 3 A. M., to witness a battle between several of the fish called thrashers or fox sharks and some swordfish on one side, and an enormous whale on the other. It was the middle of summer, and the weather being clear, and the fish close to the vessel, we had a fine opportunity of witnessing the contest. As soon as the whale's back appeared above the water, the thrashers, springing several yards into the air, descended with great violence upon the object of their rancous, and inflicted upon him the most severe slaps with their long tails, the sound of which resembled the reports of muskets fired at a distance. The swordfish in their turn attacked the distressed whale, stabbing him from below, and thus beset on all sides and wounded, when the poor creature appeared, the water around him was dyed with blood. In this manner they continued tormenting him and wounding him for many hours, and I have no doubt they in the end completed his destruction."(30)

The following is a story given to Frank Buckland by Mr. Hill, captain of an English trawling vessel:

"The thrasher sharks just do serve out the whales. The sea sometimes is all blood. A whale once got under our vessel —the Hurricane—to get away from these thrashers, and when she was there we were afraid to throw a rope overboard, almost to walk out, for fear the whale should chuck her tail and punch a hole in our vessel. She was full length in water, as clear as gin, right under our bottom, and lain as quiet as a lamb for an hour and a half, and never moved a fin. Where they had been a-thrashing of her the sea was just like blood. I have seen these 'ere thrashers fly out of the water as high as the mast head and down upon the whale, while the swordfish was a-pricking of 'im up from underneath. There is always two of 'em, one up and one under, and I think they hunts together and you can see the poor whale blow up in great agitation; and I be bound the pair on 'em don't leave him until they have their penn'orth out of him. It is just for vengeance they does it. Whether Master Whale has offended them or not, it's hard to tell. If they eats him they must have a tidy blowout of him, but I don't think they like the oil. I saw one engagement off the Staples; it was all two or three hours they was at it. I don't think they leaves him till they kills him."

Egede puts on record the belief of Danish explorers of the last century:

"The *swordfish* who is the Whales greatest Enemy; and when he kills one eats nothing but his Tongue, leaving the rest to the Shark, Walrus and Birds of Prey."(31)

The last quotation is especially important, since it shows how the swordfish and the killer-whale have been confused. It is still held, on good authority, that the killers eat the tongues of their victims.

At a meeting of the Boston Society of Natural History in 1864, in reply to a question of Dr. J. B. S. Jackson about the thrasher or swingle-tail shark recently exhibited in Boston, Captain Atwood said that they were abundant at Provincetown, though not so common as the mackerel-shark. He also observed that he placed no confidence whatever in the stories current of attacks on the whales by the thrasher, believing them to be quite harmless and unable to hurt a dolphin. The story very likely arose from some peculiar movements made by the hump-backed whale. Swordfish, he believed, might attack a whale and kill him, from what he had seen of the force of their thrusts into the bottom of vessels, though he has no evidence that they ever do attack them. He was not aware, either, that the thrasher ever uses his tail for offensive purposes.(32)

Captain Scammon, in his "Marine Mammals," gives the following confirmation of Captain Atwood's views, speaking of the habits of the hump-back whale of the Pacific:

"In their wanderings they are addicted more than any other roqual to 'breaching,' 'bolting,' and 'finning.' In the mating season they are noted for their amorous antics. At such times their caressings are of the most amusing and novel character, and these performances have doubtless given rise to the fabulous tales of the swordfish and thrasher attacking whales. When lying by the side of each other the *Megapteras* frequently administer alternate blows with their long fins, which lovepats may, on a still day, be heard at a distance of miles. They also rub each other with these same huge and flexible arms, rolling occasionally from side to side, and indulging in other gambols which can easier be imagined than described."

[TO BE CONTINUED.]

BLACK BASS CULTURE IN OHIO.

As you had a report of the building of a half acre pond by the Chagrin Falls Fish and Game Club last fall, for the purpose of propagating small-mouth black bass, your readers may be interested in knowing the result.

In October we placed six bass, weighing from two to three pounds, in the pond. They were brought eighteen miles in a tank in a wagon, and were considerably the worse for wear when deposited in the pond, their tails and fins being badly split and the slime pretty much all washed off of them. Within a week two died, from the effects of that great enemy of the fish tribe, fungus. In May our pond became thickly covered with alga, and we feared that our experiment was a total failure, but in about a month the alga all disappeared and our bass could be seen occasionally making a dash for minnows.

Our efforts have been crowned with the most gratifying success, and our pond now contains thousands of bass from one to two inches long, and as healthy and lively as could be desired. We, yesterday, caught over three hundred of the little fishes with a net around the borders of the pond and placed them in streams not previously stocked, and we shall this week draw down the pond and scoop the young fish from a low place or "kettle" left for that purpose, and go on with our stocking operations. Our pond is on a small brook and is very unpretentious, but answers all purposes.

The carp in our pond, which is about the same size as our bass pond, are doing very finely, and we have specimens a year old which will weigh nearly two pounds, and which are fourteen inches long.

I wish to urge upon the angling fraternity the advantage of building small ponds for stocking purposes. The ponds can be builded at small expense and stocked with little trouble. In them the parent fish are not troubled by other large fish, their young are not destroyed, and the result very satisfactory.

J. J. STRANAHAN.

CHAGRIN FALLS, O.

EARLY AMERICAN FISHCULTURE.—A friend sends us the following, headed "Growing Fish," from the Newport (R. I.) *Mercury*, of December 15, 1854: "The Cleveland (Ohio) *City Fact* says the most pleasing things exhibited at their county fair was a lot of brook trout, artificially bred by Drs. Garlick and Ackley, whose labors in this line we have heretofore noticed. They showed several brooks of fish, in different stages of growth, and have demonstrated that it is just as easy to grow fish as it is fowls, or any other description of food."

The Kennel.

FIXTURES.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden, Conn.

BENCH SHOWS.

April 3, 4, 5 and 6, 1882. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Stayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

November 17—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. F. N. Hall, P. O. Box 884, New York, Secretary.

December 4—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

THE PRAIRIE CHICKEN TRIALS.

[BY TELEGRAPH TO THE FOREST AND STREAM.]

FAIRMONT, Minn., Sept. 5, 1882.

The inaugural prairie chicken trials of the National American Kennel Club opened under most favorable weather conditions, and so far they may be pronounced a success.

Fairmont is situated amid most beautiful surroundings. The country is a high rolling prairie, interspersed here and there with many beautiful lakes, and well supplied with an abundance of timber.

The resident sportsmen had made all needed preparations for the entertainment of their guests, and there is a general feeling of satisfaction with the arrangements among visiting sportsmen. The East and the South are well represented by well-known sportsmen; and among the competing dogs are many first-class field workers.

Hon. E. B. Kennedy, of Omaha, who was one of the judges, having sprained his ankle, is not here. Mr. B. Walters, of Canterbury, Conn., filled his place Monday, and has been relieved by Mr. E. C. Sterling, of St. Louis, Mo. The other judges are Messrs. Theodore Morford, of Newton, N. J., and O. C. Bergunthal, of Indianapolis, Ind.

Many spectators have witnessed the running, visitors and residents repairing to the scene of the trials in a great variety of vehicles, and many on horseback.

MONDAY'S RUNNING.

The drawing for the Derby Stakes took place at 8 o'clock Monday morning and resulted as follows:

E. E. Hardy's Elsa (Drake—Countess May) against Sportsman's Kennel's Prairie Molly (Prairie Joe—Prairie Queen).

George C. Marsh's Gilderoy (Druid—Princess Draco) against B. F. Wilson's and J. J. Snellenburg's Josephine (Knox's Duke—Hunter's Cora).

W. B. Mallory's Pink B. (Gladstone—Countess Key) against A. M. Decker's Scott (Rob—Flash).

Joseph H. Dew's American Dan (Lincoln—Daisy Dean) against Dr. S. Fleet Speir's St. Elmo IV. (St. Elmo—Clio).

James Gibson's Cavalier (Rip Rap—Flight) against D. McK. Loyd's Count Dad (Count Noble—Nellie).

H. Widdicomb's Prince (Count Noble—Nellie) against J. Palmer O'Neil's Acme (Thunder—Bess).

R. R. Morgan's Prairie Wonder (Prairie Joe—Prairie Queen) against David Furgesson's Frank (Carl—Queen).

John D. Ladd's Countess Mollie (Count Noble—Spark) against Luther Adams's Countess May II. (Drake—Countess May).

Summary.

ELSA beat PRAIRIE MOLLY.
GILDEROY beat JOSEPHINE.
PINK B. beat SCOTT.

The birds were not very plenty, and the running generally was poor. Tuesday opened with good weather and a breeze. Birds still scarce. The result of the running Tuesday is given in the following:

Summary.

AMERICAN DAN beat St. ELMO IV.
CAVALIER beat COUNT DAD.
PRINCE beat ACME (withdrawn).
PRAIRIE WONDER beat FRANK (withdrawn).
COUNTESS MOLLIE beat COUNTESS MAY II.

This ended the first series. The result of the second series so far as completed Tuesday was as follows:

Summary.

GILDEROY beat ELSA.
PINK B. beat AMERICAN DAN.

There are twenty-eight entries for the Free-for-All Stakes. The drawing is as follows:

P. H. and D. Bryson's setter bitch Sue (Druid—Ruby) against W. H. Colcord's Countess Druid (Druid—Princess Draco).

H. M. Short's Frank H. against C. Cullin's Broker (Druid—Clio).

Geo. Knowles' Kinniknick (Druid—Bessie Lee) against Luther Adams's Bessie (Dash III.—Countess II).

E. J. Stoddard's pointer dog Bodine (Boy—Jaunty) against Col. W. E. Hughes's pointer dog Max (Garnet—Jill).

Dr. W. H. Daly's Jess (Dan—Flash) against R. T. Vandewarl's Christmas Bill (Lick of Edenhall—Ready Money).

Sportsman's Kennel's Prairie Ranger (Charm—Pearl) against Luther Adams's Shandee (Dash III.—Daisy Dean).

D. C. Sanborn's Count Noble (Count Wind 'em—Nora) against H. B. Harrison's London (Paris—Till).

D. C. Sanborn's Dashing Novice (Dash II.—Novice) against W. Tallman's Foreman (Dashing Monarch—Fairy II).

Col. W. E. Hughes's pointer dog Meteor (Garnet—Jill) against Sportsman's Kennel's Pride (Charm—Flip).

J. W. Orth's Gertrude (Gladstone—Neely) against J. J. Snellenburg's May Laverack (Thunder—Spot).

L. Sinclair's Clementine D. (Dash III.—Cornelia) against J. S. McIntosh's Biz (Dash—Flora).

Dr. N. C. McDonald's Rock against Dr. S. Fleet Speir's Maida.

Richard O'Brien's Dash against J. O. Donner's Bessie (Ranger II.—Belle).

R. B. Morgan's Punch (Charm—Pearl) against R. T. Vandervoort's pointer dog Don (Bang—Peg).

All above are setters, except where otherwise designated.

Some good work was done to-day (Tuesday).

FAIRMONT, Minn., Sept. 6—1 P. M.

The running of the second series of the Derby was continued to-day. Weather continues fine, and there is a large gathering of spectators. The results up to the hour of sending this dispatch are as follows:

PRINCE beat CAVALIER.

Prairie Wonder and Countess Mollie were ordered up, to be put down again if they have any chance to win. This ended second series. In third series,

PINK B. beat GILDEROY.

Prince was a bye. This ended third series. Pink B. and Prince are now running to decide first place.

DO DOGS DREAM?

I AM led to ask this question from a circumstance which came under my personal observation. While out in a country a few days ago with my setter dog I noticed a number of meadow larks in a field adjoining the road. Merely to give him a little exercise, I bade him "find 'em!" He ranged and quartered beautifully, and stood two birds fully thirty feet from the tip of his nose. Becoming somewhat excited, he afterward flushed another, for which I lightly boxed his ears. He is a very sensitive dog, and a flogging causeshim to "drop to heel" and remain there. A slight reprimand has always been sufficient to correct any indiscretion; a put on this occasion he seemed to fear that I was holding the flogging in reserve, and that the chastisement he had received was only a forerunner of what he might expect. The birds had by this time become very wild, and would up and away before he could catch a scent. The dog's actions plainly showed that he considered the condition of affairs all his fault; he hunted slowly and carefully, but it was of no use, no more points were had. I called him in, and as he approached me with downcast head and drooping tail his appealing look seemed to plead for mercy. I patted him and otherwise gave him evidence of my forgiveness, but his cheerfulness had departed for that day.

After returning home in the evening I sat down to read; the dog came up to me, wagged his tail and dropped at my feet. In the course of half an hour I took my eyes from the paper and happened to look at him. He was asleep; his breathing seemed laboured, broken occasionally by a piteous whine. Suddenly he jumped up, every muscle in his body stiffened, his tail betokened that he had found game, and there he was, fast asleep, staunchly pointing an imaginary bird. A close scrutiny revealed the fact that he was in a somnambulistic state. I touched him; he awoke with a start, appeared very much confused, turned around two or three times and went out into the yard.

I fully believe the dog had been dreaming of the incidents of the day, and that his conduct having so worked on his mind, actually dreamed he had found a bird, and, as a matter of course, must point it.

Now the question arises: Do dogs dream? I can see no reason why they should not. They are certainly the most highly organized animals of the brute creation. Will not some of the close observers of dogs give an opinion on this point?

C. D. V.

[Most certainly dogs do dream. We have seen just such instances as that related by our correspondent, and doubtless like phenomena have come under the observation of others.]

SOME OBSERVATIONS RESPECTING SETTERS.

I WISH to offer a few remarks, the result of my own observation and reflection, upon certain "points" of setters, especially English. They may seem of slight importance, but I hope they may contribute in some degree to the development of dog science. I also hope they may start some new discussions, as it seems to me we have had about enough of the cocker question, as well as the debate over Gordon and Irish setters. The writers on these topics, it appears to me, dealt too much in generalities, when they do not get into personalities. By way of a change I offer the following on certain details of the make-up of the leading variety of dog at our bench shows.

1. THE HEAD.—An idea is quite prevalent among some sportsmen that all setters should have "gable-roofed" heads; that is that the occipital ridge should be highly developed, the more the better. It is supposed that this form of head indicates intelligence, the theory being, I presume, that the whole or some very important part of the brain of the animal is contained within this bump, which, therefore, by its size and prominence, becomes a simple gauge of his mental endowments.

Now, I am pretty confident that this is all nonsense. Mere external examination of the head of the dog shows that the occipital prominence is a ridge of bone with a flat, broad muscle on each side of it. A slight knowledge of the dog's anatomy demonstrates that this ridge of bone cannot possibly contain any material part of the brain, because, for one reason, the brain consists of two parts or lobes situated respectively in the right and left parts of the skull. No mammal, so far as I know, has the brain massed in the center. Moreover, the bony ridge itself is too thin and narrow to serve any such purpose.

What advantage, then, is there in this form of head? The only one that occurs to me as possible is, that it may conduce to a good carriage of the head. The occipital ridge being a more bony process, useful only as a point of attachment of the muscles of the neck, an extraordinary development of it may assist in making the dog high-headed. But I do not think there is much in this suggestion. More probably the whole notion is a superstition, like the preference for double-nosed pointers, or the doctrine that a dog that has not a black roof to his mouth is a mongrel.

So far as English setters are concerned, the recognized authorities do not give much countenance to the "gable-roofed" head. Stonehenge says the English setter is without the occipital prominence so characteristic of the pointer, while the Irish setter has it well developed. My impression is he requires the Gordon setter to conform substantially to the English type in this respect, but I am writing without the opportunity to refer to his books. I am thankful that this high-peaked head (which I never liked, although I have seen it on some admirable dogs) is not essential to the perfection of my favorite dog; but I cannot see why it should be required of the Irish setter, in whom I am less interested. All the "points" of these dogs should have some relation either to utility in the field or to beauty in the eyes of an artist, and I am entirely unable to see how the form of head I have been considering can contribute either to beauty or utility. Moreover, what reason can there be why a good head for one kind of setters should not also be good for other kinds? Why is the same type or standard not applicable to all dogs so nearly related?

2. THE COAT.—On this subject I regret being obliged to differ from "the authorities." Idstone says the coat of the English setter should be of the texture of "floss silk." My impression is Stonehenge and some other writers say substantially the same thing. So I should not venture to oppose my opinion to theirs unless I conceived I had substantial arguments on my side. My idea is especially to these dogs, fineness has been carried too far. With respect to some other dogs, notably the fox-hound, the evil of excessive fineness has been recognized. It has not been considered the correct thing for a fox-hound to have a silky coat; not that it is a bad thing in itself, but because it indicates a certain delicacy of constitution, opposed to the ruggedness, which is a prime essential in that animal. Now the coat I must admire in a setter may be called the fox-hound coat lengthened. It should be long, straight, glossy, considerably coarser than floss silk, except on the ears, and with well developed feather on the stern and legs. All the dogs I have known with this kind of coat were as tough and enduring as any sportsman could wish, and none of them ever knew a day's sickness. I believe almost every sportsman knows that there is no specific for distemper except a hardy, vigorous constitution; and those who have experienced the ravages of this disease upon animals of inferior vitality will generally be more than willing to avoid a repetition. The recent mortality among the blue-blooded setters of this country, not alone from distemper, is quite suggestive of the need of greater vigor of constitution in this class of dogs. Without special effort I recall the deaths of St. Elmo, Pontiac, and Prince Taxis, and doubtless the list might be greatly extended. Now I do not mean to assert that fineness of coat was the proximate or remote cause of the death of any particular one of these dogs. But what I do think is that excessive fineness is apt to be associ-

30. Parnell, Fishes of the Firth of Forth, 1838, p., 216.

31. Hans Egede, Natural History of Greenland, 1741, p. 37.

"Three or four of these voracious animals do not hesitate to grapple with the largest baleen whales, and it is surprising to see those leviathans of the deep so completely paralyzed by the presence of their natural although diminutive enemies. Frequently the terrified animal—comparatively of enormous size and superior strength—evinces no effort to escape, but lies in a helpless condition, or makes but little resistance to the assaults of its merciless destroyer. The attack of these voracious fishes upon the cetacean in their power may be likened, in some respects, to a pack of hounds holding the stricken deer at bay. They cluster about the animal's head, some of their number breaching over it, while others seize it by the lips and haul the unwilling monster shoreward when practicable; should the terrified mouth be open, they eat out its tongue. We saw an attack made by three killers upon a cow whale and her calf, in a lagoon on the coast of Lower California, in the spring of 1858. The whale was of the California gray species, and her young was not over three days old; the bulk of the largest killers engaged in the contest, which lasted for an hour or more. They made alternate assaults upon the old whale and her offspring, finally killing the latter, which sunk to the bottom, where the water was five fathoms deep. During the struggle the mother became nearly exhausted, having received several deep wounds about the throat and lips. As soon as their prize had settled to the bottom the three orcas descended, bringing up large pieces of flesh in their mouths, which they devoured after coming to the surface. While gorging themselves in this wise, the old whale made her escape, leaving a track of gory water behind. Instances have been known on the northwestern coast where a band of orcas laid siege to whales that had been killed by whalemen, and which were being towed to the ship, in so determined a manner that, although they were frequently lanced, cut with boat spades, they took the dead animals away from their human captors and hauled them under water out of sight."—(C. M. Scammon, Marine Mammals, p. 89).

32. Proc. Bost. Soc. Nat. Hist. vol. x, 1864—'66, p. 82.

ated with more or less delicacy of constitution; that many of the leading English setters of the day are too delicate for sportsmen's dogs; and that their coats are excessively fine.

PICKERT.

August 31, 1882.

THE BEST DOG IN THE WORLD.

WE have been looking for a good dog, anxiously looking for many years. We are still watching hopefully, confident that our lucky dog star will ere long brightly shine and illumine our pathway with so bright a radiance that we cannot fail to reach the goal for which we have been striving so long. Now we have dogs, and always have had more or less ever since we were young and free from guile; dogs that answer our purpose very well ordinarily, and that afford us a fair amount of enjoyment when we take them out for a day's shoot; dogs that only once in a while flush a bird, and seldom chase or bite their game; dogs that mind us fairly and are not absolutely hideous to look at. But all this does not fill the bill. Our requirements are far greater than this. What we want and must have is a *good* dog. Such a one as we often read about would suit us exactly, or we would be content to become the proud possessor of one of these that we sometimes hear so much of as being the "best dog in the world." Now, either of these would make us supremely happy and fill with joy the aching void that rankles in our bosom; but, alas! fickle fortune fails to smile upon us and we are ever in pursuit of an ideal dog that ever eludes our grasp. Many years have flown by since we commenced this futile chase, and we have met with many adventures in our search for perfection, and encountered many mishaps that would perhaps have discouraged a less ardent devotee. But such was our determination to attain the end in view that, no matter how stunning the knockdown that we received, we always managed to come up smiling and in trim for the next encounter.

In our early days we owned a dog that perfectly satisfied us. It is true that we had had but little experience, and of course were not supposed to know much about it; and that our ideas were crude and uncultivated we were painfully aware, and hence neglected no opportunity to increase our knowledge or improve our skill. We have said that this dog entirely suited us. Perhaps this is putting it a little too strong, and we will modify the statement by saying that he pleased us better than any dog that we had ever seen. But there was a secret longing, an indescribable yearning for something intangible that we had not seen, that caused us much unhappiness. We often met sportsmen from different parts of the country, and were greatly impressed with the wonderful tales that they poured into our ears of preternatural dogs whose only fault appeared to be that they were too good, and that they would soon exterminate all the game in their vicinity. These oft-told tales excited in our bosom an ardent desire to become the possessor of such a prodigy as they described. We found upon inquiry that, although none of these paragons were for sale, yet to accommodate a friend, especially one that they esteemed so highly as ourselves, why, they would consent to part with their favorites and make us happy. We yet retain a very vivid recollection of our first attempt to secure one of these nonpareils. There came to our office one day a man who told marvelous stories of slaughtered partridges (ruffed grouse) and fabulous tales of the wonderful knowledge possessed by his dog. With attentive ears we listened to his lavish encomiums; with anxious eyes we eagerly scanned his weather-beaten features to try and discover a ray of hope for us. Thinking that we could perceive slight tokens of tenderness in the lines about his mouth, we hesitatingly asked if he would sell him. Anxiously awaiting his reply, what was our horror to see him take from his pocket a huge clasp-knife and coolly open it. Thinking that he was about to commit suicide, or offering such an affront, we retreated behind the counter. Our fears were soon allayed, however, when we saw him take from the other pocket a plug of tobacco and slice off a generous piece and place it in his mouth. Then with an expression of the utmost frankness he turned his eyes full upon our face and candidly said that he would not sell that dog to everybody, but, seeing that it was us, he didn't know but he might be induced to part with him, especially as his wife hated dogs

sible to change the conditions, hence the Palma match, through Sir Henry's efforts, has become practically a "dead letter."

Major A. P. Humphry is an officer in the Cambridge University Royal Volunteers. He was a member of the English team in the Centennial match for the Palma. He is a barrister at law. He became the champion military shot of England in 1871, when he took the Queen's prize on the score of 98 out of a possible 91 points at 800, 900, and 1,000 yards. He won the Duke of Cambridge prize in 1877, on the score of 33 out of a possible 75 points, at 1,000 yards; the Any Rifle Association Cup in 1879, on the full score of 35 points at 600 yards, and was a member of the team in the "Sixty" match in 1879-80. He published a work called "First Hints in Rifle-shooting," which had an extensive circulation among the soldiers in the United Kingdom.

Robert McVittie is a private in the Seventh Dumfries Regiment Royal Volunteers. He was a member of the Scotch team in 1876, in the Centennial match for the trophy. He is a cabinet-maker by trade and resides in Dumfries. He won the St. George's Challenge Vase at Wimbledon in 1874, on the clean score of 35 points at 500yds., and like third prize in the grand aggregate, score 34 the same year. In 1878 he carried off the Olympic on the score of 33 out of 35 points at 600yds. He has been one of the first 60 competitors in the Queen's Cup match, locally known as "The Queen's Sixty," six times. He has been a member of the Scottish eight in the Elcho Shield match for many years, and his score in that match this year was 187 out of a possible 225 points. He also won the Secretary of War's match this year at Wimbledon, on the score of 33 out of a possible 35 points at 900yds.

Lieut.-Col. W. H. Walrond is a member of Parliament for East Devonshire. He was born in 1830. He was formerly a member of the Lancaster Grenadier Guards, but is now a member of the First Devonshire Rifles. He shot for the Elcho Shield several times, and in 1865 was second in the competition for the Queen's prize. He is six feet high, has hazel eyes, light mustache, and light hair.

Henry Smith, Adjutant of the team, is employed in the telegraphic bureau of the English War Office. He entered the Volunteer Civil Service Rifles in 1863 and was the founder of the North London Rifle Club, one of the leading rifle organizations in England. He was the champion marksman of his regiment in 1876, and won the All Comers' match in the Middlesex Rifle Association of that year. He is five feet six inches in height, of fair complexion, light hair and mustache, and blue eyes. In shooting for a place on the team he averaged about 76.

George Boulter is chief clerk of the Cheshire Post Office, and belongs to the Second Cheshire Rifles. He entered the Volunteer service in 1865. He is 42 years old, and is 5ft. 9in. tall, fair complexion, hair sandy and beard and blue eyes. He has won the Grand Aggregate prize at Wimbledon three times, and holds the Bronze Medal of the British National Rifle Association. He also captured the Lord Lieutenant's County of Cheshire prize.

Sergt. John W. Dods lives in the town of Dunse, Durhamshire, England. He is 35 years old, has light hair, brown mustache and hazel eyes, and is 6ft. high. He joined the First Berwick Volunteers in 1867. He was a member of the "Twenty" during the past three annual prize meetings at Wimbledon, and also shot in the United Service match this year. He won 16 prizes at the last Wimbledon meeting.

Capt. P. T. Godsal, of Windsor, England, was born in 1850. He is about 6ft. in height, of light complexion, and has hazel eyes. He belonged to the Volunteers for several years, then served a term of six years in the Fifty-second Light Infantry, regular army, and finally went into the Second Regiment, Buckinghamshire Volunteers. He was a member of the English team which made the match for the Elcho Shield for three years. He won the Dudley Cup at 1,000yds. in 1880, and captured the Wimbledon Cup in 1881. He won the prize in the first stage of the Albert match, and the Dudley Cup this year at Wimbledon.

Private J. Goodear lives in Lancashire, and was born in 1838. He is of portly physique, florid complexion, with full sandy beard. He joined the Sixth Lancashire Volunteers in 1871. He made the top score of the winning team for the Wigan Challenge Cup, and won the St. George's Badge in 1876, and has been a member of the Lancaster team at Wimbledon every year since 1875. He also shot in the English "Twenty" during the past two years. "I have tried very hard to win the Queen's prize for the past eleven years," he said, "and I very much hope to win it next year."

Lieut. John Heap is thirty-seven years old, and has a florid complexion, hazel eyes, light hair and mustache. He shot second in the grand aggregate at Wimbledon this year, and has won all 700 at various volunteer competitions and has shot on the English "Twenty" and on United Service teams. In the team practice he has made scores of 89, 86, 87, 95 and 86 at the short ranges and 95, 97, 95 and 94 at the long ranges.

Capt. H. Mellish, the youngest member of the team, is 23 years old, and lives in Nottinghamshire. He is of medium size, light hair, sandy beard, and blue eyes.

Sergt. H. Oliver, of Middle Bromley, has been in the Volunteer service 12 years. He is 34 years old, of fine build, light fair complexion, and has a sandy mustache and blue eyes. He has been in the "Queen's Sixty" since 1870; won prizes in the St. George's match, and is a member of both the North London and South London Rifle Clubs. He made the top score out of a possible 105 points in the competition for a place on the team. He is regarded as one of the strongest shots in the regiment.

Corp. E. J. Parry was born in 1848. He is 5 feet 6 inches high, has blue eyes, light hair, sandy beard and chin whiskers. He took a shot in the English "Twenty" since 1874, making the top score in the first year and again this year. He won the Kolapore Cup in 1875 and this year. He won the Queen's prizes in 1877, 1880, and this year; the St. George's in 1872, 1874, 1877, 1878, 1880, and 1881, and the Grand Aggregate in 1877, 1878, 1880, 1881, and this year.

Major George Pearse, of Hatherleigh, was born in 1852, and is the tallest man in the team, being 6 feet 4 inches in height. He joined the Volunteers in 1870. He wears glasses, has a full brown beard and mustache, dark eyes and light hair.

Corp. H. Bates lives in Birmingham. He began shooting in 1879, when he won the Henry prize on the score of 33 out of a possible 35 points. He has won the Grand Aggregate prizes three times, the St. George's Medal five times, and has made a number of fine scores. He is 40 years old, of medium height, fair complexion, full beard, and hazel eyes.

Corporal William Caldwell, of the First Renfrew Rifle Volunteers, is forty-three years old, and about five feet eight inches in height. He wears a full beard, and has dark hair and gray eyes. He has been a member of the Scottish "20" every year since 1870, and was in the Scottish team in the Elcho Shield match in 1879. He won the Alexander prize in 1875, the Alcock prize in 1876, the Grand Aggregate in 1876, and the Albert prize in 1875. He was champion for the west of Scotland in 1879, and won the Grand Aggregate and Canadian trophy in 1881, when he was also in the United Service team.

Private Caldwell served three months at the outbreak of the late war as a member of Company F, Twelfth Regiment N. G. S. N. Y., the same company and regiment to which Van Heusen, of the American team, belongs. He subsequently served to the end of the war as Captain in the Fifth Volunteers. He was never naturalized.

Some of Secretary Smith's records show that Pearse in competitions scored from 85 to 99 at the short ranges and 92 to 82 at the longer distances. Dods—Short range, 91 to 95 long range, 70 to 81. Caldwell—Short range, 78 to 98; long range, 75 to 94. Bates—Short range, 85 to 94; long range, 91 to 99. Heap—Short range, 86 to 95; long range, 93 to 97. Boulter—Short range, 80; long range, 79. Goodear—Short range, 93; long range, 74. Smith—Short range, 82; long range, 75.

In an interview with the Times reporter Sir Henry Halford pronounced the statements made here that the British team was using guns comprising the barrels of long-range match rifles attached to the stocks of military muskets as being "utterly without foundation." He proposed to use the same rifle with a change of rifling for scores. He has used in military matches for 15 years. Other members of the team would also use rifles they had used for many years, he said. The capacity of the rifles he thought was fully 90 or 95 points out of 105, but he did not believe it was possible for his men to make a greater average than 90 points with them. Their ammunition is from 75 to 80 grains of powder and bullets, weighing 530 grains.

"I believe," said Sir Henry, "that we can do better work with such charges than can be done with 84 grains of powder and 540 grains of lead which the American team is using." He also thought the gun barrels were less liable to become foul with the use of the lighter charges. Formerly, the British Rifle Association prohibited the cleaning of rifles between ranges. But when the American team went over to Dollymount a committee was appointed which practically abrogated the old standing rule, and now it is hardly observed. Sir Henry expressed the opinion that this match would result in a renewal of the rule in Great Britain, as well as its establishment here.

CREEDMOOR FALL MEETING.—The entry-books for the Autumn prize meeting at Creedmoor are now open at the offices of the National Rifle Association, No. 102 William street. Entries will be received until the 9th inst. The Michigan State rifle team will arrive at Creedmoor Tuesday, September 5.

MAINE ASSOCIATION.—Second annual tournament of the Maine Sportsmen's Association, for the protection of fish and game, will be held at Bangor, Me., Sept. 13, 14 and 15, and possibly the 16th, under the auspices of Norombega sportsmen's Club, at the Bangor Trotting Park. The matches under English rules have been modified to allow ten-gauge guns to compete; weight, and charge of powder is not limited. Contestants may gather their own birds.

FOREST AND STREAM.

RANGE AND GALLERY.

CREEDMOOR.

AUGUST 29.—All the members of the American military rifle team were at Creedmoor for the Autumn "day." They had almost the entire range to themselves, as besides them only a few members of the Seventh regiment were practicing at 200yds. The scores made were generally low, and several members of the team expressed themselves openly dissatisfied with the day's work. Irlam, especially, who is considered a very good shot, made a miss at 500yds., another at 600yds., and two more at the 1,000yds. range. His total score in the first stage was 69, and his score at the 1,000yds range only 17. The namesake of the bard of Avon showed only middling shooting. Although the day was clear, and the breeze in the morning was very light, the conditions under which the men practiced were said to be unfavorable to fine shooting. The sky was cloudless, and the bright glare of the sun's rays powerfully reflected from the white targets dazzled the eyes. During the entire day, too, there was a strong sheen or mirage that danced in front of the targets like gases ascending from a very hot furnace.

Col. Bodine was in command, assisted by Adjt. Charles F. Robbins. Ranges being clear, the "Monday" of the American team's long range," who had been impressed into the service as coach at the previous practice, seems to have become so infatuated with his new occupation that he appeared on the grounds in the same capacity. Dr. S. T. G. Dudley was also selected as coach for the shooters. During the day Col. Bodine appointed Major William L. Murphy of the Twelfth Regiment, Secretary of the American military team. When the team settled down for work in the forenoon, a slight breeze was blowing from the northeast, but not sufficient strong to interfere with the shooting. It gradually shifted, and when the 500 yards shooting was going on it was blowing from the east, and in the second stage it had freshened to a moderately stiff breeze from the southeast. Atkinson and Pollard did very creditable shooting in the first stage, and the latter planted five bullseyes in succession at the 500 yards' range. The following is the score in the first stage:

	200yds.	500yds.	600yds.	Total.
D R Atkinson	30	31	31	95
J M Pollard	30	35	28	93
John Smith	31	29	32	92
C W Hinman	31	32	31	92
T J Dolan	30	29	30	89
G E P Howard	29	35	27	89
J L Paulding	31	30	26	87
D H Ogden	24	29	28	81
E O Shakspeare	28	30	27	85
Captain T W Griffith	31	32	22	85
A B Van Heusen	29	31	24	84
Frederick Alder	30	30	24	84
N D Ward	29	27	27	83
M D Hinds	29	28	26	83
James McNevin	28	28	24	80
S E Irlam	28	31	20	69

When the first stage was finished a recess was taken for luncheon, while the attendants moved back the tents and stools to the 800yds. range. Very few shots were fired at this distance, and the score was not taken, the team being desirous of occupying what remained of the afternoon at the 1,000yds. distance. The following are the scores made in this range:

John Smith 28, C. W. Hinman 25, D. K Atkinson 21, J. M. Pollard 22, T. J. Dolan 26, D. H. Ogden 27, T. W. Griffith 26, J. L. Paulding 24, A. B. Van Heusen 24, E. O. Shakspeare 23, G. E. P. Howard 18, J. McNevin 19, N. D. Ward 14, M. D. Hinds 13, F. Alder 11, S. Irlam 17.

Aug. 30.—The rifle team shot over all the six ranges of the international match at Creedmoor to-day. The aggregate score of the highest twelve men was the best, with one exception, that has been made since the selection of the team was undertaken, but very many points of weakness appeared in the course of the practice. The men drew a full 8 inches instead of 6 inches that is encouraging. Misses are sandwiched in between centers and bullseyes in a manner that seems to imply great uncertainty of judgment. The prone position is held accountable by all the most experienced shots who are watching the practice for the wildness of the shooting at the long ranges. "What is the use," asked a prominent member of the Amateur Rifle Club, who has given aid as a coach, "in my telling the wind and elevation exactly to a man when I can see the muzzle of his piece shaking enough in every direction to carry him twenty feet away from the target?" A majority of the men unfortunately use this position, and it is admittedly too late to break them in to shooting from the back position before the match. The best must be made of them as they are.

There are two flatly contradictory opinions regarding the chances of victory. A National Guardsman who has been an attendant at Creedmoor events since the range opened said: "We must no reckon on winning with less than 90 points per man—ninety-five at the short and ninety at the long distances. This, according to present indications, is about equivalent to saying, "We must not expect to win the match." On the other hand, Mr. Smith, of the team, who has himself shot at Wimbledon, and who knows all the visitors and their prowess, thinks America will win. He expects the team will average ninety points a man in the short-range stage, while the English will average rather less. He thinks the shooting will be even at the long-ranges, or else the advantage will be on the American side. He looks for a clean score for about seven men, or points each on an average in this division of the match. This, it may be remarked, is considerably above any average yet made by the American team.

About 5 o'clock the team held a meeting at the Range Club House, and there determined to all aim alike at a point above and to the right of the bullseye. This point has been found the most expedient with a view to avoiding errors of vision, and all corrections for wind and elevation necessary to carry the bullet into the bullseye can be made over the bar of the rear sight. Every man has besides been furnished with a document reading as follows, except, of course, that the figures all vary in proportion to the distance between the sights of each one's rifle:

Mr. ——: The sights upon your rifle being 27½ inches apart, a movement of line on the rear sight a iher for wind or elevation of 1/01 of an inch gives a variation on the target of 81-100 inches for each 100 yards; or, in other words, if, using a Vernier marking hundredths of an inch:

	Actual.	Approximate.
At 500 yards 1 point gives you	6.86	6½
At 600 yards 1 point gives you	7.89	8
At 800 yards 1 point gives you	10.48	10½
At 900 yards 1 point gives you	11.79	11¾
At 1,000 yards 1 point gives you	13.10	13

By order of Col. JOHN BODINE.

C. F. ROBBINS, Adjutant.

Shooting was begun about 11 o'clock upon three targets. This accommodation proved insufficient, and the team barely succeeded in finishing their scores in time for those who wished to catch the last train for the city. Four targets, all agreed, should by right be provided for the practice. The weather was fair the whole day, though not without drawbacks. The wind was fishtail and fresh enough to cause trouble up to 600yds. It declined steadily all day, and caused little or no disturbance at the long ranges, but there was considerable mirage. The scores are given below in the order of merit:

	First Stage.				Second Stage.				
	200 Yds.	500 Yds.	600 Yds.	Total.	800 Yds.	900 Yds.	1,000 Yds.	Total.	Agg.
Dolan	29	29	32	90	29	29	27	85	175
Hinman	29	33	28	90	28	31	26	85	175
Hinds	30	31	25	87	29	25	33	87	174
Smith	31	32	31	94	29	23	30	82	176
McNevin	26	29	31	86	32	25	21	78	164
Pollard	30	33	25	88	27	24	23	74	162
Alder	29	27	29	85	29	29	16	74	159
Ogden	30	29	27	86	22	26	23	71	157
Howard	29	31	31	91	27	23	15	64	156
Paulding	30	23	27	80	28	22	20	65	155
Shakspeare	30	29	19	78	22	26	27	75	153
Atkinson	28	31	31	90	18	23	20	61	151
				1,052				894	1,946

Irlam made 79 at the first and 65 at the second stage, total 144. Griffith, 63 and 70, total 133. Ward, 71 and 53, total 124. Van Heusen shot only in the first stage, making 75 points.

Aug. 31.—The American Rifle Team did by far the best work to-day that it has done since the close of the preliminary competitions. Only four ranges, including the 500, 900 and 1,000yds., were shot at, and the results were very satisfactory indeed. On arriving on the grounds they found that two artillery batteries had possession of the 200 and 300yds. range, and decided to open the day's work with shooting at the 600yds. range and to omit the other two ranges of the first stage altogether. This gave the men more time to practice at the longer ranges, and they made some of the highest scores recorded since they went into practice. The men got to work fresh at those points where they had been weakest. They had plenty of time and they made the best of the opportunity. It is only necessary to say that the best twelve made an average of eighty and five-twelfth points per man out of the possible 105, against seventy-four and a third on Wednesday, to show how great the improvement was, and, further, it must be remembered that Wednesday's shooting surpassed all previous days. Whether this average is a winning one is a subject of dispute. There are "bears" and "bulls" on the match. Some believe that, shooting as they do at short ranges, the team can take a victory with an average of seventy-eight points at long. Others believe that ninety points will be needed.

It was not a bad day on the whole for shooting, still it was not a very good one. The light was dull and pretty steady. The air was free from mirage, but, on the other hand, an ugly fishtail wind blew up the range with some force, varying from south by east to south by west, and defeating the calculations even of veteran marksmen. Elevations, too, had an unaccountable rise toward the close of the day, the theory being that it was due to a fall in temperature. Another peculiarity of the day's shooting was that some of the rifles fouled in an unusual degree. An examination of the deposit showed that this was due to the hardening of the wax used in the lubricating discs. On warm days this material remained soft, but yesterday the metal got heated rapidly and the crust quickly hardened on the inside of the bore.

The prevailing opinion is that a general mistake has been made in the use of lubricants. Most of the men use a soft disc, with a grease proof wad between it and the powder, and the bullet in contact with it. It is thought that the "patch" or paper wrapping of the projectile is injured by the grease, and, besides, the bullet carries with it several hundred yards a sufficient amount of grease to materially modify its line of flight. The practice is said to insert a second greaseproof wad between the disc and the bullet. Colonel Bodine, Captain Robbins and Secretary Murphy were all on the field. Mr. R. Rathbone, Mr. W. W. De Forrest and Dr. S. T. G. Dudley acted as coaches, and Major H. S. Jewell, of the team of 1877, paid a short visit and consulted with the officers of the team. Shooting began at eleven o'clock at 600 yards, and full strings were shot at that and the three long ranges as follows:

	800 Yards.	900 Yards.	1,000 Yards.	Total.	Yards.
J. L. Paulding	31	29	28	88	28
G. E. P. Howard	31	27	29	87	27
C. W. Hinman	32	29	26	87	32
T. J. Dolan	30	28	28	86	31
E. O. Shakspeare	22	27	38	82	31
James McNevin	26	32	23	81	32
T. W. Griffith	26	27	30	83	25
D. K. Atkinson	29	27	22	78	28
John Smith	24	24	29	77	29
Frederick Alder	32	26	19	77	31
J. M. Pollard	27	26	20	73	32
M. D. Hinds	20	26	31	72	36
D. H. Ogden	18	23	22	63	24
N. D. Ward	24	16	20	60	25
A. B. Van Heusen	17	20	14	51	29
E. Irlam	25	16	10	51	30

Friday all the weather conditions were favorable, and some fine scores were piled up. At the short distances—200, 500, and 600yds—the highest scores were made by Smith and Ogden, who each tallied 96 out of a possible 105. Shakspeare also made a score of 95 at the same distances, and Hinman 91. At the 800, 900, and 1,000yds. ranges Pollard carried off the honors with a score of 96, and Howard followed with 91. They were both vanquished at individual ranges, however, by Smith and Paulding, each of whom made "clean" scores, or a bullseye at every shot, at the 800yds. range. The highest aggregate scores at both sets of ranges were made by Smith, Pollard, and Ogden, who tallied 186, 185, and 184 respectively.

	200 Yds.	500 Yds.	600 Yds.	Total.		800 Yds.	900 Yds.	1,000 Yds.	Total.
Smith	31	32	33	96	Pollard	31	32	32	96
Ogden	29	34	33	96	Howard	30	29	32	91
Shakspeare	29	30	34	93	Smith	35	26	29	90
Hinman	30	31	30	91	Ogden	32	27	30	89
Paulding	32	27	30	89	Dolan	27	30	32	89
Howard	28	30	31	89	Atkinson	31	30	28	89
Atkinson	30	28	30	88	Alder	31	29	28	88
McNevin	33	33	32	88	Shakspeare	32	25	25	82
Pollard	33	32	28	88	Paulding	33	26	23	82
Dolan	31	26	32	88	Griffith	25	32	31	82
Hinds	30	30	28	88	Ward	29	26	20	75
Alder	27	28	24	79	Irlam	17	29	27	73
Irlam	26	22	24	72	McNevin	30	9	9	74
Van Heusen	28	14	25	68	Van Heusen	25	20	16	71
Ward	27	22	19	68	Hinds	29	28	11	68

Monday Col. Bodine announced that he had selected the following ten members of the team: Frederick Alder, T. J. Dolan, M. D. Hinds, C. W. Hinman, Col. G. E. P. Howard, James McNevin, D. H. Ogden, J. L. Paulding, Major E. O. Shakspeare, and John Smith.

The averages of the chosen men for all the completed competitions were as follows: T. J. Dolan, 167-2-3; C. W. Hinman, 167-1-3; Paulding, 160 3-7; D. H. Ogden, 160 3-7; C. W. Hinman, 159; M. D. Hinds, 157 5-7; F. Alder, 155 3; J. McNevin, 154 2-3; E. O. Shakspeare, 154 2-7; G. E. P. Howard, 141.

Frederick Alder, is a private in the Seventh regiment. He shoots the Hepburn gun, with 90 grains of powder, 530 grains of lead, three wads and two lubricating disks. Dolan is a sergeant in the Twelfth, and also uses the Hepburn. His charge is 92 powder, 550 lead, with the same number of wads and lubricators. Paulding, also a sergeant in the Twelfth, is the only man who has adopted the Hotchkiss gun. He shoots it with 100 powder, 550 lead, two wads and two felt lubricators. Sergeant McNevin, of the Thirteenth regiment of Brooklyn, uses the Hepburn, with 90 powder, 550 lead, two wads and one lubricating disk. Hinman, a private of the First Massachusetts, shoots the Hepburn, with 92 powder and 550 lead; Private Smith, of the Ninth New Jersey, uses the Borchard, with 85 powder, 550 lead, two wads and one lubricant; Ogden, of the Twentieth separate company of Binghamton, uses the Borchard, with 85 grains of powder to the same bullet, wad and lubricant. All the rest use the Hepburn. Hinds, of the same company as Ogden, uses 90 powder and the rest of the charge like his comrades. Col. Howard, a New Jersey staff officer, uses factory ammunition. Shakspeare is the only man of the team who does so. Maj. E. O. Shakspeare belongs to the staff of Maj.-Gen. Hartranft, of Philadelphia. His charge is 100 powder, 550 lead, two wads and one lubricant.

The practice on Monday resulted in the following scores, Hinman being absent. The rain seriously interfered with the work.

	800yds	5	5	5	4	5	5	5—34
T J Dolan	900	0	5	5	5	5	4	5—29

D H Ogden	800	0	0	0	4	3	3	2— 9
	900	4	5	3	5	5	4	4—30

Ogden's break-down was due to a change in his loading. The totals of the other six men were: G. W. Fielding, 182; J. M. Pollard, 28, 27; A. B. Van Heusen, 27, 23; N. D. Ward, 25, 24; S. E. Irlam, 27, 23; D. K. Atkinson, 25, 20.

Tuesday both teams were out for practice. The wind was troublesome and affected the guns. The first twelve men in the American team scored only 999 points, against 1,002 made by the British team, and the grand total also heading twelve men in the British team scored 2,028 to the Americans 1,988, making a difference of ninety-five points in favor of the British riflemen. Following are the scores:

ROCHESTER, N. Y.—The last contest of the Rochester Gun Club series of matches for a $200 gun, was shot last Thursday. Of the four contestants who had persevered, the winning man was Mr. Bigelow, who scored 178 glass balls out of 200. The other scores were: Butler, 175; Sumner, 162; King, 161; Amsden, 155, with one shoot behind.

NEWPORT, R. I.—The first competition of the Newport Rifle Association for the selection of a team to go to Creedmoor was held at Paradise Range last Thursday afternoon. The following scores were made 300yds. off hand, Creedmoor target:

W M Farrow	4	4	4	5	5	5	4	5	5—47
W S Knight	5	4	5	5	4	4	4	5	5—46
P Peckham	2	4	4	4	5	4	4	5	4—40
J H Witherell	4	4	4	4	4	5	4	5	4—42
C Torrey	4	4	4	4	4	4	4	4	4—36
E E Leonard	4	4	4	4	5	4	4	4	4—37
W Charles	4	4	4	4	4	5	4	3	2—34

The team match at Creedmoor will be shot with teams of four men. The club finals they will send on four strong shots. The next competition takes place Saturday.

CREEDMOOR, Aug. 30.—The Amateur Rifle Club team practiced at Creedmoor to-day in anticipation of a match with the team of the Massachusetts Rifle Association, to be shot at Creedmoor on Saturday, the 9th of September. It is a return match to one at which the New Yorkers were defeated at Boston, in June. The team will consist of H. F. Clark, R. Rathbone, J. Habirshaw, W. W. DeForrest, J. H. Brown and J. W. Todd. The match is of fifteen shots each, at 800, 900 and 1,000yds.

IRISH MARKSMEN.—The Irish-American Rifle Club, of New York city, shoot a match on Sept. 5 with the Irish-American Club of New Haven. The contest will be at Creedmoor, ten shots at 200yds. The home team and reserve are: J. McNevin, F. F. Millen, N. O'Donnel, S. Cavanagh, J. Kerr, M. Duffy, P. McMorrow, W. Cushing, P. Farrelly, M. Brennan and F. Stewart.

THE TRAP.

WHITESTONE GUN CLUB.—Whitestone, L. I., August 30, 1882.—The fourth of the series of live bird matches for a silver cup and the championship of the Whitestone Gun Club was held here to-day with five men at the trap. A second prize was also offered consisting of a book, "The Life and Writings of Frank Forester." The cup goes to the man winning it the greater number of times. Conditions: Ten clay pigeons, fifteen yards, club rules.

Martin Hoffman	1111111111	10	H DeWitt Smith
A C Wilmerding	1111110001	7	F R Perry
C H Simonds	0001010011	5	

Hoffman took the cup and Wilmerding the second prize.

NEW HAVEN vs. WORCESTER.—Springfield, Mass., August 30.—The New Haven (Conn.) Gun Club and the Worcester Sportsman's Club shot a match on the Springfield Glass Ball Club grounds this afternoon, with six men on a side, each man shooting twenty balls. The Worcesters won by a score of 94 to 91. The scores follow: Worcester—Eager 16, Beaudry 13, Smith 12, Holden 18, Clark 17, Perry 18. New Haven—Post 18, Brogden 15, Folsom 18, Langdon 16, Goodrich 18, Nichols 11.

Yachting and Canoeing.

FIXTURES.

Sept. 7.—New Jersey Y. C. Open Matches.
Sept. 7—Royal Canadian Y. C. Club Race.
Sept. 8—Royal Canadian Y. C. Open Matches.
Sept. 9.—Pacific Y. C. Fall Matches.
Sept. 9.—Toronto Y. C., Mimico.
Sept. 9—Merrimack Y. C., Open to All Match.
Sept. 10—Quaker City Y. C., Harbor Cruise.
Sept. 14.—Vixen-Cetes Match, New Haven; cup and $50.
Sept. 16—Dorchester Y. C., Open Races, Oak-Rigs.
Sept. 16—Royal Nova Scotia Y. S., Three Classes, one prize each.
Sept. ——Royal Nova Scotia Y. S., Yachts dinghies, sailing race.
Sept. ——Royal Nova Scotia Y. S., Charlottetown, P. E. I.
Sept. 20—Jersey City Y. C., Matches.
Sept. 24—Quaker City Y. C., Harbor Cruise.
Oct. 1—Quaker City Y. C., Closing Cruise.
Oct. 3—Jersey City Y. C., Ladies' Day.

LOGIC IN MEASUREMENT.

AN exceedingly superficial mind reporting occasionally for a turf journal imagines he has disposed of bulk measurement with such a vulgar platitude as this: "A barn is known to possess great bulk, yet I have never known one to sail fast." Very well; we add that a pine log 100ft. long is known to possess great length, yet we have never known one to sail fast; in fact, would undertake to beat the 100ft. log with a 16ft. Whitehall boat. What then becomes of length measurement?

The reporter's access to the columns of a reputable journal is our excuse for obtruding his pompous charlatanry upon our readers.

ENTERPRISE.—This Boston cutter, built for Com. Frank E. Peabody, has been sold to Mr. Geo. Moffat, Atlantic Y. C. Enterprise is 50ft. long, 43.9 on load line, 15.8 beam, and 6ft. hold. Built in 1878 in the best manner by D. J. Lawlor, of Chelsea, Mass. She is one of the earliest attempts at producing a compromise between cutter and sloop, has light displacement, with great depth of keel and deadwood, a cabin house and full cutter rig.

AMERICAN CUTTERS.

Editor Forest and Stream:

American cutters have met with most decided success in the Beverly regatta, as you have to some extent already commented upon. The friends of such boats are naturally proud of their performance. In the second class keels, Beetle, Kelpie and Mavis take the three prizes, all of them full-fledged cutters, with flush deck and running lbs. Beetle made better time than many of the second class center-boards or any of the schooners. All three were built by Lawley & Son, of South Boston and they have another on the stocks. Beetle is 29.04ft. load line, 9ft. 8in. beam, and 5ft. 4in. deep, and is the property of Mr. Hemenway, built from lines under the supervision of Mr. S. W. Burgess, in the spring of 1881. Kelpie and Mavis are sister ships to Mr. Edward Burgess's Moya, and a little smaller than Beetle, being 26ft. 4in. on load line, 9ft. beam and 5ft. deep. A strange thing was that these cutters outran the sloops before the wind quite as much as on the wind.

[The class of cutters refered to by our Eastern correspondent are yachts which can be recommended to all for every purpose. They combine the maximum of room on deck and below with speed, seaworthiness, significant handiness in rig, moreover and "comfort" of any style brought to notice, and they draw rather less water than the new keel sloop. As cruisers they carry off the palm, and for that reason alone they are destined to become very popular in Boston, and they should ultimately in New York as well. In general they resemble the most improved Solent boats in body, with the quarter, finish and rig they are up to the best cutter standards. The Mavis was designed by A. Cary Smith, of this city.]

BEVERLY YACHT CLUB.—AUG. 26.

LAST week we gave our own version of the most numerously attended yacht matches ever sailed in America or abroad. This week we publish an account from our special correspondent, and with it the only full official record of the racing yet printed, justified by the impartial hand of the Secretary.

Editor Forest and Stream:

The second open regatta of the B. Y. C. was held at Marblehead, Aug. 26, the starting line being laid from the Phantom of the Eastern and Beverly clubs, anchored off the Eastern Y. C. House, to a stake-boat placed below Peirl.

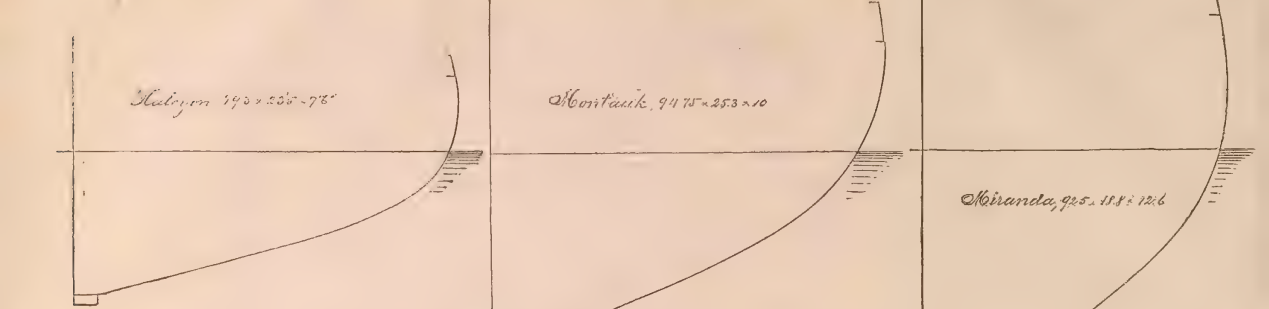
Great expectations had been raised in regard to this race, as the club had spared no trouble in making the arrangements and getting as large a number of entries as possible. The largest race on record was that sailed by the club at Swampscott in 1879, when 144 boats entered, 99 started and 88 completed the course, and this race was expected to break record. The result was that large numbers of people gathered to see it, many from a distance, covering the shores and crowding the scores of yachts and boats watching the race.

Very soon after 9 A. M. of the E. Y. C.'s handsome new steamer loaned the Phantom to the judges, came round Friday afternoon. Very soon, although the wind was very light, the racing boats began to appear: odd boats from various clubs came first; then a dozen boats of the Cape Ann Y. C., closely followed by the Hull and Dorchester Club, which came down as a body, under the command of Com. Gray. The entrance of the latter club was very pretty; the cutter Kitten, which at Egg Rock was in the rear, had very cleverly worked to the front, and was leading, as they appear, close-hauled around the point of the neck; the minute she bore off up the harbor, light kites went up on both sides, and she ran quickly up to the head of the harbor followed by Egeria, Viking, Fiona, and some twenty sail besides.

During the night it was almost a dead calm, but the boats came dropping up, some of them having taken twelve or fourteen hours to run the fourteen miles from Boston. The morning of the 26th opened with a brisk northeast wind, a heavy sea, and every prospect that a northeaster of storm would set in by night; as early as 6 A. M. the boats began to arrive, the smaller boats under reefs. Later the wind slackened, but breezed up well at the start.

After considerable debate the judges decided to send the first, second and schooner classes round course No. 1, as follows: Leaving the harbor buoys, Hinkey Island and other shore, Rocky and Fig Rock stakes on starboard hand; leg of three miles to Egg Rock on port hand and return, fifteen and three-quarter miles, all outside work except the short run down the harbor. The third class was sent over course 10, as follows: Leaving Half Way Rock; stakeboat off southeast breaker, Gales Ledge; Bowditch's Ledge Beacon on port hand and return, ten and a half miles, while the fourth and fifth classes left Salman's Berth Buoy and Black Buoys three, five and seven, on port; stakeboat off Curtis Point and Bowditch's Ledge Beacon on starboard and return, seven and a half miles.

At 12 M. when the numbers were set the sight was pretty; many large yachts, including many of the E. Y. C. and the Hildegard of the N. Y. Y. C., were on hand to watch the start, while many more were cruising round the mouth of the harbor to see how the racing boats. The upper end of the harbor was so packed with the smaller classes as to look perfectly white, making it difficult to see the water from a little distance. The lower part of the harbor was crammed with the larger classes, and yachts of every description; the whole of Beverly Bay was covered with sails, all heading to one point, while the boats from Boston and vicinity were rounding the lighthouse point in a steady stream; the line running back toward Boston, beyond Egg Rock. At the time of the start there must have been over 200 sail in the harbor, not counting the large numbers waiting outside.



Promptly at 12:30, the advertised time, the order to fire was given, but the cap snapped, and the preparatory gun was fired at 12:31. Five minutes after the gun for first class was fired, and at 12:36:59 the crack Shadow led off, close hauled on the starboard tack, closely followed by Anna, Nimbus and Lena, with the other fifteen close behind. At 12:46 the gun for the second class was fired. Here Lillie led off, crossing at 12:46:26, with Eugenia twelve seconds later. Four centerboards and fourteen keels started in this class; among the latter the cutters Mavis, Beetle and Kelpie, of the L. Y. C., which were matched for the first time against all the crack keel sloops in the bay. Only six centerboards entered in this class, which, as '79, was second in numbers only to the first class, and this shows how the tide runs now; but it is doubtful whether the keels proved themselves better than the centerboards. The boats that started were two large Crosby built catboats, the well-known Folly taking better care of the start she used to, and the Joker 2d, who had come around from Woods Holl to try her hand. She appeared with a new suit of sails, put on for the first time Friday evening, which were hardly up to the mark in fit.

While the second class was crossing, a sloop, not in the class, suddenly shot up and anchored on the line just where the yachts were coming. As four boats were close to the line it was awkward, causing one boat to come up into the wind and make a start, and crowding two others into each other, the only foul of the day. The sloop was at once removed.

After getting out of the harbor the boats set large jib topsails, which were carried to the Pig Rock stakes, where spinakers were run out to port and all light canvas piled on for the run to Egg Rock. The boats opening over the course made a very handsome show and one not often seen; thirty-seven boats with spinakers coming down in a cloup before a strong breeze.

The cutters seemed to do well in second class, Beetle particularly passing several first class boats, and rounding the rock tenth boat. From Egg to Half Way was a beat; at first a long and short leg, as the wind canted out a little; but it soon went back and a dead on end beat in a heavy sea ensued, the big topsails having been taken in at Egg Rock. Inland the wind was more to the eastward, and spinakers to port were carried in from Half Way.

The third class gun was fired at 12:50, sixteen centerboards out of seventeen entries, and four keels out of eight entries starting, Allie leading at 12:56:41, with Jet seven seconds astern; some of the keels were in sight, but too late to start. The course was

Second Class Keels.—1st, Beetle, B. Y. C.; 2d, Kelpie, B. Y. C.; 3d, Mavis, B. Y. C.

Third Class Centerboards.—1st, Expert, H. Y. C.; 2d, Rebie, Bo. Y. C.; 3d, Sea Bird, H. Y. C.

Third Class Keels.—1st, Banneret, South Boston; 2d, Judith, T. C.; 3d, Sadie, S. Bay Y. C.

Fourth Class Centerboards.—1st, Joker, H. Y. C.; 2d, Janet, H. Y. C.; 3d, Amy, Q. Y. C.; 4th, Niobe, D. Y. C.

Fourth Class Keels.—1st, Vesper, W. L. Y. C.; 2d, Charlotte, H. Y. C.; 3d, Nonpareil, W. Y. Y. C.; 4th, Lizzie, J. C.

Fifth Class.—1st, Flora Lee, S. B. Y. C.; 2d, Mirage, B. Y. C.; 3d, Sassacus, C. A. Y. C.; 4th, Nancy D., C. A. Y. C.

Note.—The abbreviations for yacht clubs are: B., Beverly—Bo., Boston—D., Dorchester—H., Hull—S. B., South Boston—S. Bay, Salem Bay—W., Winthrop—J., Jeffries—L., Lynn—W. Y., Washington Village—W. L., West Lynn—Q., Quincy. TILLER.

THE PRESENT RULES GOOD ENOUGH.

Editor Forest and Stream:

The greatest drawback that canoeing has had to contend against in the last twelve years has been the indiscriminate writing of its would-be friends. The "early fathers" have much to answer for, but their sins are small compared with those of the daily press and the average reporter. Not a race takes place but what the anger of the contestants is aroused by misspelled names, incorrect time and absurdly written reports, with usually some sagacious advice or suggestions. Of course in the late meet at Lake George was no exception, the daily reports were mostly meagre and incorrect, and in addition, the *New York Times* devotes a column to the asserted scarcity of competitors in the races, giving the reasons therefore and also a remedy. The writer complains that the presence of a few well-known sailors and paddlers deterred all others from entering, and that boats built and rigged solely for racing excluded the cruising canoes, and advocates a tax on sail area as a remedy (in the sailing races). As a matter of fact the entries in the different races were fairly up to the average in such contests, all conversant with any form of boat racing knowing well the difficulties of securing entries in any class. The races and regattas of the various yacht clubs call out perhaps a couple of schooners, three first class sloops, and less than half a dozen of the second class, while with hundreds of small sailboats around New York seldom a dozen show up in any one class in a race. The true reasons for this well-known fact do not concern us now, but an examination of the Lake George racing programme shows the absurdity of those given in the *Times*. Of the twelve races set down three were "junior" races, from which Messrs. Vanx, Whitlock and Hedgway, having taken prizes previously, were excluded, being no longer "juniors." A fourth race was for the larger boats in cruising trim, a limit being placed on ballast and consequently on sails, and designed to give a chance to the cruisers apart from the racers. As this was the first attempt, it is possible that the limit was not as low as necessary, a point easily settled in the future.

Two races besides these were "upset races," in which, as tests of skill in managing the boat in all emergencies, and in not depending on special racing appliances, the cruisers were fully on an equality with the gentlemen mentioned. Here were six races out of twelve specially devoted to the cruising boats, and in which it was intended they should have the advantage over any racing craft. The programme of races as well as the sailing rules were distributed to every member of the association some weeks in advance, showing plainly what races were open to each boat, and those who did not enter must find some better reason than that given. As to the second ground of complaint, there was not at the meeting a canoe that was not perfectly fitted for cruising, the only change needed being the substitution of smaller sails and replacing lead ballast by stores, etc., in some boats, not one being built exclusively for racing, or even so arranged as to deny the cruising outfit.

The many cruises of the Dot, the wandering of the Psyche in Florida, Mr. Wilsin's voyages in the smaller canoes, the well-read log of the original of the Lark, the present whereabouts of the Esmeralda, the Wraith's reputation, Oakes George and Champlain with what, speak sufficiently of the "racing boats," while with the larger and as yet untried Pearls the cruises of their English prototype are ample guarantees of their abilities as open water cruisers. That such boats, handled by men who are willing to carry more sail and carry more sail than the same boats owned by tyros is given as a reason for handicapping them, or, in other words, the man who timidly hoists his 40ft. of sail on a Shadow canoe in a calm, demands an allowance that will put him on an equality with Mr. Vaux, also in a Shadow, but carrying 80ft. in a fresh breeze, pluck and skill being penalized in favor of timidity and ignorance.

If this remedy is good for sailing races, why not apply a similar one to paddling? Mr. Heighway, with his six feet two inches height, has arms and consequently a reach to correspond. Now is it fair that men of only average height must paddle against him on even terms? Certainly not; but how can it be remedied? Let us adopt the rule of measurement, proposed in the *Canoeist* by "Keelson" for canoes, applying it to the crew—"multiplying the greatest girth by the extreme length between perpendiculars," or, to adapt it to the case in hand, multiplying the chest measure by the extreme height. Here is taxed both factors most valuable in paddling, staying power and reach of stroke, the latter nearly proportional to the height. No one could object to a rule so obviously fair as this, its only deficiency being that it takes no account (as a tax on sails does in reality) of the pluck, determination and fearlessness found in all successful racers, and which certainly must be considered if all are to be equal. With this detail added these two rules will cover both sailing and paddling races, and with some proviso for the upset races to make the good swimmer equal to the man who wears a life-preser when in his canoe, there will be no grounds for such complaints in the future, and this greedy monopoly of the prizes by a few practical canoeists to the exclusion of all "parlor" and "paper" cruisers, be effectually stopped.

JERSEY BLUE.

[The objections of our correspondent are well taken. The classification of the A. C. A., whatever its faults, is not likely to be improved by out of hand doctoring to handicap this or that style or individual. Better leave well enough alone and build up to the rules to compete with the best rather than weight the best for the benefit of the inferior. Type in canoes is necessarily not in a state of anarchy because the sport is too new to have the course clearly marked and canoes are put to such widely different purposes that no rules can be concocted to put all on the same level. Leave the builder untettered. Let him do his best on equitable terms, follow suitor take rank upon merit without asking for unjust indulgence by harrassing progressive development with complicated grants to types which have been left behind in the race or which are intended for foreign purposes.]

DUXBURY Y. C.—After an interval of several years this club started into life again with a match sailed August 31, over ten and six mile courses off the club house. First class, for yachts over 30ft., second for sprit sail boats. Judges were T. A. Hutchins, J. M. Cushing and Aug. Winsor. Leda, 28ft. 6in., C. Harlow, won in first class, by a single second in 1.42.25, beating Mamie, 27ft., W. C. Winslow. The sprit sail race was won by the Young Teazer, 15ft. 4in., J. D. Gaines, beating half a dozen others. Time, fifty-seven minutes and forty-two seconds.

LEADING TYPES OF SCHOONERS.

It is not so very long ago that light draft and shoal hold were deemed absolute requisites to speed, and even to the best rough water qualities. Such a belief had, of course, never taken hold of the handful of leaders who really set the fashions to the masses, but in late years talent of the aggressive sort, to whom the great crowd of mediocre copyists could look for precept and example, has been exceedingly scarce. Without masters the lesser lights fell ready victims to any kind of dogmatic faith, to which they clung with a tenacity in inverse proportion to their understanding. Circumstances surrounding our yachting in its infant stages of development, notably shoal and sheltered waters, beyond which we did not care at first to venture, conspired naturally enough toward the production of sheal flat-floored centerboard boats. By the time the sport had grown, and more venturesome sailing demanded hitherto unconsidered qualities in the pleasure fleet, the general run of builders had sunk too deeply into the rut of custom, and faith in "what was" held a vice-like grip upon the yacht building craft of the country.

To experiment, to venture innovation, to learn from other nations far advanced in experience of the kind we began seeking, was sneered at as mean and unworthy a truly loyal citizen who should be satisfied to take without murmur what was presumed to be indigent to the soil or in this case, rather, the waters. The man who accepted the wide, flat raft, and no questions asked, was the truly good American. The man who wished to improve sought only anarchy, was a ready to foreign ideas, a "snob," and a generally dangerous member of the community. But time works wonders, and as the little drop constantly at its work bores into the toughest stone, so the steady insidnous drilling of a few self-sacrificing workers with limited means and tools has at last wormed through the iron-bonad prejudice exhibited against the use of depth and handy rigs in yachts, until at the present day no excuse seems any longer sufficient to justify the construction of flat-iron boats, lest it be the very exceptional misfortune of having water only knee deep to sail in. In bringing about this change of sentiment, in transferring the affections of the public from the light draft sailing contrivances to vessels of safe and useful depth, and in forcing an acknowledgment of their speed and good qualities, FOREST AND STREAM has a record in common with a few enlightened designers and builders we are willing to leave to the judgment of the ripening experience of the times.

With the unjustifiable bias against the use of depth removed, a wider and more creditable field has been opened for the display of talent and sound judgment in the models of the fleet, and a short review of the predominating characteristics of the principal types now in favor may be the means of aiding in the selection for new vessels to be laid down this winter. Because we have been a persistent champion of depth, while down-trodden by the ignorance of supercilious and unpractical sophistry, it would not be justifiable to conclude that our opinions, in our opinion, exist in the colored type of old. On the contrary, we are prepared to give credit where it is really due, though declining to subscribe to mere blind faith because grandiloquently heralded as "patriotic" or fraudulently claimed as the indorsing "and American."

The three types with one or the other of which all schooners can be associated are very well represented by three well-known yachts of that class. Two of the three have figured with much credit in the recent cruise of the New York Y. C., while the third has its champions in the notable Miranda, the most successful schooner ever raced on Great Britain, and whose fame is familiar enough in American circles to require no specification.

The midship sections shown in the accompanying cuts reveal at a glance the striking differences in form of three radically opposite methods of achieving success. The Halcyon may be taken as an excellent and well-tried representative of the broad and shoal style of building with light draft, little dead rise and low freeboard. The Montauk is an exemplification of a new school likely to supersede former notions of perfection, especially where measurement by length is adhered to. In her the opposition to depth has been overcome, though great beam is still in the ascendant in her conception. She may be considered as a half-way house between extremes, the depth of the third representative having been approached while retaining the beam we are accustomed to on this side of the Atlantic.

In the Miranda we have an illustration of the newest ideas abroad, new even in her native waters. These have been a gradual approach in British schooners to the cutter form and Miranda's career has proven the wisdom of the tendency. The really modern two-sticker in beam and depth is not very wide of the proportions set for racing cutters, and by stepping the mainmast well in the middle a much closer match for the cutters has been attained on a wind than considered possible when Cambria's praise used to be sung in verse on the streets and her print displayed in the shop windows of British yachting ports.

[TO BE CONTINUED.]

VIXEN AND MAGGIE RATIONALLY COMPARED.

In answer to several inquiries, we put the issue between these two yachts in this form, the equity of which we do not think will be disputed by any person.

We race Maggie and Vixen, or any cutter and sloop, primarily as a test of *form*, and *not* of size, for everyone knows that a large boat has an advantage over a small one without trial by racing. We all know that a 30-ton cutter can beat a 5-ton sloop, and we know as well that a 20-ton sloop can beat a 5-ton, or a 10-ton, or even a 15-ton cutter; that is, the advantage, apart from form, lies with the larger boat to begin with. We do not seek to find out by a race whether a 15-ton Maggie can beat a 19-ton Vixen, but what we are after is whether a 15-ton Maggie can beat a 15-ton Vixen; and if no such boat is to be found and the race must be made with a 19-ton Vixen instead, it is only common sense and equity to demand allowance for the extra four tons, so as to obtain a correct and truthful answer to the query, "Which form is the best, on its own merits and not aided by extra size?" It is not a fair expectation to ask that a 15-ton cutter should be as good as a 19-ton sloop. That is clearly giving the sloop great odds. No one has been silly enough to claim that cutters are so very much better than sloops that they can afford to race on even terms with sloops twenty-five per cent. larger, but the claim has been that on the equitable basis of even size the cutter is the better form on all round trial. On the other hand, with "sloop men" it is not a question as to whether a 19-ton sloop can beat a 15-ton cutter; it stands to reason she ought, on the strength of being so much larger, if upon nothing else; but the question for them to answer is this: Would a 19-ton sloop be a better boat if shaped as a 19-ton cutter? There can certainly be no equity in the query, "Would my 19-ton sloop be a better boat if shaped as a 15-ton cutter?" The answer would at once come forth: How can you expect such a thing? You are asking that the cutter, in addition to being relatively as fast as the sloop, shall possess the extraordinary virtue of overcoming four tons of size and power.

We race for a test of *form*. The issue can therefore be nothing else but this: Given a certain size, which is the best *form* for it to take. Such being the issue, and we do not suppose any rational person will dispute the correctness of this fundamental proposition, a true answer can only be obtained from a race after all competitors have been reduced to the same size by the application of proper allowances. Whatever the remaining result then is represents the superiority of one form over another, outside issues of course not being here considered.

Now, since form is the issue, each individual should be unhampered in all directions so that he may give to the size agreed upon any shape he may choose, as long and narrow or as short and wide as he pleases. If he is building a sloop to race a 15-ton cutter, he may build her as wide as he likes, but in so doing he must not exceed 15 tons, for that would be impressing an advantage having no connection with the question of form. If he makes use of 19 tons in his sloop, the cutter builder would rightfully exclaim: "See here, friend, that is not fair. If you make a 19-ton sloop, you must let me make a 19-ton cutter. Of course you may beat my little cutter with your big sloop. A collier will outsail a tiny yacht, but it is nothing to her credit. Size does it, not form. Now, if your 19 ton sloop outsails my 15-ton cutter it may be due to her excess in size while her form may actually be inferior!"

And, we add, it would be difficult to deny the justice of such an argument. Clearly then, if the 19-ton sloop is matched with the 15-ton cutter, an allowance for the extra 4 tons is due to the smaller yacht, no matter what their respective lengths may be.

This is the rational method of comparing different types. The basis is equally fair to all. But to ask that a vessel like Maggie, not built under a length rule, should sail on even terms with one built with the special view of evading length is a proposition devoid of the least trace of equity, and results obtained from sailing a 19-ton Vixen against a 15-ton Maggie, must always be illusionary and misleading in their influence, unless the larger of the two, be it sloop, cutter, barn or dhow, is put on an equality with the smaller in respect to size. Measuring by bulk shows partiality to no form, it brings boats to the line even in that respect, so that the race may give us an answer to the query, "Whose *form* is fastest, unaided by the known superiority of greater size? Is a 15-ton Maggie better than a 15-ton sloop? Is a 19-ton Vixen better than a 19-ton cutter? That a good 19-ton sloop is better than a good 15-ton cutter, and a good 19-ton cutter better than a 15-ton sloop, stands to reason without competitive contests.

CRUISING.

YACHT cruising seems to be growing in favor in the East, while racing seems to be confined among a few. That is, a few fast boats have all the racing to themselves, while those who have yachts of medium speed content themselves with cruising and sailing, leaving out the exciting elements of the race. As we stated in our editorial of last week there are several reasons for this. The expense of maintaining a racing yacht is very great, and few care to keep in racing trim yachts which are not as speedy as some others in the same fleet. The fast ones are kept up for racing and the others cruise.

Cruising is really the sport of yachting, which is better liked as it is longer practiced. When a due fleet starts off on a cruise with a lot of yachtsmen and guests, everybody is in for a good time. The good time for one does not mean defeat and chagrin for another, as is the case in a race. There are no hard feelings engendered in any way. The "scrub races" which take place when going from port to port afford amusement for all and give the racing gentlemen a chance to enjoy the contests, while the absence of prizes and the general freedom from rules, etc., make the racing pleasant for all.

Within the past month the large clubs in the East, the New York, Seawanhaka and Atlantic, have had extended cruises, and judging from the published reports all hands seem to have pretty thoroughly enjoyed themselves. The only thing to mar the pleasure has been that the yachts have drifted from place to place without any wind. It seems as if this drifting business was rather the rule than the exception. Here we never have any trouble on this score, although the better cruisers several occasions when too much wind prevented the return of a portion of the fleet.

People who own yachts and cruise about for short trips get more out of their boats than any other class. They invite a few friends and go for a day or two to some favored spot, where they fish or lounge, enjoying the sail to or from the place, and in fact the whole trip. Others can see no enjoyment in this, but must have the excitement of the race or there is no fun in it for them.

When two or more yachts cruise in company a great deal of pleasure is experienced. Mutual interchange of visits, the pleasant evening in company, good natured rivalry to be at anchor or under way first, all combine to make such trips remembered. Of course, in cruises in squadron there is more or less formality, and there is a certain submission to orders expected, which is irksome to many. Yet fleet cruising does more to create an *esprit du corps* than anything else.—*San Francisco Breeder and Sportsman.*

THE AMERICA CUP.

FOR two seasons in succession we have been cheated out of the grand and instructive spectacle of competitive trials between British and American yachts. Last year it was Seabelle who decided not to cross to our waters, and this year the "forty" Annasona has been deferred from a visit by the shamefully unfair conditions surrounding the America Cup. It remains to be seen whether the New York Y. C. will show itself sufficiently solicitous of its own fair name to right a very patent wrong, or whether it will prove unworthy the trust assumed by permitting the charges brought against the club abroad to crystallize into permanent reproach to American yachtsmen. The *London Field* gives voice to the current impression abroad that the present trustees seek deliberately to escape international competition when it says as follows in its issue for Aug. 19:

"American papers are still having an altercation over the terms under which a foreign yacht can claim to sail for the cup won by the America at Cowes in 1851. One side contends that the terms are perfectly fair, and the other that they are the reverse of fair. We should consider them fair if the challenger could do the same as the New York Y. C.—select a yacht on the morning of the race; this, of course, he cannot do, and he has, moreover, to present the club beforehand with a model of his yacht. The terms appear to have been arranged with the sole object of making the winning of the cup as difficult as possible. It is quite a mistake to suppose that Mr. Ashbury acquiesced in the New York Y. C. selecting a vessel on the morning of the race. In fact, he was blamed by the English press for accepting the terms before the Livonia sailed for America, and on her arrival he endeavored without success to get the condition reversed. However, as it turned out after two days' sailing, the club

had no vessels to select from, and Sappho had to sail against the Livonia over the inside course and beat her. A most significant commentary on the present controversy, and one worth any number of opinions is this: that the owner of the most successful forty-tonner of the last two seasons had intended this spring to challenge for the cup, but altered his mind when he learned the conditions. It seems to me that if the cup is to be of any use at all as a challenge cup, the defending party should have no advantage of any description over the one challenging, except such as can be obtained by actual superiority of design of hull or handling in a match."

BAY OF QUINTE Y. C.

Editor Forest and Stream:

The annual regatta of the Bay of Quinte Y. C., which took place on Monday last, was the greatest success which the club has ever had, quality of the competing craft in the first class especially being taken into consideration. The wind was the only thing wanting to make the day a perfect one, but forces was in no place timid enough to furnish air enough to test the big ones, though the way in which the stately cutter Aileen and the graceful sloop Norah speeded along was astonishing. The Cygnet, a famous light weather skimmer, had her breeze, and although the big ones were close to her until the last part of the final round, when the breeze fell to a mere zephyr, and once even passed her, they were never in a position to give her the time to which she was entitled from her bigger sisters. At one time only was there a good breeze, namely, in the second round, and then the Norah's topmast—a flimsy, hastily made piece of balsam—was broken like a carrot. However, thus disabled, she showed of what she was capable of, taking the lead, nevertheless, while the wind held, but when it dropped she was done with. The Cygnet was in rare form in this race. After being hauled out at Kingston she was dropped on her board, which was doubled up, hence her miserable performance at Oswego. However, after being put in proper trim at Oswego, and with Capt. R. M. Wood, of Boston, at the helm, she was fit to race for all that was in her. The cutter Aileen was much admired and had many visitors, your correspondent among the number. She is a beautiful, business-like craft, and when her top sides are smoothed she will strike the observer as being as near perfection as possible.

The second class race was virtually a match between the Katie Gray, which is now the property of Mr. W. B. Phelps, Jr., of Oswego; and never giving her opponent a chance, she won handsomely by seven minutes. The Katie is in good hands, and will be put in the best of trim and kept that way.

The Royal Canadian Y. C. offers handsome prizes in their open regatta on September 8.

The young but ambitious Toronto Y. C. will offer handsome prizes on the 9th. The gathering will be a large one, and the local fleet will be represented by the Gracie and possibly the Norah. By the way, the Royal Canadians are now doing things in the right way; but two or three years ago yachts intending to take part in their races were paid no attention to, their dinghays being refused even the privilege of landing at the club's dock. Now, members of other clubs are invited to attend, and owners of yachts are asked to assemble off the club house, the accommodation of which is proffered them, also the use of the club's steam yacht to convey them to and from the city. The change is a highly desirable one. Long may matters remain as they now are.

Of the race not much remains to be said. The course was the usual one, from a stakeboat in the Narrows to a buoy off Badgley's wharf, on Big Island, thence around a buoy off Salmon Island, and return to the starting point, three times around for first class, thirty miles and prizes $100, $60 and $25 in first class, and $50, $25 and $10 in second class, which comprised all yachts under twelve tons. Four yachts to start or no third prize. No shifting of ballast allowed. Entrance five.

The breeze was paltry and fickle all day, and the smaller craft made way with the big ones in consequence. First class was got off as follows: Cygnet, 42ft. load line, at 12:37:28; Gen. Garfield at 12:38:32; Norah, 57.6ft., Commodore R. J. Bell, at 12:40:35, and the cutter Aileen, of Toronto, 54ft., at 12:42:47. Lady Agnes could not find wind enough to cross properly and gave up. Cygnet went into the lead though Aileen weathered on her in the second tack. The Norah fetched the mark to windward first with the cutter close aboard. With a free sheet to the second mark Cygnet went by the cutter and overhauled Norah by the time the first round was finished, the cutter two and a half minutes later, the Garfield distanced. The latter there took the first of a fresh southwest breeze to the home station, while the others were working out on the second round, thereby closing the gap. Norah had in this breeze closed up well on Cygnet, but after rounding the Big Island buoy lost her topmast and was left by the rest. Light winds gave the smaller craft the best chance for the rest of the race, which was finished as under:

	Start.	Finish.	Actual.	Cor.
Cygnet	12 37 28	6 48 06	6 10 38	6 16 18
Garfield	12 38 33	7 02 58	6 24 26	6 24 26
Aileen	13 42 47	7 08 48	6 26 01	6 30 31
Norah	12 40 35	7 12 34	6 31 59	6 47 57

The second class found three at the line. These were sent away as follows: Gracie at 12:43:09; Surprise at 12:46:19, and Katie Gray at 12:47:52. Surprise did not hold a good wind, and after being suddenly shunted to leeward by a shift of wind she gave up during the second round. The other two made a fine match, leading alternately, with Katie getting the best of it toward the close, finishing at 5:35:04, her actual time being 4:37:12; Gracie finishing at 5:38:02, actual time 4:44:18, the former winning by 7m. 1s.

HULL Y. C.—The first of three races for the club championship was sailed off the club house September 2, with a good list of entries in the smaller classes. In second class, Gen. J. A. Osgood had a sail over for want of competitors. Third and fourth classes sailed seven miles, the rest six miles. Wind cast, wholesail breeze, shifting to southward and fading away. The judges were accommodated aboard Mr. Smith's sloop Vision for the day. Souvenir prizes were given to the winners, Gem, Allie, Amy, Corsair and Sea Mew. The races were finished as under:

THIRD CLASS.

	Length.	Actual.	Cor.
	L. M.	H. M. S.	H. M. S.
Allie, A. S. Wattles	32 05	1 29 31	1 05 16
Fairy, C. A. Perkins	24 01	1 31 56	1 08 46
Davy Crockett, A. Putnam	21 06	1 30 31	1 14 06

FOURTH CLASS.

Amy, E. W. Baxter	21 05	1 37 30	1 12 01
Ibis, J. K. Souther	20 06	1 38 38	1 12 13
Joker, George Coffin	20 08	1 34 38	1 13 25
Thisbe, S. A. Freeman	21 05	1 43 57	1 18 28

FIFTH CLASS.

Corsair, W. H. Mills	18 11	1 23 13	59 11
Jamet, W. L. Phinney	18 11	1 25 03	1 00 11
Myrtle, C. H. & R. C. Poor	19 06	1 25 52	1 03 22
Wildfire, H. A. Keith	18 01	1 30 25	1 05 33
Dread, W. J. Eagle	19 03	1 30 26	1 06 30
Shearwater, W. M. Merrill	18 09	1 31 46	1 07 31

SIXTH CLASS.

Sea Mew, G. R. Howe	17 02	1 30 57	1 05 08
Idlewild, H. N. Curtis	17 03	1 31 18	1 05 31
Dandelion, C. F. Adams, 3d	17 06	1 32 46	1 07 18
Zip, G. W. Morton	16 09	1 33 41	1 07 24
Dart, E. H. Ingalls	15 03	1 56 56	1 28 51

LYNN Y. C.—The third championship races were sailed in Lynn Harbor, Sept. 2, in a fresh southeast wind, which fell to a light wind the latter part of the race. Course, five miles. No starters in first class. Judges, C. E. Bead, Wm. Cyrus and Wm. Estes. Summary:

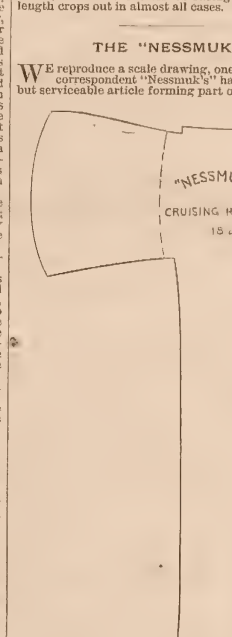
SECOND CLASS.

	Length.	Actual.	Corrected.
	Ft. in.	H. M. S.	H. M. S.
Jennie L., C. H. Lockhardt	33 11	1 04 27	0 57 26
Paul, J. C. Lee	32 04	1 05 59	0 48 19
Rita, W. Bassett	24 09	1 09 50	0 51 50
Sadie, G. B. Gordon	32 00	1 16 15	0 58 38

THIRD CLASS.

Sadie, F. E. Taylor	17 06	1 09 40	0 47 27
Daisy D., W. D. Woodbridge	18 05	1 11 16	0 50 49

NEW YACHTS.—Mr. A. Cary Smith has just finished a design for a Boston owner, 27ft. water line, 10½ft. beam and 3ft. draft. Least freeboard, 23in. The keel will be 2ft. wide at top and 1ft. wide at bottom, and the lower part will be lead, 2 2-3-100 tons weight. The remainder of the ballast will be cast to fit inside. The centerboard will go down through the keel. This boat is an improved Hesper, the improvement consisting of rather better lines, ballast better placed and more sail. The area of sail will be 8,80sft., or 162ft. more than the sloop Julian carried, the latter boat being ballasted with all iron inside. Mr. Smith's cutters Mavis and Hesper won in their classes last week at New Bedford and Boston. Orders are coming in thick and fast, and with the boats now on the books, 93ft. water line, 70ft. water line, 60ft. water line, not to mention some small fry, the season for designers bids fair to be a very busy one.



A SUBSTITUTE RULE.

"WHAT rule would you have recommended for the Vixen-Maggie races, as the Maggie could not be hauled out to have her bulk measured?"

So writes a correspondent from Boston. We should have recommended the Seawanhaka Corinthian Y. C. rule, as it lends to much the same results as measurement by bulk. While taking exception to the theory of this rule, we have before this testified to its fair applicability in practice. Thus Maggie and Vixen are about same length. Multiply by their sail areas, 1,580 and 2,080 (these are lower sail only, but topsail could be added to live up to the rule in detail.) The products would, of course, vary in the proportion of 158 and 208, and if we start with Maggie as 15 tons, the Vixen would gauge between 19 and 20 tons. This is near the proportion her size bears to that of the cutter. The Seawanhaka rule makes a very fair substitute for bulk, since broadly stated, the larger boat has also the larger sail area, whether the excess of size be obtained by adding to depth or beam, and multiplying by the sail area acts, therefore, as a check to the error of racing on length only. It may be the largest boat pay for her extra size as indicated in a larger sail plan. Cases might be cited where the rule would work the wrong way, but they are exceptional, whereas the error of racing vessels of different type and length crops out in almost all cases.

THE "NESSMUK" HATCHET.

WE reproduce a scale drawing, one-half real size of our well-known correspondent "Nessmuk's" hatchet, especially made as a light but serviceable article forming part of the outfit of his light cruising

canoe. Total weight of hatchet and handle 18oz. As the cut shows, this tool is "double barrelled," as its originator is pleased to term the two cutting edges, and probably the only one of the sort in use. "Nessmuk" indorses the tool as extremely serviceable and fully as useful for canoeing and general camp service as the heavier and clumsier articles.

HULL Y. C.—The new club book for 1882 is a well arranged publication, and contains the story of the marvelous growth of the club. Organized June 20, 1880, incorporated April 20, 1882, it now has 450 members, owning a fleet of twenty-two schooners, all but two of them being keels; forty-nine sloops of which twenty-six are keels; four steamers and forty-eight catboats. The pamphlet contains charts of the various courses, the customary constitution and by-laws, an excellent collection of sailing rules, etiquette, and a good selection of U. S. laws bearing upon yachts, and a handsome chart of private burgees. The club flag is triangular yellow field, black diagonal cross with white star in the center. Flag officers fly swallowtails, yellow field, circle of blue stars around blue anchor for commodore, red ones for vice and white ones for rear. Quite a number of the private burgees are square in shape after orthodox fashion, so that the shape of the burgee may show whether it is a club, private or flag-officer's signal, the first triangular, the second square and the third swallowtail in cut. For racing signal the club has adopted a square blue flag with white star in center.

MATCH ON THE BAY.—The unfinished sweepstakes of the 24th ult. was sailed Aug. 31, with better success. The same boats came to the start. Mimic, 27ft. 4in., Pat McGehan; Mistake, Judge Elliott, 27ft. 11in., and Mary Keegan, John Keegan, 27ft. 4in. Mimic suffered from a leak, and Keegan was short on sand bags. Dave Snediker looked Mistake, young McGehan the Mimic, and the Keegan was sailed by her owner. Course from Frank Bates's pier around Robbin's Reef buoy, thence around buoy off Coney Island Point and home; sail twice over. The clinker got off first, followed by Mimic, and Keegan last. Wind was fresh S. W. Same order was kept up until the latter two got "pocketed" in the Narrows by a long tow, giving Mistake a chance to get well away from them. She led around the lower buoy by two minutes, finishing the first round at 3:41:30, Keegan at 3:43:14, and Mimic at 3:53:30, evidently handicapped by her leak. Second round was much a repetition of the first, the finish being made by Mistake at 5:00:09, the Keegan second at 5:02:22, and Mimic at 6:05:58. Mistake wins by 2m. 1s. actual, and 1m. 31s. corrected time.

SALEM BAY Y. C.—Under auspices of the Salem Bay Y. C. a series of races were sailed August 29 in the bay. The famous Lillie, 30.6ft. load line, Messrs. Dillingham and Bond, met the Nirvana, 41.6ft., W. S. Eaton, Jr., and was beaten by her over a course around Baker and Lowell islands. The wind was light and Lillie lost two minutes at the start. Nirvana's corrected time was 3:20:03 and that of Lillie 3:34:37. In third class Comus, J. Newcomb, won, beating Wave Crest, E. B. Rogers and Tulip, D. C. Goodridge and Sais. Time of Comus 2:23:38, taking the championship in her class. In fourth class Tulip, F. G. Dexter, won in 2:24:30, taking championship and beating Posy, S. Rich; Rose, T. H. Cabot; Lota, H. E. Wusten and Snowball, L. Philbrit.

NEW SURVEY.—Long Island Sound is now being resurveyed by the U. S. Coast and Geodetic Survey. Five parties are in the field with the steamers Gedney and Silliman and two schooners. It will take till 1885 to finish the work, though it will be pushed with vigor and detail charts issued as fast as harbors are plotted.

LILLIE-HERA MATCH.—The first of three matches between these two rival flyers was sailed Sept. 1 over a 20 mile-course off Marblehead. Only a week ago we wrote: Hera seems a trifle too full in body to be driven, and we should prefer her chances in light weather. That our preference was well grounded is shown in this first race. The wind was light from southwest and Hera finished in 3:2:7, with Lillie at 3:6:31, "much to the surprise of everybody," as the dispatch has it. Large sums changed hands on the event. Hera is 41ft. on deck, 35 load line, 14ft. 3in. beam with a draft of 5ft. 8in. Lillie is 38ft. 6in. on deck, 30ft. 6in. on the line, 14ft. beam and 5ft. draft. Hera has considerable weight on her keel, and Lillie is an old centerboard altered by the addition of a deep wooden keel.

SAN FRANCISCO YACHTING.—Stone has got a 60ft. steam launch under way, and Farmer is building a small catboat. Schooner Ariel has had a lead keel bolted on and a Bermuda mainsail instead of the gaff sail. Turner has Spreckels' new 80ft. schooner in frame. A mosquito race for small boats is contemplated in San Francisco harbor, all to measure less than thirty-five feet.

OSWEGO REGATTA.—The winners at the Oswego regatta, sailed August 22, were Katie Gray, of Trenton, first prize; Gracie, of Belleville, second; Laura, of Oswego, third, and Ella, of Oswego, fourth. Garfield, of Kingston, crossed the finish second, but was ruled out for fouling the Gracie.

ATALANTA.—Com. Vermilye, A. Y. C., arrived in his schooner in Halifax harbor Aug. 31, and will return to the southward the middle of this month.

OSPREY.—This snug little cruiser, 53ft. load line, has been sold by Charles Stevenson to Mr. Archibald Watt.

ECLIPSE.—This fast sloop has been sold by Mr. Willard to Mr. M. Flagler, of the Standard Oil Works.

Answers to Correspondents.

H. B., Lancaster, Pa.—The rifle will do very well.

NASSAU.—See our last issue for New Jersey rail shooting locality.

J. R. S., New York.—There is no mention of the "meadow hen" in New York law.

W. H. B., Boonton.—We should rule that the ball ought to be scored as broken by the shooter.

SUBSCRIBER, Gildersleeve's Landing.—Your questions will be answered upon the return of our kennel editor.

SAYVILLE.—It is not probable that we shall publish a compendium of FOREST AND STREAM ichthyological matter.

J. E. L., Torrington, Conn.—The measure of powder is arbitrary. Take a Dixon's measure, which is usually accepted, as your gauge.

D. D.—You want one of the Boker guns which combine two shot barrels with a third rifle barrel, or else an auxiliary rifle barrel, which may be inserted into the shotgun barrel.

G. H., Canal Fulton, Ohio.—I. Belton was by Sykes' Dash, out of Daisy, who was litter sister to Llewellin's Dan. Dash by Dash II. out of Belle. 2. Belton is the sire of Sanborn's Nelly.

A. S.—I would like to buy a nice setter dog, a good ranger and staunch. Do you know of one? Ans. A card inserted in our advertising columns will bring you the desired information.

E. C. L.—It would be cheaper to buy a hammerless gun than to have your present one converted. If, however, you like the barrels, we presume that you could have the work done by any of the hammerless gun-makers.

WOODCOCK, Matteawan, N. Y.—When is the shooting of woodcock authorized in Dutchess county, N. Y.? Is there a special law in force in such county modifying the general State law? Ans. Woodcock season opened Sept 1. Game cannot be killed for market purposes.

J. M., Baltimore.—Is there any work giving instruction in fly fishing, or is it to be acquired only by observation and practice? Ans. The best American work is "The American Angler's Book," by Thaddeus Norris, fully illustrated and containing fly fishing and fly tying. Price $5.50. We can furnish it.

D. H. P.—1. You will find good Chesapeake ducking at Havre de Grace. 2. The bay is full of professional shots now, and there is no room there for mere shooters. 3. For map go to Colton's, in William street, this city. 4. A good book on the subject is Long's "American Wildfowl Shooting," published by J. B. Ford & Co., this city.

H. W., Shelbyville, Ind.—Will you please inform me through your paper where I can procure black bass fry, the proper season to plant them and what they will cost? Ans. Write your State Fish Commissioner, Mr. Calvin Fletcher, Spencer, Owen county. We know of no one in your section, or in fact anywhere else, who supplies fry of black bass. Waters are usually stocked with adults.

K. K. K., Philadelphia.—Is there a gun made for shooting a small harpoon with cord attached that could be used for catching porpoises? If so where are they made or sold? Ans. Yes, harpoon guns are used in the whale fisheries. They are somewhat similar to swivel guns. You can probably procure such a gun through any house of gun dealers, or if not, by applying to the New England whale-ship outfitters.

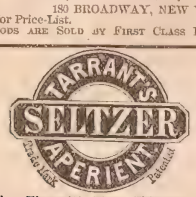
R. T. W., Jersey City.—Has any one as yet succeeded in breeding quail in confinement, and if so with what success? I ask the question because I would like to try the experiment and also profit somewhat by the experience of those who have preceded me in the attempt. Ans. Quail-rearing experiments have been made in this country for more than a quarter of a century, but no one has yet had any real success at it. Our files contain many articles on the subject.

R. W. T., Brunswick, Ga.—What is a "pompano" fish? What is its usual size and where found? Are they generally considered a delicacy? Ans. The pompano (Southern coast), cavalle or crevalle, (South Carolina) *Trachynotus carolinus*, is a fish found in salt waters all along the Southern coast. It is a fish of oval shape, compressed laterally, colored olive on the back and shading to light yellow below. It weighs about a pound and is considered one of the best of fishes at New Orleans and New York; at the latter place it sometimes sells as high as a dollar per pound. An excellent figure is given by Kilbourn, in "The Game Fishes of the United States," accompanied by an equally good description by Prof. G. Brown Goode. Ten years ago the fish was unknown in New York markets.

FIELD GLASS, Cincinnati.—I was greatly pleased with your interesting editorial on "The use of the Field Glass" in FOREST AND STREAM, June 29. It is a matter which is of great interest and importance to me, as I am slightly troubled with myopia, and having spent last summer in Colorado with nothing but an opera glass to assist my sight, I soon found that something more powerful was necessary. It is very necessary for me to procure the most powerful instrument that I can, combining convenience and portability, and I would like to have your opinion in the matter, as I place much confidence in your decisions. The cost would be no object. Ans. We know of nothing better than a finest quality field glass. Possibly some reader of the FOREST AND STREAM may have had experience with other glasses, and if so we should be glad to hear from them.

BLUE BARRELS, Ionia, Mich.—We repeat for you the directions given many times in these columns, but would advise you to send your gun to be re-blued by a first-class gunsmith. Any of the firms who advertise with us will do. The directions are as follows: Tinct. of muriat of iron, one ounce; nitric ether, one ounce; sulphate of copper, four scruples; rain water, one pint. First, securely plug up both ends of barrels, leaving one plug in each end of sufficient length to be used as handles, then thoroughly clean with soap and water, after which cover with a thick coat of lime, slacked in water, and when that has become dry remove it with an iron wire scratch brush; this is to remove all dirt and grease from the barrels. Then apply a coat of the fluid with a rag, and let it stand for twenty-four hours, when a slight rust will have appeared; then take barrels and immerse them in a trough containing boiling hot water, after which scratch them well with the scratch brush, repeat this until the color suits, which will be after three or four applications. When completed, let the barrels remain in lime water a short time to neutralize any acid which may have penetrated. Take great care not to handle the barrels during the operation, for the least particle of grease will make bad spots.

THERE'S SOMETHING IN THE WIND, as the dog said at Fairmont last Monday when "he became a statue of carven rock."



Pencils, Holders, Cases, Etc.

THE CALLI-GRAPHIC PEN.

A GOLD PEN and RUBBER HOLDER, containing ink for several days' writing. Can be carried in the pocket. Always ready for use. A luxury to persons who care to preserve their individuality in writing.

☞"A full assortment of medium and fine drawn gut from 7 to 13 inches long at market rates.☜

English manufacturers please take notice that we can supply them from New York, Redditch or Murcia. We keep constantly on hand a full supply of the short and cheap sorts, such as are generally used in England. Prices on application.

Orders received from persons residing in cities in which the dealers keep a full line of our goods will not be filled at any price.

ABBEY & IMBRIE, 48 Maiden Lane, New York.

THE GREAT SINGLE BREECH-LOADER.

"THE FIELD," 10 and 12-Gauge.

This gun, which from its wonderful adaptation to all kinds of field shooting we have named **"The Field,"** leaves nothing to be desired in the way of a single breech-loader. It is really the only single breech-loader worth having. It has Scott top lever, pistol grip, rebounding lock, and patent fore end, and is beautifully finished. For **strength, convenience, penetration,** and in fact for all practical purposes it is just as good as the best double-barrel gun. We have sold the bulk of all the single breech-loading guns used in this country for the past four years. The reason is that the top lever action as combined with other features in the "Field" gun is the only correct one, and other single guns are successfully sold only as they resemble ours. Persons with ordinary prudence will not hesitate long as to which to choose, particularly as the "Field" gun costs but a trifle any way, and no more than the imitations. Address

P. O. Box, 1114. H. & D. FOLSOM, 15 Murray Street, New York.

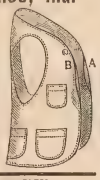
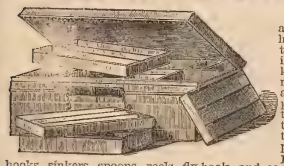
Hollabird Shooting & Fishing Suits

Unequalled in Convenience Style or Workmanship.



Write for circular to

UPTHEGROVE & McLELLAN, Valparaiso, Ind.



THIS

is our Skeleton Coat and Game Bag. "A" and "B" show entrances into game bag. This coat has seven pockets besides the game pockets. It is dead grass color; can be worn over or under a common coat. Weighs but fifteen ounces; is unequalled for warm weather shooting. Send breast measure and we will mail it to you for $2.00.

SIMPSON'S NEW FISHING TACKLE CASE.

A want long felt for by sportsmen. All Anglers will acknowledge that the most vexatious thing that can happen him is to have his Spoons, Hooks and Lines all tangled up. This case will prevent any such disaster, as it is so arranged that the most careless fisherman can keep his Tackle in shape. They are made of the best material, and handsomely ornamented and furnished with a lock and key. This case is approved of by the practical piscatorial professors, who have investigated its perfections. Size—Box: Length 12, width 7¼, depth 4¼ inches; trays (4): Length 7¼, width 4, depth 1 to 1¾ inches. top tray: Length 11¾, width 7, depth 1¾ inches. Three partitions in each small tray, eight in large tray, two compartments in box, making twenty-four places for lines, hooks, sinkers, spoons, reels, fly-book, and each case packed in a neat box and sent on receipt of $4.50. To Clubs taking six at one time, $24.00. Send for Catalogue of FISHING-TACKLE AND SPORTSMAN'S GOODS.

R. SIMPSON, 96 FULTON ST., NEW YORK.

The Parker Gun.

Again Victorious at the late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Show Rooms: 97 CHAMBERS ST., N. Y. PARKER BROS., Meriden, Conn.

CRUTTENDEN FLY ROD.

This cut is an exact representation of this rod, which

CANNOT BE EQUALED FOR THE MONEY.

It has Nickle Plated Patented Solid Reel Plate which prevents Reel getting fast by swelling of Rod. Full Nickle Plated, Patented Ferrules, allowing the wood to be used the full size, thus preventing rod breaking where wood and ferrules join. Metal Tennons which never allow the joints to get stuck together by swelling of same if they should get wet. Butt stained dark, polished and wound with cane and silk, giving it that desirable appearance and the feeling of the high priced rods. The middle joints and tips are made from fine lancewood, left natural color, varnished and polished. This makes a handsome contrast to butt, and gives the entire rod a look of beauty which is a joy to every fisherman's heart while using it. The rod is well ringed throughout. Length ten and one-half feet, weight from nine to ten ounces. This is the best made, best finished rod for the money in the United States, and will guarantee it every way. If by accident any part should get broken, we can send a duplicate, thus saving expense and trouble of returning rod to be repaired. With short tip it makes an excellent Bass Rod.

Sent to any part of United States, prepaid, with one Trout or one Bass Tip for $5.00. Trout Tips, each, $1.00, Bass Tips, each, 75cts., Trout Tips, one-half Bamboo, each, $1.25.

SPECIAL ANNOUNCEMENT.

THE PITTSBURGH FIRE ARMS CO.

Would call attention to their new double

Hammerless Breech-Loading Gun.

This new gun is made under the Anson & Deely patent with automatic safety bolt, so constructed that the triggers are effectively bolted whenever the lever is moved to open or close the gun, thus preventing any possibility of accidental or premature discharge.

The breech action is top lever, double bolt, with Westley Richards' extension rib, making the strongest possible breech fastening. The barrels are of fine Damascus, choke-bored on the most approved system for close, hard shooting. The stocks are of English walnut, with pistol grip and horn butt plate. The fore ends are made with the Deely & Edge patent snap fastening. The frame and guard handsomely engraved and case hardened. The proportion and symmetry of the gun is perfect. Illustrations and prices furnished on application.

Send stamp for our new 48-page illustrated catalogue containing descriptions and prices of all new and useful improvements, including the new Parker Gun with top lever, Ligowsky Clay Pigeon Trap, with rules for shooting clay pigeon matches, also a compilation of the game laws, showing the open season for game and fish in every State in the Union.

Address all communications (not forgetting to enclose stamp) to

PITTSBURGH FIRE ARMS CO.

Pittsburgh, Pa.

WILLIAM READ & SONS.

DEALERS IN FINE GUNS, 13 FANEUIL HALL SQUARE, BOSTON.

AGENTS FOR

W. & C. SCOTT & SON.

Furnished by us to Capt. Bogardus who for years has used none other than the SCOTT GUN, and won with it the championship of the World.

None genuine unless bearing the full address, W. & C. SCOTT & SON.

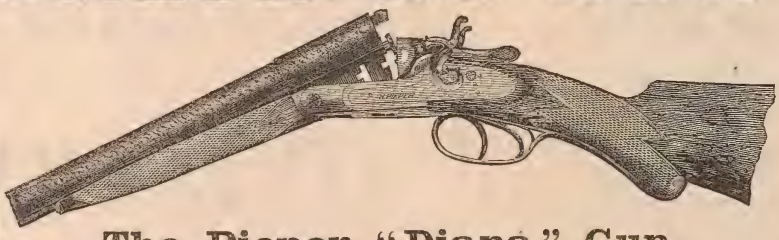
Their New Gun.

$85.00 With Latest Improvements.

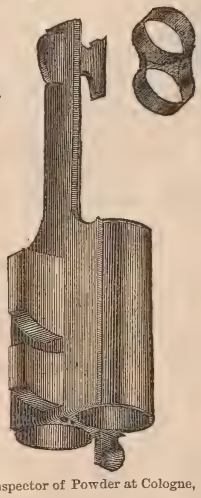
Description.—Top snap, double bolt, extension rib, pistol stock, rebounding locks, snap fore stock, large solid strikers, low hammers when cocked, horn butt plate, Damascus barrels, choke bored. 20-bores, 5½ to 6lbs.; 16-bores, 6½ to 7lbs.; 12-bores, 7 to 9lbs.; 10-bores, 8 to 11lbs.

To meet a want for a really fine, good breech-loader at a medium cost, Messrs. Scott & Son have now put this gun into the market at above price (a great reduction from the figure such quality has hitherto been offered at), and the demand thus far shows that it is thoroughly appreciated.

Every Gun Warranted in Shooting and Sent on Trial.



Scott's Hammerless, with Crystal Apertures and Block Safety Attachmemt, All Sizes, Constantly in Stock.



If to be sent C. O. D. on trial, inclose in every case $3.00 as a deposit for expressage in case gun is not taken, which, if too much, we will return the difference. If you send whole amount with order, we will include at no charge, a waterproof gun case; and if gun does not suit on receipt, you can exchange, or we will return your money on return of gun, less expressage. Hence there is no risk in inclosing whole amount.

SEND STAMP FOR OUR GUN CIRCULARS AND SECOND-HAND LIST.

SOMETHING NEW!

The Pieper "Diana" Gun.

This is the only gun of European manufacture made entirely by machinery. The system is entirely new, and actual tests have shown that for accuracy and strength it has no superior.

The reinforce lumps and bolt loop are of one piece of wrought steel. The tubes are finished to gauge and are put together *without heat* so that they are perfectly straight and always shoot to center. This is only found in very high cost guns made on the ordinary system, as the best barrel filers are necessary. The locks are finely finished and of the best steel, and all the joints are closely fitted; all the parts are interchangable.

A public trial was made in Cleve, Prussia, in August, 1881, to which the best continental makers sent their finest guns. The trial was for closeness and penetration. 4 is excellent, 3 is good, 2 is fair, 1 ordinary. The gun of Mr. Roedel, of Prague, was made on the Pieper system. The result was as follows:

	30yds.	45yds.	60yds. Total.
Size of shot..	2 4 6 8	2 4 6 8	2 4 6 8
H. Pieper, Liege	3 3 4 4	4 4 4 3	4 4 4 4—45

Discontinuation

OF

"THE BLUE STAR KENNEL,"

—OR—

THE COCKER SPANIEL KENNEL,

FRANKLIN, N. Y.,

As a Public Kennel.

Health and increasing private business compels that on and after November 1st, 1882, the above kennel will be closed as a public kennel. Present kennel stock must be reduced, and after the above date a private kennel of four or five choice specimens of this breed will only be kept. Private breeders, public breeding kennels and sportsmen will find this a chance rarely offered to secure extra grand cocker bitches with best of pedigrees, both broken, and grown and unbroken, at prices below actual value. Correspondents enclosing stamp will get printed pedigrees and prices of stock offered as per above. Address M. P. McKOON, Proprietor Franklin, N. Y. aug31,tf

The Blue Star Kennel

—OR THE—

Cocker Spaniel Kennel.

Of M. P. McKoon, Franklin, Delaware Co., N. Y.

I keep only Cockers of the finest strains. I sell only young stock. I guarantee satisfaction and safe delivery to every customer. These beautiful and intelligent dogs cannot be beaten for ruffed grouse and woodcock shooting and retrieving. My elegant stud dogs of the following colors, viz: Liver with white ruffle in bosom, even liver and white, and beautiful black with white ruffle in bosom, are now open for service; fee $15; usual conditions. Correspondents enclosing stamp will get printed pedigrees, circulars, testimonials, etc. Photos of my stock, 25c. each. sept7,1f

Richmond County Training Kennel.

Dogs carefully trained for all purposes. Live quail kept in stock. Gentleness and kindness are my methods. Terms reasonable. ISAAC W. EMMONS, Proprietor, New Dorp, Staten Island, N. Y. june22,tf

THE ANGLER'S AUTOMATIC REEL.

MANUFACTURED BY

LOOMIS, PLUMB & CO.,

SYRACUSE, N. Y.

The following letter is from Dr. Geo. F. Gale, of Bradleboro, Vt.:

GENTLEMEN:—Have just returned from Moosehead Lake, Me. I cannot express the degree of satisfaction and pleasure I have found in the use of your automatic reel. Would not exchange it for all the reels I ever saw for fly fishing. Am confident I saved many fish that would have been lost with any other reel, particularly one large trout weighing three and one-half pounds which I played fifty minutes before he would come to the net. He fought hard and long, making many furious spurts from and towards the canoe, but it made no difference. I kept my finger on the brake and it was simply impossible to get a slack line. Mr. Childs, who fished with me once, has one of your reels, says that nothing would induce him to go back to the old crank reel. Yours truly,

GEO. F. GALE.

Hotels and Resorts for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

Kay's Chip

—OR—

EXPANSIVE SHOT CONCENTRATOR,

With Perforated Case.

In our latest device for concentrating shot, we have substituted a special wire for expansion, where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.

By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device balls the shot by the expansion of the wire after leaving the gun.

100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.

Address all orders to A. B. KAY & CO., Newark, N. J.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breech loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 3, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

ANSWERS TO CORRESPONDENTS.

SUCCESS IN OYSTER-CULTURE.

OUR readers have been made familiar, through the reports which have appeared in our columns, with all that has been done in the matter of experimenting on the fecundation of the eggs of the oyster. The last contribution to this subject was from Prof. John A. Ryder, and appeared in full in our issues of May 25 and June 1, of the present year. The experiments there described were a continuation of those of Prof. Brooks. These gentlemen have demonstrated that our oysters were not hermaphrodite, as was claimed by naturalists for the European oyster, but that they were bi-sexual, and that the eggs could be taken and impregnated in nearly the same manner as are those of the fishes, and some oysters that were imported from Europe by Mr. Blackford for the purposes of study were pronounced by the professors to be bi-sexual, and that the former European observers were at fault.

This season Prof. Henry J. Rice, Fellow in Natural History of the John Hopkins University, Baltimore, who had formerly paid much attention to this subject, came to New York and began a series of investigations in the laboratory in Fulton Market, which has been rented and fitted up for the use of students by the private enterprise of Mr. Blackford, has met with a success that promises to place oyster-culture among the practical industries. Heretofore the term oyster-culture has been confined to merely taking small oysters from one locality and depositing them in another which is more favorable to their growth. This is properly oyster-planting, and not culture, as we understand and use the terms.

Former experiments have shown that it was merely possible to obtain a successful impregnation of the eggs and to hatch them, but no one had been able to keep the "spat," as the free swimming fry are termed, more than six days, when they died, either from want of food, or more likely from lack of circulation. The minute spat defied all attempts at retention when circulation was attempted, and so the experimenters contented themselves with merely adding a small quantity of water at stated times, and thus gradually filling the vessel in which the infantile mollusks were confined. In consequence of this, the water stood perfectly still for hours, a condition which never happens in the places which oysters inhabit; hence they passed from life without the aid of an oyster knife in the hands of a restaurant conchologist, and without the accompaniment of pepper, salt, or lemon juice.

Prof. Rice was of the opinion that circulation of the water was the one thing needed to sustain the infants until such time as they should come to anchor and settle down to a steady and respectable molluscan life. Syphons had been tried in vain. All who have attempted to use this principle to maintain a flow of water have sooner or later found out that two syphons will not balance each other, and that if one of them sucks down and loses its grip it will not start again without assistance, and a stoppoge or an overflow is the consequence. Besides this, it was found that whatever sufficed as a strainer to detain the spat was necessarily so fine as to soon fill up and stop the flow. In pondering over this subject, Prof. Rice happily thought of strips of woolen cloth as syphons, and on trial found that the capillary attraction was not only sufficient to give a constant flow, but that the balance between the inlet and the outlet could be maintained by them because of their ability to start themselves, and they also detained the oysters.

With this apparatus he succeeded in passing two gallons of water per day through a small drinking goblet, and kept his embryos for fifteen days, nine days longer than they had ever before been kept, when a business call compelled him to leave them to their fate. We had the pleasure of dropping in on the Professor several times during the experiment, and of taking peeps at the youngsters through the microscope, and it did seem to us to be cruel to abandon them to their fate while they were doing so well and making such rapid strides toward the dignity of wearing shells, and lying on a block of ice in a window, under the gaslight, a hope which, we have no doubt, found a place in each little bit of molluscan protoplasm.

No former experimenter has been able to bring the spat to the condition when it cleaves unto some hard object for better or worse as long as it may live, notwithstanding they have kept them alive for six days. At the mature age of forty-eight hours one of Prof. Rice's infants, while under his eye at the upper end of the microscope, reached out one of its tentacles and fastened to the glass slide right in the center of the field. That this is the usual age for them to anchor we doubt, because others of the same age did not do so. It may be that being a precocious juvenile, and while passing under the instrument and happening to meet the Professor's eye, it just tried to show off, and anchored beneath his vision merely to attract attention. Be this as it may, the Professor was so delighted that he rushed down the corkscrew stair to Mr. Blackford's office, on the lower floor, and announced the event as soon as sufficient breath was regained. To fully appreciate the haste of Mr. Blackford's ascent into the laboratory, and his ineffectual efforts to shake the hold of the adolescent oyster from its chosen place, as well as the delight that overspread the countenance of Prof. Rice, one should have been there to see.

LABRADOR.—Prof. Chas. Linden, of Buffalo, N. Y., has just returned from an extended trip to the coast of Labrador. He reports a most pleasant and successful excursion, the details of which will shortly appear in our columns. On his way to and from Labrador, Prof. Linden met many of the prominent sportsmen of the Dominion, among them J. U. Gregory, Esq., of Quebec, whose interesting notes of a recent Florida trip are printed in this issue. Mr. D. H. Talbot, of Iowa, has also just returned from a Labrador trip. Mr. Talbot went out with the Stearns party, and although he was unable to penetrate into the interior of the country, collected some valuable ornithological specimens.

DEATH OF JAMES CHUBB.—We regret to learn of the recent death of Mr. James Chubb, of Cleveland, Ohio. Mr. Chubb was well known to scores of shooting men, and this brief note will recall to many of our readers red-letter field days spent in his company. Mr. Chubb was an expert shot, and a sportsman of long and varied experience. He was a skillful taxidermist; a beautiful pair of quail mounted by him are before us as we write. One by one the old guard are passing away, and their ranks are growing thin. The younger men who are taking their places may well imitate such examples of manhood in the field as was that afforded by the life of James Chubb.

AN INTERESTING TEST.—It is reported by our Philadelphia correspondent that a resident of that city, who has been fined through the action of the West Jersey Game Protective Association, proposes to appeal, and test the constitutionality of the law under which his fine was imposed. If the gentleman has the time and money to spare we hope that he will carry out his expressed determination. The more cases carried up to the higher courts the better the results.

THE RIFLE MEETING.

WITH our next issue readers of the FOREST AND STREAM will find the record of the matches of the tenth annual fall meeting at Creedmoor, and in connection with that meeting the story of the International Military match. What the result of this great contest will be has been pretty well forecast in the news of the doings of the two teams as it has appeared in our columns. The Britishers are confident, the Americans quite the reverse. A defeat may be an advantage to the cause of rifle practice here. It certainly will direct attention to the matter, and in the many explanations which no doubt will be offered to explain the defeat we may find the true difficulty, and the weak points once noted their remedy is entirely a matter of time and labor. America cannot afford to be behind in any matter connected with small arms, and having made the better long-range military rifle, there should at least be a dozen National Guardsmen who will come forward and use it.

Some unfortunate occurrences have taken place in connection with the visit of our British friends, but much of the bad luck which now seems to surround our home team has been of their own bringing on. The doings of the past month have not encouraged in the breast of an impartial and critical observer any very high hopes of an American victory. As against a straggling few thousand National Guardsmen who have given little or next to no attention to rifle practice, there should be no doubt of the position of a compact organization of volunteers, who for over twenty years past have had several hundred thousand men giving much care to rifle practice. Yet for all this, there is no reason why the disparity should not be made up by renewed effort, and not as we now see, have the gap made wider by carelessness, over presumption and a disregard of the plainest precepts of good marksmanship.

MR. GEORGE DAWSON'S RETIREMENT from the editorship of the Albany *Evening Journal* marks the close of a notable newspaper career. His connection with the *Journal* has extended over more than half a century—a long time for active and continuous labor in any calling. He was first given employment on the paper when it was edited by the now venerable Thurlow Weed, with whom, from boyhood to the present hour, Mr. Dawson has enjoyed an unbroken friendship. The period of editorial service covered by these years was a most momentous one in the history of this nation and full of political crises, in all of which Mr. Dawson has taken an active and influential part. It is said that few men have declined more political offers than he. Now, having arrived at an age—he is over seventy—when most men, although their physical and mental vigor be unabated, naturally seek to throw off the burdens of active life, he has formally withdrawn from newspaper service to enjoy a well-earned leisure. Mr. Dawson, as all readers of this journal know, is an enthusiastic angler. He has been wittily referred to as one who "gave life to factions and death to fishes." We do not know how many of the famous Canadian salmon rivers he has fished, nor for how many summers he has made extended angling trips. We trust that there are many noble fish yet to be brought to gaff by his skill. In the pleasures of these angling excursions the readers of the *Journal* have usually participated, Mr. Dawson having written several series of charming letters from the woods. In 1876 a number of these papers were collected and published in a handsome volume under the title "The Pleasures of Angling," a book of which, we have found, it is now difficult to obtain a copy at the bookstores. The volume is an excellent model of angling literature—the finished work of a mature man and a graceful writer, natural and unaffected in style, and brimful of sentiments which are shared by all genuine followers of the craft.

AMATEUR PHOTOGRAPHY.—Among the many specimens of photographs, made with the portable amateur outfits, which we have examined, none are more interesting than a number sent to us by our well-known correspondent. "Appe-kun-ny." One of them is a view of an Indian's aerial sepulchre, such as was described in the sketch, "Old Eagle Head's Sepulchre," in our issue of July 27.

THE FOREST AND STREAM PRIZE offered at the convention of the New York State Association for the Protection of Fish and Game has been awarded to the Onondaga County Fishing Club, of Syracuse. The particulars will be given in our next issue.

ADIRONDACK SURVEY NOTES.

IX.—THE DEER QUESTION.

I FIND that my sixth paper, which treated of killing deer out of season, has been very well received, and I am tempted to express some other views which, while believing that they will not be as palatable to all as the former ones, still are opinions which I entertain, and I see no good reason for withholding them through fear of their unpopularity. This would appear to me to be a cowardly course, and one dictated by fear of adverse criticism, and if those who take issue on this point will only stand up and maintain their point in FOREST AND STREAM and prove that the opinions are all wrong, I will find no fault, and even may be converted.

Deer in the Adirondacks are mainly killed in summer by "floating" or fire-hunting them at night in a boat. In the autumn they are hunted with hounds (except in St. Lawrence county, where it is forbidden), and still-hunted to a very limited extent. In the winter they are killed by crust hunting, a mode which is unlawful. Floating for deer is the most popular mode with both guides and sportsmen, and it is one of the laziest and unsportsmanlike of methods. Lazy because it involves no exercise of the body which sits in the canoe watching for the eyes of a deer to shine up from the light of the jack in the bow, and unsportsmanlike because the animal stands in a dreamy sort of way wondering what the light means which approaches its feeding grounds among the lily-pads. Added to this, it is often murdered with a charge of buckshot from a heavy fowling gun. I have said "murdered" deliberately, and will stick to that part of it at all hazards, and would like to see it made unlawful to use buckshot on a deer at any time.

My idea of shooting for sport is that the game must have a chance for its life, and that some skill should be required in the killing of it. Nor do I believe in killing a swimming deer by any means; let the animal get on its legs, at least. There are two methods of deer shooting to which no objection can be made; one is by still-hunting when there is no crust on the snow to cut their legs, and the other is to take a shot while the animal is before the hounds. The last, *ne judice*, is the highest style of sport and develops skill that its possessor may be proud of. The question of hounding *versus* still-hunting has been argued *pro* and *con* in many ways, and the gentlemen of the Michigan Sportsmen's Association are undoubtedly correct in saying that it is the best mode of keeping up the stock, and that one good still-hunter will kill more deer in a month than a party of six can with hounds, and that the deer do not fear the dogs as they do men. To still-hunt requires much knowledge of the woods and of the habits of deer, hence old woodsmen prefer it as the most certain. It develops manly qualities, brings health and muscle, and inures the body to fatigue, while it calls forth the exercise of the brain to circumvent an animal at once swift and wary. To kill a deer before the hounds requires patience, watchfulness, a quick shot and steady nerves. These qualities are those of the highest sportsmanship, but are not developed by floating or by killing a deer which has been run to water and is swimming for life, thereby becoming an easy prey to the man who has cartridges enough.

Our young men who go to the woods are too luxurious; and seem disinclined either to exert themselves or to seek more dangerous game than the deer. If they can lie in camp all day and at sundown step into a boat and be paddled up an inlet where the deer feed and kill one in an hour or two they are perfectly satisfied with the so-called sport, and return home without having wasted a drop of perspiration and think themselves heroes. If a man wants meat this is the easiest way to get it, but don't, O don't, term it sport. To my young friend going into the woods for the season, I would say: Never kill a deer out of season, nor while you have plenty of venison in camp; never kill one while swimming, and never allow yourself to get behind a jack light any more than you would set a trap or a spring gun to murder one. Kill your deer either by still-hunting, where your intelligence is pitted against that of your game, or shoot it fairly before the dogs. Follow these rules and you will learn to respect the qualities which will be developed in you, no matter if you do not have the numbers to boast of which those have who pursue the more effeminate methods.

Deer are more plentiful this year than in many years, a fact which is largely credited to a better observance of the law, and which I incline to believe to be the true reason. The guides are awakening to the fact that if the woods are full of deer it means business for them, and they are entering into the spirit of game protection, and certainly no more powerful aid can be given than their cordial support of the law, which prevents the extinction of the game upon which their livelihood so largely depends. Some guides have, to their honor be it said, given information to the game protectors of men who have opened the season on their own account, and have had them fined; and when this becomes to be a general custom throughout the Adirondacks the deer will swarm on the hills as before and the sportsmen will leave more hard cash among the hotels and guides than thrice the market value of all the venison killed. F. M.

ATTENTION IS CALLED to the advertising pages of this journal. All the principal sportsmen's goods dealers of this country are there represented.

The Sportsman Tourist.

A WAR HORSE.

BY A. MULE.

"SHELB, was you in the war?" "I were in the scouts. I joined the cavalry first, but they found out that I knew something about woods and paths and sich, and put me into the scouts. I can't say I liked the service, though there was good pints about it. A man could go pretty much where he pleased so he kept to a general line of country, and of course this liberty was very agreeable to me, but then I never could get used to the idea of soldierin' without a gun."

"Why, didn't scouts have guns?"

"Nary gun. It was even agin orders to carry a six-shooter, though most of us did it. But you see our business was to run and not fight, and it was best to keep out of temptation. When a fellow had no weapons he had to run, while if armed he was always bein' tempted to do some bushwhacking on his own account. The Lord knows how many Yankee ginerals and colonels I mought have bagged if I had only done it. But it would have interfered with the General getting information, and to supply that alone was our business."

"You must have had some adventures, though."

"Well, I don't know that they amounted to that much, but I seed several things along during of the war.

"One time I jest dropped in to supper at a friend's house in North Mississippi, and hearing the family in the parlor I walked right in. There was nobody there but women, and they were looking mighty flustered about something. They were red-hot Union folks, but good friends of mine, and many a good point had I got by a sociable chat with them simple women. So I didn't mind their disturbed looks much, but arter passing the time of day and sich like I flopped down onto the sofy as natural as life.

"'Oh! Don't sit on that oncomfortable thing, Mr. McP.—,' they all squealed together.

"'Do, occupy the chair,' said the mother getting up out of the rocker.

"'Or maybe this would be more preferable to you,' said one of the gals, bringing up her little chair.

"'Why, I wouldn't take yer chairs for the world, ladies', I protested, and begged them to believe that most any sofy were softer than a saddle.

"Well, we had a reglar dispute about it, and one little miss about sixteen she come and got hold of me and wanted to pull me up anyhow. I laughed and got about half way riz, when her hold slipped and down I come again with a bump. And somebody grunted 'Good God'! and the women broke for other parts.

"'Hello,' sez I, 'what's that?'

"'It's me!' said a fine voice away down under the sofy. And, by hokey, there was a Yankee Major that had come over to see the gals and hid under the sofy. But he was too fat under the circingle by about six inches and the sofy just rested on him instead of the floor, and my cavortin' and bumping had been on him altogether."

"Did you capture him, Shelb?"

"Thunder, no. We never captured nobody without orders. I pulled him out and we all had a good laugh together, and a good supper besides. Though I won't say that I didn't get some points out of him, for that was my business. But we parted friends, and he sent me afterward a fine meerschaum pipe through the lines, with a word wrote on it: 'Sofa and yet so near.'"

"Did you never get captured?"

"Oh, yes, often, but I always got away by one means or another. Sometimes the Yanks would look rather jubius at me and begin to talk about spies. But I had on my uniform and regular orders in the pocket, so they couldn't say anything more. As for pure lyin' I always believed that was one of the arts of war, and indulged liberally whenever my position required it. One time I was ketched in a way I never heered of before. You see I was always fond of hoss-flesh, and during my leisure hours I had nothing to do but get up hoss races among the boys and trade around generally. Well, one time a fellow came along with a rattling pony that was a beauty, sure. He said he was a natural pacer and could outpace any hoss in the world. So all the pacin' stock in Forrest's division tackled him, and sure enough he got away with every cent we put up on our hosses. Somehow that pony got into my mind until I was just crazy to own him. So I traded for him at big figures, and rode off proud as a peacock.

"In a day or two I was sent out with a party toward the Yankees. They come on us rather unexpected, and pretty soon it got to be a question of speed with us, in other words we had to run like the devil. Off went everybody but me, and thar I was, Yankees a-comin up like hail, shootin' and a-yelling, my men running half a mile ahead, and me a diddling along on that cussed pony, whipping, spurring and cussin' all I knew how, and the pony doing his best, but he couldn't break his pace. He was a natural pacer, sure enough, and couldn't go another gait.

"Of course the Feds. just picked me and the pacer up like we was a sittin' down. I got away in a night or two, but I left the pacer."

"Didn't the Federals have their scouts, too?"

"I suppose they must. But they were not like ours, for certain; because being in a friendly country we could go unarmed anywhere, and get all the information the people had, while a blue uniform straying about was very quickly picked up by somebody. So their scouts must have been almost if not altogether spies—that is without their uniform, and going concealed.

"Did you have any regular system in your operations or every man go on his own hook?"

"Why, we couldn't have ran a week without a very rigid system. Suppose for instance, the General had his headquarters at a certain town and wished to know where the enemy was. Well, now spread out your fingers wide and you get an idea how we worked. First, say five men started on separate roads, all leading toward the enemy. After a greater or less interval five more were sent out, and so until the nails and joints of your fingers are represented each by a scout. In very important cases this system was extended to any stretch of country and any number of men.

"As soon as one of the first men discovered anything he dropped back, told the second and returned to his road. And so the news was rapidly carried to the General. Among so many some one was sure to find out what was wanted. One time, without knowing it, I had got entirely behind a Federal force out on a raid. And how to get back I did not know. Finally in despair, I determined to run through them. I knew they would be sure to just drop down and camp on both sides of the road, and made a little plan accordingly. So about 9 o'clock when everything was quiet I got up close to the pickets and put spurs to my horse full tilt down the road yelling, 'Whoa! whoa! stop that horse!' as loud as I could talk it out. Well, there was the very mischief to pay. Lots of Yankees lying in the road—run over and howling, scared to death—pickets shouting, 'Halt—halt!'—hosses breaking loose and neighing—the colonel a cussin' and damnin', 'Why don't you ketch that —— hoss?' And me lying flat on old Ball, and spurring and a shouting whoa! for dear life. I'm blessed if I believe they ever did find out what did it!"

"I should say that camp must have had very poor pickets and patrols," said I.

"Now, that's just it," said old Shelb. "What you read about in tactics is one thing, what the officers order is another, and what is actually done is the very last and most different. We scouts soon found out that it was almost safer to be in the enemy's camp than out of it and easy enough to get there if you tried. It did seem to me that if the big officers had known as much as we did, or would have believed us when we told them, that war would have been a very different affair. I firmly believe that the drawback in all wars is in the Generals getting skeared of each other. They are like two pinter dogs Tom S— uses; sometimes they pint each other by mistake and thar they stand, looking and afeared to stir until somebody comes up and gives them a kick to move 'em. Them high-blood dogs and scientific Generals stand waiting while one of my old cur fighters or a common man would run in and see what was what."

"But you must have been very lucky to escape so often?"

"Lucky is, may be, the right word for it, though I hardly spell it that way. My idee of luck is in a man keeping his eyes and ears open and his brains ready for business on the jump. One time I was ketched by some Federal cavalry, and as I was their only prisoner there was a poor show for me to get away. However, I rode along in the very middle of 'em, joking, laughing and making the best of it until we rode out into the woods a bit, for a noon halt. This was on a creek with pretty high banks and a smart chance of bushes about. About ten feet from whar I was I saw the biggest kind of a ball hornet's nest in a bush, and I begin to feel idees creeping all over me.

I kept sidling around until I got close up to the nest, and when all hands happened to not be looking my way, I up and hit that ball a tremenjous lick with a big riding switch I had. Good lord, how them insex did circulate among the hosses and men of that company. Thar was about a hundred of the cavalry, but in two minutes thar seemed to be a thousand. Every hoss seemed to think he ought to have been born a centerpede and was trying to make up the mistake now. Some run, some backed into the creek ker-slosh, some laid down and rolled over, but every one was a-buck-jumpin' all the time and all he knew how. About a dozen lit on me and my old mare and we went to dead plain running. I threw away the switch, and just held on to the mane. The hornets give me the devil, but I got away."

A TEXAS RIVER.

I HAVE a theme or subject here which I wish to suggest to some poet who will utilize it in the proper way. It is the river San Marcos. The river is all poetry, and so are all its surroundings. It reflects poetry, and poetry is reflected upon it. As it rises out of the earth in the grand fountain and moves along among the lily pads, ten to sixty feet deep, with stately and majestic step, it acts poetry; often it has escaped the deep pool and moves murmuring over the stony bed; it sings poetry, whose numbers may be distinguished by the dullest ear. Let some poet capture the poetry that it acts, and the poetry that it sings, putting it sometimes in a soft, low mellifluous verse, and sometimes in a grand outburst of song in rapid numbers. He need not write anything after that, for he will be immortal. The river will give him the poetry and the numbers; he need only put it in the right words. Translate this poet faithfully, and the poet who does it will place himself among the stars forever. Let him picture a beautiful water nymph, crowned with flowers and sparkling with gems, rising out of a fountain so bright that it may scarcely be called earthly, singing in the sweetest numbers of whence she came—from the profound grottoes in the earth; then let him picture her as she glides gracefully over the fountain; then as she enters the rapids and goes dancing away with the foam. Have we not here poetry for you, O, poet? If I were a poet myself, I would not betray to others this beautiful subject; I would cherish it until the work was done at my hands. But, alas, I am no poet, I am only a wandering gentleman tramp, with some æsthetic taste, to whom such high walks are forbidden. Yet, if I cannot be witty myself, I will "be the cause of wit in others," and therefore I freely tender unto them the nymph of San Marcos and her song and play. When you write your fine poetry think of him who gave you the cue.

This river is a very remarkable one. About a mile above the town of San Marcos, on the International Railroad, it rises suddenly out of the earth in one great, grand outburst of sparkling water, and moves away from this fountain a full-fledged river from the start. Just where it gushes up from the subterranean depths, it comes with such force that one often sees cones of water-dancing about on the surface like lunatics. They dance and dance until they sink away exhausted or burst to pieces in their mad joy. It is a peculiar sight, forsooth. The spring or great pool at the head of the river is about a mile in length, and often several hundred yards in width, a little lake of unsurpassed beauty. In some places it is said to be 60 feet deep, and yet the waters are so bright and pure that one can see the bottom as in a mirror, and count the glittering pebbles. Water lilies with gigantic leaves grow everywhere except in the deepest places, and it is delightful to see the fishes—black bass and perch—darting and glittering among these. Besides these, you may see blue cats leisurely moving about, as if in a high state of easy contentment, and on the bottom a graceful race of suckers maneuvering like armies in regular file. The fountain breaks forth at the foot of a rugged, lofty hill, but covered with live oak, elm and a wild entanglement of grape vines, loaded with purple grapes in their season. It is delicious to bathe in the great head fountain even in mid winter. The mountain that rises above it to the north is good protection should a blue-nose Texas norther whistle up at the time of the bath. There is no winter here except when the norther is blowing. N. A. JOTTINGS BY THE WAY.*

A Trip from Quebec to Florida in the months of January and February, 1882.

BY J. U. GREGORY.

Mr. President, Ladies and Gentlemen:

In response to the request of the Quebec Literary and Historical Society, I appear before you this evening to read my jottings by the way on my recent trip to Florida, the country of perpetual summer, orange groves and flowers, and a paradise for the lover of the gun and rod. My stay being but of a few weeks' duration, my notes are consequently not very extensive, and apply principally to what came under my personal observation, or to information gained from those with whom I came in contact.

I need not occupy your time with describing our journey to New York as full-fledged Quebec winter travelers, for this is easily imagined, but I shall begin with my departure from there. My traveling companion was the Baron de La Grange, a young French nobleman, who had been several months in Canada, enjoying its sports and wild scenery; an excellent companion and a good shot he proved himself to be, which very much added to the enjoyment of my trip.

On the 4th of January at three o'clock in the afternoon we left New York on the beautiful steamship Gate City, of the Savannah line. She is a vessel of 2,000 tons register, commanded by Captain Daggat, an excellent seaman and a courteous companion, to whom I commend the Southern traveler. The fare from New York to Jacksonville by this line is $25 all found. When we left New York the thermometer stood 31 degrees above zero, the sea was almost smooth, and the wind favorable. We were still wearing our Canadian winter clothing.

On the 5th, at nine o'clock in the morning, the thermometer had reached 36 degrees, the sea still smooth and the wind favorable. In the afternoon the thermometer reached 56. On each side of the vessel and for a long distance ahead might be seen hundreds of the sportive black porpoises racing and leaping out of the water, crossing and recrossing our bows, and greatly interesting the passengers on board. That night we passed the dreaded Cape Hatteras, and while enjoying a beautiful moonlit view of the sea we distinctly saw the light of the Hatteras lighthouse. The next day was much the same, with delightful clear weather, and the company of the passengers very agreeable.

On the 7th the thermometer in the early morning stood at about 62, and when we arrived at Savannah, which was at about 11 o'clock, it had reached 70. We steamed slowly up the Savannah River until we reached our wharf, which we found crowded with negroes, lounging among thousands of sacks of guano, bales of cotton and barrels of rosin. We noticed a great many of the large three-masted-schooner rigged vessels loading pine lumber for foreign ports, also several large steamers and sailing ships taking in cargoes of cotton, rosin, rice and other products of the country.

We dined that day at the Pulaska Hotel and then took a walk through the town. Our first impression of Savannah was not at all a favorable one, as the soil is sandy and the buildings in the business part of the town dingy in appearance; but on the outskirts are some very handsome residences, surrounded by flower gardens and shaded with trees of different Southern descriptions.

We here got our first sight of a Southern street railway, whose small cars are drawn by a span of mules, the driver lazily sitting upon a chair, lashing them on. He is often a negro, and appears to know everybody he meets, for he smiles, and bows and grins to a great many on each side of the road as he passes on.

Walking quietly along, I was soon greeted by a pleasant Quebec voice and a smile from Counselor Hans Hagens, who is spending the winter there for business purposes. Being nearly run over by a smart horse and buggy, I was astonished, on looking around, to find that the driver was another former Quebecer, no less a personage than the renowned Jim Ward, who appears to be thriving in his new home. A little further on another reminiscence of Quebec struck my ear. I heard the voice of a woman singing, and at once told my friend that I was certain I had heard that voice in Quebec. We turned a corner near by, and there, sure enough, accompanied, by an organ, was the large Frenchwoman who was seen last summer in the streets of this city. She informed me that she was flourishing in business, notwithstanding the language of her songs was not understood by the people. Here I thought I had done with Quebec, but a short distance further on another familiar sound greeted my ear, and we came upon a man in an artillery uniform, with a bright Russian helmet surmounted by bells and playing an accordion, drums and triangle. This poor fellow was perspiring freely under the weight of his warlike attire, and astonishing the darkeys with the multiplicity of his musical performances. My companion afterwards saw these two musicians in New Orleans, and says he thinks they are making *le tour du monde*.

Having some time yet to spare, we engaged a carriage and drove out to the beautiful cemetery at Bonaventure, a short distance from the city. This cemetery is possessed of the most tastefully arranged trees I have ever seen, consisting principally of the live oak, each branch of which is draped, in long hanging festoons, with the gray Spanish moss. These trees are perfectly regular, and almost entirely cover the long, broad, straight avenues running in different directions, their branches projecting across in such a manner as to resemble interlacing arches or the rafters of a church nave. The tombstones are plain but handsome, and surrounded by roses, magnolias, japonicas, camelias, oleanders, clematis and other beautiful flowering plants, many of which were in full bloom. The holly, with its red berries, was also there. The tree called the live oak is an oak which is at all seasons of the year in green leaf. From fissures in the bark of many of these trees were growing young ferns, which gave the trunks a remarkable appearance.

Our leisure time having now expired, we proceeded to the wharf to take passage on the steamer Florida for Fernandina. We parted with regret from our delightful old Captain Daggat, who had kindly introduced us to Captain Cusina, of the steamer on which we were then to embark for a journey of about 200 miles through the tortuous rivers, or rather lagoons, to our first landing place in Florida. We had met with great courtesy and politeness from everyone, and had been pressed to stay over in Savannah for some shooting and sight-seeing in the neighborhood, but our time would not permit us to accept these offers.

We left Savannah at about 4 o'clock in the afternoon.

*From the manuscript of a paper read before the Quebec Literary and Historical Society

The steamer was one of those large, flat-bottomed boats, with side-wheels, propelled by separate engines, and the boilers heated with pitch-pine wood thrown in immense fire-holes by a troop of darkey firemen, whose songs and jokes were very funny indeed. On our way up the river we passed a sucking dredge employed in deepening the channel. This dredge is of peculiar construction, and looks like a steamboat; it has a long, fifteen-inch pipe from behind which is dropped into the middle of the channel; the great wheels of the dredge stir up the mud, and so liquify it that it is easily sucked up by the pipe and poured into barges alongside, from which the water drains off, leaving the thick substance to be carried out of the channel. A passenger called this vessel "the government sucker," and said that it sucked a great deal more money than anything else. (We have such suckers here in Canada, but they are two-legged instead of two-wheeled.)

We were frequently detained on our journey, for some minutes at a time, by sudden fogs which would as suddenly lift, allowing us to proceed a few miles and then come on again. The sharp bends in the river necessitated the execution of extraordinary manœuvres to get around them. The bow of the steamer would be run on the bank, and then she would wiggle around till she turned as far as possible, then going ahead a little, soon taking the bank again for the same purpose. "Hook her up," the captain would sing out to the pilot, which means "full speed," and off she would go again till we would come to another bend, when the same manœuvring would be repeated. A good deal of the journey was made, first by the starboard wheel, then the port one, and often one wheel working against the other; but it was novel and very amusing.

The edges of the flat marshes, on each side of the river, were lined with oysters. There are no stones in Florida. Wherever anything in the shape of an island is seen, its low rocky appearance, left bare by the tide, is simply a bed of oysters, called 'coon oysters, and I know two 'coons who eat a good many of them.

On the 8th, in the morning, we saw many flocks of what are called raft duck, which are our common bluebills; we also saw hundreds of yellow-leg plover, curlew, oyster-catchers, and ricebirds. The latter is our singing bird, the bobolink, called by the Canadians the gougleu. When the bobolinks return to the South, they lose their handsome Northern plumage, and assume pretty much the color of our little sparrows. They feed upon the wild rice and get very fat, consequently they are much sought after for making game pies. We also saw the large and small heron, or white egret, the large blue heron, and the great scavenger, the bustard, the common cormorant and water turkey, which, I believe, is the Mexican cormorant, specimens of which I preserved later on.

The thermometer, this day, ranged from sixty-five to sixty-eight; it was exceedingly pleasant. The country, to our right, perfectly level, and to our left, the low, flat extent of marshes, through which could be seen the open sea, looking like a great lake.

At 4 P. M. on the 8th, we arrived at Fernandina. We had the pleasure of meeting here, a St. Hyacinthe French Canadian, a brother of the Hon. Mr. Mercier, who has been residing in the South for a number of years, and is connected with the line of steamers on one of which we had taken passage.

Before reaching Fernandina we had passed Cumberland Island, at the eastern extremity of the State of Georgia. Upon it stands Dunjeunnesse, a large house built of coquina, a conglomerate of shells. This was once the home of General Nathaniel Green, of American Revolution fame. In a quaint old burying ground near by, is the tomb of the celebrated American cavalry officer of the light horse, Harry Lee, father of General Robert E. Lee, who took such an active part in the late civil strife between the North and South, and made the memorable raid into Pennsylvania—ever memorable to me from the fact that I was in Philadelphia in 1863 when whole trains of wounded and dying Northern soldiers were brought in from the battlefield of Gettysburgh. Their groans, and sufferings can never be forgotten by one who saw and spoke to them.

Fernandina is a favorite wintering place. It was founded by the Spanish in 1632, and has a very interesting history, which I have not time here to speak of.

At 5 P. M., with the thermometer at about 78, we were seated in the cars which should have landed us in Jacksonville in an hour and a half. All went well on our journey for about half an hour, when we were nearly choked by the smell of burning grease and rags. The cars were stopped, and we found that the wheel packing had taken fire in the boxes; these were cooled off and replaced, and we started. We had not gone very far when some other boxes heated, and we were stopped again till they were cooled off, and fresh lubricants put in. This same thing occurred four times on our journey, which made it rather unpleasant, but it added variety to our previous delightful mode of traveling.

In our car we saw the first beautiful octoroon girl we had yet met; her eyes, glossy black waving hair, and figure were perfection, and one could hardly believe that the beautiful creature had any negro blood in her veins until attention was directed to the delicate yellow tinge of her complexion, and the peculiar dark hue surrounding the nails on her tapering fingers. Her companion was an ordinary negro woman—and such a contrast!

We reached Jacksonville at 8 P. M. and drove to the Carlton House, a large hotel near the river side, which is kept by two Northern proprietors who also have a hotel on the sea shore in Maine which they open in summer, closing the Florida house until winter, when they return again, thus enjoying a continual summer and appearing to thrive upon it.

On the 9th, having letters of introduction from our friends of the FOREST AND STREAM to Dr. Kenworthy, who goes by the *nom de plume* of "Al Fresco," we presented them, and were very kindly received at his beautiful home in Jacksonville, which we found surrounded by shady trees and flowers in full bloom. Dr. Kenworthy is an English physician who had practiced in England, Australia, and some portions of the United States before he came to Florida, where he was induced to remain on account of the wonderful health-giving properties of the climate, which thoroughly cured his delicate wife, who was suffering from weak lungs, and who is now a capital illustration of the curative powers of Florida's climate. Mrs. Kenworthy is the daughter of a British Admiral, whose name I do not remember.

The Doctor gave us much valuable information regarding the shooting and fishing of the country, and as the change of climate was fast telling favorably upon me, I felt all the ardor of the sportsman springing up within me, and was eager for the chase.

The thermometer this day was 79 in the shade, and I can assure you that, dressed as I was, I felt it. I had the pleasure of finding my old friend, Romeo H. Stevens, of Montreal, who had arrived a day or two before me. He was dressed in a white flannel summer suit, and being a portly gentleman of my own style we compared notes, which resulted in my visiting the shops for the purpose of procuring the lightest of underclothing. Fortunately I had with me my thinnest summer suit of serge, and in this I spent my time in Florida, never requiring anything warmer. But it is not well to be altogether without some fall or spring clothing as the country is occasionally subject to what they call a "norther," when the thermometer drops down to about 30, especially in the neighborhoods of Jacksonville, St. Augustine, and even a long distance up the River St. John, and when young plants and fruit are nipped; but such changes are of short duration and the weather soon assumes its usual warmth.

Jacksonville is situated on the left bank of the St. John, at a point where that noble river makes a sharp bend to the east. The city presents a very attractive appearance from the water, and its higher points command a pleasing outlook upon the stream and low-lands along the opposite shore. It is favorably situated for commerce, and does an extensive trade in lumber. Nearly all the railroad and steamer lines of the State center at Jacksonville, whence enormous quantities of fruit and vegetables are shipped to foreign ports. The city is lighted by gas, is possessed of an excellent system of water works from artesian wells, and is thoroughly drained, has several public schools, a circulating library and free reading room, Episcopalian, Presbyterian, Methodist and Catholic churches, banks, public halls, newspapers and telegraphic connections with all points. The population is about 15,000 souls. The rate of growth is very rapid, and the city is destined to be one of the great industrial centers of the United States. It is noted as a resort for invalids, especially those suffering from pulmonary complaints.

Florida was discovered by Sebastian Cabot, who sailed under the British flag, in 1497, and who also discovered Newfoundland. In 1525 Naverez took formal possession of it for Spain. The first settlement was made at the mouth of the St. John River, by a Frenchman named Ribault, in 1562. Then came a colony of Huguenots, in 1564, who settled eighteen miles from the entrance of the St. John River, on the south side, and called their settlement Caroline, which was totally destroyed by the Spaniards in 1565. In 1569 De Gougues, a Frenchman, revenged this massacre by killing the entire Spanish garrison quartered at Fort Caroline. The Spaniards founded a colony at St. Augustine, in 1565, which is said to be the first permanent town in North America. Many relics authenticating this fact still exist. In 1584 the Spanish authority extended as far as Georgia on the north and the Mississippi on the west. In 1586 Drake, the English filibuster, plundered St. Augustine, and Seminole Indians also pillaged it in 1611. Pirates, said to be English, sacked it in 1665. Pensacola was afterward settled by the Spaniards in 1669. In 1702 St. Augustine successfully resisted an attack, and in 1740 was captured by Col. Oglethorpe, of Georgia, then a British possession. In 1763 Florida was ceded by Spain to Great Britain, who only kept possession of it for one year, when they gave it back to Spain in 1764.

During the English occupation, the population of the entire State was only 600 whites. In 1812 the United States captured Florida from the Spaniards, and one year after gave it back to them. In 1818 the Spanish port at Pensacola was occupied by British soldiers, and General Jackson captured it for the United States. In 1819 Spain sold and ceded Florida to the United States, and it remained a portion of its territory until 1849, when it was admitted as a State of the Union. In 1861 it seceded and espoused the Confederate cause, but was speedily captured by the Northerners.

You can now understand why, for over three centuries, this country remained in an unsettled state. It certainly does not appear to have been very highly valued by either Spain, England or the United States, for even when given by Spain to Great Britian or the United States it was, in both instances, returned about a year afterward, I suppose because it was not considered worth keeping. However, since it has been admitted as a State, and particularly since the war between the North and South, energetic Northerners have been flocking into the country, and with true Yankee instinct have discovered and are fast developing its dormant resources. Even English capital, which has done so much to build railroads in other portions of America, is now being largely employed there for the same purpose.

Florida is the furthermost south of all the United States, and a great portion of it is a peninsula, projecting between the Atlantic Ocean and the Gulf of Mexico. Its peculiar position, with its ocean and gulf surroundings, makes it unlike any other country in the same latitude and longitude; there being no mountains or even hills of any size, the winds of the Atlantic sweep over it by day from east to west, and at night a gentle, cool breeze from the Gulf passes over the land in an opposite direction. One can only realize the delights of the climate by a visit to the country and a sojourn there of a few weeks. I was informed that Florida is nowhere more than 500 feet above the level of the sea, and this rise is almost imperceptible as it is so gentle, and extends over such a great distance. There are lakes in every direction varying from one to fifty miles in length.

Speaking from my own experience, as to the heat, I must say that while out shooting, when walking, especially in the middle of the day, I frequently felt very hot, but on turning completely round in another direction, I invariably felt a cool refreshing breath of air, as there is always more or less breeze which purifies and vivifies the atmosphere. The average temperature in winter is about sixty degrees Fahrenheit, and in summer seldom over ninety. No case of sunstroke has ever been known to occur, nor, it is alleged, has a dog ever gone mad in Florida.

How delightful this climate appeared to me, when sitting upon a shaded verandah, lightly clad, with a Quebec newspaper in one hand, and a delicious orange in the other, the paper speaking of the thermometer being away down below zero, and snow over so many feet deep. The contrast was a novelty never to be forgotten by a Quebecer who enjoyed it in the latter part of January. How I did pity you poor mortals.

Some people have chills and fever during the summer, especially in localities bordering on swamps and creeks, but they pretend they are no worse than in the Western States, nevertheless, Florida affords many places said to be perfectly free from miasma, but they are all found upon the numerous sea-islands, and along the Atlantic and Gulf coasts, or in the naturally well-drained pine lands of the interior.

Pine lands largely predominate, of fair producing quality,

comprising the pitch and yellow pine. There are also extensive tracts of what is called "hamak lands," high and low, covered with a dense growth of hard wood, such as live oak, white oak, cypress, gum trees, hickory, cabbage palmettoes, red cedars, magnolias, oleanders, and other varieties which I need not enumerate.

The "hamak lands" are adapted to the growth of tropical fruits, the leading species of which are the orange, lemon, lime, citron, banana, plantain, pineapple, guava, pomegranate, and several kinds of nuts and grapes. The black Hamburgs grow out of doors, but they are not equal to those cultivated under glass by our worthy president.

I saw no potatoes growing in the country, other than the swell potatoes. What they call the "Irish potatoe," our old-fashioned "Murphy," will grow there, but all that came under my observation were imported from the North, and selling at about from $6 to $8 per barrel, and were served out sparingly I can assure you.

Cotton, sugar-cane, and rice are extensively grown, in fact I believe that anything will grow there if the ground is well enriched with powerful fertilizers. It appears plain enough to every one that the climatic advantages possessed by Florida are counterbalanced by the porosity of her soil. It costs $50 a year per acre to keep an orange grove properly fertilized, and when this is neglected, the effect can be easily seen by the sickly appearance of the trees.

The orange is the leading crop. Three years after the transplanting of the young tree, it commences to bear and become remunerative, and at ten years old it yields handsome profits, some trees giving as much as $100 yearly returns. Oranges usually ripen late in November or December and if left there remain on the tree till March, constantly drawing nourishment from the sap, and daily growing larger, more juicy, sweet and delicious, but these oranges will not stand a long journey. Those of the Indian River district, where I made my longest stay, are renowned and justly so, for they deserve it.

Fancy a Quebecer picking such oranges off the trees in February, stepping out into the garden in the morning, collecting a handful of crisp, cool radishes and lettuce—yet dear old Quebec has her charms, as we all know, and we return to her with happiness, but a little break in the long winter months is very desirable, and I must say that Florida, so easily reached, affords a delightful change.

There was a peculiarity that struck me forcibly, it was the lank, sallow faces of some of the natives; they seem to run to a point or an edge. The country white children are the color of putty in complexion, their lips perfectly white, and all have a very lazy look. If you stop to talk to a man or woman anywhere near a fence, building or tree, they will lean against it before answering. They always appear to want propping up; they lack the vim of a true Northerner. I felt like a racer beside some of these fellows.

One noticeable feature of the population is the small number of foreign-born people and the very few Irish. I only met one Irishman who had a true touch of the brogue, Mr. Barbour says in his extensive travels in Florida, and I fully corroborate this from my experience.

There is quite a colony of Swedes near Sandford and a few Germans here and there. In the northern part of the State there still dwell some of the old Southern aristocratic families. They are few in number, and trying to accustom themselves to the new state of affairs consequent upon the destruction of the system of slavery under which they formerly flourished.

The negroes form a great portion of the population in the larger towns, and a strange, funny set of beings they are. They are not over industrious, very improvident, and light-hearted. A little hominy and pork, a cup of coffee sweetened with syrup, and an occasional fish, so easily caught, is their principal food. The last meal of the day over, fun begins, and banjos, fiddles and guitars can be heard in many directions. A jig is played, and then their feet—and, oh, such feet!—begin to keep time and become uncontrollable, a broad smile overspreads his countenance, his mouth enlarges, lips puff out with a grin, off goes his jacket, up jumps Sambo, and, with a tremendous chuckle and peculiar yell he is off in a double-shuffle, and will keep it up till he drops from sheer exhaustion. As a rule, the blacker the darkey the better and truer the man. The yellow fellows are considered lazy and conceited in most cases.

On the 10th of January, through the kindness of Dr. Kenworthy, we were invited by Captain Hains to take a trip on the Savannah, Florida & Western Railway, to a place called "Convict Camp," thirty-six miles from Jacksonville. Our object was to shoot quail, of which we were told we would find plenty. As we had no dog of our own, we engaged a negro called Joe to go out with us and bring his setter, which, he said, was staunch on such game.

We arrived at our destination at nine in the evening, and were met by the guards of the State prison, whom we followed to the quarters prepared for us, in a large room in which some ten or twelve of the force lodged. A good meal was soon laid before us, and we were waited upon by a smart young darkey named Charlie, who was dressed in the prison garb—black and white stripes. Our boy Joe took a seat, sullenly, in a corner, crying and evidently in great distress, and refused all food. He sobbed so much that we really pitied him, and tried to ascertain the cause of his sorrow, but without success, as we could not obtain any satisfactory answer. I called Charlie over to me and told him to try and get Joe outside and learn from him what was the matter, which he did, and soon came back and told us that Joe believed he had been fooled by us, that we had brought him out there with the intention of making him a prisoner, he was sure of it, and had confessed to Charlie that two of his brothers were already convicts at that station. Joe must have felt that if he was not there also it was through no fault of his. My impression was that he had an idea that he deserved to be there, and felt unsafe in consequence; he neither ate nor slept that night. Charlie, with his remarkable anxiety to be useful and agreeable, said he would introduce us, the next morning, to Joe's brothers. I answered that we had no objection to see some other members of Joe's family, but could do without the introduction.

The State of Florida utilizes its convicts in an excellent manner, and Georgia adopts a similar plan. So soon as a person is convicted of a crime, for which the penalty is imprisonment exceeding three months, he is sold to the railway company for $15 per annum, and sent out to the camps to work. The company feeds and clothes him, and is responsible for his safe keeping. There were 160 men, nearly all black, and about eight women, of whom four were black and the remainder white. They were housed in log buildings, surrounded by stockades. The women have separate quarters, and do the sewing, mending, and making of the prisoners' clothing. Any men who are unfit for hard labor, from physical infirmity, wash, cook, and keep the premises in order. The punishment for infringement of discipline is inflicted with a long, broad leather strap, the number of lashes being dependent upon the gravity of the misdemeanor. They are fed on corn-meal cake, pea soup, hominy (which is corn boiled like rice) and pork. One ox is killed every week to afford fresh meat.

When we arrived there, it being night, we found that the prisoners were all locked up in their sleeping quarters. After supper the assistant superintendent invited us to look at them. We found the men lodged in two long buildings, constructed of large pine logs, with plenty of space between each log. These structures were about 100 feet long. Within, raised about two feet from the earth, on either side of the passage, and extending its whole length, was a long bed, about 8 feet wide, capable of holding 100 men, 50 occupying each side. On these were sleeping the convicts in their working clothes, their great black feet near the edge of the bed, and their heads resting on blocks of wood. At each end of the passage was a square box, 3 feet high by 4 feet wide, filled with earth, upon which were burning pitch-pine knots, lighting up the interior and emitting an odor of burning rosin. Each prisoner's leg was in an iron ring, from which hung a chain about 4 feet long, fastened to another chain running the whole length of the building. They were covered with light blankets, but many of them had kicked theirs off. Outside, at the four corners of each building, stood the guards, armed with double-barreled guns loaded with buckshot. No prisoner is allowed to rise without permission, or speak to another until four o'clock in the morning, when free speech is permitted until breakfast time, which is six o'clock. After breakfast they are chained in gangs of nine, with a guard over each gang, and marched off to the work on the road, where each one still carries his leg chain. They work till dinner-hour, their food being sent out to them, and at the expiration of the hour allowed for this meal they resume their labors until six o'clock in the evening, when they are again chained in gangs and carried back to the stockade by the labor train.

I noticed three or four good-looking white men, who, I was informed, had been convicted for embezzlement or something of the kind. They were chained to negroes, and fared no better. When prisoners attempt to escape, a pack of hounds, kept for the purpose, is put on their track, and by following their scent never fails in coming up with them, and they are overtaken by the guards on horseback. Some of the prisoners, by good conduct and usefulness, are allowed considerable freedom; these are called "trusties" and are not chained. Of such was our attendant Charlie, who was a good, bright boy. While serving us at table I asked him how long he had been there, he answered, "For five years." "How long are you in for?" I then asked. "For life, sir," said he. "What did they send you here for, Charlie?" "Because I killed a man, sir." "What did you kill a man for?" "Because, sir, he killed my father with a gun; I grabbed the gun and shot him dead. I was tried for murder. The judge said I had no right to take the law in my own hands, and I was condemned here for life. I was here three years before I became a trusty, and I have been a trusty nigh on two years."

Charlie's case is certainly a hard one, and he meets with very much sympathy. The guards told me they expected the Governor of the State would pardon him very soon.

By the means I have mentioned of disposing of her convicts, Florida saves, in keep and attendance, over $12,000 a year, when the amount of $15 per head is taken into account. The railroad company thus have constantly on hand a certain number of men whom they can force to work, and by this means the road is mostly built, the State of Georgia doing the same at its end, as the road lies between the two States. There is considerable free labor employed in addition to convict labor, but it is not reliable, for the darkeys will not work if they can help it, and white people are very scarce, and will not work with niggers.

As soon as a darkey earns a few dollars he leaves for some of the large cities, rigs himself out in new clothes, buys sweets and cigars, and spends the balance of his money in fun and frolic; but when it is all gone he is a "hard-up" looking fellow indeed until he gets a new job.

When the work in the vicinity of the stockade is completed, the old buildings, which are mere log huts, are abandoned, the prisoners moved further off and new buildings erected by them which they occupy as long as required, when they emigrate again.

Sunday is a real holiday for the convicts, and they do pretty much as they please. After church service they engage in games and singing. Some of the old men preach very good sermons and lecture the young ones on the evils of their ways, but I believe fun predominates, as it is the nature of the negro to be very light-hearted.

To observe a lot of negroes, men, boys, women and girls, lounging around the wharves and railroad stations, and listen to their chatter is very amusing. They are constantly quizzing each other, and the chuckles and hearty laughter they indulge in is very funny. They often have good voices, and two or three of them will take a song in parts, executing it in a manner equal to any minstrel performance.

On the 11th, after breakfast, with one of the guards as a guide, we left our quarters for a ramble through the forest and swamps, and soon came upon quail. These beautiful, gamy little creatures generally found in coveys of twelve or thirteen birds, when flushed fly off two or three acres, alight and separate. The dogs point them as they do snipe, and when again flushed they rise singly or one or two together. They flew so swiftly that we found them very difficult to hit, or else they must have carried away lots of our shot; however, we managed to bag twenty-six to our two guns. They are found on the open portions of the pine lands.

While tramping along the edge of the forest, I came suddenly upon a large black snake, six feet long, and not knowing what his intentions might be, I gave him the contents of one of my gun-barrels through the head, which I regretted afterwards on being informed that this species, called the king snake, is harmless to human beings, but a deadly enemy of the dreaded rattlesnake, which it vigorously attacks, and quickly kills by winding itself around its foe, and exerting its constricting power. I may here mention that I saw no rattlesnakes in Florida, and that they are seldom met by any one. The hogs, running wild, sand cranes, and other large birds destroy a great many snakes of all kinds. One kind, called the moccassin snake, is very common in the swamps. It is not known to attack anyone, but will strike if stepped upon, and although its bite is venomous, it is not so deadly in its effects as that of the rattlesnake.

All strangers carry whisky with them as an antidote against the poison from the fangs of the rattle, as well as the mocassin snake. It appears that when bitten, a pint of whisky must be drunk as quickly as possible, which, it is said, is absorbed into the system, neutralizing the poison. Many travelers carry quite a quantity of whisky for the purpose also of qualifying the water, often using more of the qualifier than of the other article.

During part of this day we were in extensive pitch-pine forests, where we witnessed the manner in which the gum from that tree is collected for the purpose of making turpentine, rosin, and pitch. Large slices are cut out of the side of the trees, the thick gum soon fills up these wounds, when it is scraped off and carried to a building near by, where it is distilled into turpentine, the residue making rosin and pitch, which are among the leading exports of the country.

The pine woods are remarkable, the trees being almost uniform in size, growing very high, and branchless until within about fifteen feet of the top, where they shoot out in all directions; the branches of one tree almost touching those of another, thereby forming a shady grove. The trees are seldom in closer proximity to each other than fifteen or twenty feet, with no bush between them, and were it not for the fallen, decayed trees here and there, one might drive a coach and four for miles through such a forest without difficulty. The land is sandy and consequently dry, and covered with short coarse grass.

Outside of the pine wood one comes upon swamps, which are seldom deep. I saw none of them where boots over the knees would be required, the general depth being about up to the ankle. In these swamps are found the snipe, which makes Florida its winter quarters.

I was told by non-residents that the water of Florida was not wholesome, but the old settlers deny this, and we frequently drank it out of the swamps and creeks, without mixing it with the "qualifier," never experiencing any bad effects, and as we were not bitten by venomous snakes, we did not poison ourselves with liquor, which, by the bye, costs a dollar and a half a bottle, and, I should say, would kill at forty yards.

The thermometer, during the entire day, stood at about 78 in the shade, but the heat was tempered by a delightful breeze.

Our time having expired, we left Convict Camp for Jacksonville, by the evening train. On our arrival we found invitations awaiting us, to attend a "hop," given by the Florida Yacht Club, which we accepted, and had the pleasure of making the acquaintance of some of Florida's fairest ladies, who, with the gentlemen, were very agreeable. They speak the English language without the nasal twang noticeable in some Northerners. The dancing was to the music of a band of Italians with harp, flute and violin, and was kept up until shortly after twelve. The refreshments consisted simply of lemonade, oranges, and cakes, no wines or spirits of any kind being allowed. The gentlemen were dressed in their afternoon suits, swallow-tails and white chokers being quite a rarity; in fact, one need not make any display of the kind, as it would not be appreciated. The figures of the dances were called out by a member of the committee, who stood upon a platform near the musicians, for the purpose. We also had the pleasure of meeting at our hotel, Mr. George M. Barbour, who has written an excellent book on Florida, and from whom we obtained much valuable information.

On the 12th, after lunch, we hired a negro with a boat, to row us upon the river, and taking fishing tackle with us, we were soon engaged catching fish called sheepshead. To those accustomed to fly-fishing for salmon and trout, the catching of sheepshead with a hook baited with shrimps, is pretty tame work, and we soon gave it up.

We were in the immediate neighborhood of an extensive orange grove of several hundred trees, loaded with luscious, ripe fruit, the odor of which was wafted towards us by the refreshing breeze. The thermometer was at about seventy-three degrees, and a pleasant breeze.

We directed our boatman to land us, which he soon effected, and passing through an avenue of live oaks, we entered the beautiful grounds of Mr. Mitchell, a wealthy gentleman, whose northern home is in Wisconsin, and whose family spend the winter months here. We walked through the groves, carefully keeping our hands behind our backs, thinking it would give us a very honest appearance, as we were treading upon tempting ground, and the inclination to pluck an orange was almost irresistible. When we came opposite the house we observed a couple of ladies on the verandah bareheaded, and evidently engaged in some fancy work. We apologized for our intrusion, and at the same time handed them our cards, after which we were very kindly invited to walk over another portion of the grove and taste of the different varieties of oranges, one of the ladies offering to conduct us. You can well imagine that the offer was thankfully accepted. We were handed oranges of four or five varieties, all perfectly delicious. We also saw the date palm tree growing from a seed brought by Mrs. Mitchell from Egypt, and planted by herself in this grove, and appeared to be flourishing. Around the house were several kinds of roses, japonicas, jessamines, camelias, and other plants in full bloom, from which handsome bouquets were composed, and given to my companion and myself as a souvenir of our visit.

Near Jacksonville, and for many miles up the St. John River, on either side, are many beautiful residences, the winter homes of wealthy Northerners who spend this season in the sunny South. Among others, is the romantically situated cottage of Mrs. Harriet Beecher Stowe, at the delightful spot called Manderin. All these residences are surrounded by orange groves and flower gardens, the air in all directions being perfumed with their sweet and delicious odor.

On the 13th at one P. M., we left Jacksonville, on board the steamer George M. Bird, for Orange City, about 200 miles up the St. John River. The thermometer during the greater part of that day stood at about 76. By the attention and courtesy of Mr. Orr, the representative in Jacksonville of the firm of Messrs. Leve & Alden, passenger agents, we were allotted room No. 8, the largest and most comfortable on board the boat. I may mention here that having bought our tickets in Quebec, from Mr. Harris, the obliging agent here of Messrs. Leve & Alden, this gentleman very kindly wrote on to the office in Jacksonville, requesting them to show us some attention, and their effort in our behalf tended greatly to our comfort, and was very much appreciated. The steamer was heavily laden with freight, among which was a large quantity of hay in bales from the State of Maine. The hay and oats for the working horses and mules in Florida, I believe, all comes from the North, as their own grass is of a rough, wild description, and not sufficiently nourishing for working animals.

We were about twenty cabin passengers, and the decks

were covered with negro laborers going to work on a new railroad, several of whom "jumped," as they style it, and escaped at the first and other landing places, especially those who had got a dollar or two paid to them in advance. Our boat was not a very fast one, consequently we had ample time to enjoy the scenery.

On the 14th at nine A. M., we had reached Lake George. The thermometer was then at 72, the weather pleasant and refreshing from a light southwest breeze, and our route was due south. On the way out we passed orange groves on both sides.

After leaving Lake George we came into the narrow river, the boat almost touching its banks. On the projecting logs or dead trees could be seen, three or four in number at a time, large turtles called coolers. On nearing them they would slide off into the water. Here we saw our first alligator, a big fellow about ten feet long, lazily basking in the sun. We counted seventeen of them on our way up the river, and also saw quite a number of the beautiful wood duck, which appeared to be very tame, as they would remain in the water till the steamer approached within gunshot.

At five in the evening we arrived at Orange City wharf, where we engaged a wagon to carry us to the city, two miles back, and took quarters at the only hotel, which was a long building, one story high, surrounded by a broad verandah, with a door and window to each bedroom off the verandah. Orange City can hardly be called a city yet. It is comprised within a radius of two miles, and numbers about 500 souls, nearly all of whom are Northern people. We met here a Doctor Martin, who had formerly lived in Montreal, Judge Stillman, formerly of Woodstock, and a Mr. Scannell, of St. John, New Brunswick. Most of the other inhabitants are from Wisconsin, and all are engaged in the establishment of orange groves, and evidently doing well.

On the 15th, in the morning, we hired a large wagon with two cream-colored horses, and started on our journey of thirty miles through Volusia county to within seven miles of Port Orange on the Atlantic. When leaving Orange City by a road through the pine forests, our driver said we were then passing through French avenue. My Parisian companion could not understand why it was so styled, as he declared that it did not resemble in the slightest degree any remarkable avenue of Paris or elsewhere in France. Our horses never proceeded faster than a walk, notwithstanding the road was perfectly level; the only hill we descended or ascended could not have been more than from six to eight feet high, and appeared to me to have been the bed of a dried up creek.

The road was sandy and consequently heavy. We drove for about a mile through a cypress swamp, the water up to the hubs of the wagon wheels, and the branches of the trees almost meeting overhead. Here we saw the remarkable air plant, which appears to grow wherever it is hung up. In appearance, it is very like the top leaves of the pineapple, with a soft bulb and projecting from the center of the leaves is a stem with pretty red flowers. We passed several herds of the native cattle, browsing upon the wild grass. Cattle-raising is a very profitable business, and herds of several hundreds are owned by different proprietors, each having his own cattle marked differently, after which they are allowed to run wild, but receive occasional visits. They are small in size and not very fat, and are shipped in great numbers to Cuba, and other West India Islands. Milk cannot be obtained from any of the settlers, as these cattle give none, except during a short period when they have their young, and then the quantity is barely sufficient for the calves. Hogs, many so wild and degenerated that they resemble the European wild boar, can be seen in every direction, their tusks often being from six to eight inches in length. They afford many a choice meal for the alligators, great numbers being devoured by them.

These "thieving varmints," as the natives call the alligators, will quietly come upon the river banks, or out of the swamps (where there is water enough to cover their backs), stretch themselves at full length, lazily dozing in the sun, with an eye half open, until some foolish pig, calf or dog, impelled by curiosity, comes up close to him, when, with a sudden lash of his long tail and as sudden a turn of his huge head, the innocent animal is tossed between his open jaws, where he is sure to be caught, if not by the body, by a limb, and immediately conveyed to the nearest water by the alligator, who soon drowns his victim and then drags him ashore, when, if there are any of his own kind around, they all come to the feast. An alligator fight takes place, and to the victor go the spoils.

At noon, near a fresh-water stream, our horses were unharnessed and fed, and we took our lunch, consisting of corn-cake, canned meat and oranges, after which, when walking along the stream, we came across the first moccasin snake we had ever seen. This reptile was over three feet long, and as thick as a man's wrist. As we had nothing in our hands to strike him with we kept at a respectful distance, and he quickly disappeared in the wet grass.

The horses again harnessed we proceeded on our journey, and about 6 o'clock in the evening arrived at our destination, Waverly, a settlement of four or five houses in young orange groves near the Spruce River or Creek. There we found two brothers named Lefman keeping bachelors' quarters, to whom we had letters of introduction from some friends in New York. These two young men were formerly employed in a New York dry goods establishment, but the house having failed some five or six years ago, they sought their fortune in Florida, where they bought 160 acres of land, called a homestead, on which they built themselves a small house, and are now living there without male or female help, with the exception of a man or two employed occasionally, to assist them in their annual labors of fertilizing and preparing the soil around their orange trees. The senior of the brothers attends to the household affairs, while the younger one is engaged in making all he can out of the sale of fruit from their bearing trees, and trading anything that he can make a dollar by.

As Waverly was our home for several days, it may not be uninteresting for my sporting friends to know what we paid for bed and board. We accepted our host's offer to lodge and find us in food, including as many of the finest description of Florida oranges as we cared to eat, for $6 a week each. Of course with our guns and fishing tackle we contributed considerably toward the supply of fresh meat and fish. However, this was not taken into consideration in our host's offer. They supplied us with bread (principally corn bread), oatmeal porridge, rice, eggs, chickens, pork, canned meats, sweet potatoes, oysters, lettuce radishes, coffee, tea and preserved milk; I nearly forgot to enumerate butter. I have already mentioned to you that no fresh milk can be had here; therefore all the butter used is salted and imported into that warm climate from the North. You can imagine how strong it becomes. I so lost my taste for the article that I have not eaten butter, fresh or salted, since the 14th day of January last, and I believe I am very much less inclined to biliousness in consequence. We all slept in separate beds, in the same room, our party consisting of my companion, the two brothers (owners of the place) and myself. A we took a great deal of exercise we retired at an early hour, and were up betimes in the morning.

Our senior landlord told me that while living in the North he was a martyr to asthma, and generally, for several nights following his frequent attacks, was compelled to sit up nearly the whole time in great distress, but since he came to reside in Florida, no child could have enjoyed sounder sleep than he did, his complaint being altogether cured, which happy results he attributed entirely to the healing properties of the climate. I met several other persons who claimed that they had experienced the same perfect relief since coming to the country; and this fact contributes largely to the settlement of Florida by Northern invalids.

Near us were three or four families of old settlers or squatters, styled by the Northerners, "crackers," and by the negroes, "white trash." One person told me that they derived their name from a habit they had of carrying a horse-whip around with them when they visited the towns, and cracking it, under the impression that it gave them style, but I could not arrive at a satisfactory solution of the reason for their being called "crackers." Both men and women are inveterate smokers and chewers of tobacco. They have an odd mode of traveling, and when one of them adopts any other method, his friends accuse him of putting on "Northern airs," and of "going back" on them. They always hitch their one horse or mule to a small cart, and saddle the animal, the man riding him, his long legs often nearly touching the ground. It is perfectly immaterial whether the cart is loaded or not, in either case the driver rides the horse or mule, seated on a wooden saddle, thus imposing a double burden upon the poor beast.

The morning after our arrival my companion and I each hired a "cracker" to row us, in two skiffs, down the river for an alligator hunt; also for the purpose of fishing what they call trout, which is Southern black bass. After having started, I asked my man, who was an easy-going fellow, but a good boatman, about twenty-five years old, by what name I should call him. He answered that his name was Juniper. "What is your Christian name?" was my next question. "Why! Juniper," said he again. "Then what is your family name, Juniper?" "Pig, sir," said he. "Oh! you are Mr. Juniper Pig, are you?" "Yes, sir," said he., "Have you any brothers and sisters?" "Yes, sir," he answered, "I have one sister and one brother." "What is your sister's name, Juniper?" "Her name, sir, is Florida, Florida Pig." "And your brother, what is he called?". "Manderin Pig." I afterwards learned that the family name is spelled Pegue, and should be pronounced Peg, but Juniper was perfectly content with it when called Pig.

Our trip of several miles down the river, opposite to Mosquito Inlet, on the Atlantic, was full of adventure, and the country through which we passed, strange in scenery. On either side could be seen the cabbage and other palmetto trees, Spanish bayonet palms, cypress, live oak, red cedar, banana, orange, lemon, lime, fig, sugar cane, oleander bush and cactus, growing wild, the odor of the wild verbena mingling with that of the orange, perfuming the air. We had not proceeded far when we found ourselves among the alligators, which would slip off the bank into the river, at our approach. We counted thirteen of them both large and small, swimming about sixty yards from us at one time. Their bodies were altogether submerged, the only part visible being the slightly elevated portion of their flat head and eyes. We popped away at them right and left, and from the manner in which they made the water fly, must, I think, have hit several, but by very carefully approaching their known haunts my companion managed to kill two and myself one while they were on the bank. We caught twenty-seven sea and black bass, the total weight of which was 210 pounds. All the rivers and lakes of Florida abound with fish.

Returning after dark we saw hundreds of fire flies flashing their lights to and fro along the banks of the river. What a January sight for a Quebecer!

Before proceeding further I shall mention some of the fur, feather and fin tribes of the locality. The fur tribe consists of deer, bear, wild cat, fox, raccoon, opossum, hare, squirrel, the large black and tan fox, and an occasional panther. The birds are the wild turkey, quail, wild pigeon, or dove, snipe, woodcock, several varieties of ducks and teal, pelican, large and small white and blue heron, egrets, sand cranes, red ibis, pink and other curlew, plover, lark, oyster bird and reed bird. The fishes are bass, pike, roach, bream and sheepshead in the fresh and brackish water, and enormous sea fish in great varieties in salt water.

During our stay at Waverly, we occupied our time in fishing and shooting. The hunting of deer, 'coons, and opossums is carried on principally at night, when it is called "fire hunting" or "shining." I will endeavor to describe the manner in which these hunts are conducted. A dark night is always the most favorable for the purpose. We leave the house as soon as the darkness sets in, the leader carries on his shoulder a pole, at the end of which is an iron pan about eighteen inches square containing a few pieces of pitch pine wood which, when lighted up, serves as a torch or flambeau; behind him follow the sportsmen with their loaded guns, accompanied by a couple of deer hounds, the utmost silence being maintained, for fear of disturbing the game. Long tramps are made through the woods, until the feeding grounds are reached, when great care is taken to observe any shining eyes. The reflecting light causes the deer to stand still, and gaze at it, their eyes appearing like gleaming stars. When within about 60 or 80 yards, a motion from the hand of the leader will direct his followers to where he observes the animal's eyes. Aim then should be taken between them, about two or three inches lower than they appear, when, if the shot is well directed, it should strike the animal in the breast. As there are a great many cattle roaming over the same grounds, care must be taken not to mistake them for deer. For one who is accustomed to this kind of hunting, it is very easy to distinguish the difference, as cattle's eyes are set further apart than those of deer. My companion, on his first expedition, not properly understanding this mode of distinguishing between a deer and a cow, and being eager to get a shot, unfortunately hit a cow, but luckily did not kill her. Of course this matter was hushed up and kept very quiet while we were in Florida, for there is a very heavy penalty incurred by killing or injuring other people's cattle. When a deer is struck, and not killed outright, the dogs will follow it till it falls from exhaustion; the sportsmen being guided by the hounds' cries, soon come up to the wounded animal and quickly dispatch it.

Raccoon hunting is conducted in a very simple manner. As soon as the dogs get on a fresh scent, they follow it until they come up to the 'coon, which generally takes to a tree, and quickly reaches one of the topmost branches, crouches as close to the end of it as possible, the dogs meanwhile yelling at the foot of the tree and making futile attempts to climb it. By the reflection of the torchlight, his 'coonship is discovered and easily brought down by a shot.

The opossum occasionally takes to a tree, but often, when hard pressed, throws itself on the ground and feigns death, when it may be taken hold of and knocked about considerably without manifesting any symptoms of life, but the moment you turn your back or get out of reach off he bolts. It is from this trait of the opossum that the negro expression of "playing 'possum" originates, and it is quite a common thing, if a negro pretends not to hear or take notice, for another to say, "None of your 'possum foolin'."

Snipe are to be found on the swamp lands, but the swamps are so numerous that one seldom finds many birds congregated in any one place. From fifteen to twenty is a very fair bag for an afternoon's shooting.

One day, while hunting wild turkeys, I came across several snipe and made a very good bag. On our way back my guide recommended me to keep one barrel of my gun loaded with buckshot, as, in beating about the palmetto scrub, he might possibly start a deer, if not some other large animal. We had not proceeded far when I flushed a snipe, at which I fired, the report starting some twenty buzzards about fifteen acres off. Knowing these birds to feed on carrion it struck me that they had probably been disturbed from a meal off a deer we had wounded two days previously, so I hastened to the spot from which they had flown in the hope of procuring the antlers. What was my astonishment in finding, instead of a deer, an alligator apparently dead. "Oho!" said I, "this is what the buzzards are feasting upon, eh!" I approached the beast and obtained a good view of him, but could not find any traces of the buzzards' work. I had heard that alligators occasionally crossed over from one swamp to another, but it did not strike me that this fellow, seemingly dead, was on his travels.

I came nearer and poked him with the muzzle of my gun—he moved—and so did I, thinking that in this case, discretion was the better part of valor. He turned with distended jaws, and hissed, making a sound similar to that of a goose, but much louder. I leveled my piece when about ten feet off, and gave him the charge of buckshot in the head. He lashed his enormous tail around at a tremendous rate, but I saw that I had severely injured him, and that his struggles could not be very prolonged. I called my man, and we had quite a war dance over our prize. After he was dead my man opened the reptile's mouth, which was found to contain quite a number of small fish or minnows. This accounted for his, as well as the buzzards' presence, in this dried up swamp, for they had been feeding on these little fish, which had congregated in the last damp spot, about twelve feet square, which remained after the water had evaporated from this low ground during the several hot days we had recently experienced. We covered him up for the night with palm leaves, and next morning my man skinned him as far as the head, and brought it to the house, a distance of some three miles. I spent two days preserving the head and skin, which I afterwards packed up and brought home with me, and there he is, filled with sawdust, his damaged head being patched with black putty.

We drove over to Port Orange, a small settlement on Halifax River, the head waters of Indian River, or rather a salt water lagoon, for it is only separated from the Atlantic Ocean by a strip of sand, about three acres wide. Halifax River is about one mile broad, dotted with oyster shoals, which, at ebb tide, appear like low barren islands. There were some trees growing upon an island, the resting place of hundreds of pelicans, cranes, and herons. The waters teem with mullet, red snapper, whiting, pompano, sea bass, and many other of the finny tribe, besides sawfish and sharks, easily caught by hook and line or nets.

Green turtles are very numerous near Mosquito Inlet—some of enormous size—and turtle hunting, as well as searching in the sand for their eggs, forms a very attractive sport, 150 to 300 eggs being frequently found in a nest. They are excellent eating, and are greatly relished by epicures, as is the turtle itself. Oysters in countless millions line the shores and bottoms, and can be raked up anywhere.

We hired a sailboat and enjoyed a very pleasant day in the neighborhood. Here we came across a former resident of Laprairie, opposite Montreal, a railroad contractor who has resided in Florida for many years. He inquired after many Canadians with whom I am well acquainted, and appeared to enjoy talking of Canada very much.

After an agreeable stay of ten days at Waverly we decided to return to Jacksonville and go to Cedar Keys, on the Gulf of Mexico coast, as advised by Dr. Kenworthy. We parted with our pleasant hosts and bade good-bye to the settlers among whom we had enjoyed a very pleasant sojourn.

We drove to Enterprise, where we took the steamer Anita for Jacksonville, stopping over night at Enterprise and Pulaska, where we visited two of the large fashionable hotels, filled with guests from all parts of the North, many of whom said they came there for their health, but I must say they all looked pretty hearty. As I had gone there for the same reason, I did not make any remarks about others, not caring to draw any upon myself.

Arrived at Jacksonville, among an accumulation of letters from Canada I found one which brought me to a realization of the fact that *"l'homme propose et le gouvernement dispose,"* and all future plans for further travel in Florida were abandoned. My companion took the route via Cedar Keys to Cuba and Mexico, and I came home with my alligator.

THE SAME OLD STORY.—Mary possessed a diminutive sheep, whose external covering was as devoid of color as the congealed aqueous fluid, which occasionally presents insurmountable obstacles to transatlantic railroad travel on the Sierras. It tagged her to the alphabet dispensary one day, which was in contravention to the established usage, and caused the other youthful pupils to cachinate, and skyfugal, to see an adolescent mutton in an edifice devoted to the dissemination of knowledge, and so the preceptor ejected him from the interior. But he continued in the neighborhood, and remained in the immediate vicinity until Mary once more became visible. "What caused the juvenile southdown to hanker after Mary so?" inquired the inquisitive children, of their teacher. "Why, Mary bestows an unalloyed affection upon the little animal, to which the wind is tempered when shorn, as you must be aware," the preceptor with great alacrity responded.—ANON.

THE HEART OF THE WILDERNESS.

THIS immediate region, about Newcomb, New York, is visited only by a few who love to recreate quietly, and a little information as to what is here, and what can be seen and done, will be of interest.

For geographical information see any good map of the Adirondacks. I suggest that the following facts be noticed while the map is in your hands: First, Newcomb is in the heart of the wilderness; second, it is in the region of the headwaters of the Hudson, where lakes and streams abound; third, by a delightful route with easy carries you can reach Long Lake, whence access is easy to the region of the Raquette and Blue Mountain lakes to the south, and the Saranac region to the north.

We reached Newcomb by railroad to North Creek, where we were met by our landlord with a smart team and a Courtland wagon, who gave us a ride of thirty miles—wild enough, rough enough, beautiful enough, and long enough to satisfy the most fastidious. There is nothing quite like a thirty-mile ride over a mountain road The life of every lover of nature and of every dyspeptic will be forever incomplete without this experience. Such a ride here pays, you get so much for your money. Besides a good appetite, sore joints and a buck acne, if Landlord Williams meets you, or any other imported Vermonter or well-bred native, you will learn much history and hear of the exploits of famous hunters, not omitting those of himself. Stories you will have in abundance, and good historical ones too, based upon facts probable and improbable. Indeed, by a little judicious questioning you may be pretty well up in the lore of the region by the time your ride ends. At the Newcomb House you will have a thoroughly good table, good air and superb views—in a word, you will find enough to eat and enough to do, the two essentials of happiness in this country.

To the east lies Marcy and his compeers; to the north the most prominent is Santanoni; to the west, near at hand, is Goodnow. These grand old lords of the wilderness you may admire as you sit on the piazza and smoke your after dinner pipe. If this does not satisfy you, bestir yourself and climb Goodnow. It will take you but an hour and a half, and you will get the best view for the length of climb we have ever seen. At a distance the monarch Marcy towers in his magnificence, and his subordinates fill the horizon. To the south you will look down upon a sea of spruce tops, an unbroken primitive forest as far as the eye can reach. So much for mountain scenery. Lakes are abundant. From Goodnow you can count nine, and several others only a few miles distant you cannot see. These are all beautiful, but Rich and Catlin lakes excel. We camped a week upon Catlin Lake, and unanimously voted the lake unsurpassed in beauty and unexcelled as a camp ng ground.

How about the sporting? Well, come up in May or June and you may catch as many trout as you choose. At this season brook trout have left the rapids and are up stream in the spring holes, and the trout can hardly be beguiled out of the deep waters. You must fish if you catch trout in August. One persistent fisherman, however, came in several times with ten pounds caught in the brooks. Hunting is good everywhere; in some places you will find game. It depends upon what you hunt and how you hunt it. Partridges are plenty. Bears are a little scarce this year. Not a good year for bears. There are a good many deer, and if you hire guides enough and stick to it you may be sure of getting one. Since we came venison has been on the table regularly, and we have done our share of the providing. Later in the season, when the deer will swim, there will be a chance for some good sport. Of course you will take your chances. If all the guides of Newcomb or any other region would agree not to slaughter any game, and not to kill the deer early in the season, this game would soon be abundant. Indiscriminate killing for the fun of it ought to be prohibited by public sentiment as well as by law. The guides have this matter entirely in their own hands, whatever the conscript fathers may enact at Albany, and if they know what is for their own interest they will protect the game.

Come in season and you may catch fish—trout, large and small, pickerel, perch or bullhead, with an occasional bass. We trolled half an hour one day and landed three pickerel which weighed together over seventeen pounds. If you want to get away from work and rest out, and allow nature to recreate your tired brain and limbs, come hither. When you have snuffed this air for a week you will wonder if you ever had an appetite before, and a five-mile walk will hardly be enough for exercise. Leave all your good clothes, your society manners and customs, and come here where you can tramp, eat and sleep with neither cares nor creditors to molest or make afraid, stay a month, and go home aged sixteen.

H. H. K.

NEWCOMB, Essex County, N. Y., Aug. 28.

PUT OUT YOUR CAMP-FIRES.—In his admirable "Guide to Moosehead Lake and Northern Maine," Mr. Lucius L. Hubbard gives this sound advice: "The attention of campers is earnestly called to the subject of their camp-fires. Too much care cannot be exercised to see that these are thoroughly put out before the camps are deserted. The danger lies not so much in leaving a few smouldering brands in the middle of a bare fireplace, as in allowing to remain unextinguished a single spark in the turf at its side. It should be the tourist's last care, before leaving camp, to apply plenty of water to the soil around his fireplace, which nearly always is composed of dry moss, leaves and other inflammable matter, frequently to the depth of a foot or more. A spark lurking in this mass for days undetected may be fanned into life by the next wind that blows, and the mischief which ensues may be irreparable. Too much stress cannot be laid on this matter. The writer knows of cases where campers have taken the utmost care, apparently, to leave not a single live ember behind them, and yet ravaging forest fires have been proved to have originated from their camps. Thousands upon thousands of dollars' worth of timber have been thus destroyed; and if we only remember that in burning a man's trees we do him as much harm as if we burned his house, it will spur all conscientious men to treat the forests with perhaps even more consideration than they would their own property. It is no mean privilege we enjoy, of camping, hunting and fishing on other men's land. Let us then render back at least this one duty of putting out our camp-fires."

OLD POINT COMFORT, VA.—There is fine fishing all around—crabs by the millions at the wharfs. Spots and bay mackerel in profusion in the deep water by the Rip Raps a half a mile away, and sheepshead and hogfish a few miles distant. The angler can have the best of sport if he is fond of ocean fishing.—CHASSEUR.

Natural History.

SNAKES AND SNAKE BITES.

I AM like Sterne's starling—"I can't get out." The best I can do is to get a week out now and then, watch a lick, put out set-lines, lay myself out on a nice camp, and leave it just as I have fairly got my woods legs on.

It is one of the mysteries that odd bundles and packages of toil and trouble should quietly and silently fasten themselves on our shoulders just when we are least able to make a heavy carry, and through no fault or failing of our own.

Shall we understand it in the near future?

Shall we ever fairly understand why a human biped with average brain power can be content to exhaust a life in grasping and grabbing for certain metallic discs, represented by 412½ grains of silver or 25.8 grains of gold, ignoring poetry, philosophy and all that is beautiful in nature? Knowing, too, that he cannot pack a dollar over the last carry, and that the more he leaves the more it will curse his heirs. And I am trying to moralize on this brightest of September mornings! (Is my liver all right, I wonder?)

If I can't get out it is well to live in a region where every day brings some ripple of sport or natural history. For six weeks the berry season has been "on," and, as the berries are found on the mountains; furthermore, as the lively rattler is found among the berry bushes, it follows that snake stories are in order, and plentiful enough—snakes and stories. On one huckleberry mountain, where the ground is, or has been, blue with berries, as many as forty teams have been driven to the ground in a single day. And still the berries are plenty; also the snakes. There is not a day on which several large rattlesnakes are not brought off the hills, pendant from the tail-boards of lumber wagons. Only the largest are saved in this way. One evening last week three teams came through town thus adorned. One had a big yellow rattler hanging from the tail-board five feet long, fifteen rattles; another two rattlers, four and a half and four feet eight inches in length, nine to twelve rattles respectively; another, a livery team from town with a jolly party of six, had a poor show of berries but three rattlesnakes banging from the counter, all black ones, and none over four feet in length. The party claimed to have found a "den." They told stories of narrow escapes. They tried to run their yarns on me. I advised them to start a soap factory; they could get their grease from fat rattlesnakes, and it wouldn't cost 'em a cent for lye. So far no one has been bitten. But as we average one case of snake bite per annum in this county, I am only waiting for the next victim. And isn't it strange that men are bitten in New York by pet snakes and either die or come very near it, while men are bitten under a blazing sun on hot barrens, far away from medical aid, and always recover, without the loss of a finger?

Perhaps I am about the only correspondent of FOREST AND STREAM who has ever been fairly, squarely and deeply bitten by a full-grown, healthy rattlesnake.

And because of this; and because, taking my own notions of treatment in such a case, I was rowing and fishing on Devil Lake four days thereafter; and for that I have taken a more lively interest in the serpent tribe than in any other branch of natural history from my youth up, I propose, at an early day, to write an article for FOREST AND STREAM on snakes.

My observations extend from Minnesota to Maine; from St. Louis on the Mississippi, to Santarem on the Amazon (or Madeira). And I have not seen a tithe of the poisonous snakes that infest this earth. But, so far as I have seen and known, I may speak. Perhaps I can give a useful hint to someone who has fooled away less time on such matters than I have.

P. S.—I am almost ashamed to say that, while we can hold our own on copperheads and rattlesnakes, we are fearfully deficient on that grandest of ophidians, the terrible hooper. It is no fault of ours. It is owing to the unfortunate conformation of the country. Our society, the "Natural Naturalists," have studied this question deeply, painfully. We have sought in vain. We have offered a reward of $100,000 (in ten centennial instalments) for a genuine hoopsnake, but there is no response. We do not wonder at this. When the Smithsonian Institution, backed by the United States Government and what small change is left in the Treasury, cannot obtain a simple, common specimen of natural history, is it likely that a village society in the backwoods is going to succeed?

At our June meeting our scientist, B. Sickle, was deputed to collect all possible information regarding the hoopsnake, to add his own deductions as an engineer, and to report at the August meeting. I append his report. (I ought to add that B. Sickle handles the heavy coal train that comes down the mountain every day from Antrim to Wellsboro, with from 40 to 80 heavily laden coal dumps. That, in icy, slippery weather he always comes through safely; and that the "company" give him credit for sound sense.) I will say again, that I have known him for years, and will put his plain horse-sense against all the false, finniken notions of college boys, which the same I saw enough of in the "Scientific Commission" from "Cornell University" in 1870 on the Amazon River.

REPORT OF B. SICKLE.

To the Society of Natural Naturalists, Wellsboro, Pa.:

I have to report on hoopsnakes. First. Logic is logic. There is not, and never can be, a hoopsnake. No such reptile can or could ever make headway on any possible ground. A simple, self-moving circle, is impossible on smooth surfaces. A bicycle goes along by stiff, unbending rims, a balance bar, two cranks moved by a muscular rider, who must have practice and skill, and he must have a gradient not exceeding twenty degrees, with smooth, hard surface. Also, he must have a small stern wheel, or he cannot go at all.

Second. The bicycle cannot go in a clover field, nor in a common pasture, nor even on a village lawn. On a mountain side, or on a prairie even, you cannot roll an iron hoop two rods. An iron hoop is stiff, but you must give it an impetus to make it roll. Then, it will only go on a hard, smooth surface. Where is your balance and impetus on the hooper? Where is your rider, balance bar and stern wheel? And a snake is limber—pliable. Even if he could go, where is the motive power?

Third. Supposing such an impossibility possible, it would call for a country smooth as a floor, with a down grade to every point of the compass, or the reptile could never make a start.

Fourth. It is a question for fools, and not worth the notice of any man who understands the first principles of natural philosophy.

Fifth. If the society has any more such fool questions to ask, please propound them to my Chinese chore boy, Ling Sec.

B. SICKLE,
Scientist to the Wellsboro Natural Naturalists.

P. S.—Your Manitou correspondent, "S. E. B.," speaks of a mysterious snake which he killed at West Branch, Mich., "resembling an adder, but having a hard, sharp horn at the end of the tail," etc. You add, in a foot note, "We cannot say what the snake was from the description. * * There is no snake which has a sting in its tail nor in its tongue, as some persons imagine." You are right. But you ought to recognize the reptile at a word. It is the milk snake, *Ophibolus eximus*; one of the smoothest, handsomest, most harmless of all the ophidians. All mature males of this species have a hard, horny spike at the end of the tail. An old male will often have a double spike, each branch about an inch long, and quite sharp, hard, and bony. They have a trick of vibrating the tail when frightened or angered, just like a rattlesnake. This, among dry leaves or grass, makes a whizzing noise, that is apt to be rather suggestive to a neophyte. It means nothing that I could ever see.

I happened to catch a fine specimen some four weeks ago (single spike). I carried him home, measured him as well as I could, tormented him to madness, and then took him into the shanty and suffered him to bite me on the back of the hand and arm until he was tired of it. Although a good-sized specimen, he could not draw blood one bite in three, and all his best biting did not raise half as much inflammation as a single bite from the North Woods black fly. He measured three feet ten inches.

If FOREST AND STREAM would think a specimen of *Ophibolus eximus* worth the trouble, I dare say I could send one before the season closes—probably a double spike, pretty certainly a single one, and alive.

In closing, I rise to say I have no prejudice anent the serpent tribe. One and all, they embody Hogarth's lines of serpentine grace and beauty. They are a persecuted race, and they are useful.

I have voluntarily taken bites from the largest specimens of the garter-snake, the green-snake, water-snake, black-snake, and milk-snake. I was a little shaky on the water-snake. He was a huge, dirty-looking fellow, and mad as a hornet; he bit savagely, and hung on like a terrier; but his bite was harmless. I have a *peachant* for testing the bites of all innocuous serpents; and of the scores of bites which I have taken voluntarily, I can testify that no one caused as much pain or inflammation as the single bite of a black fly. As to the bite I got from a rattlesnake, perhaps you will agree with my friends, who ask, with super-human humor, "Did the snake live? What did they want a doctor for—the snake?" etc., etc.

Well, the snake turned out to be the only one of that party who needed a doctor. NESSMUK.

WELLSBORO, Pennsylvania, Sept., 1882.

The man who should read a daily paper in front of a map of the world and mark on it every point of interest as he reads, would soon find himself educated, and also find his map had disappeared in a bed of chalk. There is hardly a spot on the earth that would not be brought under his eye, and the simple record of facts thus gathered as the world moves on would show what it really is—one great source and one great reservoir of human knowledge. It is this characteristic which makes the FOREST AND STREAM, aside from sporting matters, a most valuable record of the true phenomena of organic life. The great beauty lies in the simple story of what is seen and done in the woods and on the water, and sometimes in that element now grave and now humorous and gay, and pardonable if the coloring is brilliant without distorting facts. Another thing is, what a man writes under his own signature will not often be "appropriated" by book compilers as their own, or credited in some obscure corner seldom seen. There is also amusement continually cropping out, marks of ignorance in high life we should hardly expect. One of the most common is disbelief in what one man of veracity has seen and done, while the other has had no such experiences. I once heard the president of a flourishing club room deny, as false and incredible, what your kennel editor had seen and done, and which your humble servant could swear to.

Some thirty years ago, in October, I unwittingly killed a blacksnake eight feet long (the black racer), from whose stomach I took seven red squirrels. I say unwittingly, because, like the Irishman, "I saw a head sticking out of a woodpile and hit it." The "original" *Springfield Republican* published dimensions and contents, which were copied into the New York *Journal of Commerce*. The next *Journal* contained the announcement from some "parlor naturalist" that it was contrary to the nature of coluber to eat so much; and would they please ask the *Republican* to shorten the tale of squirrels by six. I replied that the request could not be for a moment entertained, but for his especial edification I would state a fact not generally known, that the blacksnake, before retiring to winter quarters, lays in a stock of provision, squirrels, mice and frogs, provided he can catch them. In the present instance the snake was as stupid as a piece of cable, and could have taken the squirrels only by fascination, as all the circumstances indicated. H.

A correspondent sends in this clipping from an article which appeared originally, we believe, in the *Brooklyn Eagle*: "You have heard of hoopsnakes?" "Yes, often." "Just so. Not long ago we heard a fearful row in the cellar one night. It sounded like a rock-blast, and then there was a hiss and things were quiet. When I looked in the morning the cider barrel had busted. But we didn't lose much cider." "How did you save it?" "It seems that the staves had busted out, but before they could get away four hoopsnakes coiled around the barrel and tightened up and held it together until we drew it off in bottles. That's the way we found 'em, and we've kept them around the house ever since. We are training them for shawl straps now. Does that strike you for an item?" "Enormously," we replied.

FOOD OF SPARROWS.—Washington, D. C., Sept. 7.—On September 5 I noticed one of several Anglo-American sparrows apparently hunting for something to eat, on the east side north of N street opposite to No. 1,311, with a grub or caterpillar hanging from his bill. He stood till I came within three feet of him, and when I stopped to look at this, to me, absolutely new sight, he moved only eight or ten feet, and then with some little difficulty swallowed the grub. The others were apparently hunting under the shade trees for the same food, so I am satisfied that this unpopular little meddler will sometimes eat worms from our shade trees. All justice be done him.—M. C. MEIGS.

A SWALLOWS' ROOST.

FOR several years past swallows in countless numbers have congregated in the late summer and early autumn upon the farm of Mr. James Babcock, in the northerly part of the town of Westerly, R. I. The Providence *Press* thus describes them as seen on a recent visit:

"About 500 feet from the farmhouse lies a maple grove, covering a swampy, undulating tract of land of about five acres in extent. Half an acre of the southwesterly corner of this grove is the location of the 'Swallows' Rest.' At the time of his arrival the reporter had noticed several swallows flitting here and there, but their number was not sufficiently large to attract attention, unless specially remarked upon. As minutes grew, however, the number was perceptibly increased and was soon sufficient to be considered unusual. At 7 o'clock their number seemed legion. One could think of nothing but a snow storm with black flakes. It was a sight never to be forgotten. Still the new-comers were streaming in from all directions, and at 7:15 the multitude had become dense. About this time there was a sudden cessation of the various flights, and a general circular motion of the whole company was apparent. Round and round they flew for several minutes, drawing closer and closer together, when all at once the center began to sink toward the tree tops. Then, with almost the rapidity of thought, in funnel-shape, the whole host vanished, circling, in the tree tops, with a whirring of wings distinctly heard, and soon the air was almost still, broken only by the greeting chirps of the late-comers, who were straggling in in small groups and singly. These last arrivals did not pause to circle about in the air, but flew in toward the grove as straight as an arrow, and vanished among their settled brothers with lightning rapidity.

"Drawing now still nearer the grove, the rustling and chirping of the birds among the leaves and branches, as they settled themselves in comfort for the night, could be distinctly heard. Occasionally a louder, sharper, and more spiteful chirp than usual betokened a little dispute about a roosting place, but generally the little creatures, as well among the branches as before in their tortuous flight, be haved toward one another with the utmost good nature. Once in a while a group of hundreds, startled by some sound or not content with the spot in which they had alighted, would rise, circle about the grove for a moment or two, and then drop rapidly into the branches again. One of these groups, acting on this night in a somewhat unusual manner, as Mr. Babcock said, rose to a great height above the grove and there circled about for more than fifteen minutes, until their great height and the approaching darkness made them almost invisible, but finally they too descended with startling suddenness into the tree tops, and then, all the late-comers having also arrived, scarcely a bird could be seen. And as the darkness increased and daylight gradually faded the rustling and chirping of the denizens of the grove grew less and less, until the birds were wrapped in peaceful slumber for the night.

"'How long has this thing been going on?' said the reporter, as the hospitable farmer accompanied him away from the grove. 'Well,' said the latter, 'forty years ago there wan't a bird to be seen bereabout—that is, no more'n anywhere else. This flying in o' nights has only been going on for fifteen or twenty years. And it's only in the last eight or ten years that they've been so awful thick in the grove, so as to be such an uncommon sight. Of course, there wasn't any such number at first, but they kept increasing every year, with the young ones hatched out and the new ones picked up, till now, for several years, they have been coming here in this big crowd you have seen to-night, only I think there's more this year than last. There's more every year. They're the common, white-breasted barn swallows mostly. Still, about a third of them are martin swallows, and I see several hundred blackbirds go in with them every night.'

"'How early in the season do they begin to come?' 'Well, that depends some on the season. This year it was late, you know, and they didn't come till the last week in July. Usually, though, they begin to come about the 15th or 20th of July. They don't all come at once, of course, but in a week after the first night the ranks are pretty full. Then they come right along every night until about the middle of September. People living at Norwich, Watch Hill, and at points in all directions within twenty miles of here, have told me that at certain hours every afternoon in the season swallows in groups or straggling along could be seen headed in this direction. And, by comparing time-pieces, they have been traced along so that there can be no doubt of their coming here from long distances.'

"Here the reporter bade Mr. Babcock good night and went down to the hotel, to return to watch the birds out in the morning. He had been told to be back surely by 5 A. M. It was 4:45 when he arrived, and all was quiet about the grove. Drawing nearer, however, rustling and chirping among the birds was perceptible. Soon two or three groups, of perhaps a hundred or two each, rose from the grove in succession, and flew away toward the southwest. Just as the distant town clock and mill gong together rang out the hour of 5 o'clock a whirring sound, as of a distant waterfall, was heard among the grove trees, and eight or ten seconds after a perfect cloud of swallows rose in sight, and in a line perhaps 200 feet abreast, struck out directly toward the southwest. When the head of the line had gone perhaps 1,000 feet from the grove, and while birds were still emerging from the trees the leaders suddenly took a spiral course up into the air. This had the effect to bring the birds into a circling group, as just before their descent the previous night. No more birds now came from the woods, though it appeared to the reporter that not more than one-third of the whole number could have arisen. But this group continued in its rising, circling flight, and soon began to spread in all directions. The spreading continued until nearly all the birds had vanished.

"A minute or two after there came from the grove another whirring sound, much louder than the first. Another cloud of birds arose, fully twice as large as the first, and took the same line of flight, for about the same distance. But, instead of circling about, they steadily rose and began to scatter. It was soon noticed that they were drawing together again, and finally, with scarcely a moment's warning, returned with a rush to the grove, and resumed their positions in the trees, evidently dissatisfied with their first attempt at flight. This, as Mr. Babcock afterward told the reporter, is a common occurrence; the birds sometimes trying three or four times before they take a final departure. Especially in stormy or foggy seasons do they delay, sometimes until nearly 7 o'clock. Finally, however, this second group emerged with another whirr, flew directly southwest and rose in the air as at first, scattered in all directions, and were speedily gone. Only a few stragglers now remained, and they flew in and out among the branches for quite a while. When the reporter left the grove the number of birds visible was not enough to cause remark."

TRANSPLANTING QUAIL.—Rockland, Me.—My first attempt at transplanting quail was made a long time ago when a boy. On returning from a visit from Southern Massachusetts, I took to Lowell, Mass., three quail, which I liberated, and though I never saw them again, I have no doubt helped in a small way to restock the vicinity with game. Within a few years I have tried to introduce both the foreign and domestic quail. In the spring of 1879 we liberated one hundred migratory quail, and in the spring of 1880 one hundred more, and after careful inquiry I cannot feel satisfied that one of them has ever returned. The question arises, what has become of them? I have also liberated a few native quail, but they succeeded in getting through the winter, until the last winter. I have been told by Mr. E. P. Walker, who lives on an island about ten miles from here, that the few pairs which I sent last spring bred, and notwithstanding the heavy snow storms we have had, that they had a flock of sixteen, which they fed through the winter. I think the parent birds came from North Carolina. I had three from the same lot, which I kept in my kitchen all winter, and knowing they came from the South, I dared not risk in an outhouse, besides, I enjoy having them where I can watch them and hear their different notes, and I have learned to imitate their call so true that they answer back, and they make a great many notes that I never heard them make in the field. Last year I tried for the second time to breed quail in confinement, and though I failed, I succeeded in hatching four eggs under a hen. Two of them birds got out from under the hen in the night, and when I found them in the morning they were so chilled that they showed no signs of life, but I took them into the house and warmed them back to life, but they were very feeble and only lived a couple of days. The other two were smart, but owing to the lack of sunshine, improper food and unknown causes, they only lived a week. The experience is something, however, and I mean to try again. I got from two hens last year about forty eggs, but only set two hens on about ten eggs each, and though the last hen was the smallest, the best color, the other being white, at the expiration of her setting time I found a few dead chicks partially hatched and a very foul nest. It was now September and too late to try again. It is queer to me why people who have a better chance than I have do not try to raise quail in confinement. I have to get my quail from a long way off, have half of them dead on their arrival, and nearly all of the remainder die after reaching here, with wagons rumbling by all day, with cats to sit and eye them through the slats, with no nice sunny place free from cats and rats where they can scratch unmolested. What a pleasant occupation and pastime for a woman who loves pets. If any of your lady readers wish to try it I will give the benefit of my experience, and I assure them there is a great deal of pleasure in it—the profit is to come.—NUFCED.

THE JAGUAR, OR AMERICAN TIGER.—Colonel Brackett, U. S. A., has recently published a paper on the jaguar, *Felis onca*, which is found, he tells us, in Western Texas as well as in South America. He describes it as the largest and most formidable of American cats, measuring four or five feet to the root of the tail, that member being two feet long, or seven feet in extreme length, and says it is little inferior in size to the Asiatic tiger. One of the best accounts of the Bengal tiger is to be found in a work published by the Harpers called "Sport and Work on the Nepaul Frontier," in which is given the average length of fifty-two tigers as nine feet, six and one-half inches. The largest of them was eleven feet five inches long. So that if Col. Brackett's estimate of the size of the jagnar is correct, the Bengal tiger grows to be fifty per cent. larger than the former animal. The cougar, puma, or panther, *Felis concolor*, grows to be much longer than seven feet. A panther skin from New Hampshire measured seven feet eight inches; one from Florida nine feet three inches; one from Colorado eleven feet two inches; while a mountain lion, another name for the cougar, which was lately killed in Colorado measured eleven feet three inches, or within two inches of the length of the largest Bengal tiger. The cougar or panther is a longer and more slender animal than the jaguar, but much less muscular and robust. Many years ago I lived in New Grenada, one of the United States of Colombia, where the jaguar was common, and was often known to kill and carry off a horse or a bullock. The cougar was also known there under the name of lion. It seems true that Col. Brackett has underestimated the size of the jaguar, and the artist in the illustration of it has given it a bushy tail, which is incorrect. I have been told by an experienced and truthful hunter in South Florida that a very large spotted animal of the cat kind had been seen there by him, which he took to be a jaguar. A two-year-old steer was carried off, and tracks of great size were found, showing that the steer was taken clear of the ground, in great leaps. Not long after, my informant saw a great spotted beast cross a road in the woods, so near that he had a good view of it; he was familiar with the common beasts of chase in Florida—panthers, wolves, wild cats, and bears, and was certain that this was something different. He had no gun with him at the time, so he lost the chance of identifying the animal, but said that it looked so large and formidable that he would not have liked to attack it alone.—S. C. C.

BREEDING OF QUAIL.—Baltimore, Sept. 2, 1882.—*Editor Forest and Stream:* In your issue of 31st ult., "J. E. S.," of Oscaloosa, Ia., states: "In favorable seasons the average pair of quail will raise two or even three broods, of say, a dozen each, which is doing much for the sportsman's pleasure in a very happy and appreciable manner. *Last October I flushed quail scarce a third grown, and only able to fly a few yards, which must have been the third brood.*" Italics mine. I have been a close observer of the animal kingdom for twenty-five years, was born and raised on a Southern plantation home, resided in North Carolina, where quail could be purchased in any quantities at thirty cents per dozen. I never knew quail to lay later than July. Generally from the middle of June until the middle of July in that section of the country, or during wheat-cutting time. I do not suppose anyone will deny North Carolina's supremacy as a quail-producing State. As an illustration of the fact that quails are to be found there in countless thousands, I will state that I spent ten days in the old North State last season, and to my own gun averaged twenty-nine birds daily for every shooting day, and am by no means a first-class wing shot. I took a tally one day and counted twenty-seven separate and distinct coveys. Now, I will come to the point. I profess to know a quail when I see it, from a young one with the shell sticking on its head, reminding one of an animated pool-counter as it darts about among the cotton stalks, to the full grown ones that lie to Don's magnificent point in November. I never knew of the third nor even the second brood, nor do I believe in such nonsense. Until "J. E. S." came to the front I never heard such an altogether improbable story as a "quail too young to fly more than a few yards in October." When found, put it in a glass case with the "hoopsnake."—CHES A. PEAKE. [Ches A. Peake" is in error in assuming that because he has never observed a second brood of quail the birds may not breed twice. It is claimed by some that in certain localities quail regularly raise two broods in a season. If their nest be broken up it is probable that a second batch of eggs will be laid. There is no improbability about the statement of "J. E. S." quoted. We have seen quail later than October which were not grown.]

THE "BUCK FLY."—Huntingdon, Tenn., Aug. 27, 1882.—*Editor Forest and Stream:* I notice in the New York *Herald* that parties have been discovering under the skins of rabbits and squirrels a specie of maggot or striped worm which appears to them and to the *Herald* to be worthy of publication. This is probably an interesting matter for the investigation of theorists and scientists, but practically the existence of such parasites has been known for an age, and perhaps a dozen ages, by all practical hunters and sportsmen. In the autumn months these worms may be found in Tennessee buried under the skins of nearly all wild rabbits, and infesting many squirrels, and are generally known here as wolf worms; and when their existence is developed the meat is not considered proper food. Now, while on this parasite question, I would say that a species of fly (known in the South as "buck fly") makes its appearance in Tennessee about November, which is reputed to be blown out of the nostrils of the male deer during what is styled the running season. Can you inform the readers of FOREST AND STREAM whether there is any truth in such an assertion? The fly is about the size of a small butterfly, with dark wings spotted with red; and the fly as he travels has an up and down motion something similar to the leaping of the buck as he ranges through the woods; and it is said that it never alights until death is at hand. Perhaps some old hunter can impart the desired information. Has any one ever found such flies or the maggots from which they are developed in the nostrils of the deer, and if so are they found only in the nostrils of the buck?—H.

CROW SENSE.—Lockport, N. Y., Sept. 11.—I can vouch for the statement made by W. W. C., in your issue of September 7. We have a tame crow that softens his cookies in the same way, and he has a queer way of drying himself after taking a bath. At three different times, when I have seen him trying to bathe in a dish that he drinks out of, I have caught him and put him in a tub of water from which our Irish setter drinks, and each time as soon as I released him he would start for the dog (that was lying in the grass) and would jump upon him and settle down and commence to flutter to dry himself. The dog makes no objection to the performance, but seems to enjoy it as much as the crow. I have never seen him dry himself in that way only when I have put him in that particular tub that he sees the dog drink from every day. Another peculiarity I have noticed, that when the crow scratches his head with his foot, he always puts the foot up over back of the wing. I have never seen it done by any other bird.—J. L. D.

WEIGHT OF OPOSSUMS.—Petersburg, Va., September 7.—I noticed in your issue of August 24 that some of your readers want to know the limit of weight attained by the opossum. Being something of a "possum" hunter myself, I'll tell you what I know. The largest one that ever came under my observation weighed, when dressed, twenty-one pounds. It was a boar, and you may depend on it we considered him some "possum." In dressing about one-fifth is allowed for offal, so he would have weighed gross from twenty-five and a quarter to twenty-six pounds. This weight was attained after having been confined in a ventilated box and well fed for about three months; the food given to him cost merely nothing, being principally chicken and turkey offal and kitchen refuse. The counties contiguous to Petersburg are teeming with deer, wild turkeys, partridges (quail, you call them), etc. Sportsmen are anticipating a good time this fall and winter.—G. T. J.

SWALLOW-TAILED HAWK IN FLORIDA.—Tampa, Fla., Aug. 28, 1882.—I notice Mr. E. A. Brown speaks of swallow-tailed hawk or kite being killed on his place last June at North Bloomfield, O. For the past two summers I have noticed a pair of same kind of hawks here on my place, and this summer I saw four of them, and judging from their actions take them for parents and young, as one pair were feeding the others. I am led to believe that they have bred in this vicinity. They have been quite a curiosity to me, and many a time I have felt like shooting and mounting them.—W. A. M.

QUAIL AND CHICKENS.—The Sacramento *Bee* says: "At the farm of W. Fern, just below the city, is a hen of the ordinary domestic breed with a brood (not a "litter," as our informant states) of fifteen chickens. Lately a quail, which had strayed from its brothers and sisters, made friends with the old hen and her family, and is now the boss of the whole business, having entirely supplanted the hen in authority over the brood."

RAIL SHOOTING.—Philadelphia, Sept. 5.—Thus far, although we have had good tides for rail shooting very few birds have been killed. The cause for this is said to be the violation of the law before the opening of the season, September 1st, when not a few rail were boated. There is a good crop of reed, and some birds bred here have all been shot by the law violators. We are now waiting for a flight, and good shooting need not be looked for before the run of afternoon tides. Reed birds are more plentiful than last season, but not yet in good order. Your New York readers who contemplate a trip this way for rail shooting should postpone it for at least ten days or two weeks. Grass plover continue to be plentiful around Philadelphia, but no one appears to start for them. The new dinkey skiffs that came into use last season are becoming more and more popular, and many are being built. Hen Young, of Philadelphia, who ranks as one of the best skiff builders about here was at first given to condemn them, but now declares them to be the best boat for rail shooting.—HOMO.

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

GAME IN SEASON IN SEPTEMBER.

THE following schedule exhibits the game now in season. (Also, in parentheses, seasons which open during the month.):

Alabama—Doves; (15th, quail).
California—Deer, doves; (15th, grouse, rail, quail, wildfowl).
Colorado—Deer, elk, antelope, mountain sheep, buffalo, bison.
Connecticut—Wildfowl; (12th, rail).
Dakota—Grouse, quail, snipe, curlew, plover.
Delaware—Woodcock, rail, reed.
District of Columbia—Woodcock, ruffed grouse, wildfowl, pinnated grouse, plover, reed, snipe.
Georgia—Wild turkey, quail, deer.
Idaho—Sharp-tail and pinnated grouse, deer, mountain sheep and goat, elk, antelope, buffalo, wildfowl.
Illinois—Woodcock; wildfowl, pinnated grouse, deer, wild turkey.
Indiana—Woodcock, wildfowl, pinnated grouse.
Iowa—Woodcock; wildfowl, pinnated grouse, elk, deer.
Kansas—Pinnated grouse.
Kentucky—Woodcock, deer, wildfowl, wild turkey.
Maine—Ruffed grouse, woodcock, wildfowl, plover.
Maryland—Ruffed grouse, wood cock.
Massachusetts—Ruffed grouse, woodcock, wildfowl, doves.
Michigan—Ruffed and pinnated grouse, woodcock, wildfowl, snipe.
Minnesota—Grouse, woodcock, quail, wildfowl.
Mississippi—(15th, meadow lark, deer.
Missouri—Woodcock, plover, meadow lark, dove, pinnated grouse, deer; (15th, wild turkey).
Montana—Fool hen, grouse, ptarmigan, buffalo, elk, antelope, mountain sheep & goat, moose, wildfowl).
Nebraska—Grouse.
Nevada—Elk, antelope, mountain sheep and goat, deer, grouse, quail, woodcock, wildfowl.
New Brunswick—Woodcock, wildfowl, snipe; (15th, moose, caribou).
New Jersey—Reed birds, rail, squirrel.
New Hampshire—Woodcock, plover, ruffed grouse, quail, deer, caribou, moose, wildfowl, squirrel, rail.
New Mexico—Grouse, ptarmigan, quail, deer, wild turkey, elk, antelope, mountain sheep, buffalo.
New York—Woodcock, ruffed grouse, deer, wildfowl, squirrels.
North Carolina—Deer.
Nova Scotia—Woodcock, wildfowl, snipe; (15th, caribou, moose).
Ohio—Woodcock, ruffed grouse, wildfowl.
Oregon—Grouse, quail, wildfowl, deer, moose, mountain sheep, elk, antelope.
Ontario—Woodcock, snipe, hares, wildfowl, pheasants, partridges, grouse, prairie fowl.
Pennsylvania—Woodcock, wildfowl, plover, rail, reed birds, snipe, squirrels.
Quebec—Deer, caribou, woodcock, wildfowl; (15th, ruffed grouse).
Rhode Island—Woodcock, ruffed grouse, wildfowl, plover, robin, meadow lark, hare, squirrel.
South Carolina—Deer; (15th, wild turkey, ruffed grouse, quail, doves, woodcock).
Tennessee—Deer; (15th, ruffed grouse, snipe, quail, meadow lark, woodcock, wild turkey).
Texas—Deer, ruffed and pinnated grouse, quail.
Utah—Elk, deer, antelope, mountain sheep, grouse, quail, wildfowl.
Vermont—Ruffed grouse, woodcock, wildfowl.
Virginia—Ruffed grouse, wildfowl, woodcock.
Washington Territory—Deer, elk, mountain sheep, grouse, antelope.
West Virginia—Pinnated grouse, deer, ruffed grouse, wild turkey.
Wisconsin—Woodcock, grouse, quail; (15th, deer).
Wyoming—Buffalo, elk, antelope, mountain sheep and goat, deer, ptarmigan; pinnated, sage and sharp tail grouse, ruffed grouse, wildfowl, plover, curlew, snipe.

☞ For exceptions, local laws, etc., see FOREST AND STREAM Schedule "B," issue of July 20, page 489

AN AMATEUR GUNMAKER.

READERS of the FOREST AND STREAM may recall a notice which appeared in these columns some time since of the work of Prof. Wm. B. Hall, of Lancaster, Pa., as an amateur gunmaker. We have just had the pleasure of examining two new guns recently completed by Prof. Hall, which embody in their plan something entirely novel in the construction of firearms. We are aware that this is saying a great deal, for a vast amount of inventive ingenuity has been expended upon such work. The records of the Patent Office at Washington contain thousands of specifications of inventions designed to improve the various styles of firearms; and efforts in this direction have never been more active than during the last few years since the introduction and adoption of the breech-loading systems. In the matter of a breech-loading small arm alone, there were filed more than five hundred inventions in the years of the war and up to 1871.

Several of the novelties and improvements in the construction of firearms have been conceived by persons who were not regular gunmakers. Another fact which is illustrated by the present instance is this, that men who are endowed with special musical gifts are apt to be also gifted with mechanical ingenuity.

Prof. Hall is a teacher of vocal music, having for a long time held that chair in the State Normal School at Indiana, Pa. With him mechanical work has been a passion from boyhood. Some years ago he fitted up a room at his home as a workshop, fitting it out with an extensive assortment of tools, many of which, true to his bent, he made himself. In this workshop the most of his leisure time has been spent, making this or that article, as his fancy dictated.

Having been a sportsman from early youth—his first hunting grounds were in that sportsmen's stronghold, Western New York—it was but natural that Prof. Hall's mechanical genius should be directed to the shotgun. Some seven years ago he determined that the only gun for him to use in the field was one which should have been constructed by his own hands. Acting on this happy thought, he secured a pair of barrels in the rough, and having made his own lock and the other parts, fitted them together. This first gun, like several others that followed, was simply a copy, built on the model of guns of well-known makers. He was soon convinced, however, that the mechanism of these models was too complicated, especially in the locks. He accordingly began to study the problem presented, and drew several patterns of new devices, all the time aiming to reduce the number of pieces to the minimum consistent with strength and safety. The result now attained is shown in the guns inspected by us last week. One of these is a semi-hammer gun, the rebounding lock of which consists of five pieces; and the other a hammerless, the rebounding lock of which is composed of four pieces. This is, so far, as we know, the simplest mechanism employed in the lock of any hammerless gun.

The gun is, besides being a most beautiful piece of work, a marvel of simplicity and safety in its action. The old style of mainspring having been entirely discarded, a straight piece of steel is substituted in its place, this single piece acting at once as the mainspring and the cocking lever. The locks are very easily and automatically cocked by the simple opening of the gun—or dropping the barrels. Opening the gun also automatically locks the triggers so securely that the gun cannot be prematurely discharged by any possible tampering with the triggers; and owing to the peculiar motion of the sear, the bent or notch in the hammer is so made that the sear hooks into it; this, with an additional safety notch in the hammer, renders a premature explosion by a jar also impossible. The hammer and sears are very solid, and the whole mechanism of the locks appears to us to be strong and durable, and not liable to get out of order.

The opening lever, which also moves the automatic safety stop which locks the trigger, is so placed that it may be easily reached by the forefinger of the right hand (or the hand with which the triggers are pulled), and after the gun has been closed again and the shooter is ready to discharge it, the same finger removes the safety catch and unlocks the trigger. The top of the gun, of course, is entirely free from projections of any kind. Much ingenuity is displayed by the maker in the various devices for ready compensation of the wear of any of the pieces which may be exposed to friction. In short, Prof. Hall's amateur-made gun has impressed us as a beautiful piece of mechanism. This arm, by reason of its simplicity, strength, durability, ease of action, and, we should add, grace of outline and beauty of finish, is one that cannot fail to interest all sportsmen who may be so fortunate as to have the opportunity of inspecting it.

The semi-hammer gun is in principle the same as the hammerless, save that it is worked by the semi-hammers, which, while to one accustomed to the usual hammers they answer every purpose of the old style, do not rise above the line of sight on the top of the gun.

To prevent any possible misconception, we repeat that Prof. Hall is a professional gentleman whose mechanical work is his rest and recreation in leisure hours. He does not make guns to sell; he makes them to gratify his own tastes; it is his amusement, and a most sensible and satisfying style of amusement. And having made a gun he knows how to use it. To bring down a bird with a gun of one's own invention and construction is, perhaps, the highest realization of the truest pleasure of the field.

THE CALIFORNIA ASSOCIATION.

I.—THE WORK UNDERTAKEN.

THE annual meeting of the California State Sportsmen's Association, at San Francisco, last May, was noticed at the time in this journal. The proceedings of the convention were subsequently published in pamphlet form for distribution. From them we give some extracts below, showing that the association comprehends the magnitude of the work it has undertaken, and also affording gratifying evidence that the California sportsmen are in earnest in taking up and carrying through this important work. In a letter to us Mr. J. Pitcher Spooner, the very efficient secretary of the Association, says:

"You will observe our State Association has much work in prospect as well as in hand, and we take pleasure in saying that we are just now becoming aware of the fact that our work is of some import. We find 'the boys' are waking up to the fact that our laws must be observed, and the 250 members of our Association are making strenuous efforts to show violators that laws not only exist, but are made for protection of game at certain seasons. Our sportsmen are thoroughly alive to the necessity of prompt action, and those who made a fine thing only a year since by illicit slaughter of game not find their vocation gone and themselves in momentary danger of arrest if they misbehave. These are, of course, most gratifying results to us all."

From Secretary Spooner's annual report read before the convention we take the following as exhibiting how the influence of the society is becoming a power in the State:

The few organized clubs not belonging to the Association are mostly working under our State by-laws and constitution, and they pay our body the honor of the compliment of saying "the State rules work well;" and these clubs are composed of sportsmen who are eager in their motives of preservation of our game and fish, and with our State Association Clubs have taken the pains to scatter your printed copies of the game laws wherever there seemed any reasonable good opening. We are firm in the belief that our game laws are not understood. For it is a most difficult matter to educate our citizens to the fact that there is any wrong in killing a deer, duck or quail, or taking from our streams a fish any time they wish to. The idea seems to prevail that game and fish are free of access in California any time of the year. A letter from Ferndale, Humboldt county, says, under date of January 23, 1882: "Deer, elk, duck and quail are taken whenever found, the whole year round, without any regard at all to the law." In fact the feeling is so strongly impressed that only last January, in a neighboring county to San Francisco, it was clearly proven in Court that a party was guilty of killing deer—killing more than one—of taking deliberate aim, and firing and killing, and as cool as possible reloading and firing and killing again and again. This evidence was most conclusive, and yet to the surprise and disgust of all our true sportsmen the verdict of an intelligent jury was "Not guilty." This case, well known to you all as the Hardy case, has been commented on by abler pens than most of us would suppose, and been printed all over the United States. Much good has accrued, and one notable conviction had in the McCutchen case, tried at Santa Rosa, September 5, 1881, for having in possession one dead female deer or doe. McCutchen plead guilty, waived time and was fined fifty dollars, which was paid. In this matter of furnishing evidence for this trial, as well as close attention to both it and the Hardy trial, your State Association made itself well known, and to those two trials must be given the credit for the scarcity of venison the past season. That venison does come to our cities is admitted; but not as openly as formerly. That deer are killed—and killed for their hides alone—we must admit; but under the laws as they now exist it is next to an impossibility for a conviction to be had. In Shasta and Trinity counties in 1879, according to a reliable informant, there were killed some 8,000 deer; in 1880 some 5,000; and so scarce had they become in 1881 that the same parties could only slay 3,500. Gentlemen, I think these figures are not erroneous, for one dealer alone in San Joaquin assures me he has purchased the past season nearly 4,000 hides of deer, and another dealer almost as many. You secretary would say further, knowledge of so strong a character came to the Association, that upwards of a dozen letters were forwarded at one time to parties who were running deer with hounds. Some few, like the boy at school whipped for catching flies, denied it, but "knew who did let their hounds run deer; and several wished to know who is the special agent of our Association. Our special agent is too good a sportsman to be deprived of his future usefulness to the Association; so the reply that he lives "over yonder" must suffice.

From San Diego come letters that you have seen printed: Deer are so plentiful we must sit on guard all night long and protect the green stuff with a small arsenal to fire every quarter of an hour to scare away the pests. The Board of Directors have gone to the fountain head for the purpose of carrying out the law, by distributing upwards of seven hundred and fifty copies of the game laws, one to each postoffice in California, one thousand copies of the printed game laws on durable board in railway cars and steamboat lines alone, and by showing to the heads of corporations their liability if found carrying contrary to law the unseasonable game. And to the credit of these corporations we record with pleasure the fact that their receipts now on file bear to us something more than a plain receipt for a piece of printed board. They show a keen sense of appreciation of the efforts of our Association, and bear to us their written expressions of kindly concurrence in the matter of stopping this illicit traffic. Wells, Fargo & Co. have given us assistance of a most important kind. J. J. Valentine, Esq., superintendent, issued to his subordinate officers throughout the entire State a copy of the laws as regards game and fish, with explicit instructions in relation thereto. One illustration will show you how nicely it has worked already.

Gen. Williams, you all know, has large landed interests in the tule islands. Last July I was called on by his agent, who stated: "Mr. Secretary, here is a telegram from an agent at Placerville; he has some fine mountain quail, caught for the General, who wishes to propagate them on his ranch; and, gentlemen, Gen. Williams cares for them in the best manner—but Wells, Fargo & Co. say 'you are not going to get us in any scrape with your live quail; see here!" and shows Mr. Valentine's order, "Ship no live or dead quail out of season." "Now, Mr. Secretary, here is this dispatch; it says: 'See some State Sportsman's Association officer and get us a permit.' Will you kindly help us to get our quail?" We were only too happy to send a few words in the name of the Association, which the agent of Wells Fargo keeps for future reference. Several cases of like kind occurred, showing we were doing some little good in our first year. It has been everybody's privilege heretofore to trap live quail for market, but now the trappers find their vocation gone, for they cannot get them to market.

You all remember ducks were scarce in market September 15 last. None were in the Stockton market. President Fisher, of the Stockton Club—a delegate here to-day—informed us that for the first time since he has been living on the Island, no shooting was done on the 14th of September last. And wherefore this sudden and welcome change from the old regime?

Our Board of Directors authorized a reward published of $40 for the information and apprehension leading to conviction of any person found violating the game or fish laws. This was published in the press September 3, 1881—the Sacramento *Bee*, San Francisco *Chronicle*, Watsonville *Pajaronian*, Tuolumne *Independent*, Yolo *Mail*, and Stockton *Independent*—and all these papers kindly gave locals, to the full extent of their space, on the good that might accrue by some watchfulness on the part of your Association. Every club of the Association was also carefully instructed to sleep with only one eye shut. Several arrests were made, but it was almost impossible to get any witnesses at the trial. Some thought that what they first called a dead wild duck might have been a chicken, and kindred testimony. But a good, healthy scare ensued, and no game was in the market until the 16th or 17th. This is of itself an acknowledgment of some importance. Publishing this offer of reward proved a most decided accelerator. But several who made application were unfortunate, in that their claim to the reward could not be recognized. One applicant who made the arrest of a party, on information furnished by members of the "California" and "Gun Club" was quite loth to give up the claim, but finally did so. The members of these aforementioned clubs not only furnished the evidence, but gave the entire credit of their good work to the State Association, and also as generously waived their claim to the reward. Martinez being of easy access, was a favorite haunt with gunners, and several arrests were made, which wake the boys unto the fact, "the States Sportsman members" do mean business.

The first reward paid was to the "Los Angeles Club," for the arrest and conviction of George Allen, for having in his possession twenty-five quail, which had been trapped. This club employed a detective, and received the reward, as was its due.

The second reward paid was to J. B. Testerman and G. W. Moore, of San Mateo, for the arrest and conviction of Charles George, for trapping quail. Said Charles George was sentenced to thirty days sequestration in the county jail, that sufficient time for meditation might be given, and it had a most wholesome effect on sundry trappers, for here too the public press generously came to our aid, and gave the facts of the case due publicity; and in this case we find the feelings of the public so dormant in the matter of whether the laws are kept or not, that your Association's counsel was, per force of circumstances, obliged to proceed without any assistance at all from the District Attorney in the case, not that your counsel was lacking in ability or zeal, but because the District Attorney thought the whole matter of slight importance. However, the result was ample, and coming so soon after the Santa Rosa doe case and the conviction in Los Angeles, gave our Association at once some considerable standing, in places where we least expected.

Reward No. 3 was paid to James Brown, constable, and Oscar Atwood, deputy sheriff at San Joaquin. These gentlemen have spent considerable time and money trying to break up the nefarious practice of Chinese fishing, have made numerous arrests, and been out of pocket every time, "John" taking the jail rather than pay a fine; but this time arrested (Nov. 21, 1881), three Chinese, an employer and his two employes, the latter, of course, could not be held, but the boss paid $50 fine and $15 costs. Since then these same industrious officials have arrested and convicted two more sets of Chinese for illicit fishing. This nefarious vocation is destined to strip our streams of every fish, unless we make constant war on it; and what cannot be sold of fish here is sent to Canton. We would most earnestly beg to impress those of our members who are likely to have a voice in the councils of our State at Sacramento, that more special legislation on this score would meet the entire approbation of our sportsmen. Other convictions for violations of fish laws have been made among them, one by Deputy Fish Commissioner Louis Levy, of Sonora, for blasting with giant powder in the stream for the purpose of killing fish; party was fined $50. J. S. Clark, of Modesto, secured conviction of two parties (both Chinese) for fishing with set nets; both parties fined $50 each. Nets of all manner of description are used, and in large numbers, despite the increasing destruction of them by our sportsmen wherever found. A fisherman told

me he cast his line seven times, and five times drew up a net, which was immediately destroyed, and the afternoon was not overly favorable either.

Considerable correspondence has been had with parties at various locations about fish ladders, and we rejoice to be able to say the ladders are gradually increasing in number.

We would say of the irrigation ditches, there is one feature unfavorable to fish. The ditch takes water from the stream and carries the water out on to some plain, and if a fish is in the ditch he soon gets into shoal water and the end is a lingering death. Those in charge of these schemes are, however, disposed to take a comprehensive view of the situation, and cheerfully comply with any suggestions offered by your Association. We must not overlook the fact that while our work has been productive of great good, the field of our usefulness is so vast that much remains to be accomplished. We have made a good start; have gotten the public press on our side; have awakened sportsmen throughout the State, and daily, almost, come to us applications for copies of the Game and Fish Laws. These must be thoroughly understood before we can hope to have them observed; some 2,000 of them are already distributed, we trust, judiciously. But the volume of correspondence received shows the spirit of our people to be willing to do the fair thing, provided they first thoroughly understand it.

SOME ONTARIO RESORTS.

WE have always had in this locality, the vicinity of Peterborough, abundance of sport. During the time the Mt. Julien Hotel was open (one or two years), no regard was paid to true laws which would govern any gentleman; and each and every guest (with only one or two exceptions) vied with each other to destroy the largest amount of fish, leaving them to rot away on the islands and shores of Stormy Lake. Had it stopped there, we could have borne with it, but on several occasions deer were slaughtered from June until the season opened. Indeed, such was the state of affairs that an open rupture with the settlers of the locality was inevitable, for when the season did open not a deer was to be found. All during the close season guns and rifles were freely carried and as freely used on every trip any party would make from the hotel. The proprietors winked at the whole matter, and actually, I was told, used the venison on the table; and I was also told at the time, that it was charged as "mutton" on the books of the company. This could not go on much longer and any sport continue, but happily some of the aggrieved habitants put match to the structure, and the place which knew it once knows it no more. Since then, game and fish have multiplied and replenished lake and forest, and our waters are comparatively free of parties who have no regard to decency.

There is now a fine hotel at Burleigh Rapids, where a genial host caters to the wants of any and all who wish true sport in either fishing or shooting. It is easily reached and offers grand inducement to those who, wearied with close confinement, wish a holiday in a healthy locality where game and fish are very plentiful. The scenery is grand and indeed sublime; with any care this place can never be fished out, nor the game all shot. Deer are quite plentiful, ruffed grouse everywhere, ducks in numbers. Black bass, maskinonge, lake trout, whitefish, and all the smaller kinds in great quantity.

Another place is situated in Bobcaygeon, a village twenty miles from here, where the devotees of old Izaak Walton would go mad over their favorite sport. Mine host Goulais is a square man and has built a beautiful summer hotel where everything tending to the comfort and convenience of guests can be had. I know of black bass being caught this season within cast of his fine house, and I am assured by an intimate friend that he caught three bass, two over five pounds and one three pounds three ounces, within a space of fifteen minutes (while the boat was waiting) not twenty feet from a part of the hotel. I may state that the fishing there is inexhaustible.

All through these lakes fishing is excellent, which with any care can never be fished out. I could direct you to small lakes where you could catch millions of the finest black bass with a piece of red flannel on a hook, where black or mountain trout are so plentiful in seasons that I was perfectly astonished, and where I believe they will bite finely to the fly, although I never tried them, but have been assured by friends I sent there that they gave grand sport in that way. On the margins of these lakes and creeks I have seen deer repeatedly, and partridge out of number.

I am so often out sketching and photographing on these places that I know many spots, out of the way ponds and little rapids where few canoes other than my own go. Here the game is plentiful, and I love to sit and watch nature in its purity, studying the habits of birds and beasts, and learning many a lesson therefrom.

But in the autumn when the leaves change and drop off, when stillness reigns everywhere, the scene changes. Early morning—daylight—dogs are coupled and quietly put in the canoes, soon to make the woods resound with such music as only a British sportsman can enjoy. Now I do not wish to say that Americans do not enjoy the voice of the hound, but I do say that to my knowledge I have never known anyone candid enough to tell the truth, who had a knowledge of the matter, that would say hounding deer diminished them or frightened them more than still-hunting.

To my own knowledge, certain localities have been infested with wolves which have been frightened out by the hunting of dogs through that part of the country, and deer are far more plentiful since the wolves left, although hound-hunting is still carried on there every year. Does any sane man who ever still-hunted, and will tell the truth, say that deer are more afraid of a dog than a man? I think not. Take for instance a case. A still-hunter invariably beats up against the wind, and a deer will turn on the scent of a human no matter how faint. Will they do so on that of a dog? No, for I have often seen them stand and allow a dog on a scent to pass them not ten yards off, and when a deer crosses a lake does he continue running? No, they invariably go back to where they came from. But let a man follow them and make the noise a dog would—why, not a deer would remain in the locality. Now, this simply proves one thing, at least here—that deer can be hunted by hounds time and again, and not be chased from a locality, and I am sorry that your countrymen have so tried to make dog-hunting so unpopular, and at the cost to themselves of loss of game.

I have written more than I had intended, but anything relating to sport makes me a different man, and I will do all in my power to advance any good cause relating thereto. I have given you already the names of two responsible hotels where a pleasant holiday and good sport may be had, but we want no men who are "cads" and butchers of game and fish. The true sportsman we will always welcome whether rich or poor, and I have often loaned my dogs to men whose faces I never saw before, but from conversation I felt they were gentlemen and could be trusted. I was not disappointed, for there is a kind of masonry about true sportsmen which is always respected, and to such men I will give any information in my power. G. B. S.

HOUNDING VS. STILL-HUNTING.

Editor Forest and Stream:

I notice an article in issue of Sept. 7, from the pen of "G. R. B.," setting forth his style of deer hunting for years past, asserting that "one still-hunter will cause more deer to leave their ground than the best hound dog ever put after them." He says: "You get after a deer as a still-hunter does, and follow him until the deer knows you are after him, and he will leave the ground and will seek new ground if hunted hard, and the worst part of this still-hunting is done when the snow becomes deep, with heavy crusts, and the deer cannot get away from the hunter. There is where the hunter shows his skill." In conclusion, he says: "My theory on hunting and the only sporting way to hunt is to have dogs which do not run too long, and post your men on high ground and take their shots; and if a man is a hunter that is the way to hunt," etc.

It has been my fortune for years past to hunt in Warren and McKean counties, Pennsylvania, and while my friend, "G. R. B.," was standing wrapt in his overcoat by the side of some huge tree, thumping his toes against it to keep them warm, I was moving cautiously along the trail. If I get in a shot before starting the game, well and good. If not, I sometimes follow until I start them the second time, when I always change off for a new track. By this method the deer take no lasting fright, and will stay and occupy their accustomed grounds continually day and night, the same as though not hunted at all. This I know from actual tests, time and again. I suppose that should a still-hunter stick to the track all day, and have the power to run as far and fast as a hound, that he might fairly compete with the dog in driving off and worrying deer; no more and no less. And as for still-hunting "when the snow is deep with heavy crusts," that is entirely out of the question, for this reason, that up to the 15th of December, when the close season shuts off all modes of hunting deer, there is seldom but light falls of snow of a few inches at a time, and even if that becomes crusted in the least, it is good-bye still-hunting until it is thawed out again. No still-hunter that I ever saw claimed that he could kill one deer per week on a crust. "There is where the still-hunter shows his skill," says our scribe. Well I admit it if such can be done, but I have yet to see the man that can do it, or one that makes any such pretensions of skill. Then, "the only sporting way to hunt is to have dogs, and if a man is a hunter that is the way to hunt." Well, if that is the final edict, my gun is for sale cheap, or I will trade it for dogs and kill the dogs. I have a farm, and once in a while slaughter a sheep or calf for market or for home consumption. But I always dropped them by a bullet through or a blow upon the head, in cold blood. Never thought of turning them into an open field, and while a pack of dogs were coursing them around it, poured buckshot into them from a distance. To some this would be more fun, as it would give the animal more show for its life, the dogs exercise and a taste of blood, and the gunner a chance to display his skill to better advantage. I never thought it any benefit to kill game that way; could always procure a quantity even of squirrels or ruffed grouse by shooting their heads off with a rifle and ball. If not, I choose to let them go. A mess of either, stove full of shot, hair or feathers, never struck my fancy, much less a deer heated and hashed up by dogs and buckshot. If this is the only sporting way to hunt deer, why is it made unlawful throughout the State of Pennsylvania to "sport it" in that manner? CAP LOCK.

FREWSBURG, N. Y., Sept. 12.

SHOOTING AT TUCKERTON BAY.

THERE are many points along our Atlantic coast where wildfowl are more abundant, where greater bags are made, and where the sportsman may be more certain of meeting with success, but in all my experience—and I have had a varied one by river, marsh and in the field—my shooting at Long Beach, N. J., has ever been the most enjoyable. Not owing to the great quantity, and perhaps I might say quality of game, that fell to our guns, but doubtless, in a measure, to the spice of danger with which our sport on the neighboring bays was mingled, and the necessary requirement of being able to handle and to be the sole occupant of one's skiff in shooting wild geese and brant on those waters. Ten years ago more fowl frequented Tuckerton Bay than now, and there were fewer market shooters than at the present time, and less watching of the ponds on the meadows after dark, or night shooting indulged in. The erection likewise on the beach of several large hotels and numerous cottages which loom up in the distance uncovered and unsheltered by foliage of any description, has had the effect of turning many a flock of traveling geese and brant in their flight, only too anxious to stop, rest and feed before moving onward.

I well remember on one occasion having gone to Tuckerton, N. J., which is situated on the mainland shore of the bay at the head of a creek of the same name, that I might be there on the opening of the quail shooting, November 1, and have a week with my dogs and lighter gun, and await the coming of the brant in the bay. Vannote kept the hotel there, and when I entered his commodious reception room the huge stove setting in its circle of sand was surrounded by baymen with feet propped against the fender, which told without words no fowl had come on. Of course there was a "howdie" all around, and a hearty shake with each. Vannote never went fowl shooting, was glad to see I had my dogs, and promised me good quail shooting, but added, "the birds go to bad places after we find them and put them up."

We found it just so; our dogs pointed many coveys, and after two or three shots at each they sought shelter in the impenetrable cedar swamps, for which this section is noted, where shooting was impossible excepting on the outer edges. Vannote had been urging me for two years to go deer shooting with him in the back country, about thirty miles from Tuckerton, and when he learned of my purpose to cross the bay to the beach for brant as soon as I tired of the quail, he became more persistent than ever, promising me a shot at a buck without fail. Having been fully initiated into the uncertainties of Jersey deer shooting I declined again, and parted with him at the creek landing, when I started for Bond's, the captain having come across the bay for us with his yacht when sent for. It seemed as if I had hit upon the exact time for fowl shooting. Many brant were seen as we sailed over, and not a few were young birds which always stool better than old ones.

In the morning my man and myself, accompanied by a gentleman and his bayman I found stopping at Bond's, each in our skiffs, with their sterns loaded down with hollow decoys, made an early start for the Bunches, a mile and a half from the beach. "The Bunches," so called from being a growth of sedge entirely surrounded by water, is situated directly in the track of the majority of brant that make their way up and down the bay. Into this sedge we pushed our skiffs, and the almost entire covering of decks having been hidden by spreading trash over them, and the decoys, to the number of one hundred and twenty, anchored in front of us, we awaited the coming of daylight. Before day dawned several flocks of brant passed up the bay, but we could only hear them. Shortly after sunrise a small bunch of seven came to us, and they were all easily killed. They were followed soon by a drove, as my friend expressed it, and from the flock of at least a hundred we were able to boat with the eight charges of BB's we had sixteen or seventeen. For an hour or two after this we were visited by black ducks, a few redheads and a number of blackheads, our decoys representing those varieties having been placed well to leeward of the brant and wild geese stools. Toward noon seven wild geese lit half a mile from us, in reply to the honking of our bayman, and gradually swam up to the stools. While we were hidden in our boats more brant decoyed, but we could not shoot while awaiting the approach of the geese. Of these we killed the only four that came in range, the three older ones doing all in their power to prevent their younger companions from going into danger.

In the afternoon, as the wind freshened up and the weather began to look "dirty," we thought it prudent to take up our decoys and make for Bond's. As it was the sea made it very rough for our little boat as we crossed the main channel, and we were glad to reach the beach in safety. On this trip I spent a week at Capt. Bond's, and it proved the most successful one I ever had. Fowl were plentiful, had been shot at, but little, and they decoyed nicely. On my return to the mainland I found Vannote back from the deer shooting and three bucks hanging up to taunt me with. Two he had killed in the drive with his dogs, the third was shot by one of the party "on the same stand I should have put you," he said to me. I could show him three large sacks of wildfowl in return, to which he retorted, "I never shoot them."

HOMO.

GAME IN ARKANSAS.

IN this beautiful prairie region of Arkansas game of all kinds is very plenty except prairie chickens; for some reason, perhaps the extreme wetness of the spring, they did not breed well. I find a good many very early coveys and a few very late ones. Quail are unusually abundant. Some coveys were nearly grown in June, but the great majority of them are late; not large enough for game yet; some are just from the nest. Six weeks from now quail shooting will be very fine here. Squirrels, 'coon, 'possums and fine game fish such as black and striped bass, perch, etc., are very abundant. Deer and turkey about the same as last year, to wit, abundantly plenty. Bear, otter, mink and beaver can be had by those who know how to hunt them. Three bears were killed a short distance up the river by a party in two days three weeks ago.

We are now having the last days of the sickly season along the river and overflows. Soon it will be safe for the sportsman to hunt anywhere here. There is no healthier or more pleasant climate than this after frosts.

The country back from the river has remained quite healthy, especially families living right out on the prairie, so far as I have observed, have been entirely healthy.

For those who contemplate looking for a home in the West, now from this until the holidays is the time to look over this beautiful region. The crops are very fine and plenty in the country to live on. I am confident that there is no place where one can get so good lands as cheaply as here, and nowhere that one can make a good living or money more easily.

CROCKETT'S BLUFF, Arkansas Co., Ark., Sept. 5. BYRNE.

TENNESSEE NOTES.—Nashville, Sept. 8.—Within the next two weeks the quail season will open in this State, and from all the reports I can gather they will be very abundant. Already our local sportsmen are burnishing up their guns, loading shells, and conditioning their dogs for the fray. Hermann Benkholz has the old reliable Jeff, and a youngster that will make a rattler when trained. Jack Bentley and Joe Clarke own two excellent dogs that are well trained and untiring in the field. Charley Griffith also has a good one. Mayor Burr's brace is as good as anybody need want. Joe Woodfolk and Clarke Pritchett each have fair fielders, while Jim Palmer claims the championship for his Prince. Felix Mitchell, Tom Chadwell, Will Erwin, and a score more of our best shots own each one or more dogs, and though they are not much on the boast, are the most reliable baggers of game about here. Several large bags of squirrels have been made lately, and as the mast is most abundant this year, the little bunnies are as fat as butter. While waiting for the shooting season to roll round our fox hunters have been making some of the grandest runs ever known in this section. Col. W. H. Johnson's pack of hounds is a remarkably fine one, and when put upon Reynard's trail the music that comes from its members is an entire opera in itself. They had a run yesterday, and after a most exciting chase earthed their game in a bluff on the Cumberland River, near by, where a most sumptuous barbecue was served to the huntsmen. There is nowhere on this continent where similarly grand sport can be enjoyed, because game is abundant, dogs unsurpassed, first-class horses, and all within the midst of high civilization and the loveliest country in America. I wish some of the Newport and Long Island fox hunters could run down here and take a spin after Col. Johnson's hounds, and I am certain they would never gallop after a drag or half tame fox any more. Our houses may not be so large nor their owners as wealthy, but on the welcome they will receive, the dogs, mounts, country and sports I will wager my last currency. If any of the patrons of the FOREST AND STREAM should determine to come out here, let them but bring a word from any of its editors to me at the office of *Southern Industries*, 162 Union street, Nashville, and I will do all in my power to launch them into the hospitable care of Nashville's sportsmen.—J. D. H.

THE RANGE OF THE SHOTGUN.

MUCH has been said regarding the "method," "loading" and shooting power of the breech-loading shotgun of modern times, and I propose to add my mite to the large amount of argument on this important point. I will speak from a practical standpoint, and give my views as an advocate of the "new-fangled" notion.

The average breech-loader will, when its peculiarities are discovered and humored, kill game at all distances "from the muzzle" to "one hundred and fifty yards," (?) but the long shots are only done in private performance, and the cartridges are always "improperly loaded" if the owner of the long-range gun be called upon to exhibit the "wonderful" gun.

I have had an experience of seventeen years with all kinds of guns, and I have utterly failed to find a gun that will kill game (excepting chance shots) at anything like "one hundred and fifty yards," and plainly state that I don't believe the gun is now made, or ever will be, that will do such work.

In a varied field and forest experience I have killed game at very long range, say 75 to 100 yards, but only claimed then and now that mere chance was the only real cause

The experience of some of our best field shots in this section, claim that a gun is "A 1" if it will kill game from 40 to 60 yards in "fair field and no favor." Distance is greatly overrate i, generally speaking, and when we down a duck at 40 or 50 yards, it looks like a far greater distance—to the "green hand."

Some time ago I was in company with a young sportsman ducking, and in passing over a large marsh came unexpectedly upon a large flock of geese at about 150 yards distance. Knowing I could get no closer excepting by a "run," I cocked both barrels, and with "far-stretching steps" went hurriedly toward the now thoroughly alarmed geese, while my companion stayed in the rear, "horrified" at my "trying to run down some wild honkers." I succeeded finally in flushing them; and on their taking wing gave them first the right and then the left, bringing to bag a fine old gander. My friend now came up on the run and emptied both barrels of his piece at the now distant "feather beds," and exclaimed: "What in the devil have you for a shotgun? That goose was nearly 200 yards off!"

I told him I had a fair shooting gun, one that done good work at all times, but he must be slightly mistaken in judging the distance of the shot, that it could not be over ninety or ninety-five yards at best.

We then paced it off, and found from where I made the shot to where the bird fell was just one hundred yards or paces. I then told him I did not expect to draw a feather from the geese, let alone kill, but made it a rule to not let a bird go "unsalued" at anything under ninety yards, and had accidentally killed many birds at that distance.

On looking over the old honker we found one "B." had found a "resting place" in his head, and he was thereby brought to bag. I have heard a great many "old hunters"(?) claim their guns would "switch them (the birds) every time at from 100 to 150 yards," an absolute, known misstatement.

No, gentlemen, the gun cannot be made that will kill game with any kind of shot 150, or even 75 yards "every time," and I know it as well as other men who have had any considerable experience with shotguns.

If you happen to "get hold" of a breech or muzzle-loader ten or twelve-gauge, that will kill every third time at sixty yards, thank your lucky stars and guard it day and night for fear it may take wings and fly away. I once got acquainted with a "gent" who formerly lived in "York State," who "once owned an old Springfield rifle that he could kill prairie hens out of trees at eighty rods, every time!" * * * * At one time this extraordinary gun "strained" its barrel on one very long shot and was "never worth a cent afterwards."

Long shots, I claim, are accidental if made out of ordinary bounds of shotgun range, and are nearly always made alone.

Keep the ball in motion. Will a gun loaded with shot kill at 150 yards "every time" or not? DELL.

SAUK CENTRE, Minn.

PRAIRIE CHICKENS IN IOWA AND MINNESOTA.—Waukon, Iowa, Sept. 1.—I came down here the 12th of August, and have had pleasant shooting since the 15th. Many sportsmen are here who observe the law, but I hear not one who hazards the observation that he would were he debarred from shooting until September 1. The cold rains struck in the 30th, and that practically closes the chicken season. There may be, still, warm days upon which the birds may lay to the dogs, but they will be exceptional, and the man in Minnesota who has waited with a young dog for the season to open will have very few days' sport; but many of tribulation of spirit. This latter man I have yet to hear of, and can name you a half hundred between Rushford and the Dakota line who have bagged birds for two weeks. Indeed, I received chickens before I left (sent down in a shooting jacket left there last year) that were shot within sight of the steeples of Fairmont. In conclusion I make the statement that I know "one-half the sportsmen (local) between the Mississippi River and the Dakota line have shot birds for twenty days." I ask you what inducement is there for you or me to go along that line shooting now the season is opened.—X.

A MOST CURIOUS ACCIDENT happened to a California sportsman named Spitzer, the other day. In company with a relative, James Ashcraft, he was hunting deer in the San Benito hills. He was about one hundred yards distant from his companion, when he observed in the brush the antlers of a buck, which he picked up and was examining. Mr. Ashcraft noticed the antlers moving in the brush, and, thinking that he was about to kill a goodly-sized deer, raised his rifle, took careful aim at where he thought the body of the animal ought to be, and fired. The ball struck Mr. Spitzer in the right elbow, passing through it and the upper portion of the hip bone, and ranging across the abdomen. The wounded man is not expected to recover.

FLORIDA.—Tampa, Aug. 28.—As usual we have plenty of quail, and the first brood are fully three-quarters grown and large enough to shoot. I have the orange craze like every one else in Florida, and am sorry to say that it occupies so much of my time that my guns lay rusting in their cases, and the poor old setter Pat comes and looks up in my face wistfully, and almost says, "Why don't you get your gun, for don't you hear those quail whistling?"—W. A. M.

MAINE COAST SHOOTING.—Old Orchard, Me., September, 1882.—It is not generally known that the finest place for shooting on the Maine coast is at Camp Ellis, situated at the mouth of Saco River, three miles from Old Orchard Beach. It is one of the most charming places in the world, abounding in fine natural scenery, pine air and excellent fishing, while its attractions as a shooting resort are unequaled. It is reached by Boston & Maine Railroad. Parties can go to Old Orchard by train, and drive to Camp Ellis, or leave cars at Saco and take steamer down the river. It is a delightful half hour's sail, past fine old hardwood growths, smooth fields, wooded eminences, and here and there a few picturesque old buildings, moss-grown and fast falling to decay. The Camp Ellis House is right on the bank of the river, within five minutes' walk of the steamer landing. In summer it is crowded with seekers of health and pleasure, who come with joy and leave with reluctance. Through September and October the weather is delightful here, and is improved by the enthusiastic sportsman. Among others here at present is Johnny Jones, of Malden, sent by the Natural History Society of Boston. He has already lost his head over the place, and is out with a gun at all hours. Recently he bagged eighty birds before breakfast, which is a record to be proud of. A gentleman from New York assures me he has often killed ducks from the piazza, and says nowhere else is there such fine shooting. Will Fredericks, of Boston, also well known in sporting circles, got two hundred birds inside of two days, and thinks he can do even better. On the opposite bank of the river is a heavy hardwood growth, where the red squirrel is at home and challenges attention. Plover are shot in great numbers, also pigeons. Very soon the water will be black with the wild duck, and then the real fun begins. The crack of the fowling-piece is heard from morning till night, and there is much friendly rivalry between the boys. Parties desiring to come here should address C. A. Tarr, Camp Ellis House, Old Orchard, Me. It will be open all the fall.—F. K. HAMILTON.

HACKENSACK RAIL.—New York, September 7.—E. W. and myself spent Wednesday rail shooting on the Hackensack meadows. The birds flew well but were very difficult to get, the tide being so high. We killed thirty-three between us. Blackbirds plentiful — shot several. When pigeons commence to flock intend going to Newfoundland on N. Y. S. & W. R. R.; will report luck.—BOAR.

ADIRONDACK DEER.—Meacham Lake, N. Y., September 6.—Our fall hunting is just beginning; one New York broker brought in six partridges yesterday. We are not running deer with dogs yet, for the reason that we get all the venison we want night hunting, or by watching on the streams before dark. The indications for good shooting were never as good here at this season as now.—A. R. FULLER.

ILLINOIS.—Charleston, Sept. 7.—Messrs. Chambers and Kline started out at noon on the second inst. and returned home about 8 P. M. They counted out twenty-six prairie chickens. That was a very large bag for this locality. On the 20th ult. John Cartwright and Isaac Hughes bagged seventeen prairie chickens.—FOX SQUIRREL.

ILLINOIS.—La Salle, Sept. 6.—Chicken shooting has been very good with us. I have shot, hunting over my old setter bitch Daisy, from eighteen to forty-six in one day. Quail I found in my tramps quite plentiful and large coveys.—T. D.

Camp Fire Flickerings.

"That reminds me."

IN a city not far from New York lives a minister as much celebrated for his love of the angle as for his profession. While speaking to his Sunday school one afternoon on the text, "Depart from evil and do good," he drew for illustration the simile of a wayward child leaving home and all good influences, he rushed into the broad paths of sin, but through the intercession of parents and friends is reclaimed, only to repeat his folly again and again. Finally, after almost superhuman effort, he is at last brought back to the fold, and his redemption from vice made a certainty for the balance of his life. To further simplify the illustration to the younger members of the school, the pastor said: "A few months ago I was fishing in the Maine woods. At the break of a fish on the waters of the stream I cast out my flies. A noble trout arose, seized the bait and away he plunged carrying almost all the line I had on my reel. Again and again, I drew the fish near the canoe and attempted to land him, but away he would go, only to repeat the struggle. Finally, tired out and weary with his efforts to escape, I at last drew him in, and slipping my landing net under the fish, threw him into my boat safe beyond all escape." Gazing about on his audience to see the effect of the moral of his story, the silence was suddenly interrupted by a small boy in the front seat, who astonished the school by exclaiming: "But, Mister ——, how much did he weigh?"

I wonder if any readers of FOREST AND STREAM ever heard about Chris. Smith's "live bait?" There was a party of them down in Maine somewhere, and were going fishing, and the question arose, where should they procure bait? Some one suggested pork, whereupon Chris. became disgusted, and declared that he would not think of fishing without live bait. A neighboring farmer had some sucking pigs which he was willing to sell for $2.50 apiece; and it was thought essential to the happiness of the party that the pig should change owners. One of the party was genial Samuel Norton, whose sudden death a year ago cast a sadness over this whole community. Now, as Sam was quite a hand on a dicker, it was thought best he should do the trading, and he was accordingly given orders to buy the pig. Unfortunately, Sam understood the price to be $3.50, and thinking it too much, he offered the farmer $3.00, which, it is needless to say, was quickly taken. The pig was boxed up, labeled "live bait," and directed to Christopher Smith; but the laugh was rather faint when they came to compare notes on the price of the pork.—SASSA-CUS.

SOUTH ABINGTON, Mass.

"SOMETHING NEW."—Photographs of the crowned heads of the world, finest assortment of Mrs. Langtry, and all the other English beauties, and also all actresses and other celebrities. CHARLES L. RITZMANN, 943 Broadway, New York City.—*Adv.*

ENLARGING THEIR FACILITIES. The clearance sale announced in our advertising columns by Messrs. J. Palmer O'Neil & Co., of Pittsburg, offers sportsmen a rare opportunity to secure a choice weapon at a very low figure. Messrs. J. P. O'Neil & Co. expect soon to remove to new stores, their present room being too small for their business.

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.

Lake trout, *Cristivomer namaycush.*
Siscowet, *Cristivomer siscowet.*
Grayling, *Thymallus tricolor and T. montanus.*
Rainbow trout, *Salmo iridei.*
Clark's trout, *Salmo clarkii.*
Dolly Varden trout, *Salvelinus malma.*
Salmon, *Salmo salar.*
Land-locked salmon, var. *sebago.*
Quinnat salmon, *Oncorhynchus chouycha.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (N. Y. pickerel), *Esox lucius*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*
Yellow perch, *Perca flavitilis.*
Striped bass (Rockfish), *Roccus lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Ambloplites*, two species.
Warmouth, *Chænobrytlus gulosus.*
Crappie (Strawberry bass, etc.), *Pomoxys nicromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus bullaris.*

SALT WATER.

Sea bass, *Centropristes atrarius.*
Striped bass, *Roccus lineatus.*
White perch, *Morone americana.*
Scup or porgie, *Stenotomus argyrops.*
Tautog or blackfish, *Tautoga onitis.*
Bluefish or taylor, *Pomatomus saltatrix.*
Weakfish or squetague, *Cynoscion regalis.*
"Sea trout," *Cynoscion carolinensis.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*
Spanish mackerel, *Cybium maculatum.*
Drum, *Pogonias chromis.*
Lafayette, *Liostomus obliquus.*
Red bass, etc., *Sciænops ocellatus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

The principal distinctions that strike the careful observer between the trout of Long Island, or, I might say North America in general, and those of the British isles, is, first, the great uniformity of size on the part of the former, which rarely exceed two or three pounds in weight, * * * and secondly, the fact that in the United States trout are never taken in large rivers, or, if ever, so rarely as to prove the rule by the wonder arising from the exception.—*Frank Forester.*

THE INVITATION.

(To a Bottom-fisher.)

COME ye who love to fish
And stray by water's brink;
Come ye, with keen relish,
And see the float down sink.

Let them refuse the sport
Who never knew its charm;
But, brother of the rod, resort
To waters clear and calm.

The perch await us there—
Perchance a bass, or two,
Shall dart from out their lair
And give us pleasure true.

There will we bait our hook
With brandling, clear and bright,
And read from Nature's book
While waiting for a bite.

And when the tell-tale float
Shall nervous warning give
That some gill-guarded throat
Is striving to receive

The well-adjusted bait,
We'll "strike" with wary zeal
Ere yet it be too late—
And bring the fish to creel

Ah! angling, dear my friend,
Hath many a joy full sweet,
And unto our life's end
Its pleasures we will greet!

Then come on Tuesday next,
Prepared for a campaign,
And leave all questions vext
Of daily care, or gain,

And find what erst dear Walton found—
No angler can deny it—
A joy too deep for tongue to sound,
And "Study to be Quiet!"

O. W. R.

THE CALIFORNIA SALMON.

THERE is something exceedingly strange in the habits of the *Oncorhynchus chouicha*, or quinnat salmon, when planted in the East. Placed in streams flowing into the Atlantic, they are seen to feed and thrive through the parr stage and then disappear forever. At the last meeting of the American Fisheultural Association, Col. McDonald, of the Virginia and U. S. Fish Commissions, advanced the theory that the fish found the temperature of our rivers too high for them to enter for the purposes of spawning, and therefore backed off to sea again; that the short streams of the Pacific coast whose heads are among mountains, where the snow lies all the year, were cooler than ours, especially at their mouths, and that the Eastern rivers often presented a temperature of eighty degrees to the fish, which expected to find cooler water. If this be so, then where do the fish go, presuming that they are alive and seeking a place to deposit their ova? They are not taken in the nets near the rivers' mouths, nor yet by the purse-netters out at sea. On the other hand, we know that they have lived in some fresh waters, and, becoming "land-locked," have spawned. This has been the case with those planted by Mr. Fairbank in Geneva Lake, Wisconsin, and they have lived and grown to great size in private ponds.

We have a still stranger story to relate of this fish. In the autumn of 1875 we had a few thousand eggs of this salmon sent us for experiment at Honeoye Falls, Monroe Co., N. Y., while engaged in trout-culture at that place, and hatched them and placed the fry in a small pond, where they fed, but did not grow fast, partly on account of the small size of the pond (four by eight feet, by two feet deep), and partly because they were not fed regularly during our frequent absence. Repeated calls away on business interfered with our fisheulture greatly, the last year of our stay there, and in the spring of 1876 we were called to Philadelphia for the summer, and left the place entirely. On disposing of the fish in the ponds the young salmon were turned into the stream, a small brook emptying into Honeoye Creek, a tributary of the Genesee River, the supposition being that they would work down over the Genesee Falls and so into Lake

Ontario. Without disposing of the farm we leased it to Mr. W. C. Varney, who has remained on it since, merely working the land and paying no attention to the fishery, which is abandoned.

In early May, of the present year, we visited the place for the first time in six years, and in conversation with Mr. Varney, who fishes occasionally, he said that he had caught a salmon in Honeoye Creek a few weeks before, and that it must have been one of ours. He produced the head of it, which we recognized as that of a salmon of some two pounds' weight, and we walked over the farm, intending to bring the head away with us, but in a hurried departure it was forgotten. On arriving in New York we wrote for it, but it had disappeared through our negligence in leaving it in the barn. Mr. Varney says that it is the third one that he has caught, and that several others have been taken there. We immediately wrote the following letter, which was published in the *News* and in the *Gazette*, both of Honeoye Falls:

OFFICE OF FOREST AND STREAM,
NEW YORK, May, 1882.

MR. W. C. VARNEY: It will be a very interesting fact to prove that California salmon have remained in Honeoye Creek for six years, and not have gone to the sea. As I saw the head of one in your possession, which is now unfortunately lost, I am sure of the identity of the fish. I wish you would offer a reward in both the papers printed at Honeoye Falls for all these fish if wrapped in cloth and packed in ice and forwarded, with a letter, telling where they were caught, etc., to Prof. S. F. Baird, Washington, D. C. The box should be marked "dead fish" on the outside to insure immediate attention. I will pay $2.00 for each fish so sent which Prof. Baird pronounces to be a salmon. FRED MATHER.

It is not possible that these fish went into Lake Ontario, for the falls would prevent their return and there is no other conclusion but that some of them have remained in the Honeoye Creek and the Genesee River for six years, and have not grown large. The latter is not to be wondered at, for fish, like all other animal life, which are stunted in growth the first year, never grow to full size. The fish which Mr. Varney caught were in a pool below a mill dam near the hamlet called Sibleyville, and only in times of freshet could they go above the stream and reach the small brook on the trout farm, which empties into the mill pond.

THE VEXED MENHADEN QUESTION.

FOR the past few years there has been a growing feeling among our coast fishermen that the taking of the menhaden for purposes of making oil and guano was seriously affecting the number of bluefish, weakfish, striped bass and other valuable food fishes. In the New Jersey Legislature a bill was introduced forbidding the use of purse seines on that coast for this purpose, but it was withdrawn when it was shown that such a law was unconstitutional and that Congress alone had supervision of the waters included in the three-mile limit, and while such a law might be passed by the general government it could not affect British subjects, who have rights under the treaty of Washington. The increase in the number of oil factories has been followed by a decrease of food fishes, and at last the attention of Congress has been called to it. Senators Lapham, of New York; Miller, of California; Edmunds, Windom and Morgan were appointed a sub-committee by the Committee on Foreign Relations to investigate this subject, in consequence of a bill which was introduced into the last Congress by Senator Sewell, of New Jersey, which proposed to place certain restrictions upon the menhaden fisheries. This sub-committee has held sessions at Newport, Long Branch, Atlantic City and Coney Island. Last week Senator Lapham began taking testimony at the latter place, and several gentlemen were summoned to give their views of the matter.

Mr. Eugene G. Blackford, the well-known Fulton Market dealer and a member of the Fish Commission of New York, was examined. He stated that he had been in the fish business for sixteen years, during which time he had carefully observed and studied the habits of fish in American waters. Various complaints had been made to him in his official capacity that menhaden fishermen were taking food fishes and carrying them to the factories to be manufactured into oil and scrap. He had been unable to do anything in the matter, however, because there was no law applying to such cases. Up to the last two or three years the menhaden industry had been expanding greatly, but recently a steady decrease had been observed in all of the places where the yield used to be the greatest. In some places it seemed to have become practically exhausted; this was especially the case off the coast of Maine. Striped bass had become scarce all along the Atlantic coast. Mr. Blackford said he knew of several instances where the menhaden fishermen had caught schools of food fishes and brought them to market. In the early fall of 1881 there was an unusually large catch, and four or more vessels came to Fulton Market with about 200,000 pounds, nearly all of which were weakfish. Owing to the warm weather at that time only about a quarter of this large catch was placed on the market. The remainder was taken to the menhaden factories and made into oil and fertilizers.

Senator Lapham inquired whether food fish were desirable for the purposes of the menhaden factories, and Mr. Blackford answered that, as a rule, they were not, but the bluefish or weakfish caught in the fall were very fat.

Senator Lapham—Upon what food do the menhaden feed?

Mr. Blackford—The food of the menhaden, as far as has been investigated, has been found to be generally a sort of jellyfish. In conversations with J. Carson Brevoort I have often heard him speak of finding jellyfish in the stomachs of menhaden.

Senator Lapham—About what time do the menhaden first appear?

Mr. Blackford—They appear on the Long Island shore between April 1 and May 1. They are then in spawn. About two months after that we find large quantities of menhaden about an inch long. I have noticed that menhaden have spawn in them about May 1.

Mr. Blackford went on to say that he had little information as to the exact time of the spawning of bluefish. The young bluefish, or "snappers," were just now making their appearance off this coast. Bluefish, it was believed, spawned somewhere between July 1 and Aug 15. They were caught prior to that period, however. Bluefish from two to three inches long were found about sixty days after they were seen in spawn in their ripest form. The young shad would hatch out in about forty-eight hours after the egg was impregnated. The effect of the great amount of menhaden fishing now carried on, Mr. Blackford remarked, was to break up the schools of fish which were followed by the striped bass and the bluefish, and it had a tendency to make them seek other feeding grounds. The striped bass were very voracious feeders on menhaden. Five or six years ago, late in the fall, large quantities of striped bass were caught, and frequently 20,000 pounds were brought to Fulton Market each day. Year by year the yield of this kind of fish had steadily diminished.

Senator Lapham—What legislation, in your opinion, would be desirable with reference to this decline of the food fisheries?

Mr. Blackford—I would like to see a law enacted prohibiting the catching of menhaden from April 1 until July 1, or such other dates as this committee may find, upon investigation, to fairly embrace the spawning season of the menhaden. I think that such a law would protect all interests and would do the least injury to those who are interested in the taking of menhaden. Many of the menhaden fishermen are of the opinion that such a measure would be wise.

Senator Lapham—Are menhaden ever used for food?

Mr. Blackford—Well, I have eaten menhaden, but I must confess I do not like them. They are only sold in market for food at times when there is a scarcity of other fish. Mr. Blackford said there had been a slight diminution in the the quality of bluefish, but nothing very marked. Fresh mackerel were caught in much the same way as menhaden. The catch of mackerel this year had been the largest of any single season in twenty years. The most noticeable decrease in the fish supply at present was in striped bass. This fish was, next to the salmon, the most desirable fish in market. Menhaden were the most taking bait for striped bass, as well as for bluefish. Mackerel fishing was not affected at all by the menhaden fishery, for mackerel did not feed on menhaden. They ate jellyfish and, at certain seasons of the year, a species of red seaweed, called by fishermen "cayenne," from its pepperish qualities and taste. The spawning season for striped bass varied very much. In the early spring they were found in the Chesapeake Bay with their roe very much advanced, and in the fall they were found off the Long Island coast. Mr. Blackford thought the prohibition of the catching of menhaden prior to July 1 would not impair the menhaden industry. He believed that after one or two years the increased catch would more than make up for the shortness of the season. The percentage of oil obtained from menhaden taken early was very small.

Senator Lapham stated that the bill under which the investigation was being conducted provided for an absolute prohibition of the practice of catching menhaden with the present appliances (purse-nets) within 20 miles of the Atlantic coast. Mr. Blackford suggested that if purse-nets were prohibited the mackerel fishery would be interfered with. He added that he desired to see legislative protection given to all fish during the spawning season.

Samuel B. Miller, President of the Fulton Market Fishmongers' Association, said that last year bluefish had left these waters for want of food, and striped bass were scarcer than ever before. In answer to the claim made by menhaden fishermen that it spoiled their nets to catch bluefish, Mr. Miller said it was undoubtedly true that if a bluefish made a dive to get out of a menhaden net, the fish could cut the net with its teeth. Caleb Haley, of Fulton Market, agreed substantially with what was said by Messrs. Blackford and Miller. Oscar O. Friedlander, President of the Menhaden Fishermen's Association, and Capt. Simeon S. Hawkins took the ground that the menhaden industry was not detrimental to the food fisheries. Capt. Hawkins says that out of 21,000,000 pounds of menhaden brought to his factories there had not been a ton of food fish. The menhaden cost the factory men about $1.50 per thousand, and the food fish were worth $18 and $20 per thousand, so there were not many food fish manufactured into oil and fertilizers. Senator Lapham will probably not take any more testimony on this subject at present. The evidence already obtained will be written out and submitted to the other members of the sub-committee in Washington.

Mr. Oscar O. Friedlander, of the Barren Island Manufacturing Company, informed a *Times* reporter that in his opinion Senator Lapham had been giving a careful and impartial hearing to the complaints that the large catches of menhaden for manufacturing purposes were detrimental to the food fishes along the Atlantic coast. Mr. Friedlander emphatically denied the statement of a morning paper that the menhaden men were organized and supplied with capital to prevent legislation against their interests. "Senator Lapham," said he, "has so far found that any legislation which would interfere with free fishing for menhaden would affect a very large industry of this State, consequently he has spared no trouble in investigating the causes for complaint thoroughly." Mr. Friedlander claims that the catching of menhaden does not cause any diminution of the food fishes. His theory is that the menhaden left the coast of Rhode Island and the east end of Long Island because they found better feeding elsewhere. They are now found in large quantities on the New Jersey coast, between Atlantic City and the Delaware Breakwater. The captain of one of the Barren Island Company's boats states that he never saw so many menhaden together as he saw off the Jersey coast last Monday. The average yield of oil from the menhaden is said to be much larger this year than last. At the factories in which Mr. Friedlander is interested the average of oil this year is 5½ gallons for every 1,000 fish. Last year the average yield per 1,000 fish was a trifle over 2 gallons. The menhaden fishermen claim that to prohibit the catching of menhaden between the 1st of April and 1st of July would seriously injure their business. "I am opposed to catching the small fish," said Mr. Friedlander. "Our men fish with 2½ and 2¾ inch meshes, and I have advocated legislation in that direction. It would be a good thing to prohibit the catching of menhaden with smaller nets than 2½-inch mesh."

FISHES OF MANITOBA.—Winnipeg, Sept. 6.—I have not been out shooting yet this season, but from reports I hear that ducks and chickens are fairly plentiful. We have a few sorts of fish in the river here, namely: Pickerel, pike, buffalo, catfish, sturgeon and a small fish called goldeye. It is a flat-sided, small-mouthed fish with very bright silvery scales and a yellow eye from which it gets its name. There is also a queer fish which looks like a very long eel run together that is shortened and very large around the center. Would you kindly tell me the names of the last two fish, and also tell me whether buffalo can be caught with bait, and if so what is the best bait to use, and oblige—WINNIPEGGER. [We do not recognize the fish. The last fish may be the lake dogfish, *Amia calva*. Buffalo fish can be taken with a bait of bread dough mixed into cotton to hold it together.]

SEE advertisement of Shelton's Challenge Gun.

THE SPADE-FISH OR PADDLE-FISH.

FRANCIS PARKMAN in his exceedingly interesting book, entitled "The Discovery of the Great West," in the most graphic manner describes the adventures of Father Marquette, and among the many incidents is one where he first enters the swift current of the "Father of Waters," soon after which event his canoe was struck and nearly upset by a "spade-fish," and finally catching a few specimens in his net. He records his astonishment at their eccentric appearance.

There was recently caught in a small lake near Warsaw, Indiana, a single very large fish of this same species, *Polyodon spatula*, weighing one hundred and fifty-one pounds, and is the only fish of that kind ever caught in these waters. This small lake at low water is entirely land-locked, but is, after prolonged rains, in communication with a larger and an adjoining one.

This singular fish was brought here and placed on exhibition. It is provided with a projection or prolongation of the upper jaw that extends sixteen inches in front of the point where the lower one closes against it, and which from its bluntness, thickness and great apparent strength is used like a spade in breaking up the ground on the bottom of lakes and bed of rivers, turning out clams, roots and other food that might be exposed and secured in this way. But how this large and solitary specimen of such a remarkable species of fish could have survived and grown to such enormous proportions in this little lakelet without having been seen before, seems singular enough.

It is in the hands of an experienced taxidermist, and will be carefully preserved. Its dimensions are as follows: Length, 6 feet 9 inches; girth, 3 feet 9 inches; length of spade, 1 foot 4 inches; width of spade, 3 inches; thickness of spade, 2 inches; weight, 151 pounds. Its stomach was entirely empty at the time of its capture, and its diet is a question to be settled by ichthyologists.

The odor is not that of "Araby the Blest," but more of "an ancient and fish-like smell," similar to that of the whale that was exhibited through the country a few years since.

DORRIS.

FORT WAYNE, Ind., Sept. 7, 1882.

CATFISH.

IN FOREST AND STREAM of August 31, I find you are seeking information regarding the catfish family, relative to transportation to Belgium

Your idea of transporting the "bullhead" is a good one; very few know its value for food, and, don't laugh, I have had heaps of fun, especially in my boy days, taking them. They are in season here in the winter, are skinned and readily fetch from fifteen to twenty cents per pound. I think the blue and yellow cats of the Great Lakes superior in flavor to all others, and the head of Lake Erie is their home. By referring to FOREST AND STREAM of two years ago (I think) you will find several articles which I brou ht out, describing this fish in both north and southern waters, from its range in the Red River of the north to the Gulf of Mexico on the south. It certainly is a fish adapted to a great variety of waters. I have taken and eaten it most everywhere, and declare to you that those taken in this vicinity are superior to all, except in size. The lake cats bring in the Southern market, frozen or salted, a greater price than any other lake fish, save perhaps the black bass.

The Southern large cats are coarse and nasty, and with few exceptions are only fit as nigger food, while the same from the fine cold water of our lakes, when rightly cooked, myself and all that have eaten of them, prefer them to all other of our fishes. Twenty-five or thirty pounds is the full weight of the cats here. They go into the mud shortly, so if you wish to procure the same this fall you must hurry up. I would transmit as small fish as it is possible to procure; they are hardy and equal carp for transportation

The largest dealer in fish on the lake is Mr. H. E. O'Hagan, of Sandusky, Ohio. He is the soul of honor, and accommodating.

I don't know but what it would be a good idea to teach those Belgians how to cook cats. DR. E. STERLING.

CLEVELAND, O.

If Mr. Mather can't get catfish more convenient, he could get a full supply in Middle Georgia. Presume he can get them nearer. THOMAS CHALMERS.

HOLYOKE, Mass.

SEA TURTLES NEAR NEW YORK.

IF you would "go a fishing" off the south shore of Staten Island, you would know that sea turtles abound in Raritan, popularly known as Prince's Bay. I may be pardoned, perhaps, for remarking parenthetically that Prince's Bay is only a little cove.

About three weeks ago Mr. Jacob Vetter, of the Excelsior Fishing Club, located at Huguenot, while angling for weakfish on "the middle," discovered that some thing had "caught on" to a baited hand line which he had dangling in the tide. This proved to be a turtle that had hooked himself by the shoulder close to the shell. With the assistance of Mr. John Ruse, who was in the same boat, and the aid of some gentlemen who opportunely passed within hailing distance, the turtle was lifted out of the water and brought ashore. With the basket in which it was placed the turtle weighed 126 pounds. It was rendered into 40 gallons of soup by "Gus" Spence, of Beekman street, which connoisseurs were unable to distinguish from the finest green turtle soup. From a description furnished to dealers in turtles, it was pronounced by them to be a green turtle. Its head may be seen at the taxidermist's on William street near Spruce. Its neck measures 19 inches in circumference.

It is unusual to pass a day in fishing off the south shore of Staten Island in the summer without being startled by the sudden appearance of one or more of these monsters, or by their "s-h-o-u-g-h," as they come up to breathe.

ALBERT E. COCHRAN

NEW YORK, Sept. 11.

THE WEST JERSEY SOCIETY.—Philadelphia, Sept. 5.—The West Jersey Game Protective Association is very active this season on the New Jersey side of our river. Several shooters have been arrested, not being able to show license. Bill Carson, of pigeon-shooting fame, was taken in day before yesterday and fined $50, and yesterday A. Welch, Jr., son of the great stock breeder, was arrested and taken to Camden and fined $50. The latter gentleman has declared his determination to make appeal and test the constitutionality of the law, which you know has been questioned by some.—HOMO.

DOLLY VARDEN TROUT.—Upper Soda Springs, Siskiyou County, Cal.—An article in FOREST AND STREAM of Aug. 17 mentions two kinds of trout as occurring in the McCloud River, viz., *Salmo iridea* (rainbow trout), and the other, punctatus (*Salmo purpuratus*), which name had been substituted for *clarkii*, and for which trout you wish a vulgar but constant name adopted. As we are not aware of a third species of trout in the McCloud River, it seems that for one and the same kind of fish the name of *bairdii* and *mahna* have, by right of priority presumably, been superseded by *clarkii* and by *purpuratus* finally. If we are correct in concluding that all these names stand for that larger, largely yellow-spotted trout of the McCloud River and other more northern streams of this coast, we would call your attention to the fact that this species is in the regions where it occurs, and more widely over the Pacific coast, known as the Dolly Varden trout, the general adoption of which name might, therefore, recommend itself as a one of long standing and answer the purpose of your article on "Correct Fish Nomenclature."—R. M. [The fish which we referred to as *S. clarkii* or *S. purpuratus*, is not the Dolly Varden, but is a fish called by Jordan "Missouri trout," and "Columbia River trout." It is so much like the rainbow trout, *S. iridea*, as to be popularly confounded with it. According to Jordan its scales are larger than those of the rainbow. The latter has 165 to 205 rows of scales (in lateral line), while the *purpuratus* has 155 to 165. Its coloration is, we believe, more of a flush than a distinct stripe like the rainbow. Its range is very wide, and it is found in the McCloud, according to the authorities, with the rainbow, from which it requires careful examination to be separated. The Dolly Varden is yellow or red-spotted, while the other two are black-spotted fish. All three species have been exhibited here, dead, at the trout openings at Mr. Blackford's.]

TOO FASTIDIOUS.—I don't quite comprehend why some of your correspondents so seriously object to the bass occasionally making a "square meal" of snake, and for such a lark condemn, knock down, and stamp, metaphorically, upon one of the gamiest, hardiest, and most succulent fish of our inland waters. That a bass "flops" a snake now and then only proves that he is the best fellow; is bold, and has a good appetite and a good digestion. Why not go back on a trout because he feeds on a nasty worm that lives on mud, or go hungry for a week because the delicious broiled chicken on the breakfast table got its sustenance from the barnyard? Snakes must be good or the bass would not take them. If the bass drank whisky enough he might have a red nose, where now he has only a red eye, and if he put into his stomach one-tenth the variety of food that every man thinks he must have or starve, or ate snake as a regular diet, there would then be some consistency in black-balling him. As it is, the bass is rarely fooled with stale meat, and will only take what has life or the semblance of it, and the same process of assimilation of food, or nearly so, that gives existence to all animated life, applies equally well to the bass that is fast superseding, I regret to say, the daintiest, sweetest, and most beautiful of fish—the trout.—SYRACUSE.

TENNESSEE NOTES.—Since the spirited correspondence between the newly appointed Fish Commissioner and the Governor, matters piscatorial have been very quiet at the executive mansion, though the genuine anglers of our city have been having a good time with the jack, bass and black perch in the many first-class streams of the State. We have had much rain, but as a rule not too much for ardent sportsmen, as the rain kept the water in excellent fishing order. Col. Geo. F. Akers, ex-Fish Commissioner, paid us a visit the other day. He says that the fishing in the Upper Cumberland and the Red River of Kentucky is simply immense. The Colonel caught at Louisville, a few days ago, out of the Ohio River, an eel which weighed four and a half pounds. He says that he "never believed that an amphibious critter would be so cussed in his ways as was this snake-like monster." Our market is beginning to be well supplied with fish and oysters from the Eastern cities. Catfish and drum are taken in quantities with trot lines from the river close by town, and occasionally a hungry bass will be snared into taking the fixed bait on this unsportsmanlike tackle.—J. D. H.

THE GASPER-GOU IS EDIBLE.—We publish the following from the Fish Commissioner of Texas on the fish called gasper-gou in the South, lake sheepshead in the North, etc., the *Haplodonotus grunniens*. It is not eaten at the North, and the following is a reply to a letter from us on the subject. We do not think there has been an error in the indentication: "We certainly do eat 'gasper-gou' and there is no doubt about its being a good fish. Is it possible that a mistake has been made in the 'identification' of this fish? With the exception of several apparent species of bass, the gasper-gou is the best fresh wather fish we have in Texas. Weighing from a few ounces up to, say three pounds, it is a good pan fish- larger, a good fish boiled or baked.—R. R. ROBERTSON (Austin Texas)."

FISH AND GAME OF TROUT LAKE.—Escanaba, Mich., Sept. 4.—I was up to Trout Lake August 20; brought down 165 trout, which weighed fifty-five pounds dressed. I saw four deer, three beavers and one otter; killed one of the beavers with a little pole. I have a sample of the white bottom of Trout Lake; do you want it? If so I will send it to you.—A. F. YOUNG. [We would like to see a sample of this singular bottom.]

LIGHT OR HEAVY RODS.—Boston, Mass., Sept. 8.—Paste this record on the banner of the light vs. heavy. An eight-ounce rod has this season killed seven black bass whose united weight was twenty-three pounds. On one occasion a 3¼-pound bass and a 1¼-pound white perch were killed and landed at one time. Of course it took some minutes to "lead them around," but we don't grudge time spent that way, for we never fish for count or money, and are never miserable because some other boat brings in more fish than our own.—M.

ADIRONDACK TROUT.—Meacham Lake, Franklin county, N. Y., Sept. 6.—The trout are just beginning to head up stream towards the spawning beds. My California trout, hatched June 1, are now two inches long. I am very much surprised at their growth. If they make a good fish for the table, they will be of great benefit to the Adirondacks. I am in doubt yet as to quality, but hope it will be good.—A. R. FULLER.

VIRGINIA BLACK BASS.—On a late trip to Loudoun county, Va., I stumbled upon the best sport for black bass, short of New York State, I have ever found. It was at Castleman's Ferry, near Snickersville, on the Shenandoah River. No one appears to know of it, and the natives, in a very primitive way, take black bass with hand lines. A good hotel on the banks of the river affords accommodations, and the fish run large and take minnow bait freely. I found one trouble, that of the muddy state of the river after even moderate rains, as the Shenandoah drains a great extent of country, and the soil of Loudoun county is of a clayey nature. Good boats can be had at Castleman's Ferry, and fishermen getting there when the river is clear can be assured of sport.—HOMO.

FATAL FISHING.—A resident of St. Louis, who was on a visit to the East, went bluefishing the other day, became seasick. In his struggles, it is supposed, burst a blood vessel, and died.

Fishculture.

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS ELEVENTH ANNUAL MEETING.

MATERIALS FOR A HISTORY OF THE SWORDFISH.

BY G. BROWN GOODE.

[CONTINUED.]

ENEMIES.

SUCH a large animal as the swordfish can have but few antagonists whose attacks would be disastrous. The tunny or horse mackerel, *Orcynus thynnus*, other swordfishes, and sharks are its only peers in size, and of these the sharks are probably its worst foes.

Capt. N. E. Atwood exhibited to the Boston Society of Natural History, December 7, 1864, the lower jaw of a large shark, taken at Provincetown, Mass., in whose stomach nearly the whole of a large swordfish was found. Some ten or twelve wounds were noticed in the skin of the shark, giving an idea of the conflict. The shark was doubtless *Galeocerda tigrina*.

Couch was told by a sailor that he had watched with interest the anxious motions of one as it was followed closely and rapidly in all its turnings by a blue shark. Twice did it leap above the surface to escape the near approach of its pursuer, but with what success at last the observer had no opportunity of knowing.

Mr. John A. Thomson states that the billfish (probably *Tetrapturus albidus*) is their especial enemy. Billfish, six to twelve feet long, appear about the last of the season, and their appearance is a signal that the swordfish are about leaving.

INVERTEBRATE PARASITES OF THE SWORDFISH.

Aristotle thus explains the leaping movements of the fish: "The tunny and the *Xiphia* suffer from the œstrus at the rising of the dog-star, for both these fish at this season have beneath their fins a little worm which is called œstrus, which resembles a scorpion and is about the size of a spider; they suffer so much from this torment that the *Xiphias* leaps out of the sea as high as the dolphin, and in this manner frequently falls upon ships."

This description of the parasite is somewhat vague; yet it is evident that allusion is made to one of the Lerneans or gill-lice, little crustaceans remotely resembling crabs and lobsters, which attach themselves to the gills and skin of many kinds of fishes, sucking the blood from their veins, and often causing death; dreadful to their victims as was their namesake, the fabled Lernean Hydra, to the Argives of old, and not to be destroyed by any pseudo Hercules and Iolaus.

In one of the early volumes of the Philosophical Transactions is an account by S. Paulo Boccone of "an extraordinary *Sanguisuga* or *leech*, found sometimes sticking fast in the fish called *Xiphias* or *swordfish*." It is described as "about four Inches long, the Belly of it white, cartilaginous and transparent, without Eyes or Head, but instead of a Head it had a hollow Snout, encompassed with a very hard Membrane; which Snout it thrusts wholo into the Body of the Fish, as far as the Tongue was wound into a piece of Wood, and fills it full of Blood into the very Orifice." He names it "*Hirudo* or *Acus cauda utrinque pennata*."(33)

A specimen taken off Seaconnet, July 22, 1875, had fluke worms in the external coat of the stomach and in the air-bladder.

I am indebted to Mr. Frederick W. True for the following account of the parasites of the swordfish:

The swordfish is infested by many species of parasites. Some hang on the gills, others fasten themselves to different parts of the alimentary canal—the œsophagus, the stomach, and the intestines—and others still, bore into the flesh. Several species, as might be expected from the size of the fish, are among the giants of their races. All undoubtedly cause more or less pain to their host, but especially those which attach themselves to the gills, disturbing their action and destroying their substance.

The parasites of the swordfish, for convenience, may be classified in two groups, the worm-like parasites (*Helminthes*) and the crustacean parasites.

a. The worm-like parasites (*Helminthes*).—Seven species of *Helminthes* from the swordfish have been described, of which one belongs to the group *Nematoda*, or roundworms, four to the *Trematoda*, or flukes, and two to the *Cestoda*, or tapeworms. [Description omitted.]

FISH PARASITES—THE SUCKERS OR REMORAS.

Several species of "stays-ships" or "remoras" occur on our coast. The ordinary kinds, such as *Leptecheneis naucrateoides*, the one with a black stripe down its side and white corners to its caudal fin, appears to choose companionship with the sharks, while the oceanic species, *Echeneis remora*, is most often found clinging to ships.

A third species, *Remoropsis brachyptera*, is the particular parasite of the swordfish. I have several times identified it when found attached to the fish, and have never known it to be found on any other species. It has never come to us, moreover, from locality and season which would be inconsistent with a theory that it had been brought near shore by a swordfish.

Still another, *Rhombochirus osteochir*, seems equally inseparable from *Tetrapturus albidus*. This fact is known to the Cuban fishermen, who call it by the name *Pega de los Agujas*, the parasite of the spearfish.

Perhaps the two species are not so fixed in their likings that they will change from *Xiphias* to *Tetrapturus*. My friend Professor Giglioli, of Florence, who speaks of *R. brachyptera* as a fish new to the Mediterranean, obtained from Taranto a specimen said to have been taken from the gills (operculum?) of *Tetrapturus belone*.

These parasites probably prefer to cling with their curious suckers to the hard exterior surface of the opercular flap of the swordfish.

THE LOCATION OF THE FISHING GROUNDS.

In what has already been said regarding the dates of appearance and local movements of the swordfish in our waters may be found all the facts relating to the location of the fishing grounds, for the fishermen follow the swordfish wherever they appear to be most abundant.

Early in the season the swordfish are most abundant west of Montauk Point, and later they spread over the shoal grounds along the coast even as far north as the Nova Scotia Banks. They may be found wherever mackerel and menhaden are abundant, as may be inferred from the almost universal practice of carrying swordfish irons on board of mackerel vessels.

I quote the statements of three or four correspondents who have taken the trouble to interview the fishermen of their respective localities.

Mr. E. G. Blackford writes: "The following information I received from an old swordfisherman, a man whose statements may be relied on. The season first opens early in June in the neighborhood of Sandy Hook, and continues along the coast as far east as Martha's Vineyard and Nantucket Shoals until about the middle of September. They are said to have been caught as far north as Cape Sable. At the first cold wind blowing in September they disappear, and are not found again on the coast that season." This is the statement of a New York man.

Capt. Benjamin Ashby, of Noank, Conn., informs me that the swordfish vessels of Noank and New London are accustomed to leave the home port about the 6th of July, and throughout the month they find fish most abundant between Block Island and Noman's Land; in August between Noman's Land and the South Shoal Light Ship. They first meet the fish twenty to twenty-five miles southeast of Montauk Point. In August and September they are found on George's Banks. There is no fishing after the snow begins to fly.

A little farther east is the New Bedford fleet. Capt. I. H. Michaux, of the schooner Yankee Bride, tells me that swordfish strike in about Block Island in the middle of June, and stay in that vicinity until the 15th or 20th of August. North of Cape Cod they are taken up to the 30th of October.

The statements of Mr. John H. Thomson, of New Bedford, have already been quoted, but may be epitomized in this connection. From May 25 to June they are found south of Block Island, approaching the Vineyard Sound and the neighboring waters through June and to the middle of July. A little later they are more abundant to the southeast of Crab Ledge, and after August 1 to the southeast of Cape Cod and George's Banks.

The schooner Northern Eagle, of Gloucester, Capt. George H. Martin, when engaged in swordfishing, is accustomed to leave Gloucester so as to be on the ground south of Block Island by the 10th of June, and the fish are followed as far east as Portland.

Mr. Earll ascertained that the swordfish are mostly fished for on the coast of Maine from July 1 to September 1.

Halibut vessels on La Have and Sable Island Banks occasionally take these fish upon their lines.

Mackerel vessels on the New England coast are always prepared for swordfish when cruising among mackerel schools. I am not aware that they are ever seen on the mackerel grounds of the Gulf of St. Lawrence.

APPARATUS OF CAPTURE.

The apparatus ordinarily employed for the capture of the swordfish is simple in the extreme. It is a harpoon with detachable head. When the fish is struck the head of the harpoon remains in the body of the fish, and carries with it a light rope, which is either made fast or held by a man in a small boat, or is attached to some kind of a buoy, which is towed through the water by the struggling fish and which marks its whereabouts after death.

The harpoon consists of a pole fifteen or sixteen feet in length, usually of hickory or some other hard wood, upon which the bark has been left, so that the harpooner may have a firmer hand-grip. This pole is from an inch and a half to two inches in diameter, and at one end is provided with an iron rod or "shank," about two feet long and five-eighths of an inch in diameter. This "shank" is fastened to the pole by means of a con cal or elongated cup-like expansion at one end, which incases the sharpened end of the pole, to which it is secured by screws or spikes. A light line extends from one end of the pole to the point where it joins the "shank," and in this line is tied a loop, by which is made fast another short line which secures the pole to the vessel or boat, so that when, it is thrown at the fish it cannot be lost.

Upon the end of the "shank" its somewhat securely the head of the harpoon, known to the fishermen by the names of swordfish iron, lily iron, or Indian dart. This form of this weapon has undergone much variation, as is shown in the series of figures of specimens in the National Museum. The fundamental idea may very possibly have been derived from the Indian fish dart, numerous specimens of which are in the National Museum. However various the modifications may have been, the similarity of the different shapes is no less noteworthy from the fact that all are peculiarly American. In the enormous collection of fishery implements of all lands in the late exhibition at Berlin, nothing of the kind could be found. What is known to whalers as a toggle-harpoon is a modification of the lily-iron, but so greatly changed by the addition of a pivot by which the head of the harpoon is fastened to the "shank" that it can hardly be regarded as the same weapon.

The lily-iron is in principle exactly what a whaleman would describe by the word "toggle." It consists of a two-pointed piece of metal, turning in the center, at one side, a ring or socket whose axis is parallel with the long diameter of the implement. In this is inserted the end of the pole-shank, and to it or near it is also attached the harpoon-line. When the iron has once been thrust point first through some solid substance, such as the side of a fish, and is released upon the other side by the withdrawal of the pole from the socket, it is free, and at once turns its long axis at right angles to the direction in which the harpoon-line is pulling, and thus is absolutely prevented from withdrawal. The principle of the whale-harpoon or toggle-iron is similar, except that the pole is not withdrawn, and the head, turning upon a pivot at its end, fastens the pole itself securely to the fish, the harpoon-line being attached to some part of the pole. The swordfish lily-iron head, as now ordinarily used, is about four inches in length, and consists of two lanceolate blades, each about an inch and a half long, connected by a central piece much thicker than they, in which, upon one side, and next to the flat side of the blade, is the socket for the insertion of the pole-shank. In this same central enlargement is forged an opening to which the harpoon-line is attached. The dart-head is usually made of steel; sometimes of iron, which is generally galvanized; sometimes of brass.

The entire weight of the harpoon-pole, shank, and head should not exceed 18 pounds.

The harpoon-line is from 100 to 150 fathoms long, and is ordinarily what is known as "fifteen-thread line." At the end is sometimes fastened a buoy, and an ordinary mackerel keg is generally used for this purpose.

In addition to the harpoon, every swordfisherman carries a lance. This implement is precisely similar to a whaleman's lance, except that it is smaller, consisting of a lanceolate blade perhaps one inch wide and two inches long, upon the end of a shank of five-eighths-inch iron, perhaps two or three feet in length, fastened in the ordinary way upon a pole 15 to 18 feet in length.

THE MANNER OF FITTING A VESSEL FOR SWORDFISHING.

The swordfish are always harpooned from the end of the bowsprit of a sailing vessel. It is next to impossible to approach them in a small boat. All vessels regularly engaged in this fishery are supplied with a special apparatus for the support of the harpooner as he stands on the bowsprit, and this is almost essential to success, although it is possible for an active man to harpoon a fish from this station without the aid of the ordinary framework. Not only the professional swordfishermen but many mackerel schooners and packets are supplied in this manner.

The swordfish "pulpit" is constructed as follows: The harpooner stands upon the tip of the bowsprit, outside of the

jibstay. At this point is fastened a square plate of iron as wide as the bowsprit. In the middle of this plate is a mortise two inches square and extended three or four inches down into the wood, forming a socket for an upright iron bar two inches square and three feet high. At the top of this bar is a bow of iron bent backward in semicircular form to surround the waist of the harpooner, the ends of the bow being separated by a distance of perhaps two feet. In the ends of the bow-iron are holes through which are passed irons to hold the dart when not in use. Through these same holes are sometimes passed ropes, by which is suspended a swinging seat for the use of the harpooner when not in action. When not in use the dart is lashed in a horizontal position to the top of the "rest." The lance is usually allowed to rest against the jibstay, to which it is secured by passing it through loops of rope arranged for the purpose. Upon the tip of the bowsprit, at the base of the *rest*, is a platform of wood about two feet square, large enough to afford a firm foot-hold to the harpooner. The harpoon-line is coiled upon the bow of the vessel, the buoy usually resting upon the bulkhead or close at hand. A second harpoon-line, attached to the reserve or second harpoon, is coiled upon the other side.

The structure above described is usually called a "rest", though not infrequently the "pulpit". Capt. Benjamin Ashby always called it an "oresembo". I was unable to obtain from him any derivation of this remarkable word. He informed me that he had always used this name because the thing looked to him as if it ought to be called by that name, and that he had never heard any one else call it so except members of his own crew, who had learned the word from him. This is a curious illustration of the arbitrary manner in which fishermen are accustomed to coin names for new articles of apparatus. Although many archaic and provincial terms whose etymology is plainly traceable are in use among our seafaring men, there are numerous others for whose meaning and origin it would be vain to search.

I have been unable to learn when and by whom this peculiar piece of apparatus was devised.

MANNER OF CAPTURE.

The swordfish never comes to the surface except in moderate, smooth weather. A vessel cruising in search of them proceeds to the fishing ground and cruises hither and thither wherever the abundance of small fish indicates that they ought to be found. Vessels which are met are hailed and asked whether any swordfish have been seen, and if tidings are thus obtained the ship's course is at once laid for the locality where they were last noticed. A man is always stationed at the masthead, where, with the keen eye which practice has given him, he can easily descry the tell-tale dorsal fins at a distance of two or three miles. When a fish has once been sighted the watch "sings out," and the vessel is steered directly towards it. The skipper takes his place at the "pulpit," holding the pole in both hands by the small end, and directing the man at the wheel by voice and gesture how to steer. There is no difficulty in approaching the fish with a large vessel, although, as has already been remarked, they will not suffer a small boat to come near them. The vessel plows and swashes through the water, plunging its bowsprit into the waves, without exciting their fears. Noises frighten them and drive them down. Although there would be no difficulty in bringing the end of the bowsprit directly over the fish, a skillful harpooner never waits for this. When the fish is from six to ten feet in front of the vessel it is struck. The harpoon is never thrown, the pole being too long. The strong arm of the harpooner punches the dart into the back of the fish, right at the side of the high dorsal fin, and the pole is withdrawn and fastened again to its place. When the dart has been fastened to the fish the line is allowed to run out as far as the fish will carry it, and is then passed in a small boat which is towed at the stern. Two men jump into this, and pulling in upon the line until the fish is brought in alongside; it is then killed with a whale lance or a whale spade, which is stuck into the gills.

The fish having been killed, it is lifted upon the deck by a purchase tackle of two double blocks rigged in the shrouds.

The fishermen have a theory to the effect that the swordfish can see nothing directly in front of him, on account of the peculiar location of the eyes, and there are instances of their having been approached and killed by men in a skilfully managed dory.

THE PERILS AND THE ROMANCE OF SWORDFISHING.

The pursuit of the swordfish is much more exciting than ordinary fishing, for it resembles the hunting of large animals upon the land, and partakes much of the nature of the chase. There is no slow and careful baiting and patient waiting, and no disappointment caused by the accidental capture of worthless "bait-stealers." The game is seen and followed, and outwitted by wary tactics, and killed by strength of arm and skill. The swordfish is a powerful antagonist sometimes, and sends his pursuers' vessel into harbor leaking, and almost sinking, from injuries which he has inflicted. I have known a vessel to be struck by wounded swordfish as many as twenty times in one season. There is even the spice of personal danger to give savor to the chase, for the men are occasionally injured by the infuriated fish. One of Captain Ashby's crew was severely wounded by a swordfish which thrust his beak through the oak floor of a boat on which he was standing, and penetrated about two inches in his naked heel. The strange fascination draws men to this pursuit when they have once learned its charm. An old swordfisherman, who has followed the pursuit for twenty years, told me that when he was on the cruising ground he dished all night in his dreams, and that many a time he has bruised his hands and rubbed the skin off his knuckles by striking them against the ceiling of his bunk when he raised his arms to thrust the harpoon into visionary monster swordfishes.

A LANDSMAN'S DESCRIPTION OF SWORDFISHING.

Mr. C. F. Holder, of New York, published in FOREST AND STREAM, February 17, 1876, the following description of a trip after swordfish in Block Island Sound:

"Lying all night in the harbor of Wood's Holl, we had ample time to prepare for sport, and at three o'clock in the morning our little sloop was swinging around, and, gathering herself together, headed for Gay Head. The vessel was a common sloop of about sixty tons, its only peculiarity being a stanchion with a curved top, to hold the harpooner, rigged on the extreme end of the bowsprit. At nine o'clock we were out of sight of the Vineyard. The wind settling, I was informed that I could go aloft and use my weather-eye, and the better I used it the more fish we would get. After not a few attempts to climb the greasy pole of a mast I found myself aloft, with a firm grasp upon the throat of the gaff, my weather-eye, contrary to orders, full of tar, and my port on the lookout for the game. We were just moving along, and I was taking in the horizon for miles around, when the man at the bow uttered a sound, which was a sort of a cross between a cluck and a groan, which I knew meant 'fish,' and that something had been sighted. The old craft fell lazily away, and I then saw two dark forms with their razor-like fins out of the water slowly moving along ahead of us. The captain signaled at once for me to come down, and as I reached the deck the fun commenced. The man waited until we were almost upon them, and as one of them turned, as if in idle curiosity, to see what the great shadow meant, he buried a spear, and the next moment the huge fish sprang from the water and with a furious twist tried to shake out the iron. So great was the effort that it fell on its side with a crash, and for a moment was still, but it was only for a second, the line jumped into activity and rushed out so you could not follow it, now swaying to and fro, and making the water fly like rain. About 50 feet of line had gone out, when six of us managed to get a fair hold on the line, and attempted to try our strength. If six individuals were ever jerked around in a more vivacious manner they have my utmost sympathies. Now the swordfish would land us altogether in a heap, then slacken up, and take us unawares, throwing us to the deck with a force that fully came up to my preconceived ideas of the sport. He would undoubtedly have dragged us all overboard if the rope had not been sure and fast. This sort of *fun* was kept up for about fifteen minutes, when the fish perceptibly weakened, and the long rushes to the right and left grew feebler and feebler, until we ventured to haul in. At last we had the brute alongside. A rope was rigged from the peak and fastened around the long sword, and the monster was rolled on board the sloop. We measured our game, which was 9 feet 6 inches long. Though I have frequently caught sharks which measured 13 feet, I never saw any that showed near the strength of this peculiar creature.

"We cruised all day in the vicinity, and succeeded in capturing three more, varying in length from 6 to 9 feet, and as we returned to Wood's Holl I felt that I had well earned my experience."

The Kennel.

FIXTURES.

January 9, 10, and 11, 1882.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden, Conn.

BENCH SHOWS.

April 3, 4, 5 and 6, 1882. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby, for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Stayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

November 17—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. F. N. Hall, P. O. Box 884, New York, Secretary.

December 4—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

TO CORRESPONDENTS.

A large number of communications remain unanswered in the absence of the editor of this department. Pending his return from the prairie chicken trials, we beg the indulgence of numerous correspondents.

THE PRAIRIE CHICKEN TRIALS.

[SPECIALS TO FOREST AND STREAM.]

FAIRMONT, Minn., Sept. 8, 1882.

Following is summary of the conclusion of the Derby running:

Fourth Series.

Prince Noble beat Pink B., and won first prize, Chevalier being withdrawn. Pink B. won second prize.

Fifth Series.

American Dan beat Scott; Gilderoy a bye.

Sixth Series.

American Dan beat Gilderoy and won third prize.

Seventh Series.

Gilderoy, St. Elmo IV. and Scott divided fourth prize. This ends the Derby.

ALL-AGED STAKES.

First Series.

Sue beat Countess Druid.
Frank H. beat Broker.
Adams' Bessie beat Kinnikinick.
Maxim beat Bodine (withdrawn).
Jess and Christmas Bell were ordered up to go down again if they have a chance to win.
Prairie Range beat Shadow.
Count Noble beat London.
Dashing Novice beat Foreman.
Meteor beat Pride.
Gertrude beat May Laverack (withdrawn).
Biz beat Clemantine D.
Rock beat Maida.
Donner's Bessie beat Dash.
Don beat Punch (withdrawn).

FAIRMONT, Minn., Sept. 9.

The continuation of the running in the All-Aged Stakes resulted as follows:

Second Series.

Sue beat Adams' Bessie.
Frank H. beat Maxim (who, with Meteor, was withdrawn).
Count Noble beat Prairie Ranger.
Gertrude beat Biz.
Rock beat Donner's Bessie.
Don beat Dashing Novice.

Third Series.

Sue beat Count Noble.
Don beat Rock.
Gertrude and Frank H not decided.
There are seventeen more heats to run. The finish will be about Thursday. Mr. B. F. Wilson, of Pittsburgh, Pa., has been elected judge in place of Mr. E. C. Sterling, resigned. Weather pleasant but hot. Fair attendance.

FAIRMONT, Minn., Sept. 11.

At a meeting of the handlers to-night it was agreed that the judges, assisted by Messrs. E. C. Sterling and N. Rowe, should place the remaining dogs instead of running them.

Sue gets four-fifths of second prize, and Dashing Novice one-fifth.

Gertrude, Count Noble and Adams's Bess equal third.
Biz and Prairie Ranger equal fourth.
The Fairmont prize was divided between Gertrude and Rock.
Best Pennsylvania entry in Derby, Count Dad.
Pointer prize, Don.
Best Pennsylvania entry in All-Aged Stake, Don.
The trials have been successful financially.

"You dog of a printer," cried the enraged poet, "you have not punctuated my poem at all." "Yes, but you see, sir, I am not a pointer—I'm a setter," replied the printer.—*Ex.*

WHY HE STOPPED IT.—Clinton, Mass., Sept. 6.—*Editor Forest and Stream:* Please stop my advertisement in your paper and send bill to me. The puppies are about all disposed of, only two bitches left, so I shall need it no longer. I can testify to the good qualities of your circulation and the advantage of advertising with you.—CHAS. L. SHAW.

DESTROYING OLD FAVORITES.

ONE of the cares which a horse or dog owner must at times be acquainted with is to know what to do with the old favorites. They have gained upon our affections for years, and when in the prime of life we have looked upon them with pride for their present worth, without estimating their value for the future, excepting for a continued use of their services. Years steal on and by degrees we find their worth depreciating, and we become reminded that animal life is a short one, and that as soon as they begin to show the signs of old age, the descent in the scale of decrepitude is very rapid. At this stage the owner possessing a mercantile mind will look about him to find a new possessor for the favorite, though there is a certain pricking of conscience even to do this, and many a determination to sell is prevented indeed until it is too late to entertain such a notion at all, and the favorite is left—perhaps half by choice and half by circumstances—to finish his days in his old home. There are other people who would not think of parting with an old servant; and her Majesty the Queen sets this example, as no horse in the Royal stable is allowed to be sold after he has been in the service of royalty for four years. A third class of owners shrink from the final lie being separated by the sure hand of death, and so give the treasured favorite away, on an assurance that is mostly unpledged, but often on the seamless verbal promise that the animal shall be well looked after for the remainder of his life. This is decidedly the most cruel and thoughtless act of all, as if a master or mistress cannot feel the deepest consideration for an old dependant, how can it be supposed that a stranger will?

The question is a very difficult one, however, as the feelings of most people are particularly sensitive on this point, and no matter how much courage, moral or otherwise, that a man may possess, he shirks giving the order or doing the deed himself that is to put the old favorite out of the way. We have known a great many cases where such feelings have brought about exactly the opposite results to those aimed at. The memory of an old Scotch terrier comes back to us that reached the good old age of seventeen, but for two years previous to that time he had become a nuisance to himself and every one near him. "Really, ma'am, Fox must be killed," the confidential housekeeper used to say to her mistress. "Well, let it be done; but I must know nothing about it," was the reply. During this dialogue, however, Fox would be listening on the hearth-rug, and, as if he knew what was said, he invariably put his tail between his legs, and hid himself under the table or behind the curtain. Such an action on his part would make his mistress look very grave, and in the course of a quarter of an hour the bell would be rung, so as to give orders that Fox was not to be killed. So matters went on until at last the housekeeper, who could not refuse to the gardener, but that functionary was very fond of the dog, as he had known him as an old friend for ten or a dozen years. Consequently, he debated the orders to the day laborer, who knew nothing about killing dogs, and the upshot of it was that Fox was hammered to death with a spade.

Another case in point was that of a sportsman who was a particularly good shot, and he determined that he would put two very favorite terriers out of the way himself, so, as he termed it, "they should not suffer any bungling. After putting off his intention for months and weeks, he plucked up his courage at last for the very unenviable duty, and, taking the two old dogs into a walled garden, and getting them both together, he shot one, but the other moving, or, more likely, his hand shaking, he only wounded the greater favorite of the two, his faithful companion for years, and he had to listen to his cry whilst adjusting another cartridge. It was but a moment or two's misery, of course; but the sportsman was terribly cut up by the incident, and declared he could go through anything rather than have that again.

It is an absolute necessity in many cases that old horses and dogs should be destroyed, as their decrepitude is unquestionably painful to themselves, and their helpless conditions are frequently aggravated by disease. In fact, it is mistaken humanity to let them last out to the full extent of their years, besides the great inconvenience they incur. The method of carrying out the most merciful intentions, both for the sake of the feelings of the owners and animals, is therefore, a most important consideration, and we consequently give one that has been suggested to us by Frank Gillard, the Duke of Rutland's huntsman. Gillard was much put out by the contemplation of the old, and it must be acknowledged the quick plan of knocking the condemned hounds on the head with a hammer. This plan is similar in every way to the method pole-axing horses, and although people say it must be painless, the idea is revolting when one thinks of the terrible blow necessary to insure death, and that the animal must be previously cognizant of the action for its destruction. Poison, also, did not come quite up to Gillard's idea of what was required, but the serious effects of overdoses of chloroform gave him the notion of giving hounds an everlasting sleep. He tried it by empting the contents of a two-ounce bottle of that fluid on to a bit of sponge, and this he put into a muzzle and adjusted it on to the hound. Almost directly the animal lay down as if sleepy, and curling himself round just as a dog always does when he feels inclined for a nap, there was no further movement, and the only fact to relate was that he did not wake again. Gillard has adopted the plan entirely since he tried the first experiment, and he does not like to see any favorite hound go out of the kennel now, for fear it may be put out of the way under less comfortable circumstances.

The above method certainly appears to be the easiest way of putting an old favorite out of the way, as the death must be painless; and there is nothing about the surroundings of such a departure from this life to shock the feelings of the kindest-hearted master or mistress sorrowing for the loss of a canine friend.—*Kennel Gazette.*

THE COCKER STANDARD.—Hornellsville, N. Y., Sept. 12.—*Editor Forest and Stream:* I do not wish to have any controversy with "Senex," as I am well aware that although I can beat him breeding I am no match for him with the pen. I used to have some respect for him, but he will not be satisfied unless he is writing against the Hornell Spaniel Club. He did just the same thing last year when we won at New York and then apologized in your columns for it. I don't care one cent what he says about me, but when he gets to writing such bosh about our dogs, then I must reply. He says the standard was made to fit the dogs of the Hornell Spaniel Club. I beg to inform him the Hornell Spaniel Club won first and special at New York before there was any standard, and that we have only one dog now in our kennel that we had when the standard was made, but we never fail to purchase any dog or bitch that may or will be of use to our kennel, and it is no exaggeration to say that we have the finest and largest collection of spaniels, field and cocker, ever brought together in America. We bought Bob Ivy in Ireland, Benedict and Beatrice of the Lachine Kennel Club, Black Prince of A. C. Williamson, Flirt of Geo. D. Macdougall, Ottawa, Ont., Topsy of R. Williams, Dash, Creole and Brahmin of A. H. Moore, Philadelphia, Curlew of A. Sewell, Madge of C. Davis, Baroness from Mr. Hollis. She was bred in Canada, and now to show that we knew what we were buying I will say that all have won first or second prizes. The way I look at it is this, if you expect to make a name you must keep on improving always more ahead and keep ahead if possible. Just let some one offer good stock for sale and see if we do not offer a good price for it. We do not deal in or breed cheap dogs, they are a fraud and delusion. We pay good prices for our stock, and expect good prices for the pups. The standard "Senex" says was made to fit certain black spaniels of ours. Let me ask him how it happens that we won first and special at Pittsburgh with a black and white native, and second in puppy

MR. J. H. GOODSELL'S LAVERACK SETTER DOG "DON JUAN."

class with a liver; first at New York with black and white, and second and special in puppies with liver; also first in aged and puppy class at Cleveland with liver. Does "Senex" think I could buy or influence such honorable judges and gentlemen as Maj. Taylor, Dr. Niven, Messrs. Mason, Orgill and Kirk? He might as well say so as to write as he does, but I suppose he thinks no one knows what a spaniel is but "Senex." He does not like it, it seems, because the Hornell Spaniel Club can win a few prizes. Let him put as much money, time and brains into it as we have, and he may also expect to win. By the way, he forgets that he wanted to fix it so I could win his special prize at New York last spring. I replied that I had no desire to take any advantage, that our dogs must win on their merits. It is evident that "Senex" had not read "Stonehenge's" endorsement of the standard when he wrote as he did.—J. OTIS FELLOWS (Secretary Hornell Spaniel Club.)

DON JUAN.

DON JUAN is a blue belton Laverack setter dog, owned by Mr. James H. Goodsell, of New York. He is registered in the E. K. C. S. B. No. 10,146, and was born Aug. 8, 1879. His sire, Tam O'Shanter (6,138), is by the celebrated champion Rock out of Rum. His dam, La Reine (6,138), is by Blue Prince out of Cora. Don Juan was bred by Mr. H. F. Grant, Newport, Isle of Wight, England. He was imported in 1881. His public appearance was at the New York show of that year, when, owing to his lack of condition he only scored he. This year he came out in grand form, and at Pittsburg, in March, won first in the class for English setters of pure Laverack pedigree and the special prize for the best Laverack setter dog in the open class, also winning with Fairy II., Petrel II., Petrel III. and Plantagenet the special prize for the best kennel of five English setters. At the show of the Westminster Kennel Club, last April, he won the special prize for the best English setter dog of pure Laverack pedigree, champions excluded, and with Petrel, Petrel II., Petrel III. and Plantagenet won the special for the best kennel of not less than five English setters. At Cleveland, in May, with Petrel II., Petrel III., Prince and Plantagenet he won the special for the best kennel of five English setters, with Petrel II. the special for the best brace of Laveracks; he also won with Petrel II. the special for the best matched pair of English setters, regardless of sex, color and quality to be considered. Don Juan is a very handsome, gamy looking animal, compactly put together, with lots of quality. He is rather under the medium size, but has plenty of bone and muscle, is very stylish, and has a thoroughbred look about him that but few animals possess. He is unquestionably the peer of any Laverack setter in this country. The cut is by Harry Tallman.

COCKERS AND FIELD SPANIELS.—New York, Sept. 4. —*Editor Forest and Stream:* The courteous manner in which Mr. Kirk answers all questions on the cocker spaniel subject leads me to ask him through your journal what he claims is the difference between a cocker spaniel according to the A. C. S. C. standard and a field spaniel. I can't see any as they are continually being bred together. And the same dogs are entered at shows, and can win prizes, first as one and then as the other, according to whether their weight at the time happens to be over or under the A. C. S. C.'s regulation weight (twenty-eight pounds), which is the weight of a medium sized field spaniel. The A. C. S. C.'s standard is about the same thing as "the points of the field spaniel," which Stonehenge gives in the third edition of "The Dogs of the British Islands," and describes a breed of dogs that has been known for a great while in England and in this country as field spaniels. The true cocker spaniel is a much smaller dog and his points differ considerably from the field spaniels. Stonehenge distinctly alludes to him several times in the third edition of "The Dogs of the British Islands," and he is very well described by "Senex," in the FOREST AND STREAM of June 22 last. There are still hundreds of them of the true type to be found in England and America. The spaniel described by the A. C. S. C.'s standard, or in other words, by the field spaniel, is said to, and may be, a more useful dog for modern shooting than the old-fashioned cocker spaniel, but that is no reason why he should be called a cocker and all old-fashioned cockers bred up to his standard. So I propose that if the members of the A. C. S. C. are satisfied with their standard they change the name of their club to the American Field Spaniel Club, and continue to guard the interests of the field spaniel, and leave the interests of the true old-fashioned cocker spaniel in the care of the new cocker spaniel club which is to be formed next October. I am not an interested party in this controversy, as I own no spaniels of either breed. I simply want to see the two breeds kept separate.—SAXON.

THE DOG BETRAYED THEM.—Philadelphia, Sept. 5.—Last week one of the boat houses at Gloucester, N. J., was entered by thieves during the night. Ammunition, oar locks, push poles, etc., were taken away, and the owners, on unlocking the door of the house the following morning, found that the robbers (evidently shore gunners) had left their spaniel dog in the building, forgetting to call him out when leaving. A very clever thought struck the owners of the boat house—that of utilizing the dog for the discovery of the thieves. A cord was fastened to his collar and the animal was allowed to take his own course before a slack line. The spaniel took his followers across the river, via ferry, and directly to the house of the robbers, where the entire stolen outfit was recovered. We all pronounce this a very clever dog.—HOMO.

If you wish a first class imported mastiff puppy write to G. W. Moore, No. 6 Engine House, Pittsburgh, Pa. Full pedigree furnished. See advertisement.—*Adv.*

Rifle and Trap Shooting.

THE TEAMS AT PRACTICE.

THE record of the teams in the last issue of the FOREST AND STREAM was given to the evening of Tuesday, the 5th instant. On the following day the teams again met for simultaneous practice. The American team shot only in the second stage, at 800, 900, and 1,000yds., while the British team began at 200yds. and shot at all the distances which will be covered in the international match. The 12 leading men in the British team made the remarkable score of 2,108, out of a possible 2,520 points. This was 50 points better than their score on Tuesday. In the second stage, at 800, 900, and 1,000yds., the British led the Americans by 66 points, although the latter had improved their score by 64 points. Col. Bodine said that his team was "banged to pieces from shooting so long over all the ranges, and hereafter they will not attempt to cover all the ranges in a single day, with perhaps one exception."

The British team began shooting soon after 10 o'clock at 200yds., the opening range of the first stage of the competition. The Americans opened at 800yds., the first range of the second stage. The sky was overcast, giving a clear gray light, and the air was chilly. "This is much like our weather at home," said Corp. Caldwell, of the British team. The Englishmen complied strictly with the conditions which will govern the match by wearing their uniforms. The wind blew gently from the rear of the firing points toward the targets. Sir Henry Halford performed his duties as captain of the team and as "coach" at one of the firing points. Adjt. Henry Smith "coached" the squad at the adjoining target. The scorers were provided with miniature targets. Looking through the glass when a shot was fired, they accurately placed it on the small target with a small pin bearing a number on its head. Each pin represented a rifleman, who had a number corresponding to it. Sir Henry and Adjt. Smith did not shoot. Neither officer proposes to shoot in the match unless compelled to do so by the illness of some other member of the team. Sir Henry wore the Scotch bonnet belonging to the uniform of officers of his regiment. Observing that there were no ladies present, he drew from his pocket a little black cigar, and filled it. Puffing away a half-smoked cigar, he leaned back in his chair, and prepared to enjoy "solid comfort."

Sir Henry, Lieut.-Col. Walrond and Major Humphry each wore on his breast a new decoration. It was made of red cardboard and looked like a poker chip. The word "council" was inscribed in German text on its surface, and it was suspended from a pin-bar by a blue and white ribbon. Sir Henry explained that it was the distinctive badge of members of the Board of Directors of the National Rifle Association. Lieut. Heap, the best rifleman in the team, did not feel well and he remained at Garden City. His absence reduced the number shooting to thirteen. The scores at the 200yds. range were of about the same average merit as on the previous day, and the total score made by the twelve men in order of rank was 349, six points more than either made Tuesday at the same distance. McVittie made the only "miss" scored in the first stage of the competition at 200yds. He retrieved himself by making a clean score at 500yds. All but one of his shots at 600yds. were also "bullseyes." His final shot was marked an "outer," counting two. Adjt. Smith, who was spotting the shots at the target, insisted that the shot was a "bullseye" and ought to have been marked as such, but it was not decided worth while to challenge the spot. Major Humphry also made a complete score at 500yds., and the score made by the highest twelve men at that distance was 385, against 363 made on the previous day by the British, and 359 scored by the Americans. The score at 600yds. yesterday was 356, an increase of five points over the score made by the Americans at that point on the previous day, and nine points better than the British score made on the same occasion.

The British completed their work in the first stage at 1:30 o'clock, just as the Americans finished shooting at the 900yds. range. Both teams dined in the same room at the club house. A heavy shower of rain began to fall during the luncheon, and as it was still raining when the riflemen left the table. The adjutants of the respective teams took advantage of the opportunity to formally introduce the members of the two teams to each other. Gen. Woodward, Gen. Molineux, Col. Cowperthwait, Col. Story, Col. Scott, and Judge Stanton reached the range during the hand-shaking, and the conversation began to be interesting, when Sir Henry, who had kept one eye on the weather, observed that the rain had ceased falling. "Come boys," he said, "there's no time to be lost," and, picking up his gun, he lighted his pipe, and started for the field. Col. Bodine's detachment followed and began their work at 1,000 yards, as the British riflemen commenced dropping "bullseyes" into the targets at 500 yards. The flags hung close to the masts. There was not wind enough to float them, and clouds obscured the sun. The score of the first 12 Americans at 800 yards was 356, against 380 made by a similar number Tuesday. This was three points less than was made by the British on Tuesday, who made 371 at that range yesterday. At 900 yards the score of the leading 12 Americans was 315, 3 points higher than their score of the previous day, and 10 points less than the British score on Tuesday. The score of the Englishmen yesterday was 355. At 1,000 yards the 12 leading men of the British "tied" a similar number of the Americans on 318 points. The Americans fired two "strings" at 1,000 yards, but only the first one was counted in their scores, while the other was kept as a record of the practice. They scored plenty of "duck eggs." Griffiths, Van Heusen, Irlam, Alder and Ogden each got one. Paulding scored two "misses," and Smith made an "angle" iron, which counted as a "miss" on his score. Following are the scores:

	American Team.					
	800 Yards.	900 Yards.	1,000 Yards.	Total.
C. W. Hinman	28	32	28	88
J. Smith	29	31	27	87
D. R. Atkinson	30	26	29	85
A. B. Van Heusen	34	27	24	85
T. W. Griffiths	29	30	23	82
M. D. Hinds	30	21	29	80
S. E. Irlam	31	23	26	80
J. M. Pollard	27	27	25	79
D. H. Ogden	27	27	25	79
T. J. Dolan	29	27	23	78
E. O. Shakspeare	24	20	31	75
F. Alder	30	24	21	75
J. McNevin	28	19	26	73
G. E. P. Howard	23	16	26	65
J. L. Paulding	20	15	30	65
N. D. Ward	27	18	Retired.	

Thursday, the 7th, was an off day. The British team made it a day of rest, and only six of them visited Creedmoor, and they did comparatively little shooting, though what they did was of excellent quality. The six were Sir Henry Halford, Capt. Mellish, Lieut. Heap, Corporal Parry and Privates Goodear and Boulter. Sir Henry brought his "marker" out with him and hammered away all day at the old familiar bullseye of target No. 6. He shot at 800, 900 and 1,000yds., and at the last distance the others of the party joined him and fired a little to obtain records of elevation for the particular atmospheric conditions that prevailed. Three gentlemen, Messrs. Heap, Parry and Boulter, shot all through the short ranges and made splendid scores. Lieut. Heap's total was 99 out of the possible 105 points; Corporal Parry 98, and Mr. Boulter 89. Lieut. Heap performed the remarkable feat of stringing out 14 consecutive bullseyes, 7 at 500 and 7 at 600yds. On this side of the Atlantic, at least, this is an unparalleled performance with a military gun.

The British team had the range at Creedmoor to themselves on Friday, the 8th, and they rolled up some magnificent scores at the short rimers. The American team passed the day quietly, some of its members returned to their homes, and some watched the shooting of the British team, but, with the exception of Major Shakspeare, none of them did any shooting. Col. Bodine was firm in refusing to allow any other member of the team to shoot until to-day. The wind fluctuated from 4 to 6 o'clock on the dial. The British team called it "an ugly fish-tail breeze." For the first time since the beginning of the practice by the British at Creedmoor, they had to resort to "coaching." The Scottish members of the team settled down to their work, apparently making the horse for their participation in the Caledonian games on the previous day. Lieut. Heap had recovered from his indisposition, and shot over the ranges with the other members of the team. All of the riflemen complained of the ravages of the "bridgets," as they termed the mosquitoes.

The score in the first stage was chiefly remarkable for an absence of "misses." Although no sighting shots were allowed, every man struck the target on the first shot, and kept on it till the close of the stage, which was at 200yds. very much as has been previously been made by the team, but they were considerably above the average. Goodear and Boulter "tied" on 31, the highest score made at that distance, and the total score made by the team was 350 points. The aggregate at the three ranges was 1,086. The wind became more troublesome as the riflemen finished their dinner and assembled at the longer ranges. The mosquitoes were thicker and larger, and upset all records. The result of the shooting at this stage was greatly inferior to that hitherto accomplished by the team. The score of the best 12 men at 500yds. was 346; at 600yds. 340, and at 1,000yds. 310, making a total of 996. The score at the first stage was 1,086, making a total in both stages of 2,082. This is 54 points better than their score on Tuesday, 148 points better than that of the Americans on the same day, and 29 points less than the British score on Wednesday. Following are the scores:

	200 Yds.	500 Yds.	600 Yds.		800 Yds.	900 Yds.	1,000 Yds.
Goodear	31	30	33	McVittie	34	31	26
Parry	28	32	32	Caldwell	32	32	24
Caldwell	28	34	30	Bates	28	31	29
Oliver	33	29	29	Parry	28	28	32
Goodear	30	32	38	Boulter	31	30	32
Humphry	29	29	32	Humphry	30	25	28
Boulter	31	27	32	Godsall	26	30	27
Heap	27	30	27	Heap	32	24	27
Pearse	30	32	28	Pearse	31	30	22
McVittie	28	31	30	Walrond	30	21	29
Mellish	28	29	31	Oliver	29	28	23
Dods	30	29	29	Goodear	26	28	31
Bates	28	32	28	Dods	28	28	27

Boulter	90	83	173	Walrond	81	80	161
Humphry	90	83	173	Mellish	88	59	147

Saturday was the final day for the practice, and both of the teams were out at work. The British team shot over all of the ranges and which will be covered in the International match this week, while most of the members of the American team dropped short at 1000yds., and thus prevented a close comparison of their scores with those of the British team. Many of the members of the team had been away from home during the entire week, and desired to take the last train from Creedmoor in order to spend the evening with their families. In the first stage 12 of the British led a similar number of the Americans by 45 points, the scores being, American, 1,055; British, 1,080.

In the second stage the British led the Americans by 22 points at each of the ranges of 800 and 900 yards. Sergt. Dolan, of the British team, shot only in the second stage. Corp. Caldwell, of the same team, did not feel well, and spent the day on the range as a spectator. In the American team Major Shakspeare and C. W. Hinman were absent, having left for their homes on Friday night. At the close of the day's work Col. Bodine completed the format on of his team by the addition of Atkinson and Pollard to the 10 already chosen. The team as now constituted is: T. J. Dolan, Frederick Alder, Major E. O. Shakspeare, J. L. Paulding, C. W. Hinman, J. McNevin, D. R. Atkinson, J. Pollard, M. D. Hinds, Col. G. E. P. Howard, D. H. Ogden, and John Smith.

Capt. Mellish, of the British team, discovered, after shooting at the 200yds. range, that his gun had been "tampered" with. His score in the second stage of the competition on Friday was remarkable, compared with those he had previously made, and he could not account for it. "Have you looked at your gun?" said McVittie, as the party moved back to the 500yds. range. An inspection of the gun showed a ragged crease in the stock, extending into the magazine. The gun about three inches. Taken in consideration with the fact that the Captain lost £20, which was in a box in his room, it was surmised that a waiter employed at the hotel, who disappeared on Friday, had been bribed to injure the gun and thus made off with the money. Captain Mellish said he could not tell what his money was stolen. He first missed it Saturday when he went to his box for some article. He observed that the contents of the box had been disturbed, and upon making a closer inspection he discovered the loss of his money. "It was done by some of those blasted pool-sellers," said Sir Henry Halford, emphatically. Capt. Mellish shot over the other two ranges in the stage with a gun belonging to another member of the team, and then left the range by an early train for this city to have the gun repaired. The theory of the members of the team is that the gun was injured by some person while Capt. Mellish was absent from the wooden cottage in which he lodges, either at dinner or while he was taking a stroll about the grounds. The incident caused quite as much indignation among the members of the American team as it did among the British team.

The wind was blowing from the rear of the firing points towards the targets, as the riflemen assembled soon after 10 o'clock to begin their work. The sky was overcast, and it was a regular Wimbledon day. As Adjt. Smith expressed it, Col. Bodine called it "a good day for shooting." The leading scores at 200 yards were very fair. When the Americans got back to the 500 yards range, "inners" and "misses" began to appear in the scores. Dolan made a "miss" on his first shot at 500 yards, and he "outered" at 600 yards. In the longer ranges Hinds opened his score with a "miss," McNevin found several "inners," and Howard got an "outer," Dolan scored three "inners," and Griffith had similar luck. Smith missed on his second shot, and then made an "outer." Ward punctuated his score with a "miss."

On the British side of the field there were numerous low shots. Goodear missed on his third shot at 600 yards. Parry kept within the "center" and "bull'seye" boundaries throughout the stage. Heap made an "inner" in opening at 600 yards, and finished his score with "centers" and "bull'seyes." Boulter found "inners" at 200 yards. Pearse ended a good score at 600 yards with an "outer." The scores are as follows:

BRITISH TEAM.

	200 Yds.	500 Yds.	600 Yds.

McNevin	71	59	130
Alder	79	44	123
Ward	81	38	119

The scores at 1,000 yards of those who completed them were as follows: Irlan, 37; Hinds, 25; McNevin, 34; Ogden, 28; Pollard, 29.

The practice was now virtually closed, and a pretty fair idea may now be formed of the merits of the teams. The teams have each shot over the range during the week and encountered somewhat distinct kinds of weather. Under all circumstances the advantage lay heavily on the English side. In every description of weather the visitors proved themselves capable of maintaining a standard of great excellence. The utmost variation of their scoring totals on different days did not reach a hundred points, and the lowest figure they made far surpassed the average shooting of the home team. Just what their shooting amounted to may be gathered from the table below, wherein the results of the week are collected, fourteen of their men are in the race for places on their team. The table shows the aggregate of points made by each, the number of practices he participated in, and the average number of points per day he made out of a possible 315. The figures are as follows:

	Aggregate Scores.	No. of Practices.	Individual Averages.
R McVittie	731	4	182¾
G Pearse	716	4	179
A P Humphry	708	4	177
G J Parry	703	4	175¾
P T Godsall	699	4	174¾
W Caldwell	524	3	174⅔
H Bates	693	4	173¼
G Boulter	691	4	172¾
J Oliver	688	4	172
J Heap	513	3	171
J Goodear	673	4	168¼
G Dods	499	3	166⅓
H Mellish	487	3	162⅓
W H Walrond	647	4	161¾

The whole number of points made by the team during the week was 8,673; the number of individual scores was 52. This gives an average for the team per day of 247·8, a figure of extraordinary merit when the distances, the weapons, the unfamiliarity of the team with range and the climate, and other disadvantageous circumstances are considered. Lieutenant Mellish's average is reduced by the nefarious delivery of his gun. Rejecting the score affected thereby, his average would be 170 points.

Last week the American team made but one complete record, b t their shooting since the opening of their practice, including that one day in last week, will give a perfectly fair idea of their capability. In the table the aggregate of all the scores since Aug. 14, the number of completed records and the average per day of each man are given. The average of each man at the beginning of this week is added, so that an estimate may be formed of the progress made by individuals and the team in general. The table follows:

	Aggregate Scores.	No. of Practices.	Individual Averages.	Former Averages.
T. J. Dolan	1,341	8	168	167 4-7
John Smith	1,323	8	165⅜	162 2-7
C. W. Hinman	1,133	7	161 5-7	159
J. L. Paulding	1,280	8	160	160 2-7
A. B. Van Heusen	1,118	7	159 5-7	159 1-6
D. H. Ogden	1,276	8	159½	160 2-7
M. D. Hinds	1,266	8	158¼	157 5-7
F. Alder	1,103	7	157 4-7	156
D. R. Atkinson	1,102	7	157 3-7	157 5-6
J. McNevin	1,085	7	155	154½
E. O. Shakespeare	1,239	8	154⅞	154 2-7
S. E. Irlan	1,225	8	153⅛	155
T. W. Griffith	1,072	7	153 1-7	152 5-6
J. M. Pollard	1,222	8	152¾	151 5-7
G. E. P. Howard	1,062	7	151 5-7	151
N. D. Ward	964	7	137 5-7	137 5-7

In this case the sum total of points for the sixteen men is 18,766; the number of individual daily scores is 120; the average per man per day is 156 23-60, or roughly 156⅝, against the English 1726⅛—a difference of 16 1-6 points per man in favor of the latter. A comparison of the two tables will show that the averages of eleven of the Englishmen surpass the best men on the American side.

On Monday the British team were down for a little desultory practice. Sir Henry Halford determined on the names of those who, barring accidents, will compose the team to shoot the match. They are Major George Pearse, Major A. P. Humphrey, Captain T. Godsall, Lieutenant J. Heap, Sergeant J. W. Dods, Sergeant P. Oliver, Corporal W. Caldwell, Corporal H. Bates, Corporal C. J. Parry, R. McVittie, J. Goodear and G. Boulter.

THE TEAM BLUNDER.

IT may be that an all-wise Providence has decided that a good end is to be met by a defeat of the American team in the match of the 22nd week. It certainly looks that way, for everything was right for a complete and utter rout of the American marksmen in the contest. It is likely that the squad of men who have worked their way to the front in the talk and effort and preparation for the match are really the best material which the National Guard of this country can afford in the match of marksmanship. It is certain that it is the best company of shooters which the National Association was able to gather.

But once gathered, the whole effort of those interested in the match should have been directed toward getting that company of a dozen men to make the very best formidable showing as a team. Instead of that, the work of the past few weeks has been a succession of blunders, until the whole matter has assumed the shape of one great, deliberate blunder. Never was a team selected as at present, before that a good captain should be chosen. It was upon him that devolved the duty of elaborating the scheme which should bring success to his team. There was some precedent to look at, but much of the work was to be done in unknown directions. We had accepted new and inconvenient restrictions in the conditions of the match. The acceptance of the rules of the match, as sent from the other side, was really as bold a step as was the agreement to shoot the first long-range match of 1874 with the Irish team. We were then pretty well again ignorant of all shooting, and we have since had much additional knowledge yet gathered on military long-range contests.

The first blunder of the team was in its selection of a captain. They selected a man of known ability as a shooter, but of manifest incompetency as an executive officer. The result of all this is that, except for the effect which the practice has had in giving the men experience, and therefore an individual prospect of higher scores, the team is to-day weaker than it was when first organized. Its captain is not respected and trusted as a captain. The suspicion exists that the captain is interested in the use of a certain model of rifle. He may allow his judgment of the merits of that arm to carry him to an excess of praise and urgency in its adoption, which suggests the paid agent, but in a team captain such a set purpose in a given direction is objectional. Instead of teaching the men to depend upon each other, to draw strength one from another, there has grown up a series of petty bickerings and divisions, personal as well as sectional. As a rifleman of exceptional steadiness and with most excellent judgment on matters of wind and the influences coming in to decide a match, Col. Bodine stands to the front rank. As a team captain, with a such a task before him as the carr ing of a military match, he has already proven a fist failure. He cannot now redeem him from such a verdict. Should the American team win, it will be by a fluke and not because they have moved up toward a victory by anything like a sensible plan of battle.

The exhibition of Tuesday afternoon last upon the range at Creedmoor deserves only the severest reprobation. Whether the charges of betting on the result of the match were true or false as regarded Capt. Griffiths, was of trivial moment as against the outrage of bringing out the whole matter before the world on the eve of the match. The washing of dirty linen in such a way and at such a time is entirely a matter for which the captain of the team is to blame. It was a senseless proceeding, since Capt. Griffiths was already in the reserve, and powerless to affect the destinies of the team, however much he may have wished to; and beyond the gratifying of some personal petty spite, it is difficult to find a motive for the attack. The team "sat down" upon the matter most emphatically, but the irreparable wrong of having fastened a black stain upon the American team remained with the maker of the charges.

The exhibition of the 12th was in keeping with the spirit which has dominated the team. There was neither sense nor reason in it, as the upshot proved. Nor does there appear to have been much discretion in any move yet made towards getting the team into shape. To have an American victory under these circumstances would be a calamity. It would put a premium upon incapacity and pretentious incapacity instead of hard-working executive ability; upon bickering jealousy instead of open-hearted helpfulness; upon sectional and personal preferences instead of a large-minded patriotism that can see that an American victory is the more glorious the fact of this or that man leading the team. The undisputed merit of American arms suffers through the blundering of a man who is foisted into a place for which he is not competent, and the record of victories is tarnished by a disgraceful defeat where there might have been a victory or at least a close rub for the honors, where little demerit would have fallen to the vanquished. NICK.

RANGE AND GALLERY.

ZETTLER CLUB.—The Zettler Rifle Club, of New York, held its ninth annual shooting festival on September 10, on Steinbach's range, Guttenburg, N. J. The shooting was on the German ring targets, distance 200yds., with following results, in order of merit:

Target of Honor.—B. Zettler, D. Miller, W. Steinbach, G. Joiner, M. Dorler, A. Anderson, A. Lober, F. Fitz, O. Patterson, C. G. Zettler, M. E. Engle, C. Judson, W. Klein, J. Blumenberg, D. Calnam, H. H. Hoiges.

Ring Target.—H. Oehl, C. G. Zettler, D. Miller, M. Dorler, F. Fitz, G. Joiner, A. Anderson, H. Hoiges, C. Overbaugh, M. E. Engel, W. Steinbach, J. Blumberg, W. Klein, C. Judson, L. Bird, G. Shultoht, A. Lober.

Bullseye Prizes.—M. Dorler, most bullseyes; M. E. Engel, first bullseye; J. Eibson, last bullseye.

CREEDMOOR, Sept. 5.—The Irish-American rifle clubs of New York and New Haven met at Creedmoor to-day to shoot a friendly match of ten shots each man at 200yds. with military weapons. The teams were composed of nine men, and that of New Haven carried off a victory by 19 points. The score ran thus:

NEW HAVEN.	Totals.	NEW YORK.	Totals.
S Keohue	38	A J Howlett	39
P O'Connor	37	J Stewart	34
P O'Connor	37	E Miller	38
J O'Connor	35	W Cushing	35
L O'Brien	35	E F Millen	35
J J Denaher	34	N O'Donnell	32
J F Murphy	34	W Hinds	32
J Reynolds	32	J McHugh	27
J P Landers	31	M Brennan	26
Total	310	Total	291

After the match the New York club entertained the visitors at the club house. A return match will be shot at New Haven in October.

BOSTON, Sept. 9.—At Walnut Hill to-day the several matches that have been running through the summer, closed, and as a consequence a goodly number of riflemen were present, partly to complete their scores and partly to get their guns in trim for the fall meeting at Creedmoor next week. The wind blew from 1 to 3 o'clock, but was not troublesome, and the light was perfect. The following are the best scores made in the several matches:

Creedmoor Match.

O M Jewell	4	5	5	5	4	5	5	5	5—48
J Merrill	4	5	5	5	4	5	5	5	5—48
J O Murch	4	5	5	5	5	4	5	4	5—47
R Davis	4	5	5	5	4	5	4	4	5—46
W Fisher	5	4	5	4	5	5	4	4	4—45
A D Aldin	4	4	4	4	5	4	4	4	4—41
J A Cobb	4	4	4	5	4	4	4	4	4—41
F Lewis	3	5	4	4	5	3	4	4	4—39

Sharpshooters' Match.

J B Fellows	4	10	10	10	10	9	4	6	8	6—79
F B Jacobs	8	7	9	6	6	7	4	9	8	7—73
J N Frye	6	6	6	9	6	7	9	7	6	10—72
F J Nye	8	7	5	10	7	8	5	10	7	3—70
F N Jenkins	7	8	9	8	5	6	7	8	5	7—69

Novelty Rest Match.

F Baker	10	7	9	10	10	10	10	9	10	10—97
W Fisher	10	8	10	9	9	10	10	10	10	10—96
J Merrill	10	10	9	10	10	9	10	9	10	9—96
Salem Wilder	8	9	10	10	10	9	10	9	10	10—95
W Stiles	9	10	10	8	10	10	9	10	10	9—95
E P Carr	9	10	8	10	8	10	9	10	10	10—94
B Francis	8	9	10	9	10	9	10	10	9	9—94

Decimal Match.

O M Jewell	8	10	10	10	10	5	10	7	6	7—86
J Merrill	10	10	10	9	7	5	5	10	7	10—84
J O Murch	8	6	8	10	10	8	9	8	6	9—82
R Davis	9	7	9	9	9	7	8	6	5	7—79
S H Sturgis	8	6	7	10	8	7	5	8	10	8—77
C H Best	9	8	9	10	6	10	5	7	4	4—69
W Gardner	9	4	8	7	7	10	7	5	9	6—68

Next Saturday new matches, similar to these just finished, will be opened and run to the end of the year. Instead of the 300-yard match a 200-yard practice match, open to all comers, fifteen cents on entry and no prizes, will be opened, and it is expected that it will attract many who like to shoot for the fun of the thing.

NEWPORT, R. I., September 9.—At the Paradise range this afternoon the competition for the powder cup was won by P. Peckham, with a score of 45. The final competition for Creedmoor of the Newport Rifle Association team resulted as follows: George H. Burnham 49, W. B. Knight 45, P. Peckham 45, W. S. Bryer 43, E. E. Leonard 42, A. Dunn 42, Maxwell 29. The shooting was poor, which is the Creedmoor target. The day was good for shooting. The Creedmoor team has been selected as follows, with average scores made: W. Milton Farrow 46⅝, George H. Burnham 44, P. Peckham 43⅔, and W. S. Bryer 42⅝, with E. E. Leonard, substitute, 42. The team leaves to-morrow night to take part in the competition for teams in Connn.

BRINTON RANGE, N. J.—On Sept. 5 the Brooklyn Amateur Rifle Club held the eleventh competition in their Champion's Match, a handsome 48 out of a possible 50 being the winning score. The following were the best scores for the day:

Bunker	55455	55555—48	J Henry	54544	45455—45
A H Anderson	55454	55551—47	F Burns	45445	44443—43
T P White	45544	50455—46	J S Case	54111	45441—42
J B Hazleton	55454	54155—46			

J. S. CASE, Secretary.

THE TRAP.

JERSEY CITY HEIGHTS GUN CLUB.—A match at pigeons of more than usual interest is booked to come off on the grounds of the Jersey City Heights Gun Club at Marion, N. J., on the 16th of this month, the challenge for a friendly match of the above club having been accepted by the celebrated Midway Gun Club, of Mattawan. The Midways have an enviable reputation as a club, comprising some of the most reliable shooters of the State, and having carried off the laurels from the Fountain Club of Long Island, and other clubs of their own State, have been waiting anxiously, we understand, for a challenge from the Jersey Heights. It has now been sent and promptly accepted, and a big time is expected. That there will be a large gathering of the disciples of the trigger from the State of New Jersey and its vicinity there is no doubt. The match is 25 men each club, 7 birds each. Jersey City Heights Club rules—that is, second barrel to count only one-half bird. The return match between the Jersey City Heights and the Algonquins at glass balls will take place soon at the grounds of the former, Marion, N. J., when 10 new members—that is, that were not among the 20 of the victors before—will be matched against any 10 the Algonquins may select. Conditions: 10 men each, 20 balls each, rotary trap, 21yds. rise; and a good time expected anyway, whoever wins. Come over and see one or both matches. The FOREST AND STREAM is always welcome.—JACOBSTAFF.

NEW ORLEANS, Sept. 7.—Below is a score of a match at hats and explosive balls, shot at Spanish Fort, on Sept. 6, during the entertainment given for the benefit of the Army of Tennessee Tomb fund. The net proceeds of this match were placed to the credit of the New Orleans Gun Club Field Trials. The 10 bats were first shot at, and proved a most uncertain target to hit; the average of killed was 6¼ out of 10. Later in the evening the balls were thrown, and the breaking of them lasted into the late twilight. Some eight or ten thousand spectators were on the grounds, the shooters having a lion's share of the audience. The score stands:

	Bats.	Balls.	Totals.		Bats.	Balls.	Totals.
I Renaud	3	6	14	Fontaine	4	3	7
W Dupre	6	7	13	W Renaud	6	3	9
Febiger	10	4	14	I Renaud	7	6	13
Gathlem	2	2	4	Dronet	10	7	17
Dennyest	4	11	Leiehl	5	5	10
Lafaye	6	6	12	Cup Fortier	6	6	12
Le Sassin	4	5	9	Stewarl	9	4	13
Stuart	9	4	13	Seligson	5	6	11
Nicholson	8	5	13	Mirondais	9	5	14
De Buys	8	6	14	W Renaud	7	5	12
Ranleit	6	2	8	Cordona	8	5	13
Cook	5	6	11	Cordona	3	3	6
Seligson	6	3	9	Enstis	3	5	8
Leche	8	4	12				

Dronet won first on a full score; J. Renaud second, Nicholson third, Lafaye fourth, Cook fifth, Light sixth. PIROGUE.

PROVIDENCE, R. I., Sept. 7.—The Narragansett Gun Club held its fifth regular fortnightly competition for badge to-day, at their club ground on Pleasant street, between Providence and Hawtucket. A new Holden trap was used for the first time. The badge has now been won once each by W. G. Crandall, J. B. Valentine, S. D. Greene, Jr., W. H. Waterman and W. H. Sheldon:

W H Sheldon	11111	11111	11000	11110—16
G W Cary	11101	11010	11111	11110—16
G P Crandall	11110	01110	10111	01110—14
S D Greene, Jr	01110	11110	11011	00111—14
W G Crandall	00101	11001	11101	11101—13
E W Tinkey	00011	01110	11110	10010—12
W H Waterman	01011	01011	10101	10110—12
Geo Anthony	00001	01111	01101	10110—11
Edgar Pratt	11001	01111	10110	00001—11
H Baker	00110	10111	01001	10001—10
Jas Brown	01010	00100	11001	11100—9
G T Crandall	10001	00011	01010	01101—9
O A Baker	10000	10000	10111	00000—6
L Bennett	10000	01100	00001	10001—6

The ties A—W. H. Sheldon, 111; G. W. Cary, 110; W. H. Sheldon wins badge.—W. H. S.

FALL RIVER, Mass., Aug. 31.—The twelfth competition for silver cup by members of the Fall River Gun Club resulted as follows:

	Balls.	Clay pigeons.
Hall	1 1 1 1 1 1 1 1 1 1	0 1 1 1 1 1 1 1 1—18
Buffinton	1 1 1 1 1 1 1 1 1 1	1 1 1 0 0 1 1 0 1 1—17

September 5.—A match for the Massachusetts State Association Championship glass ball badge, between Mr. W. T. Howard of the Stoughton Club, and Mr. E. W. Buffinton of the Fall River Club, resulted in an easy victory for the former, by the following score: 50 balls each, Hyde rise. Holden trap.

| | | | | | | | | | |

tirely misconceived the drift of our articles concerning the Vixen-Maggie races, and ascribed to us certain sentiments and conclusions we never made. If his accusations were true, we should certainly have to plead guilty to his indictment. Others may not subscribe to our views, but we claim that our course has never laid us open to the implication of being so thoroughly illogical as Mr. Beames's charges. If correct, certainly would make us appear. Our object was just the reverse of that ascribed to us. We sought to strip the race of the unfair assumption of the length rule that both yachts were of like size, and also to submit the theory that the object in the case of the Vixen in her catching and working out ahead in a steadily strengthening wind. We have no other object than to arrive at the truth, for it is a matter of the utmost interest to us which yacht wins, so she does on merit, and not by the hocus pocus of a swindling rule and the dispensation of luck.

Our correspondent claims we neglected a comparison of displacement. We did not mention anything about displacement because wholly irrelevant to the issue and of no concern in the comparison. With like bulks at the commencement of building displacement is optional and at the free choice of the builders. The modeler of Vixen deliberately preferred light displacement and great shoulder power. The modeler of the cutter preferred the opposite theory, and put more body under water and less above. It was a matter of choice and neither has any claim upon the other for an allowance on that score any more than for fine or full lines, much or little bilge, outside or inside weight, or the hundred and one points going to make up a modern racing cutter. All these points we thought we had an even chance. With unlike bulks to work upon, the one using larger bulk, however, has an advantage in the command of larger possibilities in every direction, and for this reason the larger yacht should be made to equalize the chances by an allowance to the smaller. So far from anything being due to Mr. Beames on the score of the greater displacement of the cutter, the reverse would hold true were it really necessary that displacement should receive any consideration at all. The modeler of Vixen scouts the idea of large displacement, and believes that modernism in that respect is conducive to speed. By adopting light displacement he is following in his opinion the best road to success. How, then, can he claim in equity from another who has followed a course detrimental to speed according to his views as expressed in the Vixen?

There would not be much logic in asking another to pay for what he throws away as worse than worthless. It is far more creditable to drive large displacement with small sails as in the case of the Maggie than to drive small displacement with big sails like the Vixen. Displacement is to suit the combination at all times should say that time was due according to the ratio between displacement and sail, the yacht having least sail to every ton of displacement to receive an allowance from the one which possesses more driving power to the ton, and that would be the only way to pay even approximately for her excess in bulk. Mr. Beames fails to draw the line clearly enough between bulk and weight. Maggie may have greater weight, adopted by the free will of her designer, but she has not the bulk of the Vixen in the whole and therefore she has not the actual power of the latter has been endowed with at the start. Given the same bulk as Vixen and it follows that Maggie's builder could have given his vessel two or two more displacement or beam or freeboard or length just as he chose, and only then would the line upon that enjoyment of equal opportunities with the modeler of the Vixen. As he has not had equal opportunity, the bulk of Maggie being less than that of Vixen, an allowance was due to the centre and that allowance we figured by first ascertaining as nearly as possible the actual cubic contents of each yacht and referring with the difference to the time scale of the Y. R. A.

Maggie shows 15 tons of ballast and Vixen 10. Owing to the greater structural weight and rig of the latter their displacements show much less difference, Maggie's nominally as 33 tons to Vixen's as much as before explained, rests with the designer's ideas and forms no proper ground for allowances, as the race was instituted partly as a test of the effect of this very difference. Our correspondent errs in supposing that we gave the cubic contents of the circumscribing cube for the actual bulk of Vixen, less counter, from the official measurement of the N. Y. Y. C., and Maggie's bulk by multiplying her three cardinal dimensions according to Lloyds and Kemp, 41,758.8.7.9, and then by the decimal 0.45, representing the fair proportion between the circumscribed cube to be cut out of such vessels, giving the bulk as 1,410, as near as we could determine without the actual lines before us. The Maggie is fuller about the load line than Vixen, but the hollow to her floors and rocker bottom probably makes up proportionately for the excess. Our correspondent misunderstands us when the fact that more is immersed and less bulk above water than in the sloop, which is an idea her modeler may legitimately pursue without being saddled with a penalty. The modeler of Vixen could have sunk his sloop to a like extent so as to have had no bulk above is less wise he must suffer the consequences in a race; if his choice is wiser he will not be being saddled in time for having made the wisest selection.

Next, through our correspondent errs most is the charge of unfairness in "taking" Maggie at 15 tons to start with and the implication that we based the comparison upon tonnage obtained by the Thames rule. We did nothing of the kind. The Thames rule, which assumes fictitious beam, is, as we have often expressed, a ridiculous and ridiculous proceeding, inapplicable in any degree to measurement, based by the single dimension of length. Having got the actual bulks of the two boats as near as we could, with the data at hand, we "took" Maggie at 15 tons merely as a matter of convenience, so as to refer the bulk of Vixen to some tonnage standard. If the Thames rule does not vitiate the comparison made. It has nothing to do with it. We might have taken anything we liked as a unit. We might have called Maggie 1,500 bundles of space, in order to express the comparison with that expression in proportion to the bulks of 1,400 and 1,800 before calculated. That is, she would measure 1,600 bundles of space. Drop the ciphers and you have 15 and thus expressing the relation between the actual bulks of Vixen and Maggie, the least one of the two is the Thames rule. We "took" Maggie at 15 tons only because she happened to be known as a 15-tonner, but any other figure or unit would have served the purpose quite as well. We are ready to acknowledge the justice of Mr. Beames's complaint that it been founded upon anything else, but that is not the case, and consequently the Thames's charge has no standing in court. It is exactly upon the simile he adduces of equal balls of dough from which to shape two models that we claim the bigger ball from which Vixen was evolved should be made to account for the extra bulk over the smaller ball of dough from which Maggie was fashioned, represented by the difference between 1,400 and 1,800.

We left both counters out of consideration because difficult to estimate and of no material bearing one way or the other. The advantage in the respect would rest with the Maggie's counter with the most finer than the cutter, and being lowsided, with great width and low quarters, the bulk of her counter would come into play much oftener and to a greater extent than the lighter, higher and narrower overhang of the Maggie, which in its last third is little more than a mere thickness of plank, and of about as much use in contributing power or lengthening the lines of the boat's after body as the main sheet outrigger of a sand-bag machine, which no one argues should be included in her length. The counter of the Maggie is a hindrance to speed more than anything else. The power derived from it is extremely small under the circumstances, while friction surface is increased in a much greater proportion. The sloop obtains more good from a short bulky overhang than the cutter from her high tucked and narrower quarters. But the cutter's counter will not be both go unmeasured, somewhat to the advantage of the sloop. We "whittled down" Vixen's victory to just what she is entitled to after allowing properly for tonnage or bulk. A beating of four or five minutes is quite enough to justify the crowing anyone makes to a fin

quette 2:19 and Coral at 2:32, giving up soon after. On the beat it was the same old story over again; Aileen soaked out on the weather of all hands and eased around the lake buoy just before the wind fell off, at 3:28, Cygnet 3:16, Verve 3:21 and Coquette 3:37. Aileen took a light air in to the Exhibition wharf and trimmed to a beam wind through the gap to finish off the club house at 3:54, Cygnet 4:07, Verve 4:12½ and Coquette 4:18. Cygnet was unfortunate on this stretch in being left for several minutes becalmed between two winds, but this was in part made up by catching it quite strong on the last of the run in, which, coupled with her greater speed down wind than Aileen, materially reduced the latter's lead at the close. Summary as under:

	Finish.	Actual.	Corrected.
Verve	4 40 00	6 00 00	5 41 30
Aileen	4 29 15	5 49 15	5 49 29
Coquette	4 22 45	6 02 45	5 48 11
Cygnet	4 30 00	5 50 00	5 50 00

Verve therefore wins on time and takes the $250 challenge cup, and a solace of $100 and champion flag. Aileen takes $50 and Coquette $25.

In second class Emma took the lead and was never headed, though Katie Gray sailing with a raw crew, we believe, pressed her closely. Summary as follows: Emma being a Kingston yacht, taking $50 without the Cosgrove cup, Katie Gray $30, and Gracie $15. Time of race for Emma 4:11:00; for Katie Gray, 4:13:30; for Gracie 5:18:55, and for Gypsy 5:04:00. Among the small fry, sixteen started, the four winners being Meteor, Commodore's cup and $30, in 3:09:33; Fiona, $20, in 3:10:45; Tory, $10, in 3:14:00 and Trixie, $5, in 3:20:00.

HULL YACHT CLUB.—The second club championship match was sailed off Hull last Saturday, in a light breeze with calms and fog. No first or second class boats appeared. The rest were sent off to a flying start in a puff from the northeast, which soon died away, leaving the fog to shut down. After an hour's drifting, a breeze from the east sent the racers around the rest of the course. Courses for third and fourth class, seven miles; for the rest, six miles. Judges, T. F. Patterson, Peleg Aborn and J. H. Conant. Amy and Sea Mew take championship in their classes, this being their second score. The other classes are not decided. Janet protested measurement of Wildfire. Summary:

	Ft. In.	Actual.	Corrected.
THIRD CLASS.			
Allie, A. S. Wattles	22 05	3 22 26	3 07 31

LILLIE—HERA.—The second match between these two Boston sloops was started Saturday, Sept. 2, but owing to lack of wind it was not finished in the time prescribed, and was re-sailed Monday, Sept. 4. Course from judges' boat off Marblehead Rock, leaving Half Rock to port, Eastern Point buoy to starboard, around outer Big Rocks buoy and return, 27 miles. Wind was light from the S. and W. Hera went to the fore, and at Half Rock had over 9 minutes to her good, but on the run to Eastern Point Lillie closed up considerably. On the return Hera gained 3½ minutes to Half Rock, and increased it by a minute to Big Rocks, finishing at the judges 5m. 30s. ahead of Lillie. We hear the owners of the latter were not satisfied with the weather, which was rather fitful, and are anxious for another trial. The two boats may be considered about even, and victory will rest with the one worked to the best advantage or lucky in the way of flukes. Hera wins $1,000, and much money changed hands on the result. Hera is off on a two weeks' cruise at present.

HALIFAX REGATTA.—A match for the Mayor's Cup and a 3-ton sweepstakes were among the features of the recent great aquatic gathering in Halifax Harbor, N. S., Sept. 6. In both classes cutters won, and, strangely enough, both of them built for the Hon. Secretary, F. C. Samichrast, under his personal supervision. The race was started at sharp 2 P. M., the Oi-Kaze, tutter, Phantom and Isabel, sloops, started. Psyche, tutter, and Esme, sloop, were entered, but did not start. Wind light from E. N. E., shifting soon after start to S. Owing to the falling of the wind the officer of the day, F. Hamilton, Esq., stopped both this and the 3-tonners sweepstakes race at the first round. In the 3-tonners match, which was started at the same time as the large race, all entered started. Velenar, down to leeward, was the first to see change of wind and hauled in bowsprit spinaker, stood in to new Railway Wharf and tacked to starboard, weathering out on one tack past Lunatic Asylum flagboat, and keeping her lead to the end. Miranda carried away peak halliard, and was delayed for a short time, but worked up to second place at the island, only to be passed on the run in to Commodore by the smart Mariquita. Mascot, hampered by a very late start, could never retrieve herself. In the larger class, Oi-Kaze, sailing better than she has done this season, went away from her rivals and led handsomely all round the course. She was sailed by Mr. G. C. S. Handcock, in the absence of her owner. Phantom sailed a game race, and well deserved her second prize. The finish was as follows:

Mayor's Cup Race—Oi-Kaze, 4:12:33; Phantom, 4:18:51, Isabel, 4:38:50.

Oi-Kaze wins Mayor's Cup by 2min. 9sec. Phantom, second prize.

Three-tonner's Sweepstake Race—Velenar, cutter, 6:38:45; Mariquita, yawl, 3:40:25; Miranda, sloop, 3:41:30; Mascot, sloop, 3:43.

Velenar wins first prize by 16sec.; Mariquita wins second prize, saving her stake.

NEW YORK CANOE CLUB.—The race for the challenge cup takes place Sept. 16, at 3 P. M., over a five-mile course off New Brighton, S. I., the present holder, C. P. Oudin in the Tramp, having been challenged by Wm. Whitlock in the Ripple. The club will also hold a regatta Saturday, Sept. 23, off the boat house, Staten Island. Six races, open to all canoeists, commencing at 3 P. M. Junior and senior paddling of class 2 canoes; same for class 3 canoes, and junior and senior sailing races for classes 2 and 3. Fifth race will be open to all classes, ½ mile sail and ½ mile paddle. Sixth race for ladies. All paddling races one mile. Sailing races 2½ and 3 miles. A steamer goes over the course. Tickets 50 cents, A. C. A. rules to govern. A junior is one who has never taken a prize in the class. No entrance fee. One prize to each race. Entries to W. E. Stephens, secretary, P. O. West New Brighton, S. I., or to the club house.

QUINCY YACHT CLUB.—The club sailed its match this year, September 4, in a light southerly breeze, over a six-mile course, with the following result:

	Ft. In.	Actual.	Corrected.
Amy, E. W. Baxter	21 06	1 49 31	1 32 56
Joker, Geo. Coffin	20 05	1 50 43	1 33 09
Nautilus, H. M. Faxon	18 01	1 58 25	1 38 02
Myrtle, D. H. Poor	19 06	1 57 42	1 38 59
Halliard, H. A. Keith	18 02	1 59 57	1 39 40
Diadem, L. Haywood	18 07	Not taken.	

SPEED OF YACHTS.—We have many a time heard of smart passages and extraordinary fast sailing, but, according to the *Scotsman* of Monday last, the Forth Y. C. yacht Evadne must be awarded the palm of being "the best on record;" for at the Aberdeen regatta, held on the 17th inst., she is credited with the following: "The Evadne covered the 21 miles in about 53 minutes, or one mile in 2½ minutes." Not bad for a 10-tonner sailed by her owner, Mr. J. B. Sandilands, and "Jimmie." It is hardly necessary to add that the Evadne took the first prize.—*London Yachting Gazette.*

BATTERY BOATMEN.—The annual race among the Whitehall working boats of the Battery was sailed last Sunday over a seven mile course to windward and back off Battery Park. Four 30ft. boats entered and sailed under spritsails, with a crew of two each. Prize, gold medal, value, $100, presented by Richard Ganley. Won by the McGirk, sailed by Ed. Ring and John Delaney. Time, 3:13:38. Richard K. Fox acted as judge.

FROM LAKE GEORGE TO FLORIDA.—Canoe Islands, Lake George, N. Y., Sept. 8, 1882.—Dr. Neide and Capt. S. D. Kendall, in their canoes, Aurora and Solid Comfort, reached Canajoharie, N. Y., September 6. Head winds and head currents have troubled them. They expect to reach Buffalo about September 20, and Cincinnati, via Lake Erie, Cleveland and Portsmouth and Ohio River, about October 20.—N. H. B.

GENEVA LAKE, WIS., REGATTA.—In the races Sept. 3, the Geneva took first money, $75, time, 2:56:48; Ethel second money, $15, time, 3:06:48; Whisper third money, $35, time, 3:31:6. Second class. Conita took first money, $50, time, 3:28:3; Zouave, second, $25, time, 3:21:30. J. S. Ramsey's Nettie carried away the Ethel's forestay with her topping lift. The Nettie also capsized off Forest Glen park. The Aganeunmon parted halyards at the beginning of the race and had to withdraw. Delafield Sturgess's yacht Sweetheart upset at her pier early this morning.

MOSQUITO FLEET.—The second race for small boats off City Point, South Boston, was sailed September 7, over a five-mile course. Start from an anchor. Wind variable. Judges, J. Bertram, John Jones and J. Bullard. Daphne, H. L. Roberts, 14ft., beat Lizzie, H. M. McDonough, 13ft 3in.; corrected times, 1:12:35 and 1:17:20. In second class Herald, C. B. Smith, 11ft. 11in., beat Iceria, W. Condon; Trinket, W. H. Buckley; Clyde, J. D. Page; and Mascot, F. O. Whitman; corrected time of winner, 1:10:17; second, 1:16:39; third, 1:16:31.

CANOE PHOTOS.—For excellent photos of the recent canoe meet at Lake George, send to S. R. Stoddard, Glens Falls, New York. They show all the different styles of boats present, the camps and canoe islands, the races and the officers; or address him for circular.

BRENDA.—Mr. Jas. Little, Eastern Y. C., has sold the schooner Brenda to Mr. W. J. Talbot. She is Harrington built, and an excellent boat of her kind. Over all, 62ft. 5in.; load line, 44ft. 2in.; beam, 18ft.; draft without board, 5ft. 4in.

CHICAGO Y. C.—In the races sailed Sept. 9, over a 16-mile course, sloop Cora beat the new Wasp, Capt. Prindiville, by 2m. 29s. In second class Nameless beat the Burke; in third class Zephyr beat the Ariel.

AMERICA CUP.—The American Challenge Cup seems likely to be productive of a deal of penmanship. The FOREST AND STREAM has, however, hit the right nail on the head.—*London Yachting Gazette.*

AMERICA.—This schooner with General Butler on board was off Quebec Sept. 4, then proceeded to Montreal, and is now on her passage home to Boston.

TYPE IN SCHOONERS.—The continuation of this article is laid over till next week.

SOUTH BOSTON YACHT CLUB.—Has now 165 members and $500 in the treasury.

Answers to Correspondents.

J. L. M., Baltimore, Md.—Noticed your account of "The Scientific Angler," published by Benrose & Sons, London, in August 31 issue. Please let me know the price. Ans. As stated in notice, the price was not given to us.

MARINE GLUE, New Bedford, Mass.—A good marine glue can be made by taking twelve parts of coal tar to one part of India-rubber. Heat the mixture gently, taking care not to burn it, and when well-mixed add twenty parts of powdered shellac. Stir well and drop in cakes to cool upon a slab of iron or stone. When required for use heat the cakes to 250 degrees Fahrenheit.

J. H., Bridgeport, Conn.—Can you give me any information concerning Greenwood Lake? I want to get three or four days' fishing (bass), and think of no place quite as convenient. Whose house is best located there, who is a good man for putting you on the ground etc., etc., and is this month or October the best season at the lake? Ans. Both months are good. There are good hotels all along the lake. We think that the largest fish are taken at the lower end of the lake. You might stop off at Cooper's Station and try it there.

INFORMATION WANTED.

A. T. wants board in farmhouse among hills, $5 per week, within seventy-five miles of New York.

H. B. wants a Pennsylvania hunting ground where he can find deer, bears and turkeys.

SATISFIED.—Hancock, N. Y., Sept. 1.—*Editor Forest and Stream:* Inclosed please find money order to balance account for advertising. I am very well satisfied with the same, as I have had more than I could do to keep up with my orders. The bass fishing here is good and has been for two months.—E. M. EDWARDS.

We are obliged to have more room in our factory and greater facilities for manufacturing our goods to meet the increasing demand. We have received the highest award and silver medal at the Massachusetts Charitable Mechanics' Association Fair for our superior goods. Send for catalogue.

The Parker Gun.

Again Victorious at the late Exposition at

MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Show Rooms: 97 CHAMBERS ST., N. Y. PARKER BROS., Meriden, Conn.

The Maynard Rifles and Shot Guns.

NEW OFF-HAND TARGET RIFLE, MODEL OF 1881.

PRICES REDUCED.

WITH PISTOL GRIP STOCK, TIP STOCK, AND SWISS BUTT PLATE.

For **Hunting** and **Target Practice** at all ranges, the **"MAYNARD" more completely supplies the wants of Hunters and Sportsmen generally, than any other Rifle in the world,** as many barrels can be used on one stock; and for accuracy, convenience, durability and safety, is not excelled. Send for Illustrated Catalogue describing the **new attachment for using rim and centre-fire ammunition.**

MASS. ARMS COMPANY, Chicopee Falls, Mass.

TARRANT'S SELTZER APERIENT

Sound Doctrine for the Sick. It would be as wise to attempt to regulate a chronometer with a pick-axe and sledge hammer, as it is to assail the obstructed and constipated bowels with abrading purgatives. That genial and healthful laxative, TARRANT'S APERIENT, which relieves and tones the alimentary canal at the same time, is the safest and surest means of superinducing a regular habit of body, in cases of chronic constipation.

SOLD BY ALL DRUGGISTS.

SPORTMEN'S DEPOT.

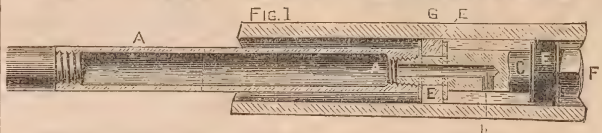
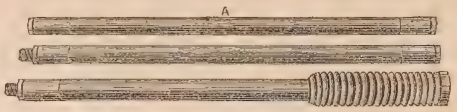
BRENTANO'S, Union Square, N. Y.

Climax Gun Cleaner.





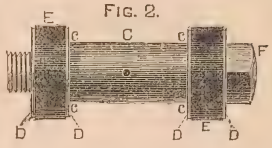


Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

In offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.

2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.

3d. The ease with which it can be adjusted to fit the barrels, loose or tight.

4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

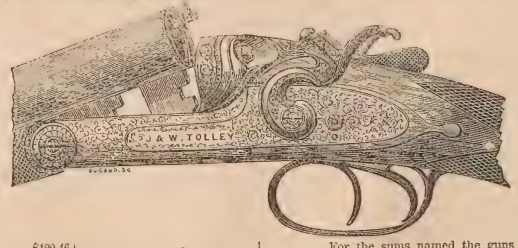
A SPECIALTY.

Special designs furnished on application free of charge.

THE GREAT SINGLE BREECH-LOADER.



"THE FIELD," 10 and 12-Gauge.

This gun, which from its wonderful adaptation to all kinds of field shooting we have named **"The Field,"** leaves nothing to be desired in the way of a single breech-loader. It is really the only single breech-loader worth having. It has Scott top lever, pistol grip, rebounding lock, and patent fore end, and is beautifully finished. For **strength, convenience, penetration,** and in fact for all practical purposes it is just as good as the best double-barrel gun. We have sold the bulk of all the single breech-loading guns used in this country for the past four years. The reason is that the top lever action as combined with other features in the "Field" gun is the only correct one, and other single guns are successfully sold only as they resemble ours. Persons with ordinary prudence will not hesitate long as to which to choose, particularly as the "Field" gun costs but a trifle any way, and no more than the imitations. Address

P. O. Box, 1114. H. & D. FOLSOM, 15 Murray Street, New York.

J. & W. TOLLEY'S BREECH-LOADING SHOT-GUNS,

WITH HAMMERS OUT OF THE LINE OF SIGHT.

"Standard" brand	$120.46	10-bores extra....$10.80
"National" "	187.35	
"Challenge" "	167.40	
"Paragon" "	198.10	

TERMS: A draft in full with the order.

For the sums named the guns can be placed on the cars in New York all paid in eight weeks from order reaching us. A comparison of these prices, with those charged in the gun stores for really fine English guns of first-rate quality will result in your ordering direct from the manufactory.

NO AGENTS. IMPORT DIRECT FROM

AGENTS FOR

W. & C. Scott & Son's

BLOCK SAFETY HAMMERLESS, With Crystal Apertures.

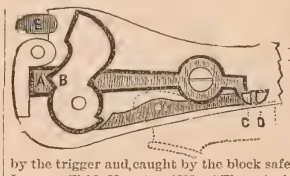
The *only* Hammerless showing position of hammers at a glance. The only Hammerless having fixed firing pins, thus preventing smoke and dirt entering the lock. In others the aperture through breech to lock is open, the hammer and striker being one piece.

1876—PHILADELPHIA, MEDAL AND DIPLOMA. 1878—PARIS, SILVER MEDAL.
1879—SYDNEY, FIRST, AND HIGHLY COMMENDED FOR MANUFACTURE. 1881—MELBOURNE, SPECIAL GOLD MEDAL AND FIRST ORDER OF MERIT.

COGSWELL AND HARRISON, 142 New Bond Street and Strand, London.—"After careful consideration of the merits or otherwise of the various systems of Hammerless Guns now before the sporting public, our opinion, formed sixteen months since, remains unchanged, that the principle of your top lever gun with the safety tumbler-block has many advantages over any other gun we know of at present; we consider with the extreme safety secured, together with the sound principle on which the gun is formed, will make it a general favorite in the future. As far as we are personally concerned we like the principle so much that we have adopted the system."

CAPTAIN BOGARDUS.—"As evidence of the durability of your guns, I have shot one gun over 50,000 times. I used your triplex action in my two recent matches with Mr. Pennel, winning both times; also in my match with Captain Shelley, at which time I scored 84, the highest score on record; and in the international match with Aubrey Coventry, Esq., for £1,000, which I won, killing 70 out of 100—all 30 yards rise."

THE *Field* says:—"The match will be handed down as one of the most exciting contests ever witnessed."



"GREAT PIGEON MATCH.—Captain Bogardus, in his recent match with Mr. Rimmel, of England, used his new W. & C. Scott & Son's **"Block Safety" Hammerless.** and killed 99 out of 100—30 yards rise."—*Forest and Stream, New York.*

C. M. STARK.—"The Scott Hammerless is the very best shooting gun I ever owned or have seen shot both for closeness and penetration."

LATEST VICTORY FOR THE SCOTT HAMMERLESS.—Match between Mr. Chas. Mucalaster, of Philadelphia, and Mr. E. C. Murphy, N. Y., for $1,000 a side.

Constantly receiving fresh invoices of these guns of all sizes.

SEND STAMP FOR OUR CIRCULARS OF DIFFERENT MAKES.

Absolute Safety!

Patent Block Safety Lock.

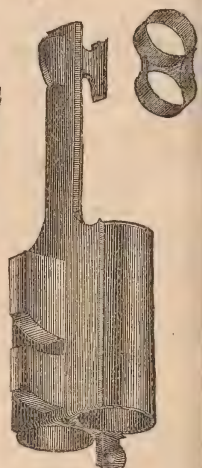
This gun is always safe from any accidental discharge. In opening the gun for loading, the block safety A, interposes between hammer B and striker E, which is only removed when the trigger is pulled. The drawing is intended to show the hammer as accidentally discharged, other than by the trigger and caught by the block safety.

LONDON *Field*, Nov. 1st, 1879.—"The principle accords with our ideas of what is wanted to make the hammerless gun safe."

Land and Water, Nov. 10th, 1879.—"The great improvement lies in the New Tumbler Safety Block; this being worked by the triggers only, supposing the hammer from any cause should fall, **without the trigger being pulled**, the projection on the hammer falls into the **Safety Block**, and so prevents an explosion. The gun is on the favorite top lever action, and the cocking arrangement is exceedingly simple and smooth-working."

REV. W. J. RAINSFORD, Toronto, Canada, Oct. 2d, 1879.—"I have used many guns, by many makers, and certainly your New Premier Hammerless is the hardest hitter I have put to my shoulder."

CAPT. BOGARDUS says:—"No gun can excel mine in shooting. The Block Safety is perfect."



GREAT INTERNATIONAL PIGEON SHOOTING, MONACO, Feb. 18, 1882.—Grand Prix du Casino, 80 competitors, comprising the best shots in the world. Sig. Guidicini (the most noted shot in Italy), won the 8,000 frs. prize with a pigeon gun by W. & C. Scott & Son.

We call attention to a few of their leading hammer guns, viz: their New Trap Gun; their Star quality gun with Prize Compensating Lump; their New Triplex Lever Grip Pigeon Club Gun. Superior quality in hammers and hammerless. Their highest quality is marked "The Premier Quality" between name and address. No guns are genuine unless marked in full W. & C. Scott & Son.

SOMETHING NEW!

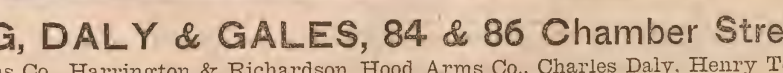
The Pieper "Diana" Gun.

This is the only gun of European manufacture made entirely by machinery. The system is entirely new, and actual tests have shown that for accuracy and strength it has no superior.

The reinforce lumps and bolt loop are of one piece of wrought steel. The tubes are finished to gauge and are put together *without heat* so that they are perfectly straight and always shoot to center. This is only found in very high cost guns made on the ordinary system, as the best barrel filers are necessary. The locks are finely finished and of the best steel, and all the joints are closely fitted; all the parts are interchangable.

A public trial was made in Cleve, Prussia, in August, 1881, to which the best continental makers sent their finest guns. The trial was for closeness and penetration. 4 is excellent, 3 is good, 2 is fair, 1 ordinary. The gun of Mr. Roedel, of Prague, was made on the Pieper system. The result was as follows:

Size of shot.	30yds. 2 4 6 8	45yds. 2 4 6 8	60yds. Total. 2 4 6 8	
H. Pieper, Liege	3 3 4 4	4 4 4 3	4 4 4 4	—45
Roedel, Prague	3 3 3 3	4 4 4 4	3 3 4 4	—42
W.W.Greener, Birmingham	4 4 4 3	4 4 3 3	3 2 3 3	—40
N. Bodsen, Liege	3 4 2 4	4 3 3 4	1 1 3 1	—88
C. Bartels, Wiesbaden	3 3 3 4	4 3 4 4	1 3 2 3	—37
Sackreuter, Frankfort	3 2 3 4	4 4 3 3	3 3 1 3	—36
Camphausen, Crefeld	1 4 2 3	3 3 4 2	3 3 3 3	—31



Size of shot.	30yds. 2 4 6 8	45yds. 2 4 6 8	60yds. Total. 2 4 6 8	
A. Jannsen, Liege	2 2 3 3	4 4 3 3	1 3 2 1	—32
Boermann, Munster	3 2 1 2	4 4 2 4	2 2 3 2	—31
Brunn, Birmingham	3 3 2 2	3 3 4 4	2 3 2 3	—30
Witte, Zutphen	3 4 3 3	1 1 1 1	3 2 3 2	—27
H. Jansen, Wesel	1 2 1 2	4 3 2 2	2 1 2 3	—25
Heuse-Lemoine, Nessonvaux	2 3 1 4	1 2 3 2	1 2 2 2	—25
Cordes, Bremerhaven	2 1 1 1	3 3 2 1	1 2 2 1	—20

Attested by the Jury, Klimm, Royal Inspector of Forests, Keyssler, Royal Inspector of Forests, Heise, Inspector of Powder at Cologne, G. Hahn, record keeper. It will be noticed that the Pieper guns are especially effective at long range.

Mr. H. Pieper has appointed the undersigned sole agent for the United States and Canada, and offers the goods at prices far below their real worth, in order to speedily introduce them into this market.

PRICE LIST.

THE ANGLER'S AUTOMATIC REEL.

MANUFACTURED BY

LOOMIS, PLUMB & CO.,

SYRACUSE, N. Y.

The following letter is from Dr. Geo. F. Gale, of Brattleboro, Vt.:

GENTLEMEN:—Have just returned from Moosehead Lake, Me. I cannot express the degree of satisfaction and pleasure I have found in the use of your automatic reel. Would not exchange it for all the reels I ever saw for fly fishing. Am confident I saved many fish that would have been lost with any other reel, particularly one large trout weighing three and one-half pounds which I played fifty minutes before he would come to the net. He fought hard and long, making many furious spurts from and towards the canoe, but it made no difference. I kept my finger on the brake and it was simply impossible to get a slack line. Mr. Childs, who fished with me once, has one of your reels, says that nothing would induce him to go back to the old crank reel. Yours truly,

GEO. F. GALE.

GUN CASES AND COVERS, GAME BAGS, Shooting Suits, Cartridge Boxes, Belts and Bags, &c., at CHARLES L. RITZMANN'S, 943 Broadway, New York City.

[Extract from FOREST AND STREAM, July 7, 1881, p. 444.]

* * * This flight so nearly resembles the actual motion of birds that the Clay Pigeons afford excellent practice for wing shooting. We commend all sportsmen to test its merits. * * *

Wanted.

Interesting to Gunners.

The "Oriole Gunning Club" have completed their building, and everything is now in readiness for fall shooting. Ducks and Geese. Three more members are wanted to make their number ten in all. Discontinuation —OF— "THE BLUE STAR KENNEL," —OR— THE COCKER SPANIEL KENNEL,

FRANKLIN, N. Y.,

As a Public Kennel.

Health and increasing private business compels that on and after November 1st, 1882, the above kennel will be closed as a public kennel. Present kennel stock must be reduced, and after the above date a private kennel of four or five choice specimens of this breed will only be kept. Private breeders, public breeding kennels and sportsmen will find this a chance rarely offered to secure extra grand cocker bitches with best of pedigrees, both broken, and grown and unbroken, at prices below actual value. Correspondents enclosing stamp will get printed pedigrees and prices of stock offered as per above. Address M. P. McKOON, Proprietor Franklin, N. Y. aug31,tf

The Blue Star Kennel —OR THE— Cocker Spaniel Kennel.

Of M. P. McKoon, Franklin, Delaware Co., N. Y.

I keep only Cockers of the finest strains. I sell only young stock. I guarantee satisfaction and safe delivery to every customer. These beautiful and intelligent dogs cannot be beaten for ruffed grouse and woodcock shooting and retrieving. My elegant stud dogs of the following colors, viz: Liver with white ruffle in bosom, even liver and white, and beautiful black with white ruffle in bosom, are now open for service: fee $15; usual conditions. Correspondents enclosing stamp will get printed pedigrees, circulars, testimonials, etc. Photos of my stock, 25c. each. sept7,tf

Richmond County Training Kennel.

Dogs carefully trained for all purposes. Live quail kept in stock. Gentleness and kindness are my methods. Terms reasonable. ISAAC W. EMMONS, Proprietor. New Dorp, Staten Island, N. Y. june24,tf

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

Kay's Chip

—OR—

EXPANSIVE SHOT CONCENTRATOR,

With Perforated Case.

In our latest device for concentrating shot, we have substituted a special wire for expansion where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.

By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device halls the shot by the expansion of the wire after leaving the gun.

100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest Packed in 6¼ lb. kegs and 1 lb. canisters

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ⅛ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

F. L. KNEELAND, 87 Beaver St., N. Y.

THE DEFEAT AT CREEDMOOR.

NOBODY was surprised at the victory of the British team at Creedmoor last week, because everybody knew that the American team had carefully worked toward defeat. Everything seemed to have been done on the part of the home team to secure a low score, while a dozen matters which ought to have been looked after to secure a victory were entirely omitted or neglected. Nobody, either, appears to be very sorry over the defeat, for it was recognized that a high score on the part of the Americans would have been almost tantamount to a cessation of all further international shoots with the marksmen of Great Britain. Small-bore shooters have a sort of unwillingness to try further conclusions with our team men, but in military shooting the Wimbledon experts have discovered the vulnerable point of the Creedmoor shooters. The recent match brings out in bold relief the real weakness of our National Guardsmen, especially in long-range marksmanship, and after all, it may be a question whether it is worth while for men belonging to city regiments to cultivate a style of shooting so distinctively professional as this of sending over a half mile through uncleaned rifles.

The Americans did themselves credit at the first stage of the match, and showed that the work of Creedmoor has not been thrown away. There are a dozen ranges where shooting may be had up to 600 yards, to one where 1,000 yards can be shot over. To have made then so close a rub for the magnificently trained English team at these distances was a performance which should have the effect of pro ving to the home shooters that it is after all not so difficult a task to overtake the Wimbledon representative.

The good feeling which prevailed from beginning to end of the match, between the two teams, shows that in a social way the match was a success. It was really a contest for the honor of victory. There is no pot-hunting flavor about it, and the men who have given their time and effort to the patriotic duty of representing their respective countries, deserve a great deal of credit. Each country was fairly represented, for though in time America will put a much stronger team in the field, it is doubtful whether at the present time a better squad could have been mustered.

The defeat has shown us that work is needed, and the first effort should direct itself to the making up of an arm capable of filling the requirements of the match. There must be no serious fouling of the barrel as successive shots are fired. The rifles used by the English did not foul, and until American riflemen have the same sort of weapons they have no chance against the better equipped foreigner. Of course our armorers can produce such a rifle, but they did not evidently do so in time for this past match, still the match served as a point from which to take a departure in the right direction. There has been a pretty thorough exhibition of what we do not know in the matter of long-range rifles of this sort. Now it remains to be seen whether or no that deficiency can be remedied.

The matter of the selection of the team is a point over which the directors of the National Rifle Association have complete control, and it is worth considering, in view of the results shown, whether the team of 1882 was really fit to be molded into a good working team. It is well conceded now that to get a team up by a review of competitors, jumping to the conclusion that those who survive the tests are therefore the best shots, is not the true theory. It is not the plan elsewhere where teams represent mere individual effort on the part of their members, and especially is it not the correct plan with us where the team should be so constituted as to get whatever of strength there is in a carefully worked out team system. This can only be done where the closest bond of friendship exists, and where there is not constant struggle for personal preferment.

The team captain should be something more than a mere figure-head, not one of the "has beens," but one of the smart, young, energetic officers of to-day, full of ambition, and not so set in a certain line of opinion that the most stubborn array of facts produce no result in changing his plan. The National Guard of the U. S. may not be a large body, but it is amply large enough to pick out a most excellent team. Abroad the men pick themselves out by going down to the great Central range near London, and there showing their ability. Here the men will have to be looked up. If necessary good holders could be taken, and with good coaching taught to make very fair scores at long range. For off-hand shooting each man must be in great measure his own drill-master, and secure the secret of excellent shoulder-shooting by private aiming drill.

To have a defeat through sheer weakness at Wimbledon in 1883 will be a far more serious matter than the knock-down just experienced. For if a year passes and the same inability to cope with the English riflemen is still shown, then it will go far to indicate that we are after all not likely to become good military shots, and that we had better yield the palm to the Englishmen, and draw in somewhat of our boastfulness as a nation of marksmen. No such result, however, is likely to come about. We might have won the recent match by a great effort. It is gone from us and the Britishers have done us the favor of showing the American public that there is after all something for our guardsmen to learn, and for our expert gunmakers to do. Another year should see the weapons made and a team armed with them ready to do battle before the butts of the strongest team Great Britain can muster on her own soil.

THE BOW IN THE BARNYARD.—A prominent Western sportsman kills chickens for his Sunday dinner with bow and arrow. Although disdaining to shoot at a deer in the woods unless it be on the biggest kind of a jump, or to kill a game bird except on the wing, he ignominiously pots his chickens on the ground, alleging that the meat is better when the domestic bird is killed in serene repose. Yielding to his sportsman's instinct, however, he is now engaged in devising a trap to propel the fowls into the air. When this ballistic machine is perfected we may look for the formation of a National American Archers' Association for the Protection of Poultry, with annual tournaments for trap-shooting old hens at eighteen yards.

THE RIFLE STOLEN FROM WALNUT HILL by burglars last August has not yet been recovered. The owner, Mr. F. J. Rabbeth, requests riflemen to be on the lookout for the arm, which is easily identified. It is a Remington Hepburn, .38 calibre, Swiss stock, with check piece on the right side for a left-handed shooter. The rear sight is also peculiar, being a Winchester vernier without elevating screws, and attached to the rifle with but one screw. Only the base of front wind-gague sight was on the rifle when taken. A liberal reward will be paid for information that will lead to its recovery.

THE MOODUS DOG SWINDLER.—The enterprising and polynomial young gentleman of Moodus, Conn., who displayed so much ingenuity in exchanging mythical dogs of wondrous virtues for greenbacks, money-orders, checks, guns, fishing-rods, and other like substantial booty, has come to grief. His real name is Frank Fowler. He was arrested at Middletown, Conn., Sept. 7, on complaint of one of his victims, and at a hearing last Friday he pleaded guilty and was bound over to appear at the November term of the Superior Court. Fowler was a very successful dead beat, and has swindled numerous gentlemen out of sums of money. He is one of a pestiferous class of dog thieves who ought to be driven out of their business. We trust that those who have been victimized by this fellow will appear against him. This is a capital opportunity to make an example of one dog swindler, and one such example will go far to deter other rascals from taking up the same line of business. It is said that Fowler has been combining with his dog frauds a patent medicine swindle.

THE FIELD TRIALS.—We give in our kennel columns this week the details of the running of the derby stakes at Fairmont. A description of the all-aged stakes running will be found in our next issue. The plan adopted at Fairmont of appointing additional judges and running several braces of dogs at the same time was a wise expedient and proved very satisfactory in its workings. There is every indication that the field of entries at the coming trials will be large, and unless some such measure is again adopted to expedite matters, the meeting will drag its slow length along to an unreasonable extent. Field trials should not be prolonged beyond a week. That is long enough time for all concerned. By confining the trials to a reasonable length of time their promoters will render them more popular, insure a larger attendance and give satisfaction all around. The majority of gentlemen who attend these meetings cannot well afford to spend more time than a week on the grounds, and the judges should not be expected to do so. We hope that this matter may receive the attention it so imperatively demands.

THE COMING ANGLERS' TOURNAMENT.—The proposed tournament which is popularly called the fly-casting tournament, will, in consideration of the attention which will be paid to bait-casting for striped bass, be known in future as the Forest and Stream Anglers' Tournament. The committee of arrangements consists of many gentlemen who are prominent in the angling clubs of the country and in game protective societies. A feature of the tournament will be a contest for prizes to be cast with single-handed fly rods which weigh less than five and a half ounces, which will be given by the house of William Mills & Son, New York. In a few days a circular asking for prizes will be issued and no doubt a fine list will be the result, as it is intended to make this contest the largest and best ever held in America. It is expected that it will come off about October 16, but the place is not yet decided upon.

THE FOREST AND STREAM PRIZE AWARD.—As stated in our last issue, the prize offered by the FOREST AND STREAM at the last convention of the New York State Association for the Protection of Fish and Game, has been awarded to the Onondaga Fishing Club of Syracuse. We had hoped to receive from the Association such particulars in reference to the competition for the prize, and the record upon which it was awarded, as would have enabled us to publish the same this week, but in the lack of such information we are compelled to defer the matter.

FOREST AND STREAM FABLES.

NO. IX.—THE GAR MINNOW PROTECTORS.

THE King of the Fishes, when he found that his law was set at naught, was first of a mind to let the destruction of his small subjects continue till the Pike, Bass and Perch were deprived of food, and so brought to obedience. But being a good King, he could not help but have some kindly feeling for the poor Minnows, and so he appointed certain Gars Minnow Protectors, and sent them to enforce the law. But instead of doing what they were set to, the Gars went Minnow hunting along with the biggest Pike and Bass, and destroyed more in one day of the week than the Perch had in the whole seven. When this came to the King's knowledge he took their office from the Gars, and cursed them, and ever since, to this day, they have been hated by all Fish, big and little, and despised as well as hated by all men.

MORAL.

A dishonest game protector is worse than a poacher.

ADIRONDACK SURVEY NOTES.

X.—A RAINY DAY IN CAMP.

A RAINY day in camp is often welcome to a party that is actively engaged at all times, when it is possible to accomplish anything, and on such occasions the ever busy chiefs of divisions of the survey improve the drizzling hours by figuring up the distances between the peaks of all mountains which are visible from not only a single peak, but from each other, also measurements of angles are looked over for correction or verification, the field notes are consulted for items to add to existing maps, and the cheerful tables of logarithms yield information both literal and figurative. In other tents, however, where the rodsmen, guides, and other attachees are gathered, mending clothes and implements and doing such other work as has been put off for just such an opportunity, there is a hum of conversation on various topics. Wishing to start an argument and then back out and leave others to fight it out, I asked the knowing guide: "Why is it that the sun puts out a fire?"

"It's because there's chemistry in the sun's rays that don't agree with fire," said he, after a pause in which he evidently hesitated between fear of appearing not to know, and doubt as to the cause of the alleged phenomenon.

"Because there's chemistry in your grandmother's black cat," said the careful guide, removing his pipe to empty and refill it, "I've heard o' that thing about the sun shining on a log fire and putting it out, ever since I was knee-high to a grasshopper, and I've watched, but never made up my mind whether the sun had any effect or not."

"Of course it has effect," chimed in the positive guide. "You let a log fire burn all night in front of your tent in winter, and then see how quickly gray ashes will form on the coals and put them out as soon as the bright morning sun strikes them. You can't tell me anything about that, 'cause I've seen it too often, and I know it's so."

"Oh, yes! You know it all, you do," put in the teasing guide, who never missed a chance to bother the positive one, "You knew the ice would bear us up on Minnow Pond last fall, and when you went on it the rest of us knew whose breeches got wet and who came near losing his axe, and would have lost it if the water had been deeper. And you are the one that knew that the trail out of Big Moose that we were on didn't go to Twitchell, and so started off on the other one and brought up at—"

"Well, I don't see what that has to do with the sun, nor what you want to throw up a mistake like that for, every chance you get," retorted the other, "but when I say I have seen the sun put a fire out, I know what I am talking about. I have seen it and I know it; that's all there is about it."

"How do you know that the fire wouldn't have gone out anyway at that time if the sun had not come out?" asked the careful man.

"I tell you it is on account of the chemistry," asserted the knowing guide, with a shake of his head. "I guided for a doctor once, and I heard him say that light hurt some of his medicines, and he talked about chemistry and other things in wood and water which I've forgot all about, but they are there all the same."

"This is one of the things that would be hard to prove, and I don't see how you are going to do it," said the careful guide. "Your fire goes out perhaps because it has burned out, or the wood is wet, and you think the sun does it. Now I have seen fires burn all day and go out at night, and then why not lay it to the moon or the darkness? Perhaps there is chemistry in darkness, too," added he, with a look at the propounder of that learned theory.

"Now I'll ask you another question," said the teasing guide to the knowing one, "Why is it that if a silk handkerchief hung up by two corners will let a rifle ball by it without moving or showing that it has been hit? That is the old game of getting a bet out of a man that he can't hit a handkerchief at ten rods."

"You can't hit the handkerchief because there's electricity in the silk, and the ball slips under it without stirring it, but the thing can't be done unless with silk," said the knowing man. "We tried it once up on the Raquette when no one in the party had a silk handkerchief and so we put up a cotton one for a very fresh young man to shoot at. He had been telling what a wonderful shot he was when I stumped him to shoot at my big red cotton handkerchief, for a plug of tobacco to be bought when we sent out to the store again. He took the bet and I fastened the rag up by two corners, just as I had always heard was the right way, and we measured off the distance. He shot, and I'm a sinner if he didn't bore a hole through the thing and tore it so that it was only fit for a gun cleaner. Of course I was elected to buy the tobacco and he crowed louder than ever. Then when I got to thinking about it afterward I remembered that the old man who told me about it said that to do the trick the handkerchief must be silk, 'cause that had electricity in it."

"Maybe the man chewed his bullet so as to make it ragged," said the young guide, "they say that will fetch it every time."

"Do you believe all this stuff?" queried the skeptical man; "if you do and have a silk handkerchief about you that you want a hole put in, just hang it up and I will accommodate you by boring it with this revolver."

"You can't do it," retorted the other, "no man can do it with a smooth bullet, and I'll bet you two plugs of tobacco, you can't."

"I don't want to bet," answered the skeptic, "for I am not a betting man, but the thing's agin reason, and if you have never seen a silk handkerchief shot at, and have faith that it can't be hit strong enough to risk it, just go out and hang it up and you won't have this delusion long."

The handkerchief was hung up by two corners to a limb of a sapling near the tent, and when all was ready the pistol cracked, and a large rent near one corner was the result. A dozen excuses were made by the knowing man. "The day was rainy and the electricity in the air took the same from the silk." "The handkerchief was wet or it would never have been done, because the water made it too heavy to dodge over the ball." And besides, "it wasn't fair to shoot at the corner where it was tied; anybody would know that it couldn't dodge there," and other learned reasons were given to account for the unexpected result. I was much interested in this discussion of a question that I had heard among hunters thirty years ago, and which, like the philosophy of shooting a candle through a board, and pistol balls through glass, often come up when shooting is the theme of conversation. I had seen bullets shot through glass without cracking it to any extent, and once saw the thigh bone of a man which had been driven through an inch hemlock board by his jumping from a three story window, and was therefore prepared to believe the candle story, but the handkerchief feat was one on which I had some doubt, and to-day do not pretend to say whether a bullet striking one so suspended, fairly in the middle, would go through it or not. Some time, when in the woods all alone, I will try the experiment.

The rain continued, and the corner of a box happening to be pushed against the tent, the water came through there, and the teasing guide turned to the knowing one and asked, "Why is it that water will come through canvas where anything touches it? Is it on account of chemistry or electricity?" But the knowing man seemed to have his thoughts afar off and replied not to the very evident sneer. The conversation now languished through the apparent depression of the knowing man, and when the jocular teaser endeavored to rouse it by going over to the side of the one whom he had made his target by saying that "any man of sense would know that it wasn't a fair thing to shoot a handkerchief where it was tied," the knowing one merely turned a weary eye on him and heaved a sigh. One of the rodsmen who had taken no part in the conversation but seemed to desire it to go on, after a long meditation on a subject for debate, propounded the old question, "What becomes of all the pins?" A depressing silence plainly showed that no one was interested, and even the face of the positive man gave evidence that he did not care what became of them. As this problem had been fully worked out by Tubal Cain long before the dawn of the Christian era I ventured to give his solution, "They fall to the ground and become *terra*-pins." An old hound that had been lying by the door of the tent shook his ears as if an extra large mosquito was boring for oil in one of them and he looked me squarely in the eye with a most heart-broken expression; but when the rodsman rejoined, "That destroys my hair-pin-ness," he ran howling from the tent and was never seen again.

F. M.

The Sportsman Tourist.

THE WILDERNESS OF LABRADOR.

I.—BELOW QUEBEC.

THE brakeman's loud voice shouts at last the welcome word Campbellton. The long, tedious railroad ride of over 900 miles from Buffalo is over, and the locomotive will soon be exchanged for the less rapid, but more commodious, transportation by steamer, schooner, boat and canoe to the still far off wilderness which fringes the north shore of the green waters of the Gulf of St. Lawrence.

Campbellton is a sleepy little town on the Intercolonial Railroad, midway between Quebec and Halifax, the terminus of that fine and well-graded government road. Past it flows the swift, glittering Restigouche, which, after pursuing its course for thirty miles or more between high forest-clad mountains, widens out here into a large estuary of lake-like dimensions, and blends its turbulent waters a short distance beyond with those of its boundless parent to whom it owes its birth and surrenders its life. The stranger from the low, dusty, heated plains of our latitudes may stand here at the wharf, which serves as the landing of the coasting steamer, and look for hours, without being conscious of the flow of time, upon the majestic panorama of nature's own handiwork, bounded on either side of the river by towering mountains fading inland into long, blue, hazy outlines as far as the eye can reach, while the seaward view is bounded by the placid waters of sunny Bay de Chaleur.

At this time of the year, beginning of July, its surface is not unlike the seas of happier climes, as yet undimmed by the dark skies and the fierce gales which but a few short months hence will herald the advent of winter. The deeply wooded slopes of the Restigouche at its mouth, with their green mantle of sombre pine trees all over-arched by the blue vault of heaven fleeced with white clouds, are morning and night reflected with mirror-like faithfulness upon the glassy surface of the river, and duplicate thus down to its destination the fairy landscape which adorns everywhere the course of this great artery of the northern wilderness.

We had gained the first glimpse of it at Metapedia, thirteen miles west of Campbellton, where a massive and yet withal artistically constructed iron bridge spans its swift current, and where the angler may, within full sight of great arches, cast his fly for the salmon, the royal game fish of these crystal cool waters.

A club house belonging to the well-known Restigouche Association, and located on the site of Dan Frazer's late tavern, is also additional guarantee that we are approaching the center of good fishing grounds, and the English and American flags hoisted at each end of the building symboliz the brotherly feelings which unite all true sportsmen, n matter of what nationality, into one common bond o brotherly feelings.

The tired locomotive which had been snorting and puffing fe over two hours since he started from Quebec rests here a fe minutes, and after being duly watered and fed speeds onwar toward Campbellton. Here we alight and transfer our selves and baggage to the near-by Royal Hotel, kept as c yore by mine host, Sproul, a rubicund, jolly landlord reminding us of the types of the now fast passing away ol regime known far and wide by all who chanced to have th good fortune to fall into their hands.

He of the Royal Hotel never tires to administer to th needs and comforts of his piscatorially inclined guests. H is himself an ardent fisherman, and will not be slow to mak arrangements for a day's trip to any of the near-by trou streams and lakes. Campbellton is indeed a focus of thes attractions, and a good point to start from for all disciple of the noble art of angling. They may diverge hence t wards all points of the compass without any danger of failure The Metapedia, Scanmenac, Norville and other equall good streams may all be reached by rail or team in less tha ten hours, while the Restigouche and Cascapedia hardly re quire even this short time, as they are almost within sight Two near-by beautiful deep mountain lakes, called Parker and Doyle's lakes, after their owners, are the favorite fishin grounds of mine host, who rarely fails to return from ther with a big load of the large, handsomely colored trout whic abound in their ice-cold waters.

I may not dwell here upon my personal experiences, no trespass upon your readers' patience by detailing what he often enough taxed severely my own, whenever success di not attend my efforts. Neither can I well picture, on th other hand, my satisfaction and delight when the strong tu at my wrist and the curving tip of my small eight-ounce ro admonished me time and again to pay attention to my lis and to idle away a few minutes in that most delicious of a pastimes—the playing with your struggling prize as the ca amuses herself with a lively mouse. We freely acknowledg of having on sundry occasions perhaps needlessly prolonge this agreeable occupation to listen a little longer to th sweetest of all musical notes, the whirring noise of the swi revolving reel, which beats time to this wild entertainmen the crowning desert of this present vacation journey.

It is also a happy pastime to view the impressive fore solitudes around us and to listen to the soothing sound foaming cascades, which becomes doubly sweet when inte rupted from time to time by the splashing noise of voracious playful brook trout. How quickly do not then our reverie come to an untimely end, and how soon do we not becom oblivious of all charms of scenery, when it becomes a seriou question as to whether we are really going to land safel that big five-pounder we have hooked, and which tugs an pulls so desperately to free itself from the encumbrance o its one-sided, gay, feathery moustache. And when, as happened to us on the St. John's River, that a large trou was hooked at the wrong end, near the ventral fin, by wh my canoeman termed jigging, the beautiful view aroun me melted away like the mists before the noonday sun, to condense itself into the focus of the struggling fish, th imagination magnified into absurdly gigantic proportion It turned out to be, after all, only a four-pounder, reinforce however, by a one-pound inquisitive comrade which ha taken a notion to the second fly.

We had enjoyed glimpses of Campbellton in former year its lakes and streams, including Mill Stream and McKe nonsbrook, both of which empty into the Metapedia te miles or more above Metapedia station, had all bee revisited, and to avoid the danger of monotony we pack u our baggage for Gaspé and northward beyond this termina point.

There is still, as four years ago, a semi-weekly coastin steamer plying between Campbellton and ports north as fa as the little village of Gaspé, on the northeastern extremit of the peninsula of Quebec. At present it is the St. Law rence, and she has good accommodations for her passe gers, although her table, like that on board of the grandil quently named Royal Mail Line, between Toronto and Mo treal, is far below the standard of American coasting steam ers. To judge, however, from her build and appearanc the chances of a safe and quick passage are fair, whic offsets to some extent the barren prospect of a good squa meal. The heavily oxygenated, invigorating sea air is affe all perhaps a better caterer than the best pupil of a Soye who could find a large field for improvement on sundr Dominion steamship lines.

The distance from Campbellton to Gaspé is about 1 miles, and is accomplished on this occasion in sixteen hour We stop at various places, including New Richmond at th mouth of the famous Cascapedia, Bonaventure and othe of minor importance, which in all tends to retard the pro ress of the steamer, while it also serves, on the other han to relieve the monotony which generally attends all trav by steamer. The sea is as polished as a mirror, and not ripple dimples its surface which photographs in ever-var ing tints the great white clouds drifting across the va overarching aerial dome. There are also hardly any dange ous jutting out reefs, and as the perpendicular rocky wal of the shore fringe abruptly the deep water, the steam approaches time and again close enough to throw a biscu ashore, as sailors term it.

The tourist, if he be inclined to study the active agenci and forces of nature which are incessantly at work to alt the contour of these shores year after year, will find here remunerative field for his observations and speculation The cliffs rise, in most instances, vertically from the se and are chiefly composed of a soft, deep red-colored san stone, which bears upon its exposed surface, near the wat line, everywhere unmistakable testimony to the wearing an eroding power of water and ice. Wherever the rocks are harder texture no deep grooves are visible, which appe again in their fullest development and of many feet in dep along the softer layers. This is undoubtedly caused chiefl by the eroding action of ice, which drifts along here in gre masses and accomplishes all of these results with the aid the strong tides and currents which are a peculiar feature the Gulf of St. Lawrence. Sooner or later the great ove hanging rocky shelves, deprived of support, tumble dow with a crash into the foaming breakers beneath them, whic pound and grind them up into gravel, sand and mud, serve, perhaps, in the far off future, as available materi for reconsolidation and a repetition of the same process which take place here now before the reflective min These features along the seashore are most conspicuous displayed from the village of New Carlisle, northward to th fishing settlement of Percé, where the ancient coast line h

become entirely obliterated. Nothing indicates its former existence excepting Percé Rock and the low island of Bonaventure, which is a mile or so in length, and composed of the same material we find on the mainland. The former is fitly named from its tunnelled base, which is marked by a perforation large enough to allow a large boat to pass through. Percé Rock appears at present as an almost square tower of a few acres in area, and 200 feet or more in height. The top of this curious ancient landmark is slightly convex, and its surface is well whitened by the excrementitious deposits of thousands of herrings, gulls and cormorants, which have chosen this lonely eyrie probably ever since the advent of the Terrace epoch as their roost. The pelting rain storms, aided by the melting of the spring snows, tend, however, to remove the excrements of the birds as fast almost as they are deposited, and such accumulations of them as occur in the rainless zone of the Chincha islands are, therefore, here not existing. For these reasons the only good which could possibly be accomplished by these otherwise useless birds is left undone, and they serve merely as an attractive sight on these otherwise rather lifeless shores. They come back each successive spring, fish day after day, chiefly for smelt and eels, not disdaining a casual dessert of young salmon and trout in the salmon rivers north and south of Percé Rock, to a distance of over fifty miles, where they may be seen coming and going to and fro each morning and night. Since no man can climb up their almost perpendicular rocky home, and since nobody cares for a mess of their unsavory flesh, they thrive and increase wonderfully, though only within a mile of the busy fishing settlements named after their rock.

There is to my knowledge only one more breeding ground of the cormorant along the shores of the Gulf of St. Lawrence, about twenty miles westward of Natashquan, where a small colony from the parent stock seems to have formed an independent settlement. The problem as to whether all birds will increase if unmolested in their breeding grounds can be studied here as by experiment in a contracted area, since the average mass of the cormorants on Percé rock, though not exactly countable, yet allow of a rough estimate. As their average number does not appear to suffer any appreciable variation, it would be instructive to learn what becomes of all of the young birds which are raised here in great accumulating numbers year after year. The normal amount of the great flock remains apparently unchanged, and whether it is only the old birds which return, or their progeny, is an open question. The ratio is perhaps maintained on the basis of the Darwinian theory, that the fittest and strongest only survive.

I am no special champion of the cormorant, some of which no doubt lessen my own chances of catching trout at Gaspé, and I pitch while passing by in the steamer a few balls from my rifle among the thickly-massed flock which sentinel in motionless attitude their chosen and protected reservation. This disturbance raises at once an immense cloud of them, which waves to and fro about the rock as long as the latter remains in sight from the steamer's deck. With aid of the field glass we also noticed that there seems to be a friendly feeling between the separate flocks of gulls and cormorants, though each tribe occupies its own special territory, in illustration of the axiom, "birds of a feather flock together."

As the sun sinks slowly behind the lofty peaks of the Gaspé Mountains, after having given us a gratis entertainment of the sunset, almost as brilliant as that so glowingly described in Byron's "Corsair," we round the bold promontory of Ship's Head, and steam into the placid, winding bay of Gaspé. This basin, as it is called, is the very picture of a typical Norwegian fiord on this side of the great deep, and unquestionably the most romantic, no less than the most secure harbor along the whole coast line from Quebec to the Straits of Belle Isle. A glance at the chart explains on sight much more than could and ought to be said in favor of Gaspé, which, like a hidden gem of the deep, is still secure from the prying gaze of the inquisitive crowd of fashionable pleasure seekers, who have not yet invaded its quiet seclusion. Its isolation is due to its great distance from the centers of population and the lack of well-organized communication, which, when completed, will destroy its present primitive charm and awaken it from the trance into which it seems to have fallen. A change will before long come over the spirit of its dream, unless all advantages which must accrue to it by reason of its geographical position should turn out to be idle fancies and speculations. It is strange indeed that the highly-favored natural situation of Gaspé should have been so long overlooked by those parties and companies directly interested in and concerned about the most rapid and cheap transportation, which seizes invariably, as if by instinct, upon the nearest and safest landing points for freight and passengers on all highways of transatlantic intercommunication. L.

Natural History.

THE GASPER-GOU.

I HAVE received the following communication from the Fish Commissioner of Texas:

"*My dear Sir*—As I have been much interested in some of your letters to FOREST AND STREAM [Why not all?—Byrne] I take the liberty of writing to you. I was interested particularly in your letters concerning the 'Monsters of White River,' [I was, too, especially in the congestive chill part of them.—Byrne]. The 'gasper-gou' with us is, with the exception of several species of bass, about the best fish we have in this State, and I am anxious to know more of this fish, its time of spawning, etc., whether I can propagate the fish artificially or not.

"In May last I sent some specimens to Prof. Baird for identification. Mr. G. Brown Goode, of the National Museum, classes the specimens as *Ambloden grunniens*, but tells me the fish is not edible.

"Mr. Fred. Mather, in a letter written August 28, asks me, 'Can you eat this fish gasper-gou, which is not used anywhere for food?'

"Is it possible a mistake has been made in the identification by Mr. Goode?

"Certainly here [And here also.—B.] the fish is a good one, and when from two pounds down to the smaller sizes, say five to six inches long, a first-class pan fish. When much larger than two and a half to four pounds, the fish is good baked or boiled, as you probably have seen. I would like to hear from you on the 'gasper-gou.'

"R. R. ROBERTSON, Austin, Tex."

As an amateur naturalist and ichthyologist, only in the back woods (prairie rather) of Arkansas, without any library, not even a dictionary, "Byrne," after carefully looking over the ground and the material and data on hand, feels that Mr. Robertson has cut him off a "little bigger chunk than he can chaw" conveniently. But if I had a complete ichthyological library, and had the collection of fishes in the National Museum at Washington (when completed) at hand, together with my vast experience in field and flood to draw from, I would tackle these questions of Mr. Robertson's with an energy and industry such as knows no failure. As it is, I will have to do the best I can, or, resign (and resign I never will so long as this occupation has no salary attached).

Where did Prof. G. Browne Goode get the name *Ambloden grunniens*? Did he coin this name just to create misery for me? I cannot keep those specialists in ichthyology straight if they go to work and coin a new technical name every time they get puzzled. If Prof. Goode had identified Mr. Robertson's specimens as *Corvina osculo*, De Kay; or *Haploidonotus grunniens*, Raf., as the other specialists have done and keep on doing; or told us that the gasper-gou is the white buffalo with a mouth formed like a sucker, and that the buffalo is *Bubalichthys bubulus*, Agassiz, "an excellent food fish," as Hallock does, "Byrne" would have had plain sailing; but for him to give it a name that I have never heard of before is simply outrageous, and relegates the whole question back to Major Lewis, of whom I had the most of my information.

Fishermen who have been very familiar with the fishes of the upper Mississippi waters, on coming here and seeing this White River gasper-gou, name it at sight either sheepshead, grunter, drum or white perch, for by these names they are very familiar with the fish known scientifically as *Corvina osculo*, De Kay, etc., and they call our gasper-gou by the same names. But if the two fishes were placed side by side, of the same size, they would resemble somewhat, but would show distinctly different. The Western sheepshead is more rounded longitudinally on the back, more hump-shouldered or heavy in front, and dwindles more abruptly toward the tail, seldom fat, flesh white, belly white. The gasper-gou is yellowish on the belly, flesh yellowish, but the most marked difference in the two fishes is in the thoracic plates or grinders, for both these fishes have, as the boys say, "their teeth in their throat," or three plates, two above, small, and one below, large, thickly armed with peculiar and beautiful grending teeth in their throats back of the mouth parts proper and in the mouth of the gullet. These in the sheepshead of the upper rivers are much larger than those in a gasper-gou of the same size. So far as I have observed the sheepshead feeds generally on shellfish and articulatæ, the gasper-gou on crayfish alone. A fish doesn't need so strong an apparatus for grinding crayfish as it does for shellfish, hence, as I think the difference. The only fish I find anywhere mentioned—though my researches have not been extensive—that seems very nearly like our gasper-gou is this. I copy from the "Sportsman's Gazetteer," Hallock, page 338.

"SCLENIDÆ.—*Malusheganay*, sheepshead; *Corvina richardsonia*, Cuv. and Val.

"This species is common in Lake Huron, where it is *highly prized as food*. It is *taken with crayfish*, on which it principally feeds; length, from one to two feet, color, grey with dark transverse bands above, sides silvery, abdomen yellowish. *The sheepshead of Lake Pepin is not valued as food*."

The italics are mine. Our gasper-gou takes crayfish only. Can it be that this Lake Huron sheepshead and our gasper-gou is the same fish? My opinion is that there are several species of this peculiar family of fishes, all looking very nearly alike, but varying distinctly in habits and quality, and that the family has been very carelessly studied, and here the matter must rest until we hear from the fish sharps again. Do not be bashful, gentlemen, if you make mistakes; I will correct you as kindly as I can, and if Mr. G. Brown Goode wants further specimens of these two fishes, some one will please furnish them, for I cannot, as I am forty miles from an express office or any other modern inconveniences.

Is the gasper-gou an edible fish? Yes, emphatically yes. But it has a peculiar flavor, like the oyster, codfish, lobster, etc., not always relished at the start, but, like them, use makes one very fond of it.

Is the up-river sheepshead (*Corvina osculo*, De Kay) an edible fish? Well, yes, hardly. Ten years ago on the Illinois River they were seined and thrown away by the thousand ton. Now they are hauled back in the country and sold as "white perch," "silver bass," and the grangers and dwellers of inland cities and towns manage in some way to get outside of a vast amount of them. Having never interviewed one of these sadly imposed upon fellow creatures immediately after he had dined on a "grunter," I cannot give his opinion as to its edibility. Of its wholesomeness I am certain, for there have been no epidemics in that Illinois country back from the river, and the people continue to raise corn enough to make "French brandy" for the rest of the world. "God bless 'em," for they have distinctly answered Mr. F. Mather's question, namely, "Can you eat this fish?" But I mistake; this question was rather pointedly asked Mr. Robertson. Well, I will answer for Mr. R. A Western man can eat anything (if it is called by a nice name), and we all know that a Texan can eat several Western or any other men.

From analogy I should say that the gasper-gou shows in August or September here in the still waters of the mouths of creeks and bayous. But this is simply a guess, but it true it would be a very easy fish to increase artificially.

Now, gentlemen, you Eastern specialists in all branches of natural history, I want you to go to work and revise the whole thing and publish a new set of text books with an entire change of technical names—the longer and harder to pronounce the better—for some of the old names are becoming entirely too familiar. If you should need any field facts or scientific facts, why write to me and I will furnish them, but be sure and enclose stamps, the more the better, green stamps, for I have been obliged to hold my mail here two weeks because our postmaster run out of stamps. BYRNE.

CROCKETT'S BLUFF, Ark., Sept. 12.

THE GASPER-GOU IS NOT EDIBLE.—Cleveland, O., Sept. 14.—The "gasper-gou (*Haploidonotus grunniens*) is edible," comes the news from Austin, Texas. So it is said of this fish whenever found in the waters of the Mississippi Valley, but here in the Great Lakes he is tough and tasteless. The better and longer he is treated by fire the tougher and tougher and more tasteless he becomes. The artist cook of the Ichthyophagus Club, they say, makes palatable many strange and untried things; let him try his art on the gasper-gou of our lake, and if he succeeds so that a cat, even, partakes of his cookery, he shall receive as reward a full peck of "lucky eyestones" from old Grunnien's head. In 1840 the first extensive German emigration quartered here, and as cheap food was a necessity to them, they resorted daily to the fishing grounds; to their surprise a fine large fish (they called them "wrass," I think) was offered to them gratis if they would take them away. I heard a fisherman remark one day: "Those ere sheeps will try those Dutchmen's gizzard's," and so it proved; in a short time the Dutchmen preferred "store fish." At one time great numbers of "sheepsheads" found their way to Cincinnati and other Southern markets. They were in great demand for a while for the reason they had foreign airs upon them, something new. If I mistake not a city council now and then in the Ohio Valley passed an ordinance prohibiting the sale of Lake Erie sheepsheads. A few years later than this a grand hotel was opened here by two of Baltimore's most popular landlords. Among other entertainments given was a fish breakfast to a few chosen "old heads;" in addition to the products of salt water, fresh water was also to be represented; one of the "old heads" proposed the Lake Erie sheepshead as a *piece de resistance* at the feast, to which the two jolly salt-water landlords readily consented, as they knew all about that fish. They had the same down in the lower bay, near the Po-to-mack. The landlords and chief cook did wonders in their way to make perfect that breakfast, and so did *Haploidonotus grunniens*. How appetizing he looked brought on the table garnished with fine dressing, herbs and lemon-peel. One stroke of the fork and knife; then a suspense. The word went forth, "Waiter, tell the cook to give this fish a little longer turn; it's not done quite enough." Soon the dish reappeared, but on testing 'twas tougher than before. "Try it again, and tell the cook to 'tend to his business or else I'll return him to Baltimore." The cook in spite of his skill gave up the job, came to the table and in self-defence declared, "That praps that ere fish might be one of them are sheepsheads, but he never came from the ole Chespeek. Them, sir, got stripes on thur sides and teeth like sheeps' in the end a booth jaws. I thinks, misters, this yar fish is a confound mongrel." The old darkey cook was exactly right. Now let the "Ichthyophagus" try.—DR. E. STERLING.

FLIGHT OF BIRDS.

THERE appeared in the scientific journals lately notices describing the results secured by photographing birds in their flight by newly-invented instruments as the "Photograph Gun" and others. The figures of birds printed seem somewhat confusing, but are nevertheless very suggestive, and I beg to send a few notes on them, by way of interpretation of the actions represented. Certain terms have been customarily used for the motion of the wings, as depression and elevation, the former indicating the wings pointed downwards, and the latter pointing upwards, as if the wings had been struck up and down through the air by the efforts of the bird, while the body remained stationary all the time.

Now, the same appearances may very well be shown to be due to converse actions in the bird, viz., that the wings really remained stationary, while the body of the bird was elevated instead each time.

Similar mechanical action occurs in quadrupeds when the feet are planted firmly on the ground, and the muscular effort of the animal projects its body forward, using that base for a fulcrum.

It needs only hinting to mention that the body of a bird would be easier moved through the air than the wings perpendicular to their surface planes, both on account of its rotund form and superior density.

The process of normal flight hence may be considered to be due to two influences—the muscular effort of elevation, and the muscular relaxation of sliding down an inclined plane, which view may tend to simplify the explanation ventured on.

When the bird flashes down the wing at A (Fig. 1), the body is thereby raised to a higher level at B than the end of

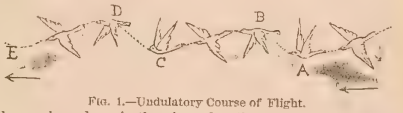

FIG. 1.—Undulatory Course of Flight.

the previous slope in the air, and at the next step the wings are held out horizontally while descent is begun down a short inclined plane, B C, where they have become relaxed, and are now pointed upwards.

On arriving here another flash of the wings is made downwards, and the bird rises to D, at the summit of the next slope, when again the wings are extended horizontally, when relaxation begins, and terminates at the bottom of the incline at E, where they are let go, and elevated previous to the next muscular effort.

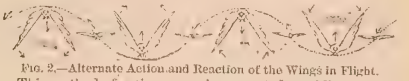

FIG. 2.—Alternate Action and Reaction of the Wings in Flight.

This method of action may be repeated rapidly, so that there might be continual flapping of the wings indicating short rises and short slopes in progression.

Or, again, if the inclines are lengthened out unduly over the rises an appearance of a bird sailing through the air is produced, when there is a flap only rarely given by the wings.

If the wings of a bird seem to be elevated we may suppose that it is at the bottom of the incline, or with wings depressed we may suppose it to be at the top of the rise.

The horizontal flight of birds with wings observed to be flapping would probably, therefore, consist of a series of undulations, or rises and falls, like the tracings of a sphygmograph, representing circulation or respiration.

The up and down flappings of the wings would correspond with the down and up curves of the line of flight, and these again with descent and ascent of the body of the bird, to which it would really tally, and not with the motion of the wings (Fig. 2).—*Arts, in Land and Water.*

RATS AND SPARROWS.—Baltimore, Md., Sept. 14.—*Editor Forest and Stream:* I was a witness to an incident a few days ago which greatly surprised me. A lot of sparrows were eating in the stable yard, when several large rats ran from the stable, and chased the birds, which did not fly high from the ground. The rats then changed their mode of operations, and sneaked upon them. This they did for over an hour, but did not succeed in catching any of the sparrows.—J. L. MOST.

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

GAME IN SEASON IN SEPTEMBER.

THE following schedule exhibits the game now in season. (Also, in parentheses, seasons which open during the month.):

Alabama—Doves; (15th, quail).
California—Deer, doves; (15th, grouse, rail, quail, wildfowl).
Colorado—Deer, elk, antelope, mountain sheep, buffalo, bison.
Connecticut—Wildfowl; (12th, rail).
Dakota—Grouse, quail, snipe, curlew, plover.
Delaware—Woodcock, rail, reed.
District of Columbia—Woodcock, ruffed grouse, wildfowl, pinnated grouse, plover, reed, snipe.
Georgia—Wild turkey, quail, deer.
Idaho—Sharp-tail and pinnated grouse, deer, mountain sheep and goat, elk, antelope, buffalo, wildfowl.
Illinois—Woodcock; wildfowl, pinnated grouse, deer, wild turkey.
Indiana — Woodcock, wildfowl, pinnated grouse.
Iowa—Woodcock; wildfowl, pinnated grouse, elk, deer.
Kansas—Pinnated grouse.
Kentucky—Woodcock, deer, wildfowl, wild turkey.
Maine—Ruffed grouse, woodcock, wildfowl, plover.
Maryland—Ruffed grouse, woodcock.
Massachusetts—Ruffed grouse, woodcock, wildfowl, doves.
Michigan—Ruffed and pinnated grouse, woodcock, wildfowl, snipe.
Minnesota — Grouse, woodcock, quail, wildfowl.
Mississippi—(15th, meadow lark, deer).
Missouri—Woodcock, plover, meadow lark, dove, pinnated grouse, deer; (15th, wild turkey).
Montana—Fool hen, grouse, ptarmigan, buffalo, elk, antelope, mountain sheep & goat, moose, wildfowl).
Nebraska—Grouse.
Nevada—Elk, antelope, mountain sheep and goat, deer, grouse, quail, woodcock, wildfowl.
New Brunswick—Woodcock, wildfowl, snipe; (15th, moose, caribou).
New Jersey—Reed birds, rail, squirrel.
New Hampshire—Woodcock, plover, ruffed grouse, quail, deer, caribou, moose, wildfowl, squirrel, rail.
New Mexico—Grouse, ptarmigan, quail, deer, wild turkey, elk, antelope, mountain sheep, buffalo.
New York—Woodcock, ruffed grouse, deer, wildfowl, squirrels.
North Carolina—Deer.
Nova Scotia—Woodcock, wildfowl, snipe; (15th, caribou, moose).
Ohio—Woodcock, ruffed grouse, wildfowl.
Oregon—Grouse, quail, wildfowl, deer, moose, mountain sheep, elk, antelope.
Ontario—Woodcock, snipe, hares, wildfowl, pheasants, partridges, grouse, prairie fowl.
Pennsylvania—Woodcock, wildfowl, plover, rail, reed birds, snipe, squirrels.
Quebec—Deer, caribou, woodcock, wildfowl; (15th, ruffed grouse).
Rhode Island—Woodcock, ruffed grouse, wildfowl, plover, robin, meadow lark, hare, squirrel.
South Carolina—Deer; (15th, wild turkey, rail, reed, grouse, quail, doves, woodcock).
Tennessee—Deer; (15th, ruffed grouse, snipe, quail, meadow lark, woodcock, wild turkey).
Texas—Deer, ruffed and pinnated grouse, quail.
Utah—Elk, deer, antelope, mountain sheep, grouse, quail, wildfowl.
Vermont—Ruffed grouse, woodcock, wildfowl.
Virginia—Ruffed grouse, wildfowl, woodcock, deer.
Washington Territory—Deer, elk, mountain sheep, grouse, antelope.
West Virginia—Pinnated grouse, deer, ruffed grouse, wild turkey.
Wisconsin — Woodcock, grouse, quail; (15th, deer).
Wyoming—Buffalo, elk, antelope, mountain sheep and goat, deer, ptarmigan; pinnated, sage and sharp-tail grouse, ruffed grouse, wildfowl, plover, curlew, snipe.

☞For exceptions, local laws, etc., see FOREST AND STREAM Schedule "B," issue of July 20, page 489.

SEPTEMBER.

(Forgot it wasn't cocked.)

Now the grouse with ruffled plumage
Hurtles wildly through the brake,
While the man with choke-bore leveled,
Yanks the trigger till fingers ache.

I am aware that the boys do not like to say anything about these little "contretemps," but a good many of them have "been there" all the same, and if brutes could talk there would be many a canine who would swear to the "doggerel" above. DICK.

BITS OF EXPERIENCE IN FLORIDA.

SECOND PAPER.

DURING the winter months the St. Johns, the prairies bordering on it, and the hamaks fringing the prairies afford much solid enjoyment with rod and gun. In many places the prairie extends from one to several miles along the river, and as far from river to hamak. Singly and in groups the palmetto dots the green expanse. Cypress swamps at intervals bar the progress. In them are found otter and cotton-mouth moccasins. Ducks frequent the river and lagoons making into it. Snipe feed in great numbers on the prairie, while turkeys, deer and squirrels keep to the hamak.

The weather is just right for a hunt. It is rarely otherwise in winter. The mercury stands at about 65 during the day, at night dropping to 40 or 50. Clean white clouds sail slowly overhead, and oranges hang yellow upon the trees. I can see the ducks rising in flocks along the river as some steamer puffs along, if I am at home, four miles distant. I hear the great blue heron squawk as he rises on laborious wing. I see great flocks of curlews whirl in the air, their snow-white plumage glistening as they circle, settling noiselessly, light as down on outstretched pinion. I note the killdee's cry of alarm. I hear the "scaipe" of the snipe, and see his jerky flight. I see the swirl of the bass chasing his prey ashore, the leap of the mullet in mid stream, or the lazy motion of the gar as he plays near the surface. What possibilities are in that dense hamak where the palmetto's fronds answer noisily to the breeze, and the far-branching live oak embraces a brotherhood of trunks. Deer and turkeys are there I know, and an occasional covey of quail may be found in the edge thereof.

I have the fever bad, and go over to my neighbor the Doctor.

"Doc., let's go to the prairie to-morrow."

"You couldn't have struck a likelier subject," says he, so we fix it up. We will start at daybreak, and stay two days, taking his darkey, dog, and my Osgood canoe.

Is there any pleasure in talking up arrangements for such a trip? Maybe not. Is there any enjoyment in loading shells, getting "traps" together, loading the wagon and taking an inventory of necessaries the night before? Preposterous. And how many sportsmen there are who don't take along divers and sundry articles they don't want, and which are sure to be in the way when the hurry is greatest? Legions. They will do it every time too. And to wind up these queries, where, on this rolling ball is the pursuit, or entertainment, or occupation, or whatever you like that will give pleasure clear to the marrow like the sports of forest and stream to the true lover thereof? Give us an easy one.

The alarm clock goes off with a rattling din at 4 A. M. I was just dreaming that my head was a boiler works and the whole place was in full blast. Out of bed, into my clothes in a hurry, and out to feed the horse. What a glorious morning! There is no suspicion yet in any part of the sky that a dawn is to break. The stars sparkle brilliantly in the cool air. Jack Frost did not actually visit us, but I know that he contemplated it seriously. What bounding life there is in the veins at such an hour—with a hunt ahead.

The horse is fed, a fire made in the kitchen stove and coffee made, and by the time I have breakfasted and hitched up, a belt of light rises in the east and all the cocks in the country are welcoming it, while the rattle of Doc.'s wagon announces his approach.

We drive through the pine woods a half hour and then down from the undulating land into what is termed "flat woods," where the saw-palmetto and gallberry grow in perfection. The fog lies heavy here, and the pleasant odor of "deer tongue" is all about. Deer feed here, and not an hour since have slowly gone, picking here and there, to dense cover. Soon we emerge from growth of tall "slash" pine and thick standing palms into a glade where the road is smooth and firm. A half mile in this brings us to the hamak that skirts the prairie, which soon opens right and left, sentineled with tall palms. When we have traversed half the distance to the river, arousing numerous snipe by the way, we strike water, increasing very gradually in depth, for the river is up, until we reach a lagoon lying parallel with the river and near it, the upper end of which we cross in water hub deep; frightening ducks, getting a couple, and driving out on a rise of ground extending a half mile around a bend of the river, called Hickory Bluff, only a few yards wide, river on one side, marsh on the other, and grown with palms, pecans and oaks. Here we choose a smooth spot canopied by palms, a yard or two from the bank, unharness the horses, unload the canoe, stretch the fly and are ready for business. Joe, the sable cook, attends to the camp and bangs away at a passing duck with his fusee, while Doc and I take the canoe and search the river and lagoons for ducks.

Around the bends we go, where the water is deep and dark and the oaks overhang the stream, or skirting a sea of bonnets we run into a lagoon here and there where the purple grakle feeds upon the bonnet worm and the gallinule querulously cries from its reedy retreat. The osprey wheels and plunges, shaking itself as it rises with its finny food, turning its head to the front, and steers straight for timber.

I noticed in a late number of FOREST AND STREAM a statement by some correspondent that the osprey seized the fish in the position in which it is carried—headed like the osprey. My observation satisfies me that the fish is seized haphazard, but is always turned head to the front after the bird rises.

We pass a cypress swamp and land on a bluff below, getting a few ducks on the adjacent prairie, kill a moccasin apiece, and go to camp, where we find Joe preparing dinner. When ready we recline under the fly, and, with other good things, sample the bass Joe has taken in our absence. Afterward we take our pipes, fill them with Lone Jack, and enjoy a half hour's smoke. The river runs with unbroken surface close by, the palm leaves rustle gently overhead, the mild winter's sun gives just the right temperature for thorough comfort, the horses stand with half-closed eyes over neglected hay (Northern, baled), and Joe clears the festive board. During the afternoon Doc. shot some snipe and I took a dozen bass with phantom minnow. After supper we gathered moss for beds, rigged our mosquito bar, and after a pipe or two, and rehearsing experiences, turned in. Our fish were on two strings, and a little distance apart. Just as we were dropping off, a splash near by aroused us.

"Gators, by jing!" said Joe, and getting a fan (dry palm leaf) he lighted it at the embers and we solemnly proceeded toward the fish. By the light of the torch we shined the 'gator's eyes as he lay out in the stream a few feet from the fish, but before we could get a gun he sank. We examined the fish and found a couple mangled. Back to bed we went, leaving a gun handy. Several times during the night we jumped with gun and torch, but failed to get a shot. Between the mosquitoes and 'gator, sleep didn't do us much good.

Next morning the fog lay heavily. Doc. and I rose about daybreak, and knowing that ducks nightly resorted to the lagoon just above us, I went to some bushes abreast the lagoon and as near as possible, and he to the upper end. Every few moments we heard the whirr of wings as ducks went by or the swish as they entered the water, but the fog was too thick to see. As it lightened they became alarmed and began to fly, but we got seven and went back to breakfast.

During the forenoon we shot a few snipe, more ducks and took some fine bass, one of which weighed eight and a half pounds; also a few large speckled perch.

The Osgood served us handsomely, being very steady and as dry as anything that never was wet. With guns, rods and ducks in her we could take her from the water and carry her anywhere with a single hand at each side. We shot ducks from her standing, Doc. making one beautiful shot. I believe I have mentioned his skill before. This day two ducks at not less than seventy yards, going down wind like lightning, tumbled to his Dougall. As an instance of his skill let me give you this: Two years since he took his team and dog and started for a day's quail shooting. His wife accompanied him. Through the high pine lands of Florida one can drive as well nearly off a road as on one. It is all open and clear. So they went here and there, the dog ranging, and when he found a covey the Doc. got out and shot, his wife keeping count. At night he had shot fifty-nine times and brought home fifty-two quail. I recently received a letter from him in which he says: "I went after quail the other day; found one covey of seventeen, shot sixteen down and bagged fifteen" (without missing). There are not many better shots than he in this country. S.

OUTFIT FOR A WINTER'S TRAPPING.

THE season for outfitting preparatory to a winter's campaign among the fur animals is now fast approaching. After a summer spent in various pursuits all trappers welcome the early frost which soon turns the color of the maple, oak and other trees into rich crimson and yellow tints so beautiful to all lovers of nature.

To trap successfully it is necessary first to have a sufficient number of steel traps which will vary some according to the ground picked upon. We have generally found 35 No. 1, 10 No. 1½, and 10 No. 3, sufficient. A double barrel shotgun of No. 10 gauge, and a Winchester model '76, will be found ample for fire-arms. A good small axe, all steel, and large hunting knife to wear in the belt will be necessary. One good companion is enough, but a smart active boy to stay at camp will be found profitable.

It is necessary to start early enough that the ground may be picked out well before freezing weather. The best places can be found with a good light canoe, skiff, or dugout, or if to the North Woods, in the country of rough, swift-running rivers, we would advise one of Rushton's light portable boats, which he will make to order of any required dimensions, on short notice. There is nothing so comfortable as a good boat in which you have all confidence to carry you safely wherever you may wish to go. The writer has ridden in nearly all kinds of boats, and knows whereof he speaks. Take along a good cotton "A" tent to serve as a shelter until the colder weather comes, when you will have a much more substantial home shanty built in some sheltered nook beneath the stately pine or sturdy cedar, and in close proximity to the river or numerous lakes, along and among which you expect to push operations as soon as the pelts become prime.

After all is in readiness you usually make one more trip to the settlements for a winter's supply of flour, meat, salt, beans, tea, etc., not forgetting some lights of glass to admit light and keep out the wintry blasts. By the time all this is accomplished it will be getting quite late, and most of the fur animals will be taking on their warmer winter dress that adds so much value to their skins. Happy indeed is the man so comfortably fixed in his lone shanty, far away from the confines of civilization. He can live comfortably and enjoy life and health through the long winter months, and if in a good locality, come out a better man in mind, body and pocket when the spring opens again.

J. LEE SMEDLEY.

DUODALE, Pa., Sept. 18, 1882.

THE CALIFORNIA ASSOCIATION.

II—THE CLOSE SEASON.

THE following extracts comprise the major portion of a paper read by Mr. Ramon E. Wilson before the last convention of the California State Sportsmen's Association. There is a great deal of sound sense contained in what Mr. Wilson says. His paper is entitled "The Close Season," and is as follows:

What a world of meaning these words must have to the wildfowl and upland birds who make their home within a radius of an hundred miles of this city. Mr. President, imagine the feelings of those ducks that unfortunately selected the Alvarado, Alviso, and Suisun marshes and Sherman Island as their feeding grounds. What a pleasure to them it must be to know that they can fly over and across every point of the slough they please, without the least danger of being met with a volley from a score of guns; or if they choose to alight among a flock of their own kind, they may do so with an assurance that they are not among a lot of wooden ducks. What an additional pleasure it must be to know that the whole marsh is free to them, and that they may select the bunch of tules for their nesting where, only a little while ago, a man with a boat and a gun was hidden, dealing out death and destruction.

The upland birds partake of this pleasure too. What a comfort it must be to the quail to feel that he need not now get up before daylight to get his breakfast and get back into cover before the man with the gun and dog comes along. Mr. President, I took a little trip into the country the other day, and as I drove along the highway where I frequently go in the open season, and feel highly gratified if I can bag a couple of dozen, it seemed to me as though I had never seen so many quail before. They were running in the road almost under the horses' feet, sitting on the fencee, here, there, and everywhere. The road led through a small fresh-water marsh, and as I approached the edge of it, not more than twenty-five yards distant, up flew a brace of fine mallards, apparently not much concerned, but two months ago the best choke-bore gun in the country could not have ruffled a feather. They would have heard me coming 300 yards off and would not have stood upon the order of their going, but would have gone.

And, Mr. President, as I drove along after seeing these strange sights, I wondered if these birds were not endowed by nature with an instinct of their security and safety from harm. But I ceased to wonder when I thought that this was the close season, the time which, of all seasons of the year, Nature had selected as the most fitting for the birds to mate, to build their nests, lay and hatch their eggs, and rear their progeny; and that if Nature had seen fit to set apart this time for that purpose they might properly think that Nature should, during that time, protect them.

And Nature has done all she can. The severe storms of the winter have passed, the high grass forms good cover for nesting, and by the time the young appear, the seeds have ripened and there is an abundance of food. But there is one thing Nature has not provided against, and that is the unnatural, inhuman and cruel man, who disregards these beneficent laws of nature by shooting the birds at this season. The beautiful lesson which is thus exemplified should deter every son of Nature, every lover of what is good and beautiful in Nature, from violating its laws. Natural law is defined as "that rule of conduct which may be deduced from the common reason and conscience of mankind, as opposed, on the one hand, to a system of divine law revealed to man, and on the other, to enacted or formulated human law.

But, Mr. President, is there anybody who would so far forget his conscience as to wilfully violate such a wise provision of nature?

Yes, their name is legion, and they belong to that large class of mankind who have no conscience.

It has therefore become necessary to supplement this natural law by the enactment of human laws which shall impose a penalty for their violation. And now, Mr. President, we have reached a question which, above all others, should seriously engage the attention of every true sportsman:

How shall the game be protected and preserved during the close season?

The existence of a law is not sufficient. The only remedy is by the enactment of wise and efficient laws and the enforcement of them.

It is true that ever since the Legislature of 1852 our statute books have contained laws intended for the protection of game; but, up to within a comparatively very recent period, no effort has been made to enforce them. For nearly twenty years, you might say, nothing has been done but to pass laws.

As I said before, the fault is not so much with the laws as it is in the non-enforcement of them. Let us search for the causes of this, and see if some plan cannot be devised by which the obstacles can be removed. Among others is the lack of sympathy with the laws on the part of the masses. The number of men who are fond of field sports is comparatively small.

The people of your cities care nothing about these laws, and nine-tenths of them are not aware of their existence. All they know is that the game market has a season, like vegetables and fruit.

Outside of the cities this same lack of sympathy exists.

The cause is apathy—prejudice against every man with a gun in his hand—a pretended claim of having the inalienable right to do with and on one's property as he pleases, and selfishness.

To illustrate: Not long since I met an old gentleman, whom I had known many years. He knew I was fond of the gun, and frequently I have been his guest at his mountain home. He said to me: "My neighbors and I have agreed among ourselves not to allow a member of any sportsman's club to hunt or shoot upon our land." I said, "Uncle Dan, that is a very strange determination on your part. What led you to it?" "Well," he said, "the law against trapping quail was instigated by these clubs, and we are therefore down on them."

The old man, it seems, had been in the habit of trapping quail and getting a little extra pocket money by selling them in the market. This was selfishness—the benefit of the law generally he admitted.

On another occasion, with two companions, by invitation, I visited Sycamore Valley to have a quail shoot. Early in the morning we started out, down a small creek running through our friend's land. In a little while we flushed a very large bevy of quail. They flew down the creek. We followed in pursuit. Unconsciously we soon exceeded the limits of our friend's land, and, all of a sudden, we found ourselves confronted by the maddest red-faced man you ever saw. Swearing with every breath, he demanded to know why we were trespassing on his property. He especially made me the object of attack. We gracefully apologized, and denied the unjust appellation of being "d——d city hoodlums," which he called us. After a time, he in turn apologized to us. He said that he had been annoyed nearly to death by hoodlums and pot-hunters, who shot quail around his house, oftimes his chickens and a number of times he had found his animals injured.

The apathetic man is one who does not care who shoots on his place, or when the shooting is done.

The other class of which I have spoken, one meets quite frequently. He tells you that he owns all the game on his place, and the law has no right to dictate to him when he may and may not shoot.

All these different classes are difficult to contend against, and the only plan that I can see which will accomplish anything, is the one we are following, viz.: Meeting in convention as a dignified body of men, publishing our deliberations to the people, and by a concert of action show our determination to have the laws observed. Treat all men who violate the game laws as criminals, and see that they are punished as criminals. Conduct ourselves in such a manner as to gain the respect of all classes—educate the people as to the meaning of the word "sportsman." When it is found out that a sportsman is the highest type of a gentleman, and that the object we seek to accomplish is a good and honorable one, then may we expect to get outside help and support and our object gained. Until this bright future is reached, let us continue the good work with unabated vigor and determination. In all of which I assure you my most hearty co-operation.

In conclusion, and as apropos of the subject, I would like to call the attention of the Association to a few suggestions in regard to the existing game laws, some of which are my own and others I have been requested to make:

1st. All shooting in the night time should be prohibited.

2d. No killing should be allowed except with a gun.

3d. The use of swivel guns and punt guns should be absolutely prohibited in hunting wildfowl.

4th. A penalty should be imposed upon all transportation companies transporting game in close season.

5th. Some provision should be made for the issuance of search warrants, as in cases of stolen property.

6th. The close season for quail and ducks should be lengthened, that is to say: Commencing with the 1st day of March and ending on the 1st day of October.

7th. Section 626 of the Penal Code should include all varieties of ducks.

8th. The statute which prohibited the killing of doves for four years, and which has now expired, should be made absolute and without any limitation.

THE BIRDS IN KENTUCKY.

QUAILS are scarce. Protracted rains through and after the nesting season supposed cause. During a recent visit to central Kentucky farmers and sportsmen informed me that there is an unusual scarcity there this fall.

Partridges have multiplied greatly, but persist in declaring their proximity to the ear instead of the eye, and the analogy between walking and shooting by faith is rather too shadowy for didactic development, hence, the value of a yellow dog, when, in season, one would refresh the assimilation machinery with that most savory dish.

My pointer stands them staunchly, but has up to now failed to locate one where whirr and disappearance were not too nearly simultaneous for a satisfactory waste of ammunition, save one single instance, when a charge of No. 10's at forty yards served simply to stimulate a graceful acceleration of his return to the chapparal, through which his flashes led me till desperation induces a discharge of No. 5's at sound. Result—a glimpse of a brown streak in direction of a mountain top a mile away. An intervening cornfield, familiarity with the rugged mountain side, a lame leg which derives no solace from even a high private's pension, and a few "saw briers" which had numerously perverted the natural course of the cutaneous circulation, persuaded me that the cooking of that particular bird would require a little more butter than the madame would cheerfully supply, and I sat down and picked out the briers before resuming my tramp home, on which a satisfactory bag of quails had started me. I'm a convert to "Nessmuk's" humane treatment of partridges. They can deride me with impunity so long as they continue to keep out of sight, but I owe the family a grudge, which I am determined to avenge by shooting every member I can catch at the advantage they've always taken of me.

Uncle Joe slipped off from me last fall, though he had pledged himself to come by and take me on his annual deer hunt. His excuse was that he went earlier than usual and knew that I couldn't get away then (which was a fact, but aggravated his slipping off), and I'm glad to report that bacon constituted his meat diet that trip. He informed me that they are there this fall, and that I shall certainly be one of the party, *Deo volente*. Turkeys have done well. All varieties of mast are better than for many years, and game will thrive. Squirrels have not appeared in numbers yet. Every fall since I have been here till this their depredations upon cornfields have been serious.

Apropos, as to reasons of quails' disappearance from localities where they were plentiful in and after nesting season. I would hazard no why as to cause in the instances recently mentioned, but give an instance which is fresh in memory from the fact that a friend and myself who own the only pointers within an area of five miles square, had located many fine bevies, and were counting on the grandest sport of our experience from their numbers and locations. When we returned from our first day's hunt we didn't have enough for a divide, and I have known old "Higgins," my companion, to grass fifteen quails without a miss from one bevy, shooting over the dog we followed that day. Fact—sure.

In our neighborhood the dry weather of July and August parched the grass and cut short the weed crops so that by open season the stubble fields had been denuded of cover and so thoroughly gleaned by cattle that the quails emigrated. We concluded, from the absence of food, principally, as cover has ever appeared a secondary consideration. In a locality thirty miles away, which had been favored with seasonable rains, my brother-in-law informed me that in a day's hunt over ground on which he thought there wasn't a bunch of more than half a dozen left in any field, he put up nineteen full bevies, and that in crossing a cornfield near the house in which had been left but five birds of the two bevies reared there, he found four full flocks. In fact, after the stock of native birds had been killed, and the boys went out hoping to find a bevy that had escaped, they found that immigration had about doubled the original supply. As Hig and I had no apprehension of infringement we waited for November frosts to open our campaign, when we found our game gone to replenish the districts which had been depleted in October—where old Tim, who didn't post, said every other fellow had a double-barreled cannon and a darned bob-tailed spotted dog.

Barring quail, our prospects for fall and winter sport are excellent. The heavy beechnut crop corroborates the infallible Vennor's prediction that mercury stands a poor chance to successfully wrestle with the cold of coming winter, and believers haven't a doubt that ducks and geese will imagine they've found the North Pole when they reach our latitude, and will contentedly locate. KENTUCKIAN.

MILL SPRINGS, Ky., September, 1882.

BRUIN ON THE RAMPAGE.

I HAVE just been reading Mr. "C. H. R.'s" letter in your paper of the 7th of September about "Adirondack Game Resorts." "C. H. R." probably had a fine time, but has made one mistake I want to correct. He says that Beaver Lake was the place where "Mr. Colvin, the surveyor, camped at, and while he was out fishing a bear came into camp and knocked down everything." Now, Sheppard, Benham, Dart, Johnson and I are Mr. Colvin's guides, and were with him in the whole expedition to which "C. H. R." refers, and we want to correct his mistake without finding any fault with him; he was probably misinformed. The fact is the camp which the bears destroyed was on the Black Spruce Mountain, two miles from Fourth Lake on the Fulton Chain, and as for the fishing I never knew Mr. Colvin to go a fishing except once, when he caught eight brook trout at the mouth of the Canachagala in half an hour, the fish averaging a pound in weight each; but that was long since. And as for the fish in Beaver Lake, I tried to catch some for the party, and never saw such poor fishing in my life. It was next door to starvation.

Now in regard to the bears, the facts are as follows: While Superintendent Colvin was engaged in exploring the headwaters of the South Branch of Moose River and the West Canada Region, he left his tents and camp on the top of Black Spruce Mountain in charge of Mr. Blake, one of the assistant surveyors in his employ, who was engaged with a party of guides and surveyors in retracing old township lines and monumenting corners. Mr. Blake's duties calling him to the foot of the mountain, he was compelled to leave the camp sometimes for a day or two. During one of Mr. Blake's absences some bears came along, and discovering the tents and provisions stored in them, tore them open and took some of the provisions. They did not do so much damage this time, and Mr. Blake coming up the same day with one of his guides discovered what the bears had been about, and took my pack basket and some knapsacks and packages and fastened them up to the ridge pole of the big tent, where he thought the bears could not reach them. Blake and his men then went down the mountain to their work, and it is probable that the bears were watching them, for they must have renewed the attack upon the tents immediately, for next morning when Blake came up again they had demolished things generally. They tore seven great holes in the big tent, some of the holes being large enough for a party of men to walk through. One great square hole was right through the roof of the tent, and it looked as if one of the bears had jumped from a precipice that slightly overhung the tent on that side, and, landing on the tent roof, tore his way right through. My pack basket had provisions in it, and hung so high up to the ridge pole of the tent that they had great difficulty in tearing it down, but by jumping and striking at it with their claws they managed to tear the basket to pieces, and finally got it down with many other things. Of all the wrecks I ever saw this tent and camp was the worst. They tore open valises, tried their teeth on the big instrument boxes, ate all the provisions, tore up the pack bags and baskets, bit open the salt sacks and flour sacks and covered the ground with scattered flour. It was funny in one place to see where they had got hold of a paper of pepper and after one bite and taste had dropped the package as though it was red hot. They did not eat all the potatoes, but scattered them around and scattered all the tins and dishes, frying pans and kettles, upset and smashed a neat bark table I had made, made off with part of a ham, and stole Supt. Colvin's buckskin moccasins. But the worst damage they did was to the books and papers; they tore some of them into bits and carried off one large leather case, containing valuable maps, twenty or thirty rods into the woods. This we recovered, also a number of books with the leaves and covers more or less torn. They tore the British Nautical Almanac to pieces, so we think they must have been New York bears, and "down on the British." The only things that escaped their teeth were two tin cans of pressed beef. The cans were sealed tight and had no smell of meat, so the bears did not touch them. They carried the blankets out through the holes in the tent thirty or forty rods into the woods, and had paths from each hole in the tent (except the one in the roof) leading out into the timber, where they left what they could not eat.

It was a most extraordinary affair, and we guides are of the opinion that the bears would not have dared to do it but for their extreme hunger, for there were no berries in the woods up to that time, and with the exception of the suckers in the brooks in the spring, the bears have had little to eat since last fall, so the poor things must have been very hungry. In fact they proved this, for very shortly afterwards they came down to Mr. Blake's camp and took his butter pail away and emptied it, and kept lurking around his camp, being seen every day. They finally became so bold, the party having no rifles, only small revolvers with them, that one or another of the bears would come into Blake's camp every morning about sunrise, looking very hungry and ugly, and nosing around for something to eat. They did not mind revolver shots very much. One of the signal men, Bill Brown, met one in the path as he was going up to the signal on Black Spruce Mountain one day, and shot at him six times with a revolver carrying a long 32-100 caliber cartridge, and only succeeded in making the bear walk leisurely away. He probably did not hit him to hurt him much, for revolvers are poor things to kill a bear with. Mr. Baker shot at one of the bears one morning before breakfast with one of the old national revolvers. The bear was about fifteen feet off, coming by a large yellow spruce tree, Baker's bullet hit the tree near the bear's nose, and threw off a chip so sharply that the bear "ended over" and ran away.

All this made it rather uncomfortable for Blake's party, and they were very glad when we arrived from the South Branch and Beaver Lake country, where exploration had kept us engaged for two weeks. I brought in Mr. Colvin's rifle, a fine Winchester sixteen shooter, and Blake's men felt more comfortable. The very night we arrived at Blake's camp the bears came again and trampled around all night. As it was too dark to see them we went to sleep. Before daybreak two of the bears came to where guides Benham and Helmer were sleeping, and snuffed at their heads. This awaked Benham, and he aroused Supt. Colvin, who immediately shot one of the bears. The bear bled dreadfully, covering the ground and bushes with blood, but managed to crawl away, coughing and dripping blood, until he got into a windshock of fallen trees and a regular den of rocks, into which he crawled to die. So we lost his meat. The other bears stayed away after this for some days, but finally returned, but did not do any damage, as we kept close watch for them; and firing the rifle from time to time probably helped to keep them away.

All this happened over on the Fulton Chain, far away from Beaver Lake, and I take the pains to give you an account of it because it was the most remarkable show of ugliness and destruction that we guides ever knew bears to do. I shall take over some of my big bear traps this fall as soon as I get through working for the survey, and it will go hard with some of those bears if they want to keep up their manœuvres around there. WILLIAM F. BALLARD.

RAQUETTE LAKE, Sept. 13, 1882.

THE FACTS OF THE JERSEY CASE.

IN FOREST AND STREAM of 14th inst., I observe an item from your Philadelphia correspondent, "Homo," stating that the West Jersey Game Protective Association had arrested a Mr. Welch and fined him $50 for shooting in New Jersey without a license. This statement is erroneous, and as I am in full possession of all the facts of the case, I desire to state them for publication.

The West Jersey Game Society was organized a number of years ago under a special charter passed by the New Jersey Legislature, which provided in its requirements that no non-resident of the State should shoot in the counties of Atlantic, Cumberland, Cape May, Gloucester, Salem and Camden, without first complying with the provisions set forth in the by-laws of said society, which exacted a fee of five dollars for each certificate of membership granted. The society at that time was organized with the honest intention of enforcing the game laws and stocking the counties with game out of the proceeds derived from membership fees, and was efficiently officered, such men as Gen. Wm. Sewell being president of the society. Of late years, however, it has become a sort of mutual admiration society, or "close corporation," one or two men "running the machine," receiving all fines and dues, and as far as many of its members assert, making no returns, either by a financial exhibit or stocking with game.

During the session of the New Jersey Legislature of 1878, a number of gentlemen interested in the subject of game protection succeeded in securing the passage of a general law similar in wording to that of the charter of the West Jersey Society, as far as relating to non-residents, which provided that no non-resident should shoot or fish in the State of New Jersey "without complying with the by-laws of the game protective societies organized or to be organized under the laws of the State," which, of course, was intended to, and does allow all non-resident members of a game protective association to shoot anywhere in the State. An association was immediately formed under the name and title of "The New Jersey Game and Fish Protective Society," whose membership immediately began to rapidly increase. Many Philadelphians joined it, the annual dues being but five dollars a year.

As the West Jersey Society daily saw non-residents joining this new society and their members leaving them, the one or two parties who run it began to threaten to arrest any person found gunning in the six counties above mentioned who was not a member of their society, whether he bore a certificate of membership of another society or not. Last fall there was a correspondence between the two societies, in which the "New Jersey G. and F. P. Society" proclaimed that no person bearing the certificates of the "West Jersey" Society would be molested by them while gunning in any part of the State. As both societies were organized (or at least supposed to be) for the general good of the game laws and their enforcement, no matter which or what society of the State a non-resident joined, he was entitled to shoot in any part of the State. This did not suit the gentleman who assumes to act as president, secretary, treasurer, board of directors and counsel to the West Jersey Society, and so it was given out to his henchman, a man named Peyster, who acts as detective, (?) to arrest some one. This man accordingly picked out a young man named Robert A. Welch, a Philadelphian, who, when approached by Officer (?) Peyster, while gunning on the marshes in Camden county, and asked to show his license (as they call it), showed his certificate of membership to the "West Jersey Game and Fish Protective Society," which was instantly taken from him, and, in spite of his protests, he was commanded to go with the officer (?) to the second man Friday, Justice (?) Cassidy, of Camden county. Arriving there, that learned dignitary proceeded to fine him $50. Welch refused to pay, and notified Cassidy that he should appeal from his decision, and demanded back his certificate.

After a lengthy consultation between the secretary, coun-

sel and officer, he was given back his certificate and notified that he was released on his own recognizance to appear before the justice the next day. It is presumable to think that the learned dignitary and his friends never expected that Welch would appear the next day before them, but he did, and brought bondsmen with him. What did this learned counsel to the "West Jersey" then do, but demand that if he paid him the sum of $4.70 as costs he would release him. This was promptly paid, and the case appealed on the spot, and it is to come to trial in the Camden Court in October. The Board of Directors of the New Jersey Game and Fish Protective Society immediately instructed the counsel to the society, Judge Wm. B. Rankin, of Jersey City, to at once look after the case and see that it comes up from the calendar. The society will pay all costs of the suit, which is to determine whether their certificates of membership do not cover the whole State. As the authorities (?) of the "West Jersey" have chosen to act in so unsportsmanlike a manner, the case will be carried to the higher courts, if necessary, for decision. The writer of this recently visited Philadelphia and talked with many members of the West Jersey Society, who denounced in strong terms the proceedings of their society in this matter. All non-residents may rest assured that the case will be thoroughly ventilated in the courts. N. J. G. & F. P. S.

PLAINFIELD, N. J., Sept. 18, 1882.

THE MUD-HEN,

OR CALOMEL BIRD.

THE fowl called the mud-hen is either largely on the increase or has recently made its appearance in waters heretofore never visited by it. During a long residence at Vicksburg, Miss., I do not remember to have seen one, or to have heard of them until within the last three years, though up to that date I took but little interest in game or hunting, yet I was about the lakes a great deal during all seasons of the year, and would most certainly have noticed this queer fowl had they been about in any great numbers. Now they are to be met with almost anywhere that ducks congregate, coming ahead of all other ducks in the fall, even the bluewing teal, and being about the last to leave in the spring.

Last fall a party of four of us went from here to a small, shallow lake near the little railroad town of Ashland, about eighteen miles distant, upon information that the lake was literally black with ducks. On arriving within sight of the lake we felt that for once, at least, the facts had not been exaggerated, for it seemed to us that no less than ten thousand ducks were before us, and it was easy to conjure up in imagination a big bag to each gun before the close of the day. It is hardly necessary to tell of the shade of disappointment that passed over our faces, and the feelings of disgust that took possession of us when our driver informed us that what we saw were only mud-hens. The water in this lake was full of rushes here and there, with occasional clear patches of about an acre in extent, with numerous muskrat mounds that reached to the hight of an average man's armpits, the water being about a foot and a half to two feet in depth.

Our party deployed about among the mounds, and each took position near one of them. Ducks were fairly abundant during the entire day, and until night brought the performance to a close, quite a fusilade was maintained. The mud-hens paid no more attention to the racket than, when too near the cause of it, to lazily rise just above the surface of the water and go skimming along it with sprawling legs and dab down again a hundred yards or so away. Very often they would swim up to the watchers at the mounds so near that the color of the eye could be detected, and many of them that in their bolder flights misled the hunters on that dark October day, fell splashing among the rushes at the report of the guns. I remember that my first effort at retrieving what I supposed to be a pair of bluewing teal resulted in my finding one dead mud-hen and another badly wounded, with his head down among the weeds and his "hind parts" (one can't say "tail") sticking above water. Ducks were coming in and going out at intervals during the entire day, but I do not think a single mud-hen sought other quarters, although in the afternoon our party was largely recruited by local hunters, who aided us in keeping up the ass.

Three years ago I had my first direct introduction to the mud-hen. A neighbor of mine at Vicksburg had, in September, before the advent of ducks, killed quite a number of "peeldoos," as it is pronounced there, and gave me half a dozen, saying I would find them good eating. As he was, upon the whole, a fastidious person touching articles of diet—albeit he had come down to rats during a time of short rations while in the army and pronounced them nice—I took his word for it and had the fowls cooked. I confess that when they came upon the table their appearance was none too tempting, and not a member of the family seemed to hanker after them, but the table not being supplied with other meat or fowl, I think every one tried a portion of the new dish. By way of encouraging the others I ate a larger share than I craved. My recollection now is that all of us were more or less sick soon after this feast, while my own stomach felt as though a dozen nasty mud-hens were wallowing around in it.

Last winter this same friend who had been the trumpeter for the virtues of mud-hen, my brother and I, went over to some lakes in Louisiana, opposite Vicksburg, duck hunting, reaching the main lake in the afternoon in time to push out our decoys for the evening shoot. The beginning proved a miserable failure. Near sundown, as this friend and I stood in our blind waiting for ducks that never came, an army of mud-hens began to swim by within easy range, and I think they were an hour in passing. As night drew near before the cavalcade had gotten by, my friend killed one for our supper. My brother got a black squirrel, and that constituted our bag for the day. The mud-hen was nicely skinned and nicely broiled at our camp fire by its advocate, my friend, who ate most of it himself. I ate none at all, and my brother, having heard of the experience of the family on that former occasion, partook sparingly. During the night our friend got awfully sick, and was up two or three times. The next morning he said we would have to excuse him from joining in the hunt. But before we had coffee ready the mud-hen had so completely purged him that he soon came around all right. Since then, however, he neither eats nor recommends mud-hen, and I heard him over in Vicksburg, afterwards, telling some of the citizens there that he had a more appropriate name for the fowl, and would urge that it be named the "calomel bird."

This has been suggested by an article in the FOREST AND STREAM, of September 7, giving the mud-hen "fits," supplemented by a note by the editor, in parenthesis, saying the author must have been mistaken, as he, the editor, had found the abused bird a very fair one for the table. It is a well-known fact that tastes differ, and it may be the mud-hens of Mississippi are worse than those of other climes, but I do know that very few down there care to try them the second time, the darkies even turned up their noses at them. I have seen them hanging up in the market stalls in New Orleans, but I never saw any one buying them or taking them away. I never heard of one being eaten in this latitude. My honest conviction is that as a diet they are utterly worthless. Having tried mud-hen and not tried crow, I would choose crow if compelled to eat one or the other. BURR H. POLK.

LINCOLN, Nebraska.

P. S.—Since writing the above I have read it to Mrs. P. She corrects me by saying that I am mistaken about the appearance of the birds when they came upon the table at our house, that in fact Aunt Ann, the old cook, did them up so nicely and they looked so well and tasted so good to Mrs. P. she ate heartily of them, enjoying the meal, but she got sick afterwards, and I don't think could be induced to try the diet again. B. H. P.

A COLORADO CAMP HUNT.

I WAS awakened at dawn by the report of Al's double-barrel cannon, and while I was rubbing my eyes in came York with a brace of ducks that he had killed from near the door as they flew past. Miguel was up, cooking breakfast, so I sent York for the ponies, and dressing, went to the creek and washed. When I came back breakfast was ready. We ate and then saddled three horses; three of us went afoot, as half of the party had got to walk all day, and started up the canyon for our deer-drive, Miguel going along, leaving the dogs chained at the door of the cabin to keep out skunks and strangers.

The programme was that on getting out of the canyon three should ride ahead a mile or so, and station themselves where they thought the deer would run, and the others then hunt till they reached them. The canyon has a growth of cedar and pinon on each bank of about half a mile wide, running parallel to the canyon, then comes the open prairie for miles. The deer are forced to run through the cedars along the bluff or they can't get down into the canyon, and don't like to run across open prairie. Dearden carried his shotgun, York mine, and they and Hi went ahead for the first stand, while Ted, Miguel and I drove. I chose the canyon edge, Ted the prairie side, and Miguel took the center. We waited ten minutes for the boys to get position, and then worked slowly down to them. We did our part faithfully, but it was a dry haul. We all saw plenty of deer signs but no deer. Miguel, Ted and I took the horses and struck out, leaving Hi, York and Al to drive. We were in position in ten minutes, tied the ponies out of reach of bullets, and took our stands on the south side of a little glade that ran at right angles from the main canyon. The boys were coming from the north. Ted stood at the top of the glade next to the prairie, Miguel next, I close to the canyon on a knoll. After waiting a long cold hour, crack went a rifle half a mile off, and the ball came buzzing over my head. I raised my gun and pointed it at a tree to see if I could hold it steady, found that I couldn't, and glancing at Miguel, who was thirty yards off, saw him doing the same thing. In a minute I heard the rocks rattle, and an old buck bounded into sight followed by three does, and stopped on the hillside opposite Miguel. A second, in which I held my breath, and crack went Miguel's old muzzle-loader, and the buck jumped high in the air and fell dead, with his neck broken by a half ounce ball. I shot repeatedly at the does, but they dashed up the glade toward Ted unharmed by me, and Ted bagged the largest of them at twenty yards, with a ball clean through both shoulders.

In a minute along came a little buck, trailing a broken hind leg, on the track of the deer, and I fired twice, missing as he ran past me, and then ran for my horse and went for him in earnest. He was forced to run across open prairie. I closed on him, and poking the muzzle of my gun against him, I rolled him over with a ball in the lungs. Trying my excited pony to a tree near by, I disemboweled the deer, put him on the saddle, and led the horse down to where the boys had got the two others. Hi and the two other drivers had reached them, and were admiring Miguel's buck, which was without exception the finest deer I ever saw. It had perfect antlers with six prongs. Hi was the one who had broken the little buck's leg. It was running when he fired at it.

Hanging the deer in a tree the drivers took the ponies and rode off, while Ted, Miguel and I built a fire and got warm, and then hunted down towards the standers. I skulked along about half a mile, catching occasional glimpses of Miguel and Ted through the cedars. I crossed a little glade, and when I reached the summit of the opposite bank I saw in the next glade a beautiful sight. About 75 yards from me in the open glade six deer, two feeding, the others lying down, and all unconscious of my presence. I quietly sat down, and resting my elbows on my knees upset a big doe that stood broadside towards me, and the rest bounded off a few yards and stopped, being a clean miss, and off they went. I ran down, knifed my deer, disemboweled when she had finished bleeding, and just then two reports came from a distance down the canyon, unmistakably those of Al's big shotgun, followed by four shots from Hi's rifle, then bang bang again from Al, and I started on a trot for the scene of action. I soon reached it, and there were three of the deer dead in a little glade, and the boys fixing them. Al had killed one, Hi two, and the two others had escaped unharmed. We built a big fire, broiled the livers, eat them, got warm, then held a council of war. York wanted to make another drive for he had not had a shot, but it was getting late and we had a load for the horses, so we slung the deer onto them and started for home. I was pretty cross by the time we reached camp, for the boys gave me an unmerciful chaffing about my wretched shooting, but after a drink from the keg I recovered my temper, and we soon had supper and settled down for the night. I occasionally have days like this when it seems as if I couldn't hit a house at 40 yards, and then other days when I can kill deer or antelope with perfect ease at a dead run. We each told our story of the day, then York asked Ted to tell about his adventure with the mountain lioness for Hi's benefit, and Ted, ever willing to oblige, commenced:

A few miles from Deck's ranche on the slope of the Raton range is the Sucarica canyon, where I used to live. The hunting is pretty fair in the spring the day after a fall of snow. One morning one of the Coe boys and I started out for a day's hunt and took opposite directions, each resolved to beat the other. I had a dog and wound my way up and along the hills traveling slow and keeping a good lookout for game. I had gone, perhaps, five miles, when I come to a big patch of low brush about up to my shoulders and commenced skirting it, when I heard the brush crack and saw indistinctly an animal leaping over the brush and coming toward me. I imagined that it was a deer and squatted behind a bush expecting a good shot. It was a large mountain lioness or cougar and had come out for a fight, so I made a virtue of necessity and fired at it. It jumped high in the air and came down howling, so I shot at it again and turned the dog loose. The lioness then retreated into the brush while I made good time toward the ranch, scared worse than Hi was with the bear I reckon. The next day four of us went up on horses with a lot of dogs and turned them loose at the edge of the brush and soon heard a tremendous row at the other edge. Dashing around there we found the lioness at bay fighting the dogs like a fiend. She could not run, as she was broken down in the loins by my shot of the night before, but she could strike with her forefeet and knocked over every dog that came within her reach. She would not notice us as we came up but kept on fighting the dogs. We all rode back about 100 yards, dismounted, tied our horses securely, and taking good aim fired a volley at her head. Every man hit the mark and her death was instant.

The dogs commenced worrying the carcass and we mounted our horses and rode cautiously into the brush as we did not know but that we might find another, and sure enough we did—two of them, but they were little ones—cubs of about six weeks old, about as big as a tomcat and as savage as demons. We caught them in a little while by one man putting a forked stick on their necks while the others tied them. Took the carcass of the lioness and the two live cubs home, and some Mexicans asked us for the meat of the lioness. We gave it to them and the wretches said it was good. It did look nice and white, but I didn't taste it. When we reached home we chained the cubs up to two kennels and fed them. They ate milk and meat greedily, and became very tame. Coe grew tired of them, and sold them to a saloonkeeper in Trinidad for $10 a piece. He sent them East and got $75 for them, and now Barnum has them. "There, that's all," said Ted, "now I'm dry." The keg went round, and Hi remarked that last winter he killed a cougar and ate the hind quarters, and it proved to be nice meat. He then began running through a list of frontier delicacies, mountain wolf cubs, skunk, rattlesnakes, beaver's tails, etc., till we all rebelled and made him quit and go to bed.

The wind rose in the night blowing from the east, and the snow commenced falling. When we rose at daybreak we saw that hunting was out of the question, so we fed the shivering horses double rations of corn, and sat around the fire all day mending saddles, playing cards and longing for it to clear off. We had a fancy dinner at sundown, cooked by your obedient servant, consisting of venison roast, venison stewed, roast duck stuffed with potatoes, fried green corn, fried potatoes, pickled onions, coffee, tea, sugar, biscuit and butter, condensed milk and canned peaches. How is that for a bill of fare 100 miles from the nearest store?

The next day was very cold with a high wind, but Hi and Ted were out all day. Ted killed a deer at long range and Hi went towards the big prairie on the east side of the canyon and found that the storm had driven the antelopes in by hundreds from the big prairie. He shot at several but did not kill any, and came home in great glee at the prospect of an antelope hunt the next day. Running antelope is the only thing I ever try to beat Hi at, but I can make him work to keep even with me there, so I felt very pleasant at the prospect of an antelope run. At daybreak next morning I was up and out hunting the horses, but not a horse could I find. Hi's mare was tied up, luckily, and so I came to camp in about an hour and sent York off to follow the trail on the mare. Hi came in at 3 or 4 P. M. with them all, found them on the run home, so we picketed them, and the next morning made an early start for the big prairie, sending Miguel up the canyon with the empty wagon to come after us and get the game that we killed.

We five led our horses up the steep path out of the canyon, and riding to the top of a little mound we saw a sight that does a hunter good to even look at. There, in the rays of the rising sun, stretched the billowy prairie for miles, extending further than the eye could reach, and literally covered with herds of antelope. I fully believe that there were five hundred in sight from that mound. The modus operandi of hunting antelope horseback is to ride in ahead of a bunch up wind, and when they try to run past you jump off your horse and shoot at them running as many times as you can. Every man forgot his friends then. Hi rode off slowly without a word. I struck out alone, and the rest did, too, I guess. I rode up a hollow and headed a bunch, ran my horse about three hundred yards, jumped off as a big old buck, followed by forty or fifty more, came whizzing past me, and commenced shooting; and now I can't tell you anything more distinctly of that day's sport. I shot and killed, I crippled, I stabbed and disemboweled. I ran my horse down, I ran myself down, and finally shot away all the cartridges I had out there on the prairie and had to stop at about 1 o'clock. Then I went to the wagon and commenced gathering the dead. York and Ted had come to the wagon and had got my dogs and were catching wounded antelope, and Hi and Al were eating liver. We went into camp that night with twenty-six antelope between us, all of us half dead with fatigue, the horses worse.

Of the events of the succeeding day I know nothing prior to 3 o'clock P. M., for I slept like a log. When I did get up I eat and went to work breaking up deer and antelope and eneveloping the hindquarters in the skin to take home. While eating supper Hi proposed to go up to the turkey roost in Cottonwood canyon, which Ted had found some days before. We were all rested and so assented. The moon would rise at 9, and so there was plenty of time as we didn't want to get there till we could see pretty well. So we tied up the horses and waited till about 8 P. M., and then rode up the canyon. It is a lonely place in the day, but in the night—whew!—it's the gloomiest, uncanniest place I ever saw. A ride of two miles and we had got within a quarter of a mile of the roost, and hitching our horses, built a fire and waited till the moon rose. When it got light we went creeping up to the roost afoot.

Al had his shotgun, I mine, and the rest rifles. The turkeys roosted in several trees that grew close together, and I should say that there were about eighty in the gang. We crept within about twenty yards of the trees; each picked our birds and fired at the word. The turkeys that were hit came down, seven in number, the others flew in all directions, and we saw them no more, for we were satisfied and went back to camp.

The next morning every one wanted to go home, and packing the wagons we started. Al's wagon, crowned by Miguel's big buck entire, my wagon with my little buck and

Peter, my dog, who was lame. We camped that night in Tuckalote canyon, where Hi found his sheep herd and left us. The next night we camped at the Follis spring in West Carisa canyon, and the next night rolled up to my ranch long after dark with tired horses. We Americans were dirty, tired, hungry and cross. We went to bed after a little unpacking and a great deal of supper prepared by the faithful Miguel.

The next afternoon I lent Miguel a horse and saddle. He put his big buck on it minus the head, which now graces my front door, also four antelope hams and a few groceries, and Al gave him $15 in small bills. He walked off home one of the most contented Mexicans in Colorado, leading my old pony well packed down.

In a few days we went to Trinidad and had a little jollification and parted. I have never seen Al nor Ted since. They both left this part of the country shortly after, but I can say for them that I never had pleasanter companions, and never had a better time than when I went on that hunt to the East Carisa canyon. W. J. D.

LOADING AND PENETRATION.

Editor Forest and Stream:

I send you a table of some experiments in loading which I have made, which may throw some light on the question of loading for game. The penetration was found in the following manner: Taking a long, narrow box (about 4x4x30 in. inside), saw through both sides at intervals of one inch or less, with a wide-cutting saw, thirty or more places, into which place as thick pasteboard as will fit; knock out the end of the box toward you, and it is ready. I used pasteboard about ⅛ inch thick, with one piece of pine wood ¼in. thick in front; range, 21yds. From results thus obtained it is easily seen what loads produced the best effect in penetration. I find in looking over the table there is great similarity in penetration when the powder is increased 4dr. and shot ½oz., seeming to show that it requires 3dr. powder to move the added ½oz. shot at the same velocity; and it holds good through the range of ordinary loads, as 3drs. with 1oz. and 4drs. with 1¼oz. the resulting penetration is practically the same. Add 4dr. powder and let the shot remain the same, and the result is very marked. I think if your correspondent "D.," in issue of Jan. 5, will make the same trials, he will find 3¼drs. with 1oz. giving better results than 3drs. with 1oz.:

Load—		Number of Pellets passing through each Card.																				
Powder.	Shot.	Drams.	Ozs.	1	2	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30
3	1			10	9	7	6	5	3	1	1												
3½	1			11	11	11	11	11	11	10	10	10	8	7	7	7	7	5	4	11			
3½	1¼			9	9	9	8	6	6	2	2	2	1										
4	1¼			13	13	13	13	13	13	13	13	13	12	12	12	9	8	8	6	3	2	2	2
4	1¼			20	19	18	16	13	12	7	3	2											
4½	1¼			16	15	15	15	15	15	15	13	12	13	12	12	9	8	5	1	1			

In the first column are all the shots that struck. I then skip to the 12th, as all the shots that were going straight went through the eleven.

In loading for game I use 3½drs. with 1 oz. for woodcock, etc., and 4drs. and 1¼oz. for duck, grouse, etc., using a 10-bore, 9½ lbs., and am ordinarily successful.

In regard to pattern, my gun shows but little difference in size of pattern with varying loads; but of course there is more pellets in a given space with more shot. W.

A VISIT TO THE YACHT SANS SOUCI.

IT was my privilege to be one of a party of eight that lately visited the yacht San Souci, the property of Judge John Leisenring, of Mauch Chunk, Pa., and Mr. Chas. Parrish, of Philadelphia. The vessel now anchored in Barnegat Bay is 130 odd feet long, and is the most complete craft of the kind I have ever seen. She is used as a floating home in the duck shooting and fishing seasons by her owner and his friends, and has always in attendance two yachts of the cat rig order, and sneak boxes for shooting and fishing purposes. Capt. Sam Perrine, who has charge of the life-saving station near Harvey Cedars, on Long Beach, commands the craft, and under his captaincy the crew, four or five in number, keep the vessel in the most complete order.

On her late trip to Barnegat Bay the company consisted of Messrs. C. C. Brown, W. A. Leisenring, John R. Leisenring and Byron Esser, of Mauch Chunk, Pa.; Mr. Lee E. Wills, of Weissport, Pa.; Mr. H. E. Taylor, of New York; Mr. C. Hazzard, of Catasauqua, Pa., and your correspondent.

Fishing and shooting was to be the object of our visit to these waters, and the Sans Souci our home while we remained. We were met at the wharf at Barnegat on the main by a small yacht, which carried the party to the vessel, anchored three or four miles out in the bay, which we reached just in time for supper. A meal served by the cook of the Sans Souci is always an appetizing one, and ample justice was done to its four or five courses by our hungry company. Each of the party at once taking possession of a state room, our suits were changed and more appropriate costumes were donned. A comfortable night's rest in the most restful of beds found us in the morning eager for any sport the bay could give us. Some of the party at once began fishing from the stern of the Sans Souci, and in an hour or two enough sea bass were caught to furnish fish for the yacht for the day, it having been determined that no fish should be eaten that was not taken the same day.

A falling barometer, the day after we arrived, indicating the approach of a severe gale, our captain thought it prudent to make ready for it. Everything loose, therefore, was securely fastened, and by evening, true to the indications pointed out, the wind came out from the east and northeast with a force your correspondent had never experienced before. A second anchor was let out, and the yacht, with her head to the storm, pitched and tossed in such a manner as to cause some of us to feel a trifle uncomfortable, although none confessed it. It stormed the entire day after our arrival, the company keeping the saloon, highly entertained by the wit of Mr. John Leisenring, and dry humor of his brother, Will Leisenring. During the night the storm carried away our topsail, although securely fastened to the mast. We learned afterward from Captain Ridgeway, who has charge of the life-saving station at Barnegat City, that when he saw the remains of the sail flying from the mast in the morning, he thought it was our signal of distress. When informed that the government register showed the velocity of the wind to have been fifty-six miles an hour during the night, we began to realize what we had gone through.

After the storm had cleared and the wind changed, Mr. Wills and your correspondent took one of the sneak boxes astern, and rowing to a sedge island near by, tried the clapper rail. It was found the change of wind had affected the tide, so that we had not water enough to push our boat where we knew the mud-hens were, and consequently but half a dozen were shot. On rowing out of the thoroughfare which cut the island in half, we met Mr. A. Emelin, of the West Jersey Sportsman's Association, with Dad Parker, coming on the same errand we were returning from.

In the afternoon the whole party went to the "old wreck" for sea bass, and within three hours took over four hundred fish. In all my experience I have never seen bass caught so fast or bite so freely. The run of fish was a good one, and an average weight of half a pound to one and a half was taken. Mr. Byron Esser proved to be the champion, taking into consideration the weight of individual fish caught, but Mr. Will Leisenring came off best as to numbers.

During the whole trip nothing occurred to mar the pleasure of the party save the storm, and even that being a fresh experience to most of us, can be said to have been highly entertaining, notwithstanding its spice of danger. The company was a most congenial one, and your correspondent considers himself very fortunate to have been asked to make one of its number.

We found the bay birds had all left the bay. Sheepshead had ceased biting, but the waters of Barnegat Bay can at any time furnish sport for just such a party of ardent tourists as was ours.

Duck-shooting begins in these waters in October; by the middle of November, however, the fowl have become wild, and acting on the advice of Capt. Sammy Perrine, I would state that the best time to visit Barnegat for ducks would be from the middle of October to the end of the month, before the birds have been too much shot at. HOMO.

KIT CARSON AS A "TENDERFOOT."—A correspondent of the Boston *Herald* tells this story: "For fifty years, from 1823 to 1873, all trade between the Missouri River and the far Southwest was carried on by wagon trains running from Fort Independence, near Kansas City, Mo., down the Santa Fé trail, which the Atchison, Topeka & Fanta Fé Railroad approximately follows, through Kansas to Santa Fé, N. M. Pawnee Rock was a favorite camping ground for the wagon trains, because its height—then considerable—insured a place of retreat in case of attack, and there was a spring of water at its base. It was one summer night, nearly half a century ago, that a train drew up at the base of the rock, which had among its guard of scouts the famous Kit Carson, then a young man unused to Indian warfare. Signs of Pawnees had been seen during the day, and there was reason to expect an attack. No camp-fires were lit, and, after darkness fell, a strong guard was put out around the camp. It was nearly midnight when it came Kit Carson's turn to watch, and, as he stole out into the grass just beyond the camp, the novelty and sense of danger in his situation stretched every fibre to the keenest tension. Suddenly the sleepers were roused by the report of a gun. Every man was instantly on his feet, rifle in hand, expecting a volley of arrows. 'What is it!' cried the leader, as Kit Carson came leaping back behind the wagons. 'The Pawnees,' gasped Kit, 'I just shot one in the grass.' The women were hastily concealed in the wagons, and the men waited the Indian yell and volley of arrows that were each moment expected. But the time wore on and nothing came. At last the strain relaxed and one man stole out to look after some horses that were in danger of being stampeded. He disappeared in the darkness and then a burst of laughter rang out on the silent night air. 'Come and see Kit's Pawnee,' he called. The scouts followed him, and there lay Kit's mule shot through the head. The innocent beast had been peacefully grazing, and Kit had taken the tips of its long ears for plumes of a Pawnee warrior. So this bluff, from that time to this, has borne the name of Pawnee Rock. Of the many Indian battles and attacks on trains that this crumbling mass has witnessed, no tale of more desperate courage has been handed down than that of two scouts, who were besieged on the summit of this rock some time in the '30s for three days by a band of Kiowas. They fought until their unerring aim made the Indians fear to approach the rock. Then the crafty savages fired the prairie, but the scouts, throwing themselves on their faces on the summit of the rock, were enabled, by a change in the wind, to escape. At last their ammunition gave out. The Kiowas sent a messenger to offer them their lives if one would safely run the gauntlet. The scouts accepted this last desperate chance, and the Kiowas chose Bill Gibson, a famous frontiersman, to undergo the ordeal. They formed in double line, armed with knives, hatchets and clubs. A little distance beyond stood the chief, who coldly warned the scout that, unless he could reach the chief's side unscathed and without losing a drop of blood, the lives of both would be offered up at the stake before sunset. Gibson stripped to the waist. The chief gave the word, and the scout leaped through the lines as though endowed with the vigor of a demon. He tossed the Kiowas right and left, dodged between their legs, under their outstretched arms, leaped over them as they stooped to strike him, and finally reached the frowning chief breathless, but saved, for the Kiowas kept their word, and he and his companion went free."

THE WASHINGTON GUN CLUB EXCURSION.—Last Thursday the annual excursion to Lake Hopatcong, N. J., of the Washington Gun Club, of Brooklyn, was the occasion of a gathering of many friends and guests of this popular association. A special boat took them to Hoboken and a ninety minute ride by rail set them down at the station, where a small tug and two barges of four-mule power conveyed them up the canal and into the lake. About noon they were at the hotel dock. A brass band enlivened the trip and cheered the mules in their labors. President Altenbraud was everywhere looking for the comfort of the party, and was exhausted with encouraging the mules. After lunch the games began. First came a boat race open to members of the club only, which was rowed in three heats of a half mile. Mr. John Lenz won the first, Dr. Hughes the second, and the third by Mr. R. M. Hopps, who also won the final heat. Next came a free for all; the first was won by Mr. C. Wingert, the second by Mr. E. J. Trembly, and the third by Mr. W. W. Johnson, the final heat being won by Mr. Wingert. Rifle shooting at an alleged moving deer was next in order, but we missed this and went off to the lake with Mr. Harry Prichard to see him cast the fly. A heavy wind was blowing down upon the water, and the conditions were unfavorable, but with ninety-five feet of line on his reel Mr. Prichard managed to get most of it out. A fat man's race, open to all who weighed two hundred pounds, took place and created much fun. At dinner the songs and speeches kept the party at table until late, when more races and jumping matches were the order of the day until time to depart. Altogether it was a most enjoyable affair, and we hope to be with the club next year.

WISCONSIN.—Eau Claire, Sept. 11.—Local and sportsmen from abroad are having extraordinary good success in the fields in this section since the shooting season commenced, and wild game, especially chickens, were never known to be so plentiful. This may be said to be the case all over northwestern Wisconsin, and may be attributed to the fact that the winter was comparatively mild, with but a limited amount of snow. An early spring had also something to do with the preservation of the game, and sportsmen are having all the fun the law allows. A party of four or five go out within a radius of half a dozen miles from the city, and return with less than a hundred birds is considered no success at all, and often this number is doubly increased. The coveys are getting somewhat wild now, after having been hunted down so often, but there are yet thousands of birds in this vicinity to spare without being missed. The time for shooting deer in this State shortly expires, and those fond of this exciting sport can have their desires gratified by an expedition fifteen miles up the Eau Claire River, where there is an abundance of that kind of game. Most of the deer killed here in November and December is shipped to the Chicago markets, and can be bought of the hunters at about six cents through in carcass. The Eau Claire Gun Club, organized a short time, is commencing to show proficiency in their skill as marksmen, and have glass ball and pigeon shoot practice weekly.—*

A REBOUNDING BULLET.—Lower Brule, D. T., Sept. 8.—I send you quite a curiosity in the shape of a 45-75 Winchester bullet that was shot at a Texas steer in our corral by the man who does our killing. Our corral is just fifty yards across, and the steer was standing some little distance from the fence. The man shot at his head, and the ball came back and struck near the shooter's feet. He says that he hit the steer, as he showed it by his actions, whether in the head or on the horn he cannot tell, as he immediately fired another shot and killed him. Even had he hit him on the horn a direct shot that would have thrown the bullet direct back, I should have thought it would have gone through the horn, and if struck on the side of horn it would have glanced to one side.—LOWER BRULE.

THE MASSACHUSETTS ASSOCIATION.—It is gratifying to notice the vigorous steps taken by the Massachusetts Fish and Game Protective Association, in offering a liberal reward for information that will lead to the conviction of any person who kills or has in possession any quail within the limits of the Commonwealth of Massachusetts before October 15. The work done by this society has had the effect of suppressing the sale of illegal game, and sportsmen can now stroll through the Boston markets without seeing large quantities of game offered for sale which was slaughtered during the close season. The association have issued posters which will be sent to game associations or parties interested in game protection by applying to the president or secretary at Boston.—A. C. G.

RAIL SHOOTING.—Philadelphia, Sept. 16.—At the closing of the week rail shooting is no better. We have had enough water but the birds have evidently not come. All the old heads look for a large flight yet during the month. I have not thought it worth while to go for rail myself, as "boats report" but 12, 16; 18, and 20 to the tide. A few teal were seen coming up the river yesterday. It will take some cool nights before we can expect many of them. Betterton fishing begins to be good, the perch are running larger. At Sim Lord's, opposite Reedy Island Light, fishing is first-class. —HOMO.

THE CLIMAX GUN CLEANER is an admirable tool. It is novel in its construction, well made, and in practical use satisfactory. The manufacture of this useful implement has been recently undertaken by the United States Cartridge Co., of Lowel, Mass., and we understand that the cleaner is being recieved with great favor by those who believe in keeping their guns free from "rust-spots."

FLORIDA.—Rock Ledge, Aug. 15.—Game of all kinds abundant. Quail are very plentiful. I see broods of from twenty to forty young birds in them, and we find them everywhere—in the orange grove and in the scrub and in the pine woods. Deer and bear are plenty at short distance from here. Fishing grand.—G. O. L.

SOUTH CAROLINA GAME LAW.—The game law in this State has been so amended that the legal time for hunting partridges and other game birds is from the 1st of October to the 15th of March.—L. M. E.

THE TAWAS CITY (MICH.) CLUB are jubilant on their success in convicting a deer killer September 7, the law not being up before October 1.

VERMONT.—Ferrisburg, Sept. 17.—I took a short tramp after ruffed grouse yesterday but did not find one bird. It looks as if they were scarcer here than ever.—R.

MIXED METAPHOR.—A Boston paper has detected three dark horses "angling" for the Republican nomination for Governor of Massachusetts.

PUBLISHER'S DEPARTMENT.

THE FOREST AND STREAM, the most interesting of sporting papers, has been enlarged to twenty-eight pages. Its evident pecuniary success is fully merited by its excellence.—*Denton (Md.) Journal.*

A USEFUL ARTICLE FOR SPORTSMEN.—All sportsmen know the advantage of having boots impervious to rain and water. "Tittie's Leather Life," advertised in this issue, softens leather and makes it waterproof, it also admits of a good shine. Having used it, we can safely recommend it to do all that is claimed. The agent for its sale is Geo. L. Brown, 125 Federal street, Boston.

The Prairie Farmer comes to us under the name of the *People's Illustrated Weekly and Prairie Farmer*, and changed in form to six-teen pages. The illustrations are profuse, the reading matter most varied and interesting, consisting of stories, sketches, humor, news, and editorials on agriculture, horticulture and current topics. It will undoubtedly commend itself more than ever to the intelligent public. It is published by the Prairie Farmer Publishing Company, Chicago, Ill.

TENS OF THOUSANDS.—The New York Post Office is a big institution. Postmaster Pearson recently gave an *Evening Post* reporter the following facts about the morning mails which reach this city by 7:38 A. M. The East mail due at 4 A. M. brings about 12,000 letters, while at 4:10 A. M. a mail is due from Philadelphia, Baltimore and Washington, containing about 15,000. At 6:30 and 6:40 A. M. three mails are due, being one over the New York Central road with some 20,000 letters, one over the Pennsylvania Central with some 18,000, and the through South mail with about 20,000. Then at 7:25 and 7:38 A. M., two mails are due from Boston and New England, averaging together about 25,000 letters. So the total must be an eloquent one, but we haven't time just now to add up and find out what it is. The point of real interest to us is that a very satisfactory proportion of these letters find their way into the box of the FOREST AND STREAM.

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

FISH IN SEASON IN SEPTEMBER.

FRESH WATER.

Lake trout, *Cristivomer namaycush.*
Siscowet, *Cristivomer siscowet.*
Grayling, *Thymallus tricolor* and *T. montanus.*
Rainbow trout, *Salmo iridea.*
Clark's trout, *Salmo clarkii.*
Dolly Varden trout, *Salvelinus malma.*
Salmon, *Salmo salar.*
Land-locked salmon, var. *sebago.*
Quinnat salmon, *Oncorhynchus chouycha.*
Black bass, *Micropterus*, two species.
Maskinonge, *Esox nobilior.*
Pike (N. Y. pickerel), *Esox lucius*
Pickerel, *Esox reticulatus.*
Pike-perch (Wall-eyed pike) *Stizostethium.*
Yellow perch, *Perca flavitilis.*
Striped bass (Rockfish), *Roccus lineatus.*
White bass, *Roccus chrysops.*
Rock bass, *Ambloplites*, two species.
War-mouth. *Chænobrytus gulosus.*
Crappie (Strawberry bass, etc.), *Pomoxys nicromaculatus.*
Bachelor, *Pomoxys annularis.*
Chub, *Semotilus bullaris.*

SALT WATER.

Sea bass, *Centropristes atrarius.*
Striped bass, *Roccus lineatus.*
White perch, *Morone americana.*
Scup or porgie, *Stenotomus argyrops.*
Tautog or blackfish, *Tautoga onitis.*
Bluefish or taylor, *Pomatomus saltatrix.*
Weakfish or squetague, *Cynoscion regalis.*
"Sea trout," *Cynoscion carolinensis.*
Sheepshead, *Archosargus probatocephalus.*
Kingfish or Barb, *Menticirrus nebulosus.*
Spanish mackerel, *Cybium maculatum.*
Drum, *Pogonias chromis.*
Lafayette, *Liostomus obliquus.*
Red bass, etc., *Sciænops ocellatus.*

☞ This table is general. For special laws in the several States see table of Open Seasons in issue of July 20.

I concur with those who speak of the pastime of angling as a medicine, not alone from my own experience, although that may count for something, but from the great number of strong men with whom I have been brought in intimate contact during my more than thirty years of out-door life, and who, from their youth up, have found nothing so invigorating as the pure air of the mountains; nothing so soothing, after the toil, and worry, and fret of business, as the silence of the woods; nothing so pervading in its mellowing influence upon nerve and brain and spirit as the pleasant murmur of the flowing river; nothing so health-giving as the aroma of nature's grand forest laboratory: and nothing so exhilarating as the rise and swirl and rush of trout or salmon. Those whom I have thus known, with scarcely an exception, have preserved the vigor of lusty youth longer and more uniformly than their contemporaries who have sought other means of enjoyment—from which I infer that few but those who are blest with robust constitutions ever acquire a passion for angling, or that the pastime itself creates the healthful vitality which insures a vigorous old age. But whether the pastime is merely preservative or is really curative in its medicinal effects, it is certainly beneficent, and deserves the high place it holds in the affections of its happy, healthy and enthusiastic votaries.—*George Dawson, Pleasures of Angling.*

CAMPING AT LAKE MEGANTIC.

IT was the latter part of August when we took the 3 P. M. International train from Sherbrook for Lake Megantic to put in our usual annual vacation. On the train we met some friends on the same errand and bound for the same destination as ourselves, with whom we formed a coalition, increasing our party to seven, and with our guide, Den Ball, who also happened to be on the train, making just the number requisite for a double euchre set. The number of beans which changed hands at draw poker on the trip, would have led one to believe that we were carrying that portion of our provisions in our coat pockets, and an advance of ten beans better on a small pair was made by the better in a spirit of utter recklessness, and in a manner calculated to bluff the more cautious holder of a flush or three of a kind. In fact it was flush times in the bean line, as those who have been there can testify.

About 8 o'clock we reached Megantic and were soon enjoying a substantial supper at Pope's Victoria Hotel with an appetite which only regular habits and a begone-dull-care sort of feeling can produce. Our old friend, John Boston, was among the first to greet us. John in his capacity of fisheries guardian is trying to bring Lake Megantic and the Chaudiere River back to their former prestige. Some two years ago a quantity of salmon trout and land-locked salmon fry were placed in the lake, quantities of which are said to have been seen in its tributaries during the past summer. Our party contained some good vocalists, so that with the assistance of Billy Lee, who presided at the organ, Jack Smith and other local amateurs, we soon improvised a first-class musical soiree in the upstairs parlor, which was kept up until midnight. We question if many older and larger places could at such short notice have got up as good an entertainment. We take the liberty, however, of suggesting to friend Pope the propriety, in fact the necessity, of placing a hand rail or two on the stairway, a suggestion which will doubtless be appreciated by the individual who reached the bottom of that stairway at one step, a step which had the effect of lowering his buoyancy of spirits some twelve feet.

We had arranged with Messrs. Flint to have their steamer on hand at an early hour, so by seven o'clock next morning we were on board, and with Bob Dickinson as engineer we were not long in running the twelve miles through the lake, making a brief call at the summer residence of W. B. Ives, Esq., M. P., near Rocky Point, where we were well treated by the hospitable proprietor. At the Spider Lake portage we experienced some delay in getting our traps hauled over, so some of the party went into camp some two miles up the lake, while the rest attended to the baggage and joined them in the evening. The weather was beautiful, and although very hot was tempered by the lake breezes, so that the heat did not seriously inconvenience us. Our party divided up, some trolling for bass on the lake, some trout fishing and blueberrying up the river, and the rest getting the pot boiling and preparing for the evening's reunion in camp.

Our first night's jack-shooting up the river supplied us with venison; of trout and bass we had abundance, and for a few days we enjoyed ourselves as only those can who are fond of and familiar with an outdoor life. Our camp was christened the "Anglers' Retreat," a sign in charcoal to that effect placed over the verandah. Our beds made of hay or boughs at the choice of the occupant, friend Sweet prepared the bill of fare and filled it, too, assuming also the control of the culinary department, and although he did tell us repeatedly to "Go away from that window," we were forced to admit that he was the life and soul of the party, always good-natured, lively, full of fun, and ready to run his legs off to add to the comfort of any one of us. We were sorry to have him leave before the camp broke up. Another camping party had shot a fine moose, six prongs on one side and five on the other, making him between seven and eight years old, and we were liberally supplied with moose steak, which for juiciness and flavor surpassed any we ever ate. This moose was dropped in his tracks, and consequently the meat was far superior to that taken from animal run down or killed in the winter.

After a few days' sport on and around Spider, four of us went across to Hathan Bog, about a couple of miles on the Maine side of the boundary line. The trail is simply a blazed line through the forest, very rough in places. The day was sweltering hot, not a breath of air could be felt in the woods, and after nearly six hours' walk we reached our camping place about five in the afternoon, our clothes dripping wet with perspiration. Ball and I took the little boat which we had brought through the year before, and went down the bog for trout. We found the water very low and densely covered with lily pads. The beaver, Ball said, had all been trapped out last fall. We were rather glad of it, as we were too frequently startled by their giving the alarm while jack-shooting on our last trip. The tracks of moose and deer around the bog were abundant. At the foot of the log and against the beaver dam where we found a patch of open water, we took out twenty to thirty fine trout, and just before dusk returned to camp, or rather an apology for one, for the rest of the party, too tired to build a camp, had lain down on the moss against a knoll, and so did we, as soon as we had made tea and cooked enough trout for supper. On our return we saw a fine cow moose walking at rather a rapid gait across the head of the bog. She had not seen us, and by paddling behind a clump of bushes we tried to intercept her; but she gained the woods ahead of us.

About nine o'clock Ball and I started our jack light and went down the bog. Soon after starting a deer whistled or snorted on the other side, but we went through the bog and a mile or two down the river without seeing or hearing anything else. I was tired and sleepy, and it was with difficulty I could manage to keep awake. In returning a deer whistled on the bank above me, and I opened my eyes just in time to see his white neck as he bounded into the bushes. He was more startled than I was, as for fully half a mile we could hear him whistling every few seconds. This kept me awake for a while, but when we got back to the bog I began to doze again, and as we were passing a place which we had passed on our down trip I was fairly asleep. I felt a poke from Ball's paddle, and roused up to see something dark and indistinct just ahead, and without waiting to take particular aim, discharged my rifle, and immediately saw as pretty a specimen of buck-jumping as one could wish to see. I is not likely I hit him, as there was no sign of blood to be seen next morning. Ball had his double-barreled gun loaded with ball and buckshot, and if he had used that instead of playing poker on my back, he probably wouldn't have been obliged to pass the buck. Although I have always used a light Frank Wesson sporting rifle, I am convinced that for night shooting, as one always gets comparatively close to game, the weapon to use is a double-barrel—one barrel loaded with buckshot for deer and the other with ball for moose or caribou. It is difficult, unless very close or the light very bright and your position such that the light is distinctly visible, to shoot accurately with a rifle. I have only succeeded once in jack-shooting in hitting the exact place I thought I was aiming at, and that fetched my first moose.

Next evening from a spring hole in the river I took about forty trout, running from one-half to one pound each, as fast as I could cast. That evening it rained, but about mid night Ball and another of the party went out shooting, without success.

The vicinity of Hathan Bog is not a pleasant place to camp. Nothing is to be seen around the bog except stunted tamaracks. Some high mountains near the Chain of Ponds lend some grandeur to the view in that direction. Perhaps if one were "up in a balloon," so as to get a view of the five lakes and ponds, which a circle of a mile in diameter would strike, he might see something more attractive than Hathan Bog scenery. Crosby Pond is attractive, lying, as it does, embosomed in mountains, which the setting sun illumines on the one side, and throws into the most sombre shade on the other, while its swiftly running outlet creates a miniature Minnehaha in the evening stillness.

After two nights at the bog, we took an early start, and our packs being considerably lighter, we reached the Upper Spider at noon. It was another sweltering day, and we drank considerable water at the three or four watering places on the trail, so that the bottle of Fletcher's ale which we had left at the landing, in anticipation of the fatiguing effect of the trip, was very acceptable. A couple of miles row, a pannikin of strong tea, some dinner and an hour's rest, and we were all right again. Our Australian experience has taught us that nothing overcomes fatigue like a cup of strong tea.

That night Ball and I went up the river, but as there were no less than five boats out, it is not surprising that no game was to be seen. Deer had been seen nearly every day on the lake shore within a quarter of a mile of camp, and as we passed through, we saw one feeding on the lily pads, and ran down on him. Knowing that an object looks nearer on the water than it is really, I had elevated the sight of my rifle to 300 yards, but in this case I had overshot the mark. The deer was within 150 yards, and the ball went over and struck a log on the bank beyond him. He pranced round a few times, looked at the log, and commenced feeding again a few feet away. Another shot "hit him in the same place it missed him before," and he was off. Ball insinuated that he could have put a bullet through a deer's head at that distance.

Next morning he had the chance. I ran him down within 100 yards of one, at which he fired and missed. As there was some ripple on the water he was excusable. We ran the boat near the shore at the place where he went into the bushes, and there he stood some forty yards off, looking at us. Another shot failed to drop him, and as Ball was confident he had hit him he got out of the boat to look for signs of blood, which he said he found. While there another deer, a doe, came out to the lake some 500 yards away. Ball got into the boat and I ran him down within sixty yards before he fired. Knowing him to be a good shot and accustomed to my rifle I counted that deer in, but it wasn't to be. The ball struck a boulder just over the deer, and Ball's ball scored a miss. The conversation between us for the rest of the forenoon was only started at long intervals and was of a very brief character. He felt worse over his failure than I did.

But time is up. Reluctantly we break camp, pack our traps, cross the carry, and are steaming down Lake Megantic in time for tea. We change the clothes we have slept in during our camping out. An obliging friend puts a ten-cent shine on our boots, stands the cigars on the strength of the ten cents, and as we sit on the verandah of the Victoria blowing a cloud, contemplating the unwonted brilliancy of the shine on those boots, and conversing with John Boston, we forget that we were only that morning "out of the woods." Next morning, at 5:30, we take the train, and at ten we are back in Sherbrooke.

D. THOMAS.

SHERBROOKE, P. Q., Sept., 1882.

SEVEN PONDS AND DEAD RIVER.

HAVING seen several articles about this wild section, none of which correspond exactly with my own experience, and having also received many inquiries concerning the same, I will, with your permission, give a running account of a recent trip there, in the hope of conveying to your readers a clearer idea of the region and its capacities for sport.

My first visit was in the spring of '81, and having derived great benefit and enjoyment therefrom, I could not resist the temptation to repeat it this season.

Our party left Boston June 17 on the 8:30 A. M. from the Eastern Depot, and arrived in Portland about 12 M. During our wait here of twenty-five minutes we tried in vain to learn of the employes of the Maine Central which train we should take for North Anson. All but one insisted that we should take the Skowhegan train, but as there seemed some doubt, we concluded the safest way would be to follow our baggage, which we did. One of our number, however, being in poor health, took the drawing-room car from Boston, and, owing to the negligence of the conductor, was carried on in advance to Skowhegan, where they tried to send us. We were naturally disgusted at the manner in which the railroad officials performed their duties.

Query: Is the Maine Central so poor that it cannot afford at this point even tolerably intelligent employes?

From Portland we took the train to West Waterville, thence on the Somerset road to North Anson, thence by stage (nine miles) to North New Portland, arriving at 6:30, where we remained all night. Wishing to take an early start the next morning for Kennedy Smith's farm, Eustis, the gentlemanly and obliging stage drivers, Viles and Dilson, accommodated us, and had us under way at 5 A. M. sharp.

We now entered upon a drive of thirty-six miles over an excellent road—a rare luxury in the Maine backwoods—enlivened all the way by scenery rich and beautiful beyond any power of description. Mountains, rocks and ravines presented themselves in almost unbroken variety, with grand old Mount Bigelow overlooking all, till we forgot the length of the ride and were not sorry to know that our return trip would take us through the same lovely region.

After crossing a primitive ferry (which was managed no by the ferryman but by his "gude wife") our way for nearly six miles lay along the banks of the south branch of the Dead River, and leading directly to the old "Flag Staff," renowned as the camping ground of Benedict Arnold in his perilous march to Quebec.

Leaving historic ground, our attention is called to a peculiarity of the road over which we are passing. It is built along the ridge of a low-lying range of hills, with, in many cases, barely width sufficient for the road, while on either side you look into ravines, some of them full seventy feet in depth. We enjoy every mile of this journey, so full is it of interest, but end it at last at Smith's Farm, about 1:30 P. M., where we dine and refresh ourselves for the twenty miles' ride on a buckboard through the wilderness to Smith's Camp, at Seven Ponds.

About two miles of this road may be passed with tolerable comfort, when we enter upon what may truly be called a "buckboard road." I will not attempt to describe it, as doubtless your readers are familiar with the term, and know what it implies. I was an easy and profitable passenger to take, for I greatly preferred walking to the difficult task of keeping my seat. Nothing but a Maine buckboard could hold together; "Adirondack Murray's," or any common vehicle would be utterly demolished in a short space of time. *En passant*, if you enjoy the company of black flies and mosquitoes, you will have no reason to complain of your reception here.

Tim Pond, the first stopping place, we reached with sound limbs at 5:30 P. M. Here Smith has six nicely kept and well arranged camps, which were our headquarters last season. Remembering my good success at that time, I could not resist the temptation to cast the fly to the speckled beauties, and for a half hour's labor was rewarded with a catch of thirty-six. The trout in this pond are small, averaging not more than a quarter of a pound, but are of excellent flavor, and contain more magnetism than any fish I ever saw. We frequently, last season, took two and three at a time, my largest weighing 2½ pounds. It is exciting sport to see them leap to the fly, clearing the water in many instances, but, wishing to encounter larger game, and having started for Seven Ponds, we pushed on next morning for those waters thirteen miles distant.

Our driver informed us that this half of the road was better, but not caring openly to question his veracity, we came to the conclusion, mentally, that his understanding, in more than one way, was calloused by his frequent drives over the road in question. Eight hours of this experience brought us to camp on the shores of Big Island Pond. These camps are well fitted up, and well kept by the man and wife in charge, who are the "right persons in the right place."

For the first two days we did not meet with flattering success. Owing to the high winds, combined with the backward season, the trout would not rise well to the fly, but the rest of our day was more satisfactory.

The pond is full of trout, averaging about a pound; though several were caught weighing from two to three. One lucky fellow, on his seven-ounce rod, captured two trout at one throw, that tipped the scales respectively at 2¼ and 1¾ pounds. The large trout are readily taken by trolling, and quantities of chubs can be obtained around the island. We did little of this, however, preferring always to take our trout with the fly.

This is the largest of the Seven Ponds, and here we spent the most of our time, though a day at L Pond gave good results. Trout plenty—eager for the fly—and averaging half the size of those of its larger sister.

At the upper end of Big Island Pond a small stream connects with Rock Pond. At its outlet a family of beaver had built their house and dam, while about half way between the two ponds a recently constructed dam, sixty or more feet in length, had flowed Rock Pond at least two feet. These were of peculiar interest to the writer, being the first he had ever seen.

The forests in this region abound in deer, moose, caribou, bear, and a countless number of partridge, so that the sports-

man who carries the gun, as well as he of the rod, will find plenty of game.

On our return to Eustis we found our lost comrade, who, having reached that place too late to join us, concluded to remain rather than make the rough journey alone. He had been having good success in the waters in that vicinity, and wished us to stop over and help him capture some of the big trout he had seen, but business prevented, and we were obliged to leave him to accomplish his object alone. He is not an expert with the fly, and the fish had literally "cleaned him out." The village afforded nothing better to replenish his stock than a large cod hook, and, fastening this to his heavy silk line, he sallied forth to the foot of the dam to capture his prize. Nor was he disappointed, for he soon landed in "derricks" ferous fashion, a lusty five-pounder. As he came to me the following day by express, I can vouch for his weight. The next cast he hooked one equally large, but having in the excitement of the moment forgotten his net, did not land him. He spent some time at Eustis, full of enthusiasm at his excellent success as a beginner, and, in fact, we all returned from the Dead River region well satisfied with our trip in all but the shortness of its duration, but mean to make up for that next time.

By this account your readers can see that, whether he bears rod or gun, if he enjoys roughing it with good sport thrown in, he will find all he desires in the wilderness I have described, while he who likes good fishing with less tramping will be well suited to make his headquarters at Eustis. S. SHAW.

BOSTON, Sept. 14, 1882.

FISHING AT INDIAN RIVER, MICH.

IN this far-off Northern clime, where the tourist, pleasure seeker, hunter and fisher join in pleasant converse to drive away the tedium of the hour, and seek that beneficent recreation that follows a change of occupation, there is much enjoyment to be had and solace to be sought in the diverse occupations that invitingly woo us to their sweet embraces. In company with a jolly party of five, two weeks ago yesterday, we embarked on my sloop yacht Cecile bound for the Descheneux, and the southern shores of the northern peninsula of Michigan in pursuit of the game bass, the succulent woodcock, and perchance a deer or two, if fortune favored. We stretched across the straits, keeping Point Brulu on our port bow and entered the harbor of the Descheneux, and a more beautiful sight never before met our greedy vision as we passed the lovely islets that, like innumerable emeralds, are set in a pale blue fringe of crystal water.

We come to anchor at the log hut of the "Poor Lo;" eat a hearty dinner and prepare our fishing tackle for an afternoon's sport in these justly famed channels. Summoning our Indian guide (Antoine we shall call him for short), and placing within his ready palm a silver dollar, we are soon put in possession of the secrets to success, which, he says, "Indian don't tell white man, 'cause they're very greedy and catch all the fish, while Indian, he catch only what he eats." Apropos of this, I could scarce repress a smile at this home-thrust at the acquisitiveness of the universal Yankee nation in all the sports of forest and stream, and wonder if the time will ever come when American sportsmen, following the custom of the rude savage, will be content to shoot and catch only what he eats, and leave the "big bags" and "long strings" to the "pot-hunter" and market-fisher. Accompanying us in his canoe, our native guide brought us to anchor where we enjoyed the very *ne plus ultra* of excellent fishing, and in less than two hours (unmindful of the Indian adage) we had captured thirteen bass, beauties, averaging not less than five and a half pounds each. Such sport as this I have never before had, though I have fished in most of the inland lakes of Northern Michigan, Wisconsin, and Minnesota. Such game beauties withal, that it took from ten to twenty minutes to land each fish, and tested the highest skill of the piscatorial art to land without injury to line or rod. This was the very perfection of sport, and if any of my brother sportsmen envy the good fortune that awaited the dipping of our lines in these successful waters, they have only to go and do likewise, and I assure them they will receive ample remuneration for their time and trouble in a visit to these justly famed fisheries of the Descheneux. We coasted back and fished for two days in "the passages," lived on fish, the most superb man ever ate. Respectfully, SENEX.

INDIAN RIVER, Michigan.

THE PLUNKETTS GO A FISHING.

MR. F. M. Gilbert, the "funny man" of the Evansville, (Ind.) *Argus* thus records the tale of the great fishing excursion of the Plunkett family:

Of course the fishing fever always strikes some people just at this season of the year, and this week it struck the Plunkett family. Their next door neighbors went out the other day and caught a few sickly little sunfish, and Plunkett and his wife saw them as they were coming home and of course the fever at once struck them hard and they decided to go next day. That night Plunkett and his wife got their tackle ready and laid plans for the morrow. The old man told wonderful tales of the huge fish he had caught when he was a boy, and the old lady said she "allowed she had yanked out a right smart chance of 'em" herself, in "the old crick up in Pike county." The worthy pair worked till late, he on his tackle, and she on the cold lunch she was going to take. She said that nothing was better than to take a skillet along, catch your fish and fry them while they were right fresh and then have a nice cold lunch to eat with them.

The rigging that Plunkett got up for his own especial use would have taken a prize to catch whales with. He had a line strong enough to hold a bull, a sinker that would take it to the bottom of the bottomless pit, and a hook that would hold up a dressed hog. His pole was a big hickory hoop-pole, and when his good wife suggested that the rig seemed to be a little heavy, he laughed at her and said, "People kin take all ther reels and fancy lixins they wanter, but gimme sumthin' I kin rely on. I don't play 'round with no fish; when I git one on that I jist yank him out, and ther hain't no busted lines nor fishes gittin away when I jist brace back and pull out that thar pole." The old man got very enthusiastic over the matter, and got in the center of the room and made a series of strange motions which he told her was the way to "land yer fish," but when he had jerked the clock off the mantel-piece and nearly snatched the old lady bald-headed by catching the big hook in her chignon, his ardor subsided and he decided to go to bed in order to get up early.

Before daylight yesterday they were up and off. The old man took the lead with a basket on his arm, the big pole on his shoulder and all his pockets filled with old oyster cans filled with worms. Next came the old lady with another basket, the skillet and two or three smaller poles which, when they were not punching the old man in the back or knocking off the big hats of the children in the rear, were continually falling off her shoulder. There is an end to everything, and so there was to the march to the fishing grounds, but the sun was high and hot, and the children were all tired and cross by the time they reached the old fallen tree top that laid in the water that was supposed to be alive with fish. After much trouble they all got their lines baited and in the water, and then followed a breathless silence. Not one of the children dared speak above a whisper, and Plunkett snatched the youngest and took it up the bank and spanked it soundly for making a noise and "skeerin' the fish away" before he remembered that it had the whooping cough and couldn't help it. Two hours passed away and "nary a bite," and the Plunketts were getting very hot and tired and hungry, when an incident occurred.

In order to get at the bottom of things it is necessary to take the gentle reader to the bottom of the hole the Plunketts were fishing in. True, a few wandering fish would drop in there once in a while, but it was the abode proper of an old time mud-turtle, or as some call them a snapping turtle. He was a grim old hero of a hundred fights with fish hooks. He was too large to be pulled out by the ordinary small boy, and of late he was getting too smart to even take chances on being pulled out. His horny head and sharp beak were scarred with innumerable conflicts with hooks during his younger days, but for some years he had known exactly how to take hold of a worm and pull it off a hook, without ever letting the point get where it could do any damage. This spring he was fatter than usual. The boys had fished that hole thoroughly, for every time a boy went home and told of the "big bites" he got in that hole, a dozen would come next day to try their luck. It may be that the big feed the old fellow had the day before had made him sleep late, but anyhow he had just waked up, and rubbed his eyes and rinsed out his mouth at the time we write of. When he saw an array of hooks all about his house he smiled to himself and remarked that, as it was a nice warm day, he believed he'd just take his breakfast and pick his teeth and then go out calling.

So he devoted himself to the hooks. First he would take a nice fat worm off the old lady's hook, and then he would patronize one of the little boys; but after he happened to come across the big hook of the old man, which from its size had to be covered with the very largest and most corpulent worms, he applied himself to that with great assiduity—and this was about the time that the old man commenced getting excited, and pulling at the big fish that he supposed kept taking his bait, and swearing, and spitting on his hands, and putting on fresh bait, and telling the children to stand back and give him a chance. Whether the old turtle got careless or whether the worms he got off old Plunkett's hook were so fat and tempting that he was eager to get them, we know not; but anyhow he made a miscalculation and stepped clear over it, and the next moment he felt the hook sink deep into one of his horny legs, and a second after he was flying sprawling through the air, with his legs vainly wiggling for a foothold, and his awful jaws ready to snap at the first thing they touched.

And that "first thing" happened to be the old lady's foot. When the horrible mud turtle came through the air she was frightened, but when it flew off Plunkett's hook and grabbed her by the toe she yelled, "Ouch! Murder-r-r-r, and flopped backwards over the log into the water, at the very time that Plunkett, the sudden weight removed from his hook, lost balance, and went over the other side, closely followed by the little boy who had been wrongfully spanked for having the whooping cough, and who had been allowed, in consideration, to fish from his mother's lap. Of course no one was drowned, but owing to the mud and dirty water that covered the party, they didn't dare to come home till dark, and as the woe-begone procession filed into the Second Ward that night *sans* poles, *sans* bait, *sans* fish, *sans* everything but the children and the old woman's frying-pan, the soft summer air was laden with a kind of a sewer smell, the musical "squish," "squish" of the muddy water in the shoes of the whole party and fourteen different assorted brands of profanity from old Plunkett.

JOTTINGS FROM GERMANTOWN.—A new Philadelphia fishing club has been organized at Atlantic City, styled the West Side Club. For the low price of $4,000 they bought the building owned and used for a number of years by Jonas Higbee as a boarding-house, located about two hundred yards from the bridge where Camden & Atlantic Railroad crosses the thoroughfare. The purchase included the furniture of the building, which contains nineteen rooms, with an acre and a half of ground attached. The club has a membership of forty, with a well-known and much-respected Philadelphian as president. . . . "S." desires to know where good autumn bass-fishing and mountain air can be enjoyed together. One of the best places that we are aware of is in the village of Bushkill, near the Delaware, about twelve miles above Stroudsburg, where a stage awaits the arrival of trains and conveys passengers directly to the place. If good success should not be met with at Bushkill, there are comfortable farmhouses a mile or two away, in more isolated places along the river, where good rooms and meals can be obtained, and better fishing than in more frequented places. . . . A sudden jar on the surface of the water will stun and not unfrequently kill fish. We have seen pike so stunned by the concussion of a pistol-ball, which struck near them, that they were captured with the hands. The driving of piles for the erection of piers and bridges has a similar effect. This was noticed the other day in Maryland, where the jar of the heavy hammer caused catfish and young shad to float on the surface. . . . An experiment was tried in France to see if fish could exist in a great depth of water. Different species were placed in vessels of water made to sustain a pressure of "four hundred atmospheres," under which they preserved their health. This pressure corresponds to that at a depth of 13,600 feet in the ocean, or about two and a half miles, and it is therefore concluded that fish can penetrate to a great depth without injury. . . . It is said that experiments show that if whisky is poured into the throats of fish immediately after being caught, they can be resuscitated by replacing them in water, even after they have been conveyed a long distance. A certain class of anglers, unfortunately, too often make somewhat similar experiments on themselves, and have none of the fiery liquid left to experiment on their victims.—*Germantown Telegraph.*

THE SCIENTIFIC ANGLER.—This work, which we noticed a short time ago, can be obtained at Brentano's, New York; price $2.50. This is in answer to several inquirers.

Fishculture.

THE AMERICAN FISHCULTURAL ASSOCIATION.

PROCEEDINGS ELEVENTH ANNUAL MEETING.

MATERIALS FOR A HISTORY OF THE SWORDFISH.

BY G. BROWN GOODE.

[CONTINUED.]

THE CAPTURE OF SWORDFISH BY HOOK AND LINE.

ONE or two instances are on record of the capture of swordfish upon an ordinary hand-line, and it is probable that this is much more common than has been usually supposed. Capt. George H. Martin, of Gloucester, informed me that he had seen seven caught in this manner in one day in the South Channel. They were caught in water fifteen to twenty-five fathoms deep, on the old-fashioned George's cod-hook, with a six-inch shank. Mackerel were used for bait; these were split down the tail so that the shank of the hook could be entirely hidden in the gash.

I have been told that they are also taken in this way about Block Island, and a similar method of fishing is described by Italian writers.

Within the past three years it has not been unusual for swordfish to become entangled in the long lines of the halibut fishermen on the northern banks. The manner in which this occurs has already been discussed above.

I have collected several instances. In 1877, in the month of August, Capt. Daniel O'Brien, of the schooner Ossipee, of Gloucester, fishing in 200 fathoms of water, between Le Have and Western Bank, caught, in one voyage, five swordfish.

At about the same time, Capt. R. L. Morrison, of the schooner Laura Nelson, fishing in 175 fathoms, on Sable Island Bank, caught three swordfish. Another vessel in August, 1877, fishing on Le Have, in from 175 to 180 fathoms, caught twelve, as well as three or four more in September. August 17, 1878, Capt. Joseph W. Collins, of the schoner Marion, fishing in the southwest prong of Banquereau, in 200 fathoms of water, caught one swordfish; again, on October 1, fishing southeast of Sable Island, in 175 fathoms, caught one swordfish on his trawl and saw several others swimming at the surface; October 3, caught another on Banquercau, in the locality first mentioned. In August, 1878, Captain Greenleaf, of the schooner Chester R. Lawrence, of Gloucester, fishing in 140 fathoms, caught thirteen in one trip. I cannot learn that this manner of capture was ever known before 1876, but it has since become so frequent that it excites no remark for a halibut-catcher to unload several swordfish among its halibut. This manner of taking the swordfish is of course purely accidental, and is rather a vexation than otherwise to the fishermen. It is probable that the fish take the bait when the line is being set and they are swimming near the surface, and they are involuntarily carried down by its great weight.

The vessels engaged in swordfishing are sloops and small schooners of generally less than fifty tons. The crew is also small, consisting of two or sometimes three men besides the cook and a boy. Although many vessels are employed in this fishery for several successive years, there are many others which fit out for a single season or for a part of a season. Others, on the south coast of New England, divide their time between fishing for seabass and hunting for swordfish, all warm and quiet days being devoted to the latter pursuit. Six or eight vessels from New London are thus employed, as well as others from Noank and Bridgeport. On the coast of Maine, as has already been mentioned, many of the smaller fishing vessels fitted for the capture of mackerel and cod devote a part of the season to swordfishing. Other vessels, among them occasionally a gentleman's yacht, enter the field for a cruise or two in the course of a summer. To this is a favorite recreation for old swordfishermen engaged in other work. Numerous mackerel schooners carry the swordfish "pulpit" on their bows, and so do various coasters and packets.

It has therefore not been thought desirable to attempt to make a list of the vessels engaged in the swordfishery, or even an exact enumeration of them. In 1879 estimates by careful men engaged in the business fixed the number belonging in different ports as follows:

New York (hailing from New London)	2
Greenport (sloops)	2
New London	8
Newport	1
Fall River	2
Cuttyhunk	3
Westport	1
New Bedford	18
Dartmouth	2
South side of Cape Cod	5
Total	40

In 1874, according to Mr. Thompson, New Bedford had twelve vessels in this fishery. In 1877 the estimates of total number of vessels made by different men varied between thirty and forty.

To show how uncertain the continuance of vessels in this fishery may be I will refer to the annals of Gloucester. In 1876, one schooner, the Meteor, was engaged; in 1877, the schooner Champion; in 1878, the schooner Northern Eagle; while in 1879 and 1880 the field is abandoned by this port.

FINANCIAL PROFITS TO FISHERMEN.

I have before me the record of a single schooner for the season of 1878, from which it appears that in the season of four months eight trips were made, averaging about twelve days in continuance. One hundred and sixty-three fish were taken between June 8 and September 20, weighing, in the aggregate, in round numbers, about 47,000 pounds, dressed. These were sold at an average price of three cents per pound. The gross stock of the season would amount to about $1,300. From this must be deducted the expense of living, the interest on capital invested, and the wages of the cook and the boy. The remainder would probably not exceed eight or nine hundred dollars, and the profits have to be divided among the two or three men composing the crew and the owner of the vessel. It is not probable that many vessels stock as large a proportionate amount as did the Northern Eagle. The success of one New Bedford vessel in the season of 1878 was spoken of as extraordinary, the return being $311 to each of the crew's share.

The price of swordfish is low, and the success of the voyage is always somewhat precarious. A few small vessels with experienced skippers apparently succeed in making a fair living, but that the profits are not great is clearly indicated by the fact that there is no great increase in the number of vessels engaged, and that so many are constantly undertaking and abandoning the swordfishery.

HISTORY OF THE AMERICAN SWORDFISHERY.

There are few data upon which to found conjecture as to the time when the swordfish came to be regarded as sufficiently useful to be sought for by fishermen. One of the earliest records of its use for food is found in the *Barnstable Patriot* of June 30, 1841, in which it is stated that the fishermen of the island south of Cape Cod take a considerable number of these fish every year by harpooning them, and that about two hundred pounds a year are pickled and salted at Martha's Vineyard.

Captain Atwood remembers seeing swordfish on the coast of Maine as early as 1826, although up to the time of his retirement from active participation in the fisheries, in 1867, no effort was made by the fishermen north of Cape Cod to capture them.

The fishery apparently sprang into existence and importance between the years 1840 and 1850, upon the south coast of

New England. Captain Ashby first engaged in it in 1859, when it was apparently a well-established industry. In 1861 it is recorded that some thirty vessels from New Bedford were profitably engaged in this business on the favorite ground, 15 to 20 miles southeast of Noman's Land.(34)

Mr. Earll ascertained that little attention was paid by the fishermen of Portland, Me., to swordfish until within two or three years. This fishery is carried on at odd times by mackerel gill-net fishermen, using by cod-trawling vessels when their regular industry is interfered with by the abundance of dogfish. The season for dogfish is also the time for swordfish, and at the present time, when the price of swordfish justifies it, smaller fishermen, when they are driven from their regular work by the dogfish, make trips for the express purpose of capturing swordfish. Mackerel-seiners are beginning to carry swordfish irons, and are often very successful in killing the fish.

At the present day, and for five or six years past, perhaps much longer, there has been very little change in the number of vessels engaged, this varying from thirty to forty approximately in different years.

Capt. Epes W. Merchant, of Gloucester, who has been familiar with the fisheries since 1804, tells me that the first swordfish ever brought to Gloucester within his recollection was caught on George's Bank about the year 1831, by Captain Pugh, who brought it in and sold it at the rate of eight dollars a barrel, salted. Fishermen had before that been very much afraid of them, but afterwards a good many were caught.

34. Swordfish have been taken this season in large numbers. New Bedford vessels have made a good thing of it. Fifty or more boats failed to take one or two daily. Captain Cobb, of the pilot boat Vision, in a day and a half took nine, the largest weighing 400 pounds. Thirty vessels are fifteen miles south and east of Noman's Land, or sixty miles out from New Bedford, and same distance from Nantucket. The season extends from June to September. The fish generally weigh 400 or 500 pounds, and are from 10 to 12 feet long. They are sold in New York. After a fish is harpooned it sends away, with a coil of rope paying out, and sometimes an hour is used before he is brought on board."—*Barnstable Patriot, Aug. 29, 1882.*

[TO BE CONTINUED.]

THE INDIANA COMMISSION.—The Fish Commission of Indiana is one of the youngest of commissions, but is making progress. The Legislature appropriated $1,400 for its use at the last session, for the year ending September 20, and the first report will be issued in January. Although but little has been done on account of lack of means, still, the energetic commissioner, Mr. Fletcher, has made a beginning and the good work will now go on. The cold season has operated against the carp, which have not done as well as in the year previous. Public sentiment in favor of fisheulture is growing in this State where it has been rather backward.

THE OHIO COMMISSION.—Toledo, O., Sept. 13.—The commission is now very popular in the interior of the State, as it has paid especial attention to stocking the rivers. Heretofore almost the entire effort has been made to stock the lakes. It expects this year an appropriation of $15,000. The commission has put into Lake Erie this year some thirty-five million whitefish, and in the rivers some fifteen million jack salmon, hatched at Toledo, and some ten thousand black bass, and has received from Troy, N. Y., a large number of silver eels, which seem to thrive well in most rivers. The hatcheries will open about Nov. 1 with whitefish spawn.—X.

The Kennel.

THE PRAIRIE CHICKEN TRIALS.

THE Inaugural Trials of the National American Kennel Club on Prairie Chickens (pinnated grouse) at Fairmont, Minn., commencing on Monday, September 4, and closing on Monday, September 11, were fairly successful. The extremely hot weather during the week made it almost impossible to run the dogs except in the early morning and just at night. This, with the scarcity of birds, caused the running to drag tediously, and had not extra judges been appointed Wednesday evening it would have been impossible to have arrived at any satisfactory result. As it was, some of the last ones in the Derby divided,and only the first prize winner was found in the All Ages, the handlers agreeing to let the judges place the dogs as they should see fit for the balance of the money and honor. This was the best possible solution of the difficulty that could be devised under the circumstances, for judges, handlers and spectators were nearly exhausted and entirely disgusted with the hot and dusty condition of affairs; and the announcement on Monday evening that arrangements had been made for terminating the running by a division, was received with satisfaction by all. Much as we should have liked to see the ties run out and the race decided on its merits, we could but agree that under the circumstances the best course was pursued.

No one expected that the running of both events would occupy more than one week, and as many of the participants as well as spectators had calculated upon the ensuing week for a little private shooting, the unexpected three days thus gained were doubly welcome. Especially was this the case with the judges. They had accepted the position in the belief that Friday or Saturday at the latest would see the close of the meeting, and as the few remaining days which they could possibly spare in the demands of business had been set apart for a turn at the chickens, for which arrangements had previously been made, it was, therefore, no small sacrifice for them to forego the anticipated pleasures of the field and devote one more day to the onerous task of following the dogs and deciding upon their merits. They consented to act only until the first prize winner was found. Too much praise cannot be bestowed upon the judges for the very intelligent and satisfactory manner in which they performed their duties. All of them were entire strangers in advance to fill the position, and the almost unanimous endorsement of their decisions shows that they were rendered without fear or favor.

Much time could have been saved and in all probability the trials could have been run out by Saturday at the latest had there been six judges instead of three at the commencement. This plan was adopted Thursday and proved very satisfactory, the judges dividing into three squads and going in different directions. The gentlemen appointed as extra judges were Mr. J. D. Brown, Missouri Valley, Iowa; Mr. T. F. Wilson, Pittsburg, Pa., and Mr. Jos. H. Dew, Columbia, Tenn. All were thoroughly qualified for the position by a long experience in the field, and so far as we could learn all of the decisions were endorsed by both spectators and handlers. There were many gentlemen from all parts of the country attending the trials, who watched the proceedings with much interest. The quality of the work done by the competing dogs was under the circumstances fully equal to that of any previous trial. We were greatly disappointed in not witnessing the performance of some of the Minnesota cracks, about whom so much has been said, as there was not a single entry from this State, although we were repeatedly assured by their owners that several of the dogs owned here could easily discount the winners.

In estimating the quality of the work of the individual dogs, and comparing it with the performances at previous trials, or with the every-day field work to which the spectator is accustomed, there are many things to be taken into consideration that form no part of an ordinary day's shooting. In the first place the dogs and their doings are under the critical eyes of inexorable judges, whose duty it is to impartially record whatever of merit or demerit may transpire, regardless of the result, and trifling faults or errors that the partial eye of the fond owner would condone or overlook, are relentlessly scored against their favorite. It must also be remembered that the excitement of the moment, be your dog never so steady and level-headed, may cause him to lose a trifle of that steadiness just at the critical instant when all his coolness and judgment are required, and instead of a meritorious point he scores an ignominious flush, that in his ordinary work would not have occurred.

Then again chickens are notoriously uncertain birds, and in the course of a single heat one dog may have the good luck to find tame and close lying birds and obtain a capital score, or he may find them with heads up all ready to take flight before he gets near them, leaving, perhaps, one or two of their number, who, with malice prepense, wait for their arch enemy to get just near enough to score a flush. In ordinary work this would be considered more in the light of a misfortune than of a fault, but in a public trial a few repetitions of this performance will not, to say the least, add much to the credit side of the score. Meantime the other dog, perhaps, has had the luck of the birds and run up a score that apparently shows him a long way ahead, when in reality he may be no better than his competitor. Many of the false points which occur at a public trial would not be seen in every-day work for often the dog will find and staunchly point a bird who but for the noise of the advancing host would lie, but before the judges can get there wily *Cupido* has swiftly stolen away, leaving scarcely a vestage of scent upon the parched ground, and nothing is left to the judges but the memory of the magnificent point which they are compelled under the rules to score as false.

In view of these facts, notwithstanding the apparently poor performances of some of the dogs, we have no doubt that a very large proportion of them would prove capital animals under the ordinary conditions of every-day work. The intolerable heat was a serious hindrance to the running. Not only was it very uncomfortable to both man and dog, but the parched condition of the ground was very unfavorable for holding scent, and it was almost impossible to accomplish anything except in the early morning or late evening. Birds were very scarce compared with what we had been led to expect, although the weather undoubtedly had something to do with this, as on the last day—Monday—which was a little cooler after the slight shower of the previous night, we found them fairly plenty.

With these exceptions no better place for holding the trials could be found. The village of Fairmont is located nearly in the center of a chain of beautiful lakes that extend for ten miles to the north and south of it. These lakes are the resort of myriads of water-fowl who are just commencing their migrations. Geese and several kinds of ducks afford the shooter a pleasing change from the weary tramp after chickens. In the immediate vicinity of the town the ground is high rolling prairie. Many of the knolls are covered with groves of quite respectable timber, which gives to the landscape a charm that is fully appreciated by the visitors, who are unanimous in praise of the great beauty of the village and the loveliness of its surroundings. Extensive stubble fields are found in every direction, and on nearly every one of them we found birds at some time during the trials. The citizens of Fairmont with few exceptions extended a cordial welcome to their visitors, and did all in their power to render their stay agreeable. Two or three of the farmers, probably not understanding the object of the meeting, or through pure cussedness, refused permission to hunt their land, and one enterprising individual, after graciously according his consent, shouldered his gun and shot over the ground just in advance. The hotels and many private houses were filled to overflowing, but we heard of no one who had not a place to lay his head and plenty to eat, and of but few who went dry.

Our description of the running, given below, is, for the most part, just as we saw and recorded it at the time. Of course in some instances when the dogs were wide apart it was impossible to see them both at once. In such cases we obtained the necessary information from the judges who accompanied the dog that we could not see. We are under great obligations to all of the judges for their uniform courtesy in imparting to us desired information. On Thursday when the judges divided and went into separate parties, we obtained the details of the running from parties in whom we have perfect confidence, and to whom we are greatly indebted for the completeness of this report.

The first event upon the card was the Derby, open to all setters and pointers whelped on or after March 1, 1881, with a purse of $450, of which first, $125; second, $75; third, $50; fourth, $25; entry, $20. The entries closed July 1, with forty-five nominations, sixteen of them completing their entry. This was a very good proportion of starters, giving us a capital lot of youngsters, many of them showing remarkable field quality. They were drawn to run in the following order:

ELSA. E. E. Hardy, Boston, Mass.—Black, white and tan English setter bitch, April 12, 1881, by Drake (Prince-Dora) out of Countess May (Dash III.-Countess Ada), handled by Capt. C. E. McMurdo, Shadwell, Va.,

against

PRAIRIE MOLLY. Sportsman's Kennel, Geneva, Ia.—Lemon and white English setter bitch, April 2, 1881, by Prairie Joe (Charm-Ruby) out of Prairie Queen (Rake-Prairie Pearl), handled by Geo. Waddington, Geneva, Ia.

GILDEROY. Geo. C. Marsh, Chicago, Ill.—English setter dog, Nov. 4, 1881, by Druid (Prince-Dora) out of Princess Draco (Rob Roy-Livy), handled by N. Nesbitt, Milwaukee, Wis.,

against

JOSEPHINE. B. F. Wilson and J. J. Snellenburg, Pittsburgh and New Brighton, Pa.—White English setter bitch, March 15, 1881, by Knox's Duke (Belton II.-Nell) out of Hunter's Cora (Parson's Sam-Queen), handled by R. B. Morgan, Canton, O.

SCOTT. A. M. Decker, Chicago, Ill.—Red Irish setter dog, July 17, 1881, by Rob out of Flash, handled by R. Johnson, Bellefontaine, O.,

against

PINK B. W. B. Mallory, Memphis, Tenn.—Black and white English setter dog, May 13, 1881, by Gladstone (Dan-Petrel) out of Countess Key, handled by H. M. Short, Middleton, Tenn.

ST. ELMO IV. Dr. S. Fleet Spier, Brooklyn, N. Y.—Black, white and tan English setter dog, April 20, 1881, by St. Elmo (Pride of the Border-Jessie) out of Clio, handled by E. H. Haight, Allaire, N. J.,

against

AMERICAN DAN. Joseph H. Dew, Columbia, Tenn.—Black, white and tan English setter dog, April, 1881, by Lincoln (Dan-Lill II.) out of Daisy Dean (Pride of the Border-Ruby), handled by Joseph H. Dew, Columbia, Tenn.

COUNT DAD. D. McKinney Loyd, Pittsburg, Pa.—Black and white English setter dog, July, 1881, by Count Noble, (10,134) out of Nellie, (Belton-Dimple), handled by D. C. Sanborn, Dowling, Mich.,

against

CAVALIER. James Stinson, Chicago, Ill.—Liver and white pointer dog, July 15, 1881, by Little Ruthin, (Faust-Devonshire Lass) out of Blight (Bow-Madge), handled by A. Winternute, Chicago, Ill.

ACME. J. Palmer O'Neil. Pittsburgh, Pa.—Black and white English setter dog, April 17, 1881, by champion Thunder (Pride of the Boarder-Fairy II.) out of Bess, handled by R. B. Morgan, Canton, O.,

against

PRINCE NOBLE. H. Widdicomb, Grand Rapids, Mich.—Black and white English setter dog, July 1881, by Count Noble, (10,134) out of Nellie (Belton-Dimple), handled by W. R. Geer, Hastings, Mich.

FRANK. David Furgesson, Milwaukee, Wis.—Black and white ticked English setter dog, June 15, 1881, by Carl out of Queen, handled by W. B. Stafford, Mankato, Minn.,

against

PRAIRIE WONDER. R. B. Morgan, Canton, Ohio.—Lemon and white English setter dog, April 2, 1881, by Prairie Joe (Charm-Ruby) out of Prairie Queen (Rake-Prairie Pearl), handled by R. B. Morgan, Canton, O.

COUNTESS MAY II. Luther Adams, Boston, Mass.—Black and white English setter bitch, April 11, 1881, by Drake (Prince-Dora) out of Countess May (Dash III-Countess Ada), handled by Capt. C. E. McMurdo, Shadwell, Va.,

against

COUNTESS MOLLIE. John D. Ladd, Martin, Tenn.—White and tan ticked English setter bitch, July, 1881, by Count Noble (10,134) out of Spark (Carlowitz-Magnet), handled by W. B. Stafford, Mankato, Minn.

After the drawing Mr. B. Waters, of Canterbury, Conn., was chosen to fill the place of Hon. B. E. B. Kennedy, of Omaha, Neb., who telegraphed that owing to a sprained ankle he would not be able to attend.

As the entries for the All-Aged Stakes did not close until 8 o'clock Monday morning, a start was not made until half an hour later, when judges, handlers and reporters, accompanied by a large number of spectators in comfortable riding spring wagons, started in a northerly direction, and at a little after 9 o'clock

ELSA AND PRAIRIE MOLLY

were cast off in a narrow piece of cut stubble for the first heat. Molly showed the most style and speed, ranging fairly, while Elsa appeared over cautious. She soon warmed up, however, and moved a little better. Elsa was the first to show sign of game at the edge of the field. Molly, soon joined her, but neither could quite make it out. Ordered on, Elsa swung to the right and ran into a brace of old birds and dropped nicely on point just at the instant they flushed. Moving on, both made game two or three times, and Elsa finally came to a staunch point, which proved to be false. It was very hot, with only a slight breeze stirring.

The dogs were now taken in the wagon, and after going a couple of miles east were put down again. Working through the prairie and stubble blank we crossed a slough, when a brace of woodcock were flushed by the handlers, and one of them was shot by Waddington. A little further on Elsa scored a flush, and soon another got up; she dropped to wing, but soon moved a little and another bird got up close to her. She then dropped on point. The handlers, coming up, flushed two more, one of which the Captain killed to order. Taking a step or two another rose, which he also cut down. Both dogs were steady. Waddington sent Molly to the left, where a brace of birds had been marked down, and she flushed one of them and half pointed just as the other rose. Turning west to a stubble field, where a bird had been marked, both dogs took a long turn to the right, and when coming in Molly ran into a covey and scored two or three flushes in quick succession, and, worse than all, she chased, for which she was beaten by Waddington as well as Elsa, who was declared the winner, after being down an hour and a half.

GILDEROY AND JOSEPHINE

were at once put down in the grass. Josephine moved much the liveliest and showed the most style at the start, but Gilderoy soon warmed up and there was not much to choose between them. Turning into a stubble, Gilderoy dropped on point. Jo. refused to back, but joined him, when both roaded nicely, but the bird had evidently flown, as they soon gave it up. It was now eleven o'clock, and very hot, and they were ordered up to go down again in the afternoon, and we returned to the hotel. Owing to the extreme heat we did not leave the hotel until after three o'clock. When about four miles north of town the dogs were again put down in a nice looking stubble which was drawn blank, except one bird, which one of the judges nearly stepped on before it rose. Then a long tramp was taken through several stubble fields and the intervening prairie without a find. After a while a single bird was flushed by the spectators, and soon after Nesbitt walked into the middle of a nice covey which got up all around him. Morgan sent Jo. in there, thinking she might find a bird remaining. His idea was correct, but Jo. was not quite cautious enough and scored a flush, she dropped to wing and Morgan dropped the bird. Then across a slough Nesbitt flushed a brace and killed one of them. Working on through a stubble and cornfield which were drawn blank we came into grass, where Gilderoy half pointed and drew on but got too close, and the bird flushed but flew only a few yards. He dropped to wing and remained on point as he saw the bird alight. Josephine stopped to order close by him until the bird was flushed. Both dogs were steady and that was all the praise that they merited. A little further on and they were ordered up as they were tired out, and Pink B. and Scott were put down. After their heat was finished Gilderoy and Josephine were again put down and after a short spin, during which Gilderoy did some very good work on a covey, dropping to point and then roading them out nicely while Josephine failed to distinguish herself, they were ordered up and Gilderoy awarded the heat. Down altogether one hour and thirty-five minutes.

SCOTT AND PINK B

were sandwiched into the previous heat. Both of them showed considerable style and speed as they ranged wide on the open prairie. Working around a small lake to a stubble field a large covey flushed wild, and several mallards also flew from the stubble, while a large bunch of teal got up from the lake, the whole making a picture that was worth going a long distance to see. Just here a skunk put in an appearance, and as he leisurely ambled along Pink spied him, and apparently realizing that nature had been remiss in not making game of the rodent, he undertook the job on his own account and sailed in regardless. Every one knows that "a rose by any other name would smell as sweet," but we assure you that a Pink is a different sort of a posey altogether, for without any change of name—although come to think over, Short did use some other name. Pink came out of the scrimmage with a most decided change of odor, at least it seemed so to us, but Pink soon convinced us that his smell was all right by handsomely pointing at a long distance a single bird that had remained on the stubble. Scott refused to back, and forged ahead and flushed the bird. This was capital work for Pink but disastrous for Scott, as they were ordered up and Pink declared the winner. Down fifty-five minutes. Gilderoy and Josephine now finished their heat, and

ST. ELMO IV. AND AMERICAN DAN

were at once cast off. They were very near equal in speed and range. Although St. Elmo is a very stylish animal, he could not compare with Dan, who is one of the most stylish dogs at the meeting. Dan led off with a flush, where he should have pointed. He dropped nicely to wing. A little further on he made a grand point, but soon moved on and roaded a short distance very nicely, but nothing was found. A little further on Haight, who was too close up scored a flush, to which both dogs dropped. Several other birds then got up all around. Dan moved on a little and pointed, but he worked up too close and the bird flushed. This was poor work all around. Soon after, as it was nearly dark, they were ordered up, to go down in the morning.

Tuesday morning we were early astir and shortly after six o'clock St. Elmo and Dan were cast off in a small stubble about a mile west of the town. Dan at once found a large covey, and pointed them in grand style; then on in grass both pointed nicely. The birds were flushed to order but not shot at. A little further on Haight flushed a brace and killed one. Working on up the swale, St. Elmo challenged and half pointed

just as a brace got up. This was very near a flush. Dan was then sent on these, and one got close up to him. One of these birds was marked down in grass and the dogs were ordered in that direction. St. Elmo found the bird and should have pointed it, but drawing too close he scored a flush. They were now ordered up and the heat awarded to American Dan. Down altogether forty minutes.

COUNT DAD AND CAVALIER

were at once put down; they got away at a slashing gait with Cavalier a trifle the fastest; he is the only pointer that ran in the Derby, and a capital one he is; he is very stylish and has the true pointer action. He has an extraordinary turn of speed and wonderful powers of endurance for so young a dog, and if properly handled will be heard from again. Count Dad is also a capital dog and did some very good work, but the pace was too hot for him, and at the close of the heat he was fagged out and could not smell the birds. Cavalier was the first to find, but he drew too close and scored a flush. Then across the prairie to a stubble he again pointed, but not so staunchly as he should, as his tail was going; he soon drew on a little, and the bird flushed. Dad pointed fairly, then swinging round he flushed a single bird that he should have pointed, as he had the wind; he dropped to wing, then moving on in some weeds he flushed two more; then on open prairie Cavalier gave a fine exhibition of his speed and ranging qualities: then into stubble Dad ran on to a single bird and scored a flush; then one or two fields were drawn blank, when Cavalier, thinking that it was time that something was done, raced away nearly half a mile away and disappeared in some corn. When we came up his handler whistled for him and a large covey flushed out of the corn, which he had evidently been pointing, as he soon made his appearance from that direction. Then swinging to the left Dad dropped on a nice point but nothing was found. He then took a wide turn on the stubble and flushed a single bird down wind; he then swung round behind where this bird got up, and dropped on a nice point, which Cavalier backed fairly. The bird was flushed but not shot at; this was a good piece of work for Dad. Both dogs then alternately pointed false. Then on in stubble Cavalier challenged and drew to a beautiful point; then roading very nicely a short distance to the edge of the grasse he again pointed, locating his bird nicely. Dad backed an instant and then swung ahead and stole the point. Two birds were flushed to order, and both handlers shot and crippled one but it got away. Then on Dad flushed a bird in weeds and then pointed, and Cavalier backed nicely. Then on open prairie a long tramp was taken, during which Cavalier let out an extra link and appeared to be going better than ever, while Dad was evidently about pumped, for when birds were found he could not smell them, but scored a flush on a single that he should have pointed. He at once dropped to wing and Cavalier backed him, the handlers coming up flushed a bird behind the dogs. Dad then moved up a little and put up another one. They were then ordered up, and Cavalier awarded the heat. Down three hours and twenty-five minutes. This was a long and very trying heat for so young dogs, and both of them showed remarkable staying qualities.

ACME AND PRINCE NOBLE

were now ordered down, but Acme was withdrawn and Prince Noble declared the winner of the heat.

FRANK AND PRAIRIE WONDER

were at once put down on some scattered birds, but at the request of the handlers they were given a short spin on the prairie first, where Wonder showed the most speed and range; then back to where the birds had been marked. Wonder challenged but could not make it out, and the birds were not found. Turning toward home, Stafford flushed a bird which was marked down in the grass. Meantime a large covey had been driven from some corn and marked down in a slough. Going for the single bird, Frank made a gamy point, which Wonder refused to back. Moving on, nothing was found, and he was stood a take point. Then in the slough an awful mess was made, and dogs, handlers and judges scored flushes right and left. It was now eleven o'clock, and the heat was stifling in the long grass, and the dogs were ordered up, when Frank was withdrawn and Prairie Wonder awarded the heat. Down fifty minutes.

COUNTESS MAY II. AND COUNTESS MOLLY

were put down in the afternoon at half-past three, about a mile east of town. Neither dog showed much speed or style. Working through some weeds and grass, Molly pointed just as a bird flushed at the corner of a corn. Just then a cur ran ahead and flushed a covey in some stubble. Turning to the south, May ran on to a bird down wind and dropped to wing very nicely; she soon flushed another which she should have pointed; then she pointed false and Molly backed nicely. A little further on May again pointed, but soon moved on and made another point, Molly backing. Then Molly did some fine roading down wind, but flushed the bird; then going south a mile to stubble, both dogs showed more speed. Nothing was found, and they were ordered up to go down again, and a number of heats in the second series were run, when they were again put down, and Molly at once pointed. May worked in ahead and pointed, but moved and flushed the covey. They were then ordered up and Molly was given the heat. Down altogether one hour. May was all off and suffering from an attack of dysentery. This ended the first series of heats. Following is a summary:

First Series.

Elsa beat Prairie Molly.
Gilderoy beat Josephine.
Pink B. beat Scott.
American Dan beat St. Elmo IV.
Cavalier beat Count Dad.
Prince Noble beat Acme (withdrawn.)
Prairie Wonder beat Frank (withdrawn).
Countess Molly beat Countess May II.

Second Series.

ELSA AND GILDEROY

were put down in stubble while the last brace were bracing up for a renewal of the contest. Gilderoy at once made game, and Elsa soon did the same. Gilderoy roaded out the bird and dropped on point just as the handlers flushed the bird. On a little further Elsa was dropped on a gamy point. Elsa swung ahead and half pointed, while Nesbitt, to order, flushed the covey in front of Gilderoy. This was very pretty. Elsa was called up and a bird flushed close to her. She moved on a little and made a beautiful point, but nothing was found. Gilderoy then swung into the wind and located a brace in capital style, dropping as if shot when he caught the scent. This was good work. Elsa now made a beautiful point at the edge of some weeds, and the Captain flushed it to order. One also flushed behind Gilderoy. Both dogs were very steady. A bird was soon after flushed a long distance from Gilderoy, who instantly dropped to wing. Then after the scattered birds Gilderoy dropped on point, and Elsa working ahead scored a flush. Gilderoy in the meantime had roaded a bird, which the judges flushed as they came up. Swinging over a knoll, Gilderoy dropped on point to a single bird, which was flushed to order. They were then ordered up and Gilderoy awarded the heat. Down forty minutes.

PINK B. AND AMERICAN DAN

were at once cast off; both started out at a rattling gait, Pink evidently all the better for his adventure with the skunk; for he let out an extra link and ranged much wider and at greater speed than in his previous heat; Dan also moved well, and was fully his equal in speed, style and range; they made a capital brace, being more nearly matched than any brace at the meeting. Both challenged several times, but it was some time before any thing was found; ranging over a stubble Pink made a long point on a brace of mallards which got up wild as we approached; then swinging a little further he again pointed in grand style, Dan backing or pointing, we could not tell which, as the birds flushed wild before we came up. This was first class work for both; then across a slough after them several more flushed from the short grass in a mowing, Dan making a beautiful point, when they got up. Pink went straight to the scattered birds and made a grand point; the birds were flushed to order, and each handler killed one, both dogs retrieving very well. Dan then pointed in grand style, but spoiled it all by moving up a little too close and scoring a flush; as if determined to lose the heat, he then blundered up another one, and the judges after a short consultation ordered them up and announced Pink B. the winner of the heat. Down half an hour.

CAVALIER AND PRINCE NOBLE

were then put down, but as it was nearly night no birds were found, and after a twenty minutes' spin they were taken up to go down again in the morning. Both showed great speed and range, giving promise of an interesting heat if no ill-luck should befall them. Wednesday morning at a few minutes past six they were again put down in an oat stubble about a mile west of the town. This was drawn blank, as was a stretch of open prairie to the next stubble, when Prince dropped on a capital point, which Cavalier handsomely backed. We then went a mile west to a large stubble, and Prince again dropped, but soon moved on and roaded very nicely what proved to be the trail of turkeys. Cavalier showed grand style in backing, in fact he was too much inclined to back, although the performance was very pretty to look at. After drawing another stubble blank we went a mile south to a large stubble where Prince flushed a single bird that was just coming out of the grass; then east to another stubble; Prince challenged where birds had been running and Cavalier backed him; Prince swung for the birds, and was fortunate in finding them; he dropped very nicely to a large covey, the pointer backing him in good style; the birds flushed nearly a hundred yards ahead; this was very well done. Working on Cavalier located a single bird in the weeds, but pointed, but his tail was moving; Prince did not back, but took point alongside.

The judges, after a short consultation, awarded the heat to Prince Noble. Down, altogether, an hour and a half. The handler of Cavalier took exceptions at the decision and withdrew his dog. In this we think he acted rather hastily, for Prince had certainly shown himself the better dog; and if a longer trial had been given, the superior handling of Prince, together with his greater experience, would undoubtedly have pulled him through. We were sorry to see Cavalier withdrawn, as we thought him a very superior animal, and had he remained in he could hardly have missed a place.

PRAIRIE WONDER AND COUNTESS MOLLY

were at once cast off and worked east to a large oat stubble, where Molly challenged, and would not leave, although repeatedly called. Stafford, in going for her, flushed the bird that she knew was there. Wonder then pointed larks, and Molly backed her a long distance. Then, in stubble, Molly pointed a covey which soon flushed; she dropped to wing nicely. Wonder then came up and made a bad flush, and Molly following suit, the dogs were ordered up, not to go down again unless they should have a chance to win; down nearly an hour. This ended the second series. Following is the summary:

Second Series.

Gilderoy beat Elsa.
Pink B. beat American Dan.
Prince Noble beat Cavalier.
Prairie Wonder and Countess Molly ruled out.

Third series.

Gilderoy and Pink B. were put down to decide which should contest with Prince Noble for the honor of first place. Prince had been very fortunate, as by the withdrawal of Acme, he won his first heat without an effort, and now by the throwing out of Wonder and Molly, he was entitled to a bye, thus virtually winning three heats while only called upon to run one. This was hard lines for Pink, who ran a game race to the end, and under more favorable circumstances, the verdict might have been reversed, as there was not much to choose between the two.

Gilderoy also ran game as a pudble and made a good fight, although he was sick with dysentery and clearly not fit for work; had he been in proper trim there is no telling what the result would have been. When he and Pink were put down Pink at once struck out at a rattling gait with Gilderoy not far behind. At the far end of the stubble Pink ran on to a bird that he should have pointed, when both dogs dropped nicely to wing and a brace of birds lay until Short came up; then swinging north both dogs made game, but Pink located the bird. Short coming up flushed the bird just as he pointed Gilderoy then scored a flush; then several fields were drawn blank. Swinging along the edge of weeds Gilderoy challenged and roaded his birds in grand style. Pink did not appear to smell them but worked ahead and flushed. Gilderoy was now out of sight in the weeds, and several more got up near him. Then some time was expended in beating a stubble and grass without result. Several birds having been marked down the dogs were worked in their direction. Gilderoy pointed grandly in the weeds, but nothing was found and he scored a false point. Pink then flushed a brace and Gilderoy followed suit. The judges, after consulting, ordered them up and awarded the heat to Pink B. Down an hour and ten minutes. Prince Noble having a bye, this ended the third series. Following is the summary.

Third Series.

Pink B. beat Gilderoy.
Prince Noble a bye.

Fourth Series.

PINK B. AND PRINCE NOBLE.

After a half-hour's rest, Pink B. and Prince Noble were put down for the final heat which was to decide which of them should be crowned as winner of the Derby. Just after the close of the previous heat we had flushed a small covey, and most of them had flown but a few yards. Working the dogs toward these, some were flushed by the handlers and judges. The dogs were swung round and Prince flushed one, dropping to wing nicely. Pink then flushed, and as it fluttered close to his head he made a jump for it. This was bad, but the provocation was great. After working a little further on the dogs were ordered up until evening, as the heat was terrible. In the afternoon, after driving about five miles north, the dogs were put down on the open prairie. A bird was flushed by the spectators and the dogs were called up, when Pink scored a flush. A little further on Prince scored a false point. Then on in the grass Prince showed the most speed. Pink was his equal in range and his superior in style. Then at corner of stubble both challenged, but after roading a short distance they lost it. Swinging for the scent, Pink found it, but scored a flush. Then, in the grass, Pink dropped on point, but he was too close; the bird flushed, and he started to jump for it, but dropped to order. Then, in the stubble, he pointed false, Pink backing nicely. Then, drawing a stubble field blank, we crossed a slough to another stubble, where Pink scored a capital point, while Prince backed in good style, Short killing the bird to order. This was very good work. It was very hot, and the dogs were tired, Prince showing evident distress. They were taken into the wagon, and the first brace in the All-Aged were given a half hour's turn, when they were again put down on marked birds when Prince scored a flush and Pink got a good point, then Prince moved on a little and earned another flush and Pink followed suit. Then in stubble Prince pointed nicely, but nothing was found, then across a slough into a nice stubble. Prince pointed and Pink backed an instant, but caught the scent and pointed also. Short flushed to order and missed; this was capital work and was greatly enjoyed by all. A little further on Prince found the bird that Short had shot at, dead, and pointed it nicely, Pink backing, then on a little further, Prince pointed and Pink backed, the bird was flushed to order, and in an instant the performance was repeated, then again the same with Pink in the foreground. This was the liveliest work that we had seen, and it was keenly enjoyed. We thought Pink was a sure winner, but he swung back and flushed two that he should have pointed, and soon another one got up in front of him. The dogs were ordered up, but after consulting awhile they were put down again and worked across the prairie to a large stubble where Prince made a beautiful point, but drew too close and flushed the bird which was a trifle wild. Pink coming up scored a flush. Prince Noble was declared the winner of the heat and first prize. Down altogether three hours.

Fourth Series.

Prince Noble beat Pink B., and won first prize. Cavalier, who was the only dog beaten by Prince Noble, having been withdrawn, Pink B. was declared winner of second prize.

Fifth Series.

Pink B., by the withdrawal of Cavalier, won second prize.

Sixth Series.

SCOTT AND AMERICAN DAN

were at once put down to decide which should run with Gilderoy for third place. Not much was done, as it was nearly night, and they were taken up to go down in the morning. At half-past six o'clock on Thursday morning they were again cast off in stubble two and a half miles east. Both started well. Dan, who had been all off, evidently feeling much better, commenced with a flush, and Scott soon after scored the same. Dan then showed us one of his stylish points, which Scott refused to honor, but moved on and put up the bird. A few steps further on Scott again flushed and made a jump for the bird, but stopped to order; he soon made another flush. Dan then pointed, but Scott, who evidently winded the birds, drew ahead and again flushed. The judges concluded that this was enough of the kind and awarded the heat to Dan. Down an hour and a quarter.

Sixth Series.

American Dan beat Scott.
Gilderoy a bye.

Seventh Series.

AMERICAN DAN AND GILDEROY

were now put down to decide the winner of third place. Both were feeling better. Gilderoy led off with a false point, which Dan backed in grand style. Then in a small stubble Gilderoy dropped on point, Dan again backing. Reading on, Gilderoy was unfortunate in taking the back track, while Dan, with better judgment, got them right, and made a magnificent point. Dew flushing the birds to order. Then, on east, Dan pointed false. A little further on he swung his head over his shoulder and made a capital point; Dew killed to order. Moving on a little, Dan again pointed. Gilderoy, failing to back, was dropped to order. Dan was a little unsteady, and Dew corrected him. They were ordered up and Dan awarded the heat. Down an hour and a half.

SEVENTH SERIES.

American Dan beat Gilderoy and won third prize. St. Elmo was withdrawn, and Scott and Gilderoy divided fourth prize, thus ending the Derby. Next week we shall give the running in the All-Aged Stake.

THE WINNER OF THE ALL-AGED STAKE.

By an unfortunate miscarriage the last three heats of the All-Aged Stake in the chicken trials failed to appear last week. They were as follows: Gertrude beat Frank H.

Fourth Series.

Sue beat Gertrude. Don a bye.

Fifth Series.

Don beats Sue and wins first prize.

FOX HUNTING IN MARYLAND.

THE revival of fox hunting in Maryland is hailed with enthusiasm. It has been steadily growing in popular favor for the past six or seven years, the red foxes having so increased as to be troublesome to the farmers. Owners of rural residences have taken a great interest in the matter, and have been greatly improving the breed of fox-hounds, bringing it up to the old time standard of excellence. Years of idleness had almost obliterated every trace of the various old packs, whose cheery voice once kept the hills of Baltimore, Howard and Hartford counties ringing merrily. Here and there a good dog was found, but it was the exception rather than the rule. Now a number of packs can be found, and the position of "Master of Hounds" is rising to its old eminence. One of the hardest workers in the late revival of fox hunting was Dr. Maxwell Wood, U. S. N., now deceased. His country seat, Rosewood Glen, is near the old Garrison Forest Church, at the head of the Greenspring Valley, and his success may be gathered from the fact that the first meeting took place there in 1875, and the fox was run to earth in the most approved style, after a ride that set the young men wild with enthusiasm and stirred the old to glad memories of their youth.

Several packs of fox-hounds of unexcelled quality are now kept in Pennsylvania, in the neighborhood of Paoli and West Chester, and for years the sport of fox hunting has been followed with continued ardor of olden time. Great care is observed by the wealthy farmers of these sections in keeping the blood of their hounds perfectly pure. All worthless animals are culled out, and the Schaffer pack as well as that of the Rose Tree Hunt, is composed of the speediest and truest of dogs. If our Baltimore friends need new blood they can readily draft from the packs of their Pennsylvania neighbors. HOMO.

TORONTO DOG SHOW.

TORONTO, Sept. 16, 1882.

Editor Forest and Stream:

A very successful show of the smaller breeds of dogs, from cocker spaniels down to toy-terriers, has been held at the Toronto Zoological Gardens during the present week. The entries numbered about 120, and most of the classes were very good.

The show of black and tan terriers was much above the average in quality, and the winning dogs, although rather too heavily cropped for perfect elegance, were thorough terriers in character, with beautiful long heads and muzzles.

The fox-terrier class was well filled and brought out some capital specimens. The winning dog, known far and near as the Markham dog, looks like a rare workman, and bears the scars of many an encounter with large-sized vermin, such as 'coons and foxes. He has a capital head, and ears beautifully carried. He is just a trifle high on the leg, and his tail has been left too long for symmetry. The second prize was given to a rare good dog, but which was too heavily marked on the body, and also a wee bit too leggy. The went to a beautiful-bodied and nice-limbed bitch, with neat ears and good expression, whose head, however, was rather short, and muzzle with hardly enough punishing power.

Two rare good Skyes faced the judges. First was awarded to a drop-eared dog, very short and strong of limb and with great length and strength of body. His coat was very dense and hard and of good length, although he was not shown in the pink of condition. He was hardly pressed by a young prick-eared dog of excellent quality, who is not yet so well furnished as his older competitor, but which will, by and bye, be hard to beat in any company.

The class for rough-haired or Scotch terriers was, as usual, rather a mixed one. The winners, although inclining to be too soft-coated and leggy, were every inch terriers of great character, and very *vermint* looking dogs.

The class for dandie dinmonts had some excellent specimens, and the winning dogs, indeed the whole four entries,

if shown with more care as to condition, are fit to compete successfully at the largest bench show.

The cocker spaniel class was an easy one to judge, although out of a dozen entries four were pretty fair dogs. First prize went to a black of average merit, and second to a liver and white ticked litter sister.

An very good young dog won the first prize. His strong points were his markings and wrinkles, and his size (about eight pounds) gave him a decided advantage over the second-prize dog, which was too large—about sixteen pounds. The winner is rather small in the head and not quite short enough in the face. He will furnish up in body with advantage as he gains in age.

The toy-terriers were very good, first going to a very small black-and-tan beautifully marked as well as coated.

Appended is a full list of the awards, the judges being Messrs. J. F. Kirk, of Toronto, J. C. Morgan, of Parkdale, and W. Bugg, of Yorkville, who acted in concert, and it is needless to say the judgments were well received by the *cognoscenti*.

AWARDS.

Class 1, Black and Tan Terriers.—1st, John Guest, Toronto, dog Cuss; 2d, John F. Scholes, Toronto, bitch Sniff; vhc, John F. Scholes' dog Sep; hc, George Haskins, Toronto, dog.

Class 2, Fox Terriers.—1st, R. G. Armstrong, Markham, dog Spot; 2d, David S. Booth, American Hotel, dog Grit; vhc, A. C. Douglas, Toronto, bitch; hc, John Warne, Toronto, bitch, and John Dudgeon, Toronto, dog.

Class 3, Skye Terriers.—1st, Jas. M. Rogerson, Toronto, dog; 2d, Thos. Ogilvey, Toronto, dog Ogie.

Class 4, Rough-haired or Scotch Terriers.—1st, Jno. F. Scholes's dog Sandy; 2d, D. McKinlay, Parkdale, dog; vhc, Polly Newhall, dog Schneider; hc, George E. Cooper, Toronto.

Class 5, Dandie Dinmont.—1st, Geo. J. Little, Parkdale; bitch, 2d, Arch Little, Guelph, bitch; vhc, Geo. J. Little, Parkdale, dog; hc, Arch Little, Guelph, dog.

Class 6, Cocker Spaniels.—1st, Henry A. Hall, Toronto, bitch Jetty; 2d, Henry A. Hall, bitch Fanny; hc, F. A. Campbell, Toronto, bitch Dido; c, Richard James Day, Hamilton, dog Czar.

Class 7, Italian Greyhounds.—1st, W. A. Andrews, Toronto, mouse-colored bitch Nelly.

Class 8, English Pugs.—1st, John Hendry, Toronto, dog Tommy; 2d, Grant Braley, Toronto, dog Jack.

Class 9, Toy-Terriers.—1st, John Walker, Toronto, black and tan bitch Topsy, 2¾lbs.; 2d, George Cooper, Scotch terrier Gyp; c, W. Smith, Toronto, black and tan bitch Tiny.

Class 10: puppies of these classes.—1st, A. C. Douglass, Toronto, fox-terrier dog pup; 2d, A. C. Douglass, fox-terrier bitch pup; vhc, Dennis Farrell, Toronto, black and tan bitch; hc, E. Cooper, Scotch terrier bitch pup.

Extra class, Yorkshire Terrier.—1st, John F. Scholes, 2d, E. G. Bell, Toronto.

Special prizes.—Hy. Samson, Toronto, fancy Chinese dog Jumbo; T. D. McGaw, Queen's Hotel, one Scotch coolie pup; E. Doherty, Galt, field spaniel pup; Mr. T. A. Sullivan, of Toronto, exhibited a pair of thoroughbred English setters, and Mr. John Hendry, of Toronto, a very fine pointer bitch and pups. These did not compete for prizes. The attendance has been very large, and the display an equally good one. SIMCOE.

DOMINION KENNEL CLUB.—Yesterday afternoon (Sept. 15) a meeting was held in the Queen's Hotel for the purpose of discussing the formation of a local branch in connection with the recently established Dominion Kennel Club. In January last the "Dominion of Canada Kennel Club" was started by a number of prominent Canadian sportsmen then in Ottawa, and since that time vigorous and consistent effort has been made to develop the association into a representative Canadian one. The original provisional board of directors included such well-known men as Alonzo Wright, John Gilmour, Lindsay Russell and W. A. Allan, of Ottawa; Lieut.-Gov. Newdney, Mr. Caron and C. N. M. Temple, of Quebec; Christopher Robinson and Z. A. Lash, of Toronto; H. B. Harrison, of Tilsonburg, and others. Mr. B. H. G. Vickars, of Ottawa, was appointed provisional secretary and treasurer. A circular issued by the directors gave the objects of the association as twofold, national and local, as follows: National—To encourage throughout the whole Dominion the importation, sale, breeding, training, and exchange of highly bred dogs of all classes. To compile and publish a national stud book, in which dogs of every breed, whelped or owned in the Dominion, can be registered. To endeavor to secure such legislation as will protect the game of this country, and assist in the enforcement of existing laws having that object in view. Generally to assist in the conviction and punishment of persons guilty of cruelty to animals, more especially to the dog, and the various kinds of game. To encourage public exhibitions of dogs, such as bench shows and field trials. To encourage legitimate sport generally. To aid in improving breed, buy, sell, train, and exchange, for the benefit and profit of the shareholders, such breeds as may from time to time appear advisable to the club. To afford medical attention, nursing, and care to dogs being the personal property of members of the club as well as those owned by the club as a body. Organization of the club was effected upon a joint-stock basis, with shares at $10 each, and headquarters at Ottawa. A resident board of directors was subsequently appointed, and each of the provinces was allotted representative directors. Besides this, it was deemed advisable to have local boards in each of the larger centers, such as Montreal and Toronto. A few days ago the secretary of the club, Mr. Vicars, arrived in Toronto to confer with sportsmen here, and the result was yesterday's meeting, attended by a number of gentlemen privately notified of the matter. There were present among others Messrs. Richard Cassels, Christopher Robinson, Q.C., John Maughan, Lieut.-Col. Otter, Jas. Spooner, Major Drayton, W. Armstrong, R. Tinning, Jr., E. G. Bell, Geo. Schofield, and J. F. Kirk. Mr. Cassels was moved into the chair, and Mr. Kirk named secretary. Mr. Vicars, in introducing the subject, spoke briefly regarding the objects of the club, as given above, and enlarged upon the benefits which would result in the breeding of dogs in Canada. Besides establishing a kennel upon a large scale at Ottawa, and holding annual bench shows, the club proposed to take in hand an annually exhibition of sporting outfits and materials. For the bench show they had assurance of large entries from the States. The club proposed also to inaugurate field trials, a sport not as yet familiar in this country. There was every prospect that the association would be able to accomplish its ends satisfactorily and economically. As regarded the establishment of a kennel in Ottawa, a lot had already been donated to the club by one gentleman, and the Messrs. Gilmour had offered to give all the lumber needed in construction. The total amount of the stock would have been subscribed two or three times over in Ottawa, had it been desired, but as it was wished to make the association as general as possible, no advantage was taken of the fact. A general discussion followed regarding the object and scope of the association. The opinion was expressed that the breaking and training of dogs was one of the most important of the matters to be attended to. Mr. Vicars said that first the club would be able only to maintain one or two competent kennel-keepers at headquarters, as the expense of a training establishment in the country could scarcely be borne, but that the keepers could yard-train the dogs, and subsequently a branch establishment might be undertaken in a game neighborhood. It was suggested that some of the country sportsmen might take this matter in hand. It was eventually determined to nominate a local board of directors, with power to add to their number, the board to formulate their views regarding the objects of the club and the best means of furthering its interests in this vicinity, and to communicate the same in writing to headquarters at Ottawa. The following were nominated: Mr. Richard Cassels, Col. Gzowski, Mr. Spooner, Lieut.-Col. Otter, Lieut.-Col. Grasett, Messrs. John Maughan, John O. Heward, E. Clarkson Jones, J. H. Morris and Beldome. Mr. Kirk agreed to act permanently as secretary. The meeting then adjourned. A meeting will shortly be held in Montreal to organize a branch of the club there.—*Toronto Mail.*

Rifle and Trap Shooting.

THE INTERNATIONAL MILITARY MATCH.

THE country and the world knows the fact of the defeat of the Americans in their match with the British team in the long talked of International Match. Below the story is told in detail and with the scores in full. There is little really to be narrated. The shooting went on without interruption. The faces fired without special mishap, and the result is a fair showing of the relative merits of the two teams. There are dozens of explanations, but the truth is that the match was lost in a dozen different directions. More experience, better discipline, superior rifles, and a greater incentive to work as operated to bring the British team one hundred and seventy points to the front. The defeat is such a crushing one that it suggests at once that a radical move must be made in making up the team for the return match. A start must be made from the bottom, and somebody familiar with the theory of rifle building must furnish a rifle fit for the work in hand. This once provided, the rest of the labor of preparation is comparatively easy. We are defeated, but it is not American habit to remain so.

THE FIRST DAY.

On the afternoon of September 14, the International Military Match opened, and the day closed with the American team 19 points to the rear.

Seldom has the range looked more attractive than it did on this occasion. As the visitor passed through the gates a most inviting panorama was presented. Bright day light, a cool breeze, and as a matter of comfort, not from a marksman's standpoint, was all that could be desired. Sun enough to be felt, clouds enough to prevent it from being felt too much and to prevent also any disagreeable effects of too much light upon the targets which so many eyes were to scrutinize for hours. The broad level acres of Creedmoor wore a charming shade of green, and at this point and that could be seen the folds of the British or American colors—National Guard flags, flags of the association or signal flags—all flying fast in the strong south wind.

Then there are to be seen over on the ex reme left of the field two rows of small tents which are at the service of visiting national guardsmen. Further down the avenue is a group of private tents, in one of which John Hilton spent a time, and in another of which General Molineux, the president of the association, received his morning callers.

The hotel is the central gathering point on the range, and from its roof the English flag is flying. The eastern end of the hotel is occupied for an ammunition salesroom and statistical department of the association. As you stop to look into the ammunition room a wagon drives up at the door with half a dozen small boxes in it which appear to be the heaviest handling, for which, in fact, the sturdy sergeant when he comes to unloading them. They are boxes of cartridges intended for a general extermination of bullseyes. The remainder of the hotel is in the hands of a caterer, with piles of roast chicken at the windows, very much like galleries of pictures, and as a matter of size, baskets of fruit, barrels of beer, and so forth, while out behind the club house some pleasant vapors began to ascend from one of the biggest clam chowders on record, and from green corn boiling in an adjoining field of huge dimensions. A view of the range from the hotel, where all the people congregated prior to the beginning of the great match, shows you, beside what has been already mentioned, the president's official tent right opposite, the bulletin board to one side thereof, a number of beer gardens under canvas, a telegraph office, the little frame house used by the markers, and below all, yet above all, that chief object of interest to visitors, the row of targets standing there, with a bit-me-if-you-can look in each one's appearance.

Just east of the systematic depreciation of the American's chances since the arrival of the British team was seen in the comparatively small interest manifested in the match. Where thousands had gathered to witness the small-bore matches several years ago, hundreds now were gathered, and there was no scene of excitement and enthusiasm. There was a strong sprinkling of military men in the lines pressing about the bulletin boards, and they were chiefly interested. It was a military affair, and in this aspect and in the interest which is bound to attach to service rifle construction and military rifle practice lies its greatest significance.

Shortly after noon the members of the two rival teams sat down to lunch together in the headquarters tent of the National Rifle Association, opposite the club house, and a crowd of spectators assembled in front of the tent to see the men at their meal, and to be pointing out to each other the different riflemen, and commenting on their appearance, a proceeding not altogether agreeable to the Englishmen, who are not accustomed to be placed on exhibition at meal time. Col. Bodine, the captain of the American team, sat at the head of the table, flanked on the right by Sir Henry Halford, Captain of the British team, and Major A. P. Humphry, of the committee who direct the British team. Mrs. Humphry, wife of Major Humphry, sat next to Sir Henry Halford, and the rest of the two teams were scattered with officers of the rifle association. The lunch was a very plain one, and no wine or other exhilarating drinks were used, soda water and plain water being drank exclusively by the gentlemen. The lunch concluded at 1:30, and at 2 o'clock precisely each of the two teams then took a last look at their rifles, discarded all superfluous garments, and started for the new, or west, range, where the first trial of skill, at 200yds., was to take place. The British team, led by Sir Henry Halford, was preceded by the Main Guard, and from the Creedmoor, then followed the American team, led by Col. Bodine, and the Pennsylvania State team, marching in columns of four, acted as rear guard. The crowd which had watched the lunch so faithfully followed the teams to the range only to find that the best places for seeing the matches had been appropriated, and they had to take their places in the rear of those who had been wise enough to hurry to the range in advance and secure good places at the ropes.

The breeze was so strong that it fairly approached the proportions of a good, stiff, working gale. It was from the left of the long stakes of the headquarters of the rifle association clear from the ground, and at times it seemed as though some of the less secure of the tents would be torn from their foundations and hurled across the range. It was a beautiful wind, veering from 6 to 8 o'clock, and at all, though blowing in a general direction from the rear toward the targets, shaping its course in such a zigzag manner that one of the British team ventured the suggestion that it was "going to be all my own eye" to shoot in such a wind. Over the tops of the tall trees which covered the sky all through the forenoon broke away before the match began, and the sun shone out upon the range very brightly. There was no mirage, however, in front of the targets to blind the eyes, and the mist was constantly driven off. The day was much preferable to alternate shade and sunshine which it was feared during the morning would make aiming very uncertain by lighting and shading the targets alternately. But for the strong south wind which blew steadily throughout the afternoon, a better day for the shooting, or a great match, could not possibly have been selected.

During the morning the choice of position had been tossed for and won by the Americans, who selected the targets to the right, marked 6 and 7, the British taking Nos. 3 and 4, to the left, leaving but one target out to use between the two teams. The British team at once began to make ready for the opening contest, which was appointed for 1 o'clock, and the American team did the same. Rifles were uncovered and carefully examined, the men sitting on rude wooden benches. The wind had veered to the south during the morning, and the wind blowing a perfect gale. In front of each team was a series of four telescopes, at which the scorers sat to watch the targets and see that no mistakes were made in the scoring by the men in the "butts." The British and American boards were many furlongs to the right of the field, on which a continuous score was kept from the first shot made in the stage to the last, with the totals.

The uniforms of the British teams presented a striking variety of color, the Irishmen in the full dress uniform of Pearse and the red coats of Dods and others, the dove-colored Eton uniform of Godsal and Humphry's cadet gray. Mrs. Humphry was dressed in quiet brown and wore the badge of the National Rifle Association. She sat at the telescope, and when not engaged looking at the target gave her husband points regarding the variation of the wind and other matters of importance to marksmen. Colonel Bodine was the most military-looking figure on either side. Tall, dignified, straight as an arrow, he looked the very ideal of an officer. Colonel Howard was only in undress uniform of the coaches, but even this slight addition to his usually exceedingly plain uniform seemed to trouble him. Some of the Englishmen had white cloth havelocks over their caps as a shade from the sun. The men shot in squads of four, two men to a target and three shots to a man. Each of the two teams was divided as follows: Parry and Goodear, Bates and McVittie, Pearse and Oliver, Caldwell and Dods, Heap and Boulton, and Humphry and Godsal. On the American side the pairs were: Hinds and Ogden, Howard and Richard and Hinman, McNevin and Atkinson, and Dolan and Alder.

Sir Henry is a genial old gentleman—not so old perhaps as his gray hair would indicate, with a love for a rifle second only to his love of the land where he learned to shoot. Naturally not a decidedly conservative nature, his enthusiasm as a marksman is unbounded, and the records he has made have given him good right to rate himself high as an expert and authority. He showed his interest by rapidly moving about among his men the livelong day, admonishing one, praising another, and urging all on to their best work. Casually glancing at him, an observer would have quickly concluded that he was displaying much nervousness, but close inspection showed that there was method in every movement, and that no word was spoken without its purpose. Personally examining the guns of all his subordinates, he was prolific in s ggestions and came fresh to each marksmen in turn with hints as to the force of the wind and other obstacles which were to be met. He had a field-glass of his own and kept it in constant use. Occasionally he would run leisurely across the sward intervening between the British and American teams on the range and cordially interchange a dozen words or so with the American leader, to tell a story, or crack a joke which always seemed to be most pleasantly received, and was certain to produce a hearty laugh. He was clad in the undress uniform of his regiment, a dark blue cloth marked by black braid. Upon his head was jauntily displayed a Scotch bonnet of color and texture corresponding to his suit, and upon the left breast side of this head-dress appeared in silver the insignia of his regiment, the First Leicester Vols.

The positions assumed by many of the men at the off-hand range were decidedly unmilitary. For instance, Major Pearse, of the British team, shot from a hip rest and leaned back on his right leg in a manner which could hardly be called military; also Sergeant Paulding, of the Americans, reached the left hand too far along the barrel. These are only two in-tances of trespassing upon the rules of tactics that might be cited. Perhaps these objections might be deemed captious, but it must be remembered that the match is supposed to be a military one. Another thing noted was that the men of both teams raised the right elbow so high that they been firing in the ranks they would have knocked their right hand men out of dressing.

The rifles of the Americans were all Remingtons, their chief peculiarity being a drop of powder and a half at all the other distances the bullet employed was 550 grains of lead, projected by a charge of 90 grains of powder, but it does not appear that there was uniformity either in the amount of powder burned by the teams or in the strength of it. So far as might be judged by the results the English powder was far quicker in burning, and, therefore, cleaner and better than the American.

The British team completed their 200yds. scores at the 200yds. range at 2:45 P. M., the American team finishing about fifteen minutes later. The aggregate British score at this stage was 340, and that of the American team 331—a lead of 9 points for the visiting team.

This range had been thought to be the strong point of the Americans, but the Britishers proved themselves able to hold up to it with greater weight of men stood firm in the heavy wind. Still the battle was not over, and nobody was either specially elated or discouraged.

Without loss of time the teams changed positions from the short to the mid ranges, and commenced shooting a few minutes before three o'clock at 500yds. This is a favorite military distance, and when it is remembered that the shooting was at a 22-inch bullseye, from the prone position, it is not surprising that good scoring should be done, and this distance the British team rapidly and confidently than they had done before the third class targets. All through the day's work McVittie, whose fine shooting had been witnessed before at Creedmoor, was remarkable for the steadiness and rapidity of his practice. The Irishmen

tlemen well known in military and sporting circles. Among them were Gen. Winfield Scott Hancock and staff, Gen. Anson G. McCook, Gen. Kilburn Knox, Gen. Alexander Shaler, Gen. M. T. McMahon, Col. John Meagher, Col. Carl Jussen, Col. Frank Risley, Major Wm. De L. Boughton, Col. Emmons Clark, of the Seventh Regiment; Judge Gildersleeve, Col. E. O. Hotchkiss, Twenty-third Regiment Veteran Corps: Gen. James W. Latta, Adjutant-General of the State of Pennsylvania; Col. George H. North, Assistant Adjutant-General on Gen. Hartranft's staff, and Dr. Reed, Surgeon-General on the staff of the Governor of Pennsylvania.

The hope indulged in by many that the Americans would be able to overcome the nineteen points by which the British led them at the close of the first day's shooting was doomed to disappointment. The leading team was confident; the following team was desperate, and lacked the cohesion necessary to make a strong uphill fight. The members of the beaten team were still trying experiments, while the winners had finished all experimenting years ago. While it was a day sufficiently ugly in its weather conditions to try the best of skill, it was not as bad as some days to be met on Creedmoor, nor are the scores on either side as good as the day should have warranted. The match closed without any mishap, and to the end there was no call for the services of General Molineux, the referee of the match. The utmost good feeling prevailed to the end, and the English team carried away with it a feeling that everything had been done to make its stay a pleasant one, and to secure it every chance of showing its wonderful skill as a band of military long-range shots. American riflemen learned by the severe drill of a "knock down" that there is much to be done yet before they can boast of real practical skill with the rifle. The plucky fight of the Americans on Thursday stimulated an interest on the part of the people much greater than that shown on the first day. Fully three or four times as many spectators were on the ground, and many handsome equipages skirted the edge of the crowd that pressed against the ropes near the firing points. Many came out expecting to see a stubbornly contested struggle, and hope was very lively at the outset, even in the hearts of the American team, for a possible victory.

All expectations of this kind dwindled rapidly when the shooting began. The first few shots on both sides told the story of what would be the outcome, to the initiated. The Americans began with excess of caution that bordered on nervousness. The British opened fire first. They had no record of the prevailing meteorological conditions and were thrown on their judgment as to how they must be met. They raised their elevations a point above their highest record, estimated with great nicety the force of the wind, and found the target at once. The Americans delibrated, consulted, hesitated, and then Hinds fired the sighting shot for the team. The bullet went wide of the target. Dolan shot next and got a bit near the edge. Shot after shot followed, and betrayed the fact that the guardsmen were floundering about without accurate knowledge either of the correct elevation or the necessary wind allowance. The story of the day's work is a simple one. Without special incident or event the shooting went on during the afternoon. On one side was confidence and serenity; on the other groping about for results. At 800yds. the opening was ragged. No shooting that could be called good was done at the 800yds. range. Heap put up only 10 points, out of a possible 35, for the British, and Hinds was able to make no more than 19 for his side. Boulter led the field with 31, while Alder and Ogden headed the American score with 27 each. The first range team completed at 2:35 o'clock, and it showed that the British had scored 293 points to the Americans' 255, leaving the latter 38 points behind. The score was out of a possible 420 points. The gain just mentioned, when added to that of the day before, gave the British a lead of 57 points to go back to the second range with.

At fifteen minutes before three o'clock the contending marksmen were ranged in order behind the 900yds. firing points. The wind was hardly so strong at the opening here, though it increased afterward. Parry began for the English with a center, and was in due course followed by Hinds, of the home team with an inner. Dolan commenced with his modest three, and so the sport went on from bad to worse, so far as the Americans were concerned. When the shooting was about closing at the 900yds. distance a large number of expectant spectators was found behind the American team watching their movements anxiously. At half-past three o'clock the practice was ended on the second range. The result was a record of 313 points for the British and 271 for the Americans. This was a new gain of 42 points by the leading team which put them 99 points ahead at the commencement of the third and last range.

The shooting was begun at 1,000 by twenty-five minutes to five o'clock, and it continued without interruption to the end. It showed no hopes for the Americans. There was only just enough daylight for keeping down the tremendous number of points against them. At the outset Ogden scored an outer, and his comrades seemed content even that he had got on the target. Hinds, on the same side, came in with a three, and then Dolan with a four. The English got to work with their customary steadiness and perseverance, forging ahead, as usual, nearly every round. At last they concluded with a total of 307 at this range to 236 made by the Americans—another gain of 71, or a total majority of 170 points over the Americans.

With the firing of the last shot came a little speech making. Good wishes were expressed towards the Britishers. Sir Henry Halford, in returning his thanks, took occasion to utter some pertinent remarks which it would be well to remember. He said: I stand, with my team, in very proud position on this occasion, as victors over those whom we had come to regard as almost invincible in rifle shooting. (Applause.) There is no doubt that the contest has been fought out in a soldierly spirit, and with every possible fairness and honesty. (Applause.) Our reception here has been more than we could have expected. Every point that has been discussed with us has been met in the frankest and most cordial and courteous manner, and I can only say that I return to all of you the best thanks of our team, and also of our country, for the way in which you have received us here. I trust that in 1877, when we were beaten, and beaten bandsomely, we took our defeat like gentlemen. (Applause, and cries of "You did.") If we took our defeat then as you have now, there was certainly nothing more to be desired. I trust that we shall not take our victory in a spirit of boasting, but that we have had a friendly contest at the butts. (Applause.) I may say that we had in the first place a very much greater chance of winning than you could possibly have had, for we must not forget that this class of shooting has been our main study for the last fifteen years, whereas you have only lately taken it up, and I think we cannot but admit that you have made a very good showing under the circumstances. I am quite convinced in my own mind that the victory lies as much with the weapons as it does with the men; and that you have been handicapped in both respects—first by want of practice at long range, and second by having to compete against superior arms. I have very little doubt but that, with your go-ahead American nature, you will appear on the ground next year with equally good if not better weapons than ourselves, and that we will have to work hard to retain our laurels. I feel that we cannot afford to consider next year's match a foregone conclusion from the result of this one. I expect that then you will put us in a very tight place, and I hope you will do so.

The score of the match is given in detail below. The team was divided into two squads of six men each, and two of each squad completed a target until their seven shots had been fired, when they retired, and the two following them in the squad took their places. The British team was divided as follows: Squad 1—Lieut. J. Healy, Sixth Lancashire Volunteers; Private C. H. Ogden, Second Cheshire; Major G. Pearse, Fourth Devonshire; Sergt. P. Oliver, Third Kent; Major A. P. Humphry, Cambridge University Royal Volunteers, and Capt. P. T. Godsal, Second Bucks. Squad 2—Corp. C. Parry, Second Cheshire; Private J. Goodacre, Sixth Lancashire; Sergt. J. W. Hale, Third Berwick; Corp. W. Caldwell, First Ronfrew; Corp. H. Bates, First Warwick, and Private R. McVittie, First Dumfres. The American team was divided as follows: Squad 1—Private M. D. Hinds, Twentieth Separate Company; Private J. H. Ogden, Second Cheshire; Major Henry Bates, Sergt. J. McNevin, Thirteenth New York; Capt. D. R. Atkinson, Thirteenth Pennsylvania; Major E. O. Shakspeare, staff of Gen. Harfranft, Pennsylvania; Col. G. F. Howard, First Brigade Staff, New Jersey. Squad 2—Sergt. T. J. Dolan, Seventh New York; Private F. Alder, Seventh New York; Private C. W. Hinman, First Massachusetts; Capt. J. M. Pollard, National Rifles, Washington; Private J. Smith, Ninth New York, and Sergt. J. L. Paulding, Twelfth New York.

The order of shooting had at any given time in the match four men at the firing points from each team, and it may be said that taken in the hap-hazard fashion the British scores ran ahead of our own. The record stood:

THE BRITISH SCORE.

An interesting view of the match is had in the running record, where the results are tabulated according to rounds shot. It was seen that when three shots had been fired by each man at 200yds the Americans were 7 points ahead, but after that there was a pretty steady downhill gait maintained by the home team. The opening round at 800yds. gave the Britishers at once 16 points, while the next round added 12 more. The completion of each stage showed a large increase to the lead the British had reached. How the battle was waged when viewed by this method is shown as follows:

THE RUNNING RECORD.

THE CREEDMOOR FALL MEETING.

OPENING on the 12th instant and running in a desultory way through the remainder of the week and into the present week, the tenth annual fall prize meeting of the National Rifle Association has been held. Good weather favored the marksmen, though, of course, there was the usual amount of growling on the part of those who would hit the bullseye but did not. It was a period for good scores if the shooting stuff was in the men. Many new faces were seen upon the old lawn, and new marksmen faced the butts. Michigan and Maine met at the firing points, and Pennsylvania was there to do her share, and right well too did the Keystone State sustain her dignity, and it may be laid down as a pretty positive fact that almost any State is now liable to send up a team of dark horses, so general has become the attention paid to rifle practice. The meeting, in a large degree, was permitted to run itself, and the time is still in the happy dream epoch of the future when system and order, and especially promptness in returns, shall take the place of the present plan of running a meeting with underpaid and incompetent help.

Interlocked in the meeting came the International Match, the tale of which is elsewhere told. There was no great crowd of shooters at the meeting at any time, and the number of entries in the matches may appear small, but it is getting to be pretty well understood that a poor shot stands little chance of securing even a place in the matches at Creedmoor, and many who would be competitors if on the ground do not care to risk the labor of a trip to the range. The presence of the visitors from England added much to the interest of the meeting, and in such matches as they entered the British riflemen held their own pretty well. There were some ugly winds at times during the progress of the matches, but there were no exceptional streaks of weather, and there was favorable chance enough for good scoring, of which many of the men availed themselves. There were no noticeable "duffers" and the places of honor in every match seemed to go where they were deserved. Everybody may not have been satisfied with the result, but everybody was agreed that he lost or won fairly.

Below will be found the complete record of the meeting with the names and winners in order of the conditions of the several matches.

No. 1.—"DIRECTORS'" MATCH.

200yds.—Open only to Directors of the N. R. A. Rounds, five. Position, standing. Weapon, any military rifle. Entrance fee, $1. Prize—The Directors' Championship Gold Badge, shot for annually, and held by the winner during the year.

Won in 1874 by Col. Wingate; in 1875 and 1876 by Maj. Fulton; in 1877 by Col. Stafford; in 1878 by Maj. Fulton; in 1879 by Col. Cowperthwait; in 1880 by Col. Gildersleeve; in 1881 by Gen. Wingate.

Geo D Scott	3 5 4 4—20	G W Wingate	3 4 4 4—18
D D Wylie	3 3 4 5 3—18	G S Schmerhorn, Jr.	3 2 4 4 4—17
G L Morse	4 3 4 3—18	J G Story	3 5 4 3 4—17

No. 2.—"JUDD'" MATCH.

Offered annually, under resolution of Board of Directors N. R. A., to commemorate the services rendered by Hon. David W. Judd in securing the passage of the law by which the association was enabled to obtain its range. Open to all comers. Weapon, any military rifle. Distance, 200yds, Position, standing. Rounds, seven. Entrance fee, $1 each. Two entries allowed, but only the highest score to count.

1st Prize.—A 6½ Pistol Grip Ballard Rifle, offered by the Marlin Firearms Co., of New Haven, Conn., through Messrs. Schoverling, Daly & Gales, N. Y.; value..... $70

Mr. J. H. Steward, of 406 Strand, London, optician by appointment to the National Rifle Association of America, offers two elegant prizes to be awarded in the manner following:

A.—To that competitor making the highest aggregate score in Matches 13, 14 and 15, a New Camp Binocular Field Glass, as used officially at Wimbledon (won by H. T. Lockwood; score, 121); value $40 00

B.—To that competitor making the highest aggregate score in Matches 2, 3 and 5, a Lord Bury Telescope (won by J. H. Brown; score, 291); value 25 00

RANGE AND GALLERY.

THE TEAM MEDALS.—In connection with the International Match came an after fight for two medals. The contest came off on Saturday, September 16. The teams were to shoot for two $100 gold medals offered by B. A. Vogeler & Co., and W. T. Blackwell & Co. One medal was to be given to the man in each team who in contest with his fellows should make the highest score. It was in no sense to be a contest between the teams. Both bodies lunched together in the headquarters tent with the officers of the National Rifle Association. Dr. Morean Morris, surgeon of the Seventh Regiment, presented Mrs. Humphrey with a bouquet made of English ivy and oak leaves, and bound with red, white and blue ribbons. He said that he was not surprised at the victory of the British team, when its interests were watched over by so fair a guardian. Major Humphrey returned thanks for his wife. Major Morris presented Sir Henry Halford with a laurel wreath. The British team fired 10 shots per man per range, while the Americans fired but 7 shots, the scores standing:

	British Team.					American Team.				
	200 yds.	600 yds.	900 yds.	1,000 yds.	Total.	200 yds.	500 yds.	1,000 yds.	Total.

						Paulding	27	25		

BOSTON, Sept. 16.—At Walnut Hill to-day a few gentlemen battled bravely with a most perplexing and baffling wind, which blew from the northeast, and made large scores very difficult to make. The wind not only affected the bullets but swayed the guns so as to make it almost impossible to "hold" at the off-hand position required. The following are some of the best scores made, the new fifteen-cent practice match being the most puzzling:

Practice Match.

A Duffee (Mil.)	45	55	55—45
J A Cobb	45	43	45—42
D Augan	44	43	35—42
B S Jenkins	45	44	33—40
J C Burns	44	43	45—40
P D Thomas	43	44	31—39

Creedmoor Match.

J A Cobb	45	44	33—40
A J Carter	45	45	43—38

C A Jones.....34 34 44 43—36

NATIONAL RIFLE CLUB—Twenty-fifth Annual Meeting.—South Vernon, Vt., Sept. 6 and 7, 1882.—Order of the day, thirty consecutive shots to three ten-strings; distance, forty rods, at rest. The club medal to the best aggregate of the three strings. Below, in inches, 8th and 10th, are the best scores in each string, and the best aggregate of three strings, measured from centre to centre:

	First String.	Second String.	Third String.
H Warner	5 4 0	N S Brockway	11 0 0
C F Fletcher	9 5 1	J Williamson	13 1 0
R C Cressy	10 0 1	N J Huntoon	13 4 0

C F Fletcher	9 5 0
H Warner	9 6 0
N B Tyler	10 3 0

The best aggregate, Homer Warner, Wilcox, Pa., 29 1-0.

J. WILLIAMSON, President.

THE ELCHO SHIELD MATCH.—24 Suffolk Street, Dublin, September 5, 1882.—In the reports of this match, published in England, there are some errors which I find repeated in the account of it that recently appeared in FOREST AND STREAM. No "Sharp" rifle was used this year by any of the Irish teams. Their armament was five Rigbys and three Metfords. Mr. Coghlan, who made the highest individual score of the three teams, used a "Rigby," as also did Mr. Gauly, whose fine record of thirteen bullseyes in his fifteen shots at 1000yds. was most heartily applauded. The Irish team had top score at 800 and at 1000yds., but lost the match by a series of errors at the middle range, among which the most remarkable were three cases of miscreading the wind gauge by a whole division, equalling ten-hundredths of an inch, resulting in two misses and one outer. The wind was a most difficult one, varying in force and direction so suddenly that very large alterations of the wind gauge were constantly necessary. This was the cause of the low score made by all the teams.—JOHN RIGBY.

LOST MEDAL.—Leo Fitzmann, of 13 Second avenue, picked up a National Guard's marksman's medal with three bars, at the festival held at Jones' Wood, Sept. 19.

THE TRAP.

JERSEY CITY HEIGHTS vs. MIDWAY.—A friendly match between the Jersey City Heights Gun Club and the Midway Gun Club, Matawan, N. J., was shot on Tuesday, the 19th, at the grounds of Jersey City Heights Club. Teams of 25 men, 15 birds, 28yds. rise, under the Jersey City Heights Gun Club's rules, which allow both barrels, but if a second barrel is used to count a half bird only. Considerable interest was manifested in this match, as the Midways had defeated the Fountain Gun Club of Brooklyn. We give the scores below, the Jersey City Club winning by 7 birds:

Jersey City Heights Gun Club.										
Heritage, Jr.	1	1	1	1—5	Palmer	1	1	1	1	1½—4½
Townsend	1	1	1	1—5	Burlett	0	1	1	1	1—4

LONG ISLAND FORESTERS.—The regular monthly shoot of the Long Island Forester Club was held at Canarsie Saturday, Sept. 16. Seven birds, handicap rise:

Thorpe, 21yds	1111000—4	Field, 21yds	0000010—1
Seidt, 23yds	1101111—6	Hawkes, 23yds	1100011—4
Giles, 21yds	1111101—6	Banks, 23yds	1000001—2
Ryan, 23yds	1110110—5		

Mr. J. F. Sabin wins the medal.

Remember if you wish to buy a fine gun and save money, go to C. L. RITZMANN, 943 Broadway, New York.—*Adv.*

Yachting and Canoeing.

KNICKERBOCKER Y. C.—SEPT. 16.

THE fall match of this club was sailed last Saturday in a strong northwest blow. Nineteen yachts started, but only eleven finished in good shape, the rest being disabled and one capsized. There were three classes, with entries as follows: Cabin sloop Sara, Commodore Hobby, 30ft. 5in. (no competitor). Second class, jib and mainsail—Nettie Thorp, J. W. Thorp, 24ft. 10in.; Corinna K., P. Crumeich, 23ft. 9in. Third class, jib and mainsail—Rover, W. H. Erskine, 20ft.; Nimrod, J. F. Lalor, 20ft. 6in.; Maggie, Wagner & Lange, 17ft. 10½in.; Mary Gibson, N. Lockwood, 21ft. 10½in. Fourth class, cat-rigged—Lizzie R., 31ft.; Alice, Baker & Beals, 29ft. 10½in.; Gracie, W. R. Morse, 24ft. 6in. Fifth class, cat-rigged—Gilt Edge, L. Lefferts, 23ft. 8in.; Melanie, W. A. Stewart, 21ft. 5½in.; Sharpie, W. Wolter, 21ft. 3½in. Sixth class, cat-rigged—Magic, J. L. Barker, 19ft. 5in.; Bon Ton, P. F. Heraty, 18ft.; Susie B., A. A. French, 17ft. 9in.; Vaddie, W. A. Brady, 17ft.; Lillie A., J. E. Ackerman, 16ft. 8in. Seventh class, cat-rigged—Hattie, R. Schelling, 14ft. 8½in. (no competitor). The course was from off the club house at Fort Morris to and around Gangway buoy, off Sand's Point, and return, for all but the seventh class, the latter turning the buoy off Fort Schuyler.

The steamer Philadelphia went over the course with the committee, Messrs. A. E. Miller, D. M. Winnie and E. W. Smith. Start flying with five minutes to cross. It was a fine wind up, but as the broad reach beyond the Brothers was entered, the strong gusts played havoc with the boats. The Sharpie got into trouble Corrina K. parted peak halliards, but repaired and continued for a while, but a second parting forced her to give up. The Gibson got into trouble and withdrew. The Gibson parted halliards off Whitestone, but made good the damage smartly. The little Hattie capsized and the rest shipped a great deal of water, and had many narrow shaves from like disaster. It was a case of "jogging" with a vengeance and hard work for the crews. Off Fort Schuyler both ends were hauled around throughout the fleet, excepting Lizzie R., Alice and Nettie Thorp. The Gangway buoy was rounded as follows: Lizzie R. at 12:47:20; Alice, 12:50:35; Nettie Thorp, 12:58:49; Sara, 12:59:05; Gracie, 12:59:35; Rover, 1:00:40; Gilt Edge, 1:00:48; Mary Gibson, 1:01; Nimrod, 1:01:34; Bon Ton, 1:05:3; Melanie, 1:07; Lillie A., 1:12; Maggie, 1:13:50.

The full sheet took them around Fort Schuyler buoy where sheets were trimmed flat, and with a favoring ebb fast time home was made, the winners being Sara, Nettie Thorp, Mary Gibson, Lizzie R., Melanie and Bon Ton. The race was a memorable one, both as to the large number of competitors and the hard work entailed by the rousing blow. One thing was lacking, however, and that was some regular windward work. Finish as under:

FIRST CLASS.

	Start.	Finish.	Elapsed.	Corrected
Sara	11 39 10	2 52 59	3 13 49	3 13 49

SECOND CLASS.

Nettie Thorp	11 37 40	2 52 53	3 15 13	3 15 13
Corrina K	11 38 00	Gave up.		

THIRD CLASS.

FIFTH CLASS.

Gilt Edge	11 24 16	3 04 49	3 40 33	3 40 33
Melanie	11 27 00	3 10 41	3 43 41	3 39 16
Sharpie	11 26 00	Gave up.		

SIXTH CLASS.

Magic	11 24 00	Gave up.		
Bon Ton	11 22 20	3 29 18	4 07 58	4 05 08
Susie B	11 22 28	Did not go course.		
Vaddie	11 21 15	Did not go course.		
Lillie A	11 23 24	Not timed.		

SEVENTH CLASS.

Hattie	11 17 15	Capsized.		

NEW YORK CANOE CLUB—SEPT. 16.

"It was a jolly mariner, the smallest man of three,
He loosed his sail against the wind, and turned his boat to sea."

A FRESH breeze from the west would have given ample excuse for a postponement, had any been needed, of the fifth race for the Challenge Cup, set for last Saturday, but 9 P. M. found all the sailormen who had entered ready at the float of the club house, Staten Island. The large racing sails had one and then two reefs turned in as the breeze freshened, and were finally dispensed with, smaller ones by the Dot and Ripple, each carrying cruising main and mizzen lugs, single reefed, while the Tramp carried racing mainsail only, also single reefed. The course selected was from the float to and around the quarantine hulk off Bedloe's Island, thence around a pile off Constable's hook, 13¼ miles, and back to float, 3¼ mile, or about 4¼ miles, thus avoiding the strong ice-going tide in the Narrows.

The reef to leeward of the float, nearly bare, made it difficult to start, but the boats were finally laid head to wind along the float, the Tramp, Vice-Commodore Oudin, to windward; Ripple, Mr. Whitlock, next, and the Dot, Commodore Vaux, to leeward, the bow of each being beyond the other in the order named. At last the word to go was given by Mr. Stephens, the boats were cast off together, the Dot at once filling away, and starting off in the style, while as the Tramp swung off more rapidly than the Ripple, with boom well off to starboard, the latter paid off until her mast brought up inside the boom of the Tramp, some time being lost in getting both clear, the Dot meanwhile taking a handsome lead. Once clear, the others started in chase, the Ripple keeping well to windward, and with the wind forward of the beam her extra foot of length soon told, the Tramp taking third place, though the Dot still held a good lead.

The tide up off Robbin's Reef made lively work for a few minutes, but the positions were about the same, except that, evidently overestimating the force of the ice-going tide, the Ripple kept too far to windward. Between the Reef and the first turn the Tramp took a knock-down, but quickly luffed and was off again. At 4:10 P. M. the Dot tacked around the mark, and with boom to port stood up toward the Jersey shore, passing the Ripple, which had gone far to windward of the mark, and was then running down for it. Tramp profiting by this error, rounded second at 4:11½, the Ripple following at 4:12¾. The three now presented a handsome sight, the crews seated up on the starboard deck, the crew of the Dot, owing to her "tumble home" and 4in. less freeboard, sitting, during the puffs, not deck, but actually outside on the upper-strake of the boat, a position which, at each weather roll, forcibly recalled the motto of the Cincinnati C. C., "Madidam mutavi vestem." At 4:23 the Dot was again about on port tack, and heading for Black Tom, the Tramp following at 4:25 and the Ripple, now far astern, holding on for a short time longer. At 4:30 all three were standing up well under their canvas, but a moment later a shout from the float directed all glasses on the Tramp, which had been holding well on to the Dot and rapidly leaving the Ripple, but now

"Alas—the Lively—where is she?
Her capsized keel is in the foam
Her pennons in the sea."

A rush was made at once to launch a boat for her rescue, but her plucky skipper, after several attempts, boarded her, put all hands to the pumps, and was shortly bound for home under paddle. The Dot, seeing no help was needed, held on her course, the Ripple evidently having an engagement in the direction of Jersey City. For the next ten minutes the Tramp engrossed the attention of all, but at 4:43 the Dot was to windward of the second mark.

"Up went the helm—close reefed—
The sheet held firmly in his hand,
With ballast snug—the vessel jibed,
And scudded for the land."

With a strong ebb under her and a stiff breeze astern, the little Dot fairly danced over the last leg of the course and finished at 4:49, the liveliest and most exciting race yet held for the cup, the Ripple rounding at 4:50 and finishing at 4:57. Four of the five races sailed have been won by the Dot, and too much praise cannot be given to Com. Vaux for the admirable way in which she is handled. Four seasons of racing together have made a combination of man and boat that will be very hard to beat, as is shown by the way in which they have disposed of larger, more powerful and heavier ballasted boats.

The performances of the Pearls thus far have not come up to the expectations of their friends, but it is no disparagement to their owners to say that they have not been handled yet to their best advantage. To get the best results from such boats it is absolutely necessary that they shall be canvassed, ballasted and trimmed properly, and some time and care is necessary to do this. The season is not over yet and there is still time for such practice and trial, that they may open next season under better auspices, the management of the race was in the hands of Messrs. Stephens, Monroe and Newman.

SUMMARY.

Fifth race for Whitlock Challenge Cup, Sept. 16, 1882. Wind fresh from W., tide ebb, course triangular, 4¼ miles.

EAST RIVER Y. C.—SEPT. 18.

A BRISK southwest wind made the fall race of the club last Monday a memorable and interesting event. Before the start the Mary Gibson capsized, but was got upon her legs again in time to sail, the gaff of the Holmes gave way shortly after crossing, and several minutes were lost in effecting repairs. Lone Star capsized when nearing Fort Schuyler, and Favorita got into trouble with her board. The steamer Americus accompanied the racers with the regatta committee on board. Course from club house, Greenpoint, Hell Gate, to and around Stepping Stones lightvessel and return. Alice made the best time but was ruled out for passing west of Blackwell's Island. It was a free wind up with a close haul home, and a beat through the Gate. Reefs and bob jibs were in order for this work, the latter being found cutting out hard and wet work for the crews. Entries as follows:

Class A.—Cabin sloops—Linda, 42ft., H. C. Roome; Favorita, 32ft. 6in., Commodore Charde; James Tregarthen, 30ft. 6in., Vice Commodore Reminaton; Lorelei, 30ft. 10in., A. Beals.

Class B.—Cabin sloops—Elsie May, 30ft. 4in., J. G. Northrup; M. W. Couway, 29ft. 4in., James Conway; Alice, 27ft. 9in., T. C. White.

Class C.—Cabin sloops—Julia, 24ft. 3in., J. F. Sullivan; Progress, 23ft. 4in., J. Schuessele.

Class D.—Cabin sloops—Jewell, 23ft., H. H. Holmes; H. H. Holmes, 22ft. 2in., J. Kreymeir; Mary Gibson, 21ft. 11in., N. Lockwood.

Class F.—Open sloops—Valley Forge, 18ft. 4in., E. B. Conners; Tip Top, 16ft. 10in., S. R. Silliman.

Class G.—Cat-rigged—Lone Star, 18ft. 4in., Oswar Jocback; Oakley, 15ft., F. Oakley.

It was a day for size to tell and the largest boats had the best of the bargain. Measurement was taken on load line, and the start was flying. Favorita won on time; Elsie May takes prize in class B., Alice going wrong course; Julianus in class C; the Mary in class D., Progress being disabled, and Tip Top wins on time from Valley Forge. The catboats failed to make a race, the weather being too much for such light weights. Jewell takes challenge pennant for best corrected time, allowance being figured for all the boats down to class, Favorita being 23 seconds longer by the same process. Summary:

CLASS A—CABIN SLOOPS.

	Start.	Finish.	Elapsed.	Corrected.

Oakley	11 50 59	Not timed.		

DORCHESTER Y. C.—The sixty-ninth match of the club was sailed Sept. 16, off the club house, Harrison Square, in a stiff northwest wind. Two classes, cats over and under 18ft. Course, seven miles. Reefs were hardened down, but many came to grief. Niobe parted main sheet off Halfway Rock; Water Witch split rudder; Amy split centerboard and Warrior carried away main boom. The big new Belle, a huge cat rig, split her mainsail near the foot and tied down two reefs, she won easily on her power. Judges, Hartford Davenport, Frank Batcheller, H. A. Sallé, Coolidge Barnard, Geo. H. Guslin. A dinner at Hull followed, many yachts running down to that town with guests aboard. Summary as under:

FIRST CLASS.

DON QUIXOTE ABROAD.

MR. FRANK GOWER, of Providence, R. I., is fortunate enough to own a little cathoat called Gleam. Mr. Gower likewise has an "organ" in our brigat contemporary, the *Providence Sunday Star*. Mr. Gower's cathoat has been a source of great trouble to its owner, and has led him into fighting windmills to port, to starboard and ahead, very big windmills, too, for it has taken columns upon columns in the *Star* to relate the ire-arousing manner in which the windmills declined to notice the ferocious onslaughts made upon them by such a mite as a most deserving little cathoat. Mr. Gower returns crestfallen, filled with bitter feelings toward our slow-going cousins abroad, because all England failed to rave and tear its hair in feverish excitement over the advent in its waters of a boat few of England could give a beating to and none to match, which could only be quenched in long columns of exultation at the doings of his wondrous little sailboat, right in the enemy's own waters. And Mr. Gower was not reckoning without his host—only he failed to furnish the materials required for the exploitation of his hero. He has been a man enough to have served up to the public. Mr. Gower won his victories in ink instead of adoat, and we declined to beslobber a cat possessing no merit, and therefore demanding no attention, and that is the reason so little notice was made in this journal of Gleam and her owner's publicity but illustrated adventures in the London yachting press.

Mr. Gower has returned to the scenes of his youth and in the *Star* sets forth his grievances at length with the very truthful remark that there are two sides to the question. Since he has given our side in his excellent organ, we will for the sake of setting things right in history give the public the benefit of the side he has overlooked, so that all may judge by the facts intelligently, and decide in this war which Mr. Gower has so bravely undertaken single handed against a people from the Prince of Wales down to the crowd of unsympathizing wretched Britons who cheered or are said to have cheered him so heatly upon the slightest provocation. It is well to see ourselves as others see us, and in holding up the mirror to the cathoat Gleam, may we hope it will teach him wherein he has failed and why his boat has not been proclaimed the sensation he deems her to be in his own estimation.

We quote the salient points from the *Star* as under, premising that, if not written by Mr. Gower himself, as we have reason to believe, they were at all events "inspired" from that source, and are as replete with warped statements, romance and views soured by disappointments as attempts to overreach opponents as other similar articles which have been distributed by Mr. Gower's honest pen.

"While a prominent sporting paper of New York, whose editor's fulsome praises of the English cutter rig, and his depreciation of the centerboard and the American model of yachts generally, are given a wide circulation in America, is publishing laudatory articles about the English cutters that dragged and sailed so far from home in American waters, it is desirable that the public should know that there is room at least for two opinions on the subject, and that a Rhode Island boat, of the extreme American model as to length, beam, depth and model on board, has created more of a panic in English waters among boats of her class for the past two seasons than did ever the Madge or the Maggie on the American side of the water. For, while Americans admitted the speed and weatherly qualities of Madge and Maggie, they were not afraid to meet them, and their yachtsmen generously admitted them to both regattas and private matches on most favorable terms, and were willing to go upon the record as being beaten if the visiting vessels could do the beating.

As an introduction we have here a tissue of misstatements and wild assertions devoid of fact, for which Mr. Gower's distant residence may serve as an excuse. The complimentary allusions to the prominent New York sporting paper refers, of course, to *Forest and Stream*, as no other yachting paper of standing in the country. The "fulsome puffery" with which we are charged consists of our efforts to introduce deep, wholesome yachts in place of traps, using the visiting cutters as the most effective handle or pry for the purpose, with what effort has been made to "depreciate" the centerboard and the American model of yachts generally, are given a wide circulation in America, is publishing laudatory articles about the English cutters that dragged and sailed so far from home in American waters, it is desirable that the public should know that there is room at least for two opinions on the subject, and that a Rhode Island boat, of the extreme American model as to length, beam, depth and model on board, has created more of a panic in English waters among boats of her class for the past two seasons than did ever the Madge or the Maggie on the American side of the water. For, while Americans admitted the speed and weatherly qualities of Madge and Maggie, they were not afraid to meet them, and their yachtsmen generously admitted them to both regattas and private matches on most favorable terms, and were willing to go upon the record as being beaten if the visiting vessels could do the beating."

matches with private owners, accepting our existing rules. Maggie joined several of our yacht clubs, and as a vessel of the fleet enjoys the same rights as any other in the club and nothing more. No rules have been relaxed in her favor, but she sails under the heavy handicap of length. Mr. Gower's conduct is really none of our business, but may we be permitted to suggest that had he pursued the same course as the owners of Madge and Maggie he would have met with like success? We are not aware that they "demanded," threatened, expostulated or sought to have existing rules laid aside for their benefit, nor did they coolly ask whether this or that sailing committee proposed to take initiative action, nor yet insist upon terms altogether in their favor as the condition of their racing. Mr. Gower would have had no cause to complain had his *pronunciamento* to the Royal Yacht Squadron been issued at all. The committee found necessary to remember in a general way this definition. Few could considerately send the following note, detailing the rules of the club, to which it not unnaturally expected a person claiming the privileges of entering would readily subscribe.

ROYAL PORTSMOUTH CORINTHIAN YACHT CLUB, }
August 6, 1882. }

SIR—I placed your letter dated 1st inst. before the committee of this club yesterday, and I am directed to forward you our programme for next Saturday, by which you will see that there is a race for Una boats, but they must be steered by a member of the club, so if you can get any member to steer for you, you can enter and race the Gleam. You will observe that the race is a handicap, and the handicapping will be arranged on Wednesday next. I am, sir,

Yours respectfully,
(Signed) C. E. MCCUNAIG, Hon. Secretary.

To which Mr. Gower is moved to respond categorically, volunteering his particular views as a partisan, but, at a lifeless, sinless, irresponsible yacht.

Cowes, Aug. 7, 1882.

C. E. McCraig, Esq., Honorary Secretary R. P. C. Y. Club:

SIR—I am duly notified by your letter of the 6th inst., on behalf of the Royal Portsmouth Corinthian Y. C. As I understand your terms, you will allow the Gleam to enter your regatta, in her (Una) class, upon the conditions:

1. That she allow herself to be steered by a member of your club.

2. That she allow your committee to impose any allowance of time which they see fit, without regard to size, or to the usual rules in such cases. I beg to be allowed to decline both these conditions, and to add the comment that they seem to me to be among the most remarkable terms of entry ever offered by any club to a visiting vessel.

I remain, sir, yours faithfully,
(Signed) F. GOWER.

The dutiful organ this side of the Atlantic, rings the echo as under:

"Truly, a most munificent offer to make! To invite the writer to enter our race, wherein he was to submit to such a handicap as they chose to impose, and then to pass the management of his boat over to his antagonists."

And in this way the irrepressible and gallant owner of Gleam conjures up another big windmill. He applies to be admitted to a certain race, to be kindly accepted and sent programmes. The conditions do not suit Mr. Gower, and small blame to him. No handicap is a fair match, as it means simply a penalty on the fast boats in favor of the slow. Again Mr. Gower was perfectly right in declining to deliver his boat to the mercies of a helmsman unacquainted with her wiles, though his inordinate suspicion of foul play we believe grounded less. The conditions not being suitable to a fair trial of the Gleam, there was but one thing to do, to keep out of the race and the matter would have been ended. But Mr. Gower expects that the Royal Portsmouth—which, with all due respect to Mr. Gower, doesn't care one cent's worth for him or his catboat and probably never heard of either until the receipt of his letter—should recall a programme already fixed, under which entries had been made, prizes appropriated and expenses incurred, to please his High Mightiness, Mr. Gower, from Rhode Island. Mr. Gower is very unreasonable. The programme could not be altered without a meeting of the club, the withdrawal of entries already made, a change in fixtures all round, and much other fuss, red tape and loss of time. The committee had no authority to do it. It is hardly to be supposed, however, that Mr. Gower's last communication was not honored with a reply or explanation. An unpardonable sin has been committed by our panic-stricken cousins abroad, for which they have justly been held to account by the home organ. We quote from the Providence *Star* once more:

"The yachting papers have ceased to refer to her as an American, and one of the most prominent of them seeks, week after week, with laudable persistency, to disparage her individuality, by mentioning her briefly as 'the Gleam, Mr. J. S. Gower.'"

There lived in the fifteenth century, we believe, one J. S. Gower, who was jugged for stealing chickens, and the conspiracy of the British press to get the gentleman from Providence, Rhode Island, misses fire, and the Gleam is maintained under the most constructive mind, as shameless as it is cowardly. Mr. F. Gower will find in this journal a staunch defender by his side, prepared to maintain his initial against the dastardly plot to run him out of existence in favor of the above-mentioned Una. We are not aware of the views of Mr. Gower's difficulties abroad in this journal of world-wide circulation, is absolute guarantee that the designing schemes of English yachting editors against the nationality of the catboat Gleam, will end in eventual failure.

We learn with pleasure that "the Gleam is a grievous thorn in the side of small English yachtsmen which will not down." Since that is much better than to have a thorn in the side "which will not out," though we are at a loss to know why undersized English yachtsmen have been selected as victims when big men might stand the infliction with less fear of consequences. We learn with equal pleasure that the Gleam is to continue in racing trim prepared to meet any antagonist bold enough to tackle her. Much as we admire Mr. Gower's enterprise and persistency, which, by the way, we would like to see some sloop owner's imitate, we regret that nothing in the Gleam's career abroad has yet transpired to justify extended notice in these columns. If Mr. Gower will draw a lesson from the foregoing remarks, we have little doubt but that he will find himself able to get on all faces in the next season, and the FOREST AND STREAM the opportunity of demonstrating that we are prepared to mete out equal doses of "fulsome puffery" to any style of yacht whose achievements are really deserving, whether she fly the flag so dear to Mr. Gower's patriotic heart or any other colors under the sun.

ROYAL CANADIAN YACHT CLUB.—A second attempt was made, Sept. 12, to sail off the Anderson Cup, not awarded in the race of Sept. 8, but the wind failed again in time. The start was in 4 divisions, as before. Entries same, including the 32-ton cutter Aileen, the 16-ton cutter Verve, the 37-ton cutter Alarm, the 90-ton schooner Oriole, sailing at 57 tons, the 17-ton sloops Madcap and Coquette, and the 34-ton sloop Cygnet. The match again failed for want of wind, Aileen made a fine start and was first round Lake Ontario Point twenty minutes to begin with. The start was flying, to one gun, which was given precisely at 10 A. M. The eastern flagboat in the bay was turned by Verve at 10:26, Alarm 10:11, Oriole 10:12, Madcap 10:13½, Coquette 10:18, Cygnet 10:20, Aileen 10:21. Aileen was timed at 10:31. The wind failed in the gap between Toronto Island and the mainland, but Verve fanned out in the lead when more breeze was struck, sending the big ones by her. The Minnie buoy was passed by the schooner Oriole, 11:32, Cygnet second at 11:34, Verve at 11:35, the rest well astern with Aileen at 11:58. Quite a swell had been stirred up by the easterly gale of the previous day, and the cutters were again at a premium. The Island buoy was reached on a close haul by Cygnet first, Verve close aboard, then Oriole, Alarm, Aileen, Coquette and Madcap. The lake then became smooth, and sailing commenced, Aileen having so far made good the twenty minutes lost at the start. The little Verve even weathered on the famous sloop Cygnet in the swell. Says the Toronto *Mail*: "The needle-like cutter dug into the swells like a swordfish, and the sloop rolled and tossed. The outer mark was fetched by the Verve at 2:23, Cygnet 2:32½, Aileen 2:33¼, the rest well to leeward. The wind was rapidly falling and the race became reduced to a drift. The yachts reached the Island buoy from the same position, and the lake then became a sailing a tow into harbor, the rest continuing the drift eastward to the Scarboro mark. The cutters led round and then it fell calm. Occasional catspaws carried cutter Aileen to her moorings at 8:30, cutter Verve second, then Cygnet, Coquette and Oriole.

NAMOUNA IN A JERSEY SEA.—I received a letter from Mr. James Gordon Bennett, of New York, who describes a very good passage made by his fine new steam yacht Namouna on Thursday, August 24, from Havre to Cowes. It blew half a gale nearly the whole way across, with a very heavy cross sea, but though fully coaled (160 tons), water and provisioned for a long cruising, Namouna accomplished the passage in seven hours, or at about thirteen knots an hour. She was driven very hard with a view to test her sea-going qualities in bad weather, and quite surprised her owner, and all on board, by her wonderful speed and behavior on such a day. She took hardly any water on board, though very deep, but when about an hour out from Havre, one very big sea gave her a heavy blow forward, smashing in some of her bulwark planking. Namouna has since sailed for the Baltic.—ST. CLARE J. BYRNE.

QUANNAPOWITT REGATTA.—Third match for Commodore's prize—a silver set—was sailed at Wakefield, Sept. 16. Course six miles. Judges, R. H. Mitchell and John A. Maloney. Won by Phantom, J. H. Beebe, in 1:05:30, beating White Cloud, S. O. Richardson; Foam, W. Wiley, and Alice, Dennis Dailey. The Cloud takes second prize, Comm. Yanostrand's silver set becoming the property of Mr. J. H. Beebe, his Phantom having won three successive times.

THE QUESTION OF TYPE.

WE have never seen a more intelligent and sound opinion delivered on the merits of shoal and deep boats than the review of the recent Toronto races in the Toronto *Mail*, September 11. We quote as follows, premising that the seeming shortcoming of the entrants Aileen and Verve when sailing free in light wind is probably due to their being English rig, and that with larger spars they would give a better account of themselves under these circumstances:

"The race brought into prominence again the respective merits of the deep-draught and centerboard yachts, and exemplified in a most interesting way the weak and the strong points in each class. Euclid says 'a line is length without breadth,' and the more one tries to take bee-lines from leeward to leeward the more it is found necessary to remember in a general way this definition. Few could view Saturday's race without going away more convinced than ever of the necessity of length rather than breadth as the *sine qua non* of speed to windward. Length, depth, bulk, and the water displacement, ability to heel far over and yet sail, absolute safety, and considerable comfort—these are evidently desirable qualities. There is a tenacity of purpose in the action of the Aileen and Verve when they turn to windward in a heavy seaway, which the shallow and broad boats can only imitate in the run away and after sometimes tries to imitate the walk of a business man—the want is very apparent. These two boats have keels of many tons of lead, modeled and molded with scientific accuracy, so as to get through the water without holding on to it, and they possess a wind-jamming power as relentless as a meat ax. The Cygnet and Madcap both got a long lead of the Aileen and Verve, the latter not being ready at the start, and the Cygnet was miles ahead at Minico, being extremely fast off the wind. After this the five miles to windward was only a short and long leg; but it was enough for the deep keels to collar the Cygnet.

"Considering the tremendous lead the Cygnet had at Minico (certainly two or three miles), these boats must have sailed nearly two feet to the Cygnet's one, and their performance in the light and vacillating breeze and heavy head sea was simply marvellous. The broad centerboard Madcap, which last won the Prince of Wales' Cup, would rise on a wave, quarter, and then plunge her short broad body into the oncoming wave and receive it on the shoulder. The deep keels on the contrary rose on the waves, and if they put their forefoot out they were held fast and firm on their course by their great depth. Those tons of lead so gracefully shaped had then a motive power which, of their own to forcibly compel the knifelike bow to slice the oncoming wave with unbated speed. Of course the Madcap's sails and trim were in no condition for a race, but nevertheless as all she had in her was coaxed out of her, and as she is a fast representative of her class, her signal defeat is unfortunate for center board yachts. With smoother water the Madcap asks no favors. The truest test, however, of all yachts is the test of going to windward in a seaway. Anything else is largely a question of who can pile on the most rags. The little centerboard Coquette, long, narrow-keeled with none of the deep draught qualities, did wonderfully well, and the deep-keel Coral, with her new sails, showed some of the ability which in the old time caused her to be as much dreaded as 'The cream-colored pirate of the yellow ocean.'"

VIXEN–CERES.—A match was sailed September 14 for $500 and a cup, value $100, between the sloop Vixen, of New Haven, J. G. Beecher, of New Haven, and the sloop Ceres, of Portchester, L. I., W. L. Ward, over a twenty-mile course, from line between Captain's Island and Fort Island Harbor, around Stratford Shoal buoy, and return. Wind blowing fresh southwest and considerable sea on. Vixen is 27ft. 10½in. long, and Ceres, a Kirby built boat, is 39ft. 9in. long allowing the former 5m. 55s. Vixen had a crew of ten hands, which left New Haven at the wheel, and Ceres had eleven hands, with Isaac Martin, of Portchester, to the shipping. Mr. J. Hobart Park acted as referee. The race turned out a one-sided affair, Ceres being too much for the smaller boat in such a wind. The sea bothered both considerably, and numerous knockdowns were the result. Sun for the 28 miles, and the weather rail we might have had to record a capsize. The yachts took the water aboard by the barrelful, and in general made very poor weather of it. A short time after starting Vixen's weather rigging parted, and the jig was rove. Ceres then reefed sing and continued over the course at leisure. The start was made at 11:25:15, lower mark rounded by Ceres at 1:32 and the free run home in little more than an hour, the race ending at 2:36. Elapsed time, 3:10:15. The match excited a good deal of interest, and Portchester was elated with the ending. Another match between the two for $100 over a twenty-mile course has been agreed to.

BUFFALO Y. C.—During the season of 1881 the Buffalo Y. C. offered a valuable barometer as a prize for the yachts in the squadron under the rules of the club, the prize to go to the yacht winning the most races. At the first race in 1881, sloop Fun (T. P. Frank), the Arrow (Geo. G. Smyth), and the Curlew (J. F. Elliott) contended for the prize, the Curlew won. Another race was had soon after, when the Arrow took it, and in a third match the Turk won it. Thus each had secured

ABBEY & IMBRIE,

48 MAIDEN LANE, NEW YORK.

THE GREAT SINGLE BREECH-LOADER.

"THE FIELD," 10 and 12-Gauge.

This gun, which from its wonderful adaptation to all kinds of field shooting we have named "The Field," leaves nothing to be desired in the way of a single breech-loader. It is really the only single breech-loader worth having. It has Scott top lever, pistol grip, rebounding lock, and patent fore end, and is beautifully finished. For strength, convenience, penetration, and in fact for all practical purposes it is just as good as the best double-barrel gun. We have sold the bulk of all the single breech-loading guns used in this country for the past four years. The reason is that the top lever action as combined with other features in the "Field" gun is the only correct one, and other single guns are successfully sold only as they resemble ours. Persons with ordinary prudence will not hesitate long as to which to choose, particularly as the "Field" gun costs but a trifle any way, and no more than the imitations. Address

WITHOUT A TEACHER

Price 50 Cents.

FOR SALE AT THIS OFFICE.

MANN'S
Trolling Spoons.

Sixty varieties manufactured, suitable for trolling for all kinds of fish that will take an artificial bait.

Our Perfect Revolving Spoon is undoubtedly the best general spoon for taking fish ever offered to the public.

Three sizes made—No bass, pike, pickerel, or any fish under five pounds weight; No 21 for large fish; No. 22 excellent for deep-water fishing.

BEWARE OF IMITATIONS.

None genuine except with JOHN H. MANN'S name stamped on every spoon.

Sold wholesale and retail by the principal dealers in fishing tackle.

If not to be found readily, the manufacturers will send by mail or express at ONE DOLLAR each.

THE ANGLER'S

AUTOMATIC REEL.

MANUFACTURED BY

LOOMIS, PLUMB & CO.,

SYRACUSE, N. Y.

The following letter is from Dr. Geo. F. Gale, of Brattleboro, Vt.:

GENTLEMEN:—Have just returned from Moosehead Lake, Me. I cannot express the degree of satisfaction and pleasure I have found in the use of your automatic reel. Would not exchange it for all the reels I ever saw for fly fishing. Am confident I saved many fish that would have been lost with any other reel, particularly one large trout weighing three and one-half pounds which I played fifty minutes before he would come to the net. He fought hard and long, making many furious spurts from and towards the canoe, but it made no difference. I kept my finger on the brake and it was simply impossible to get a slack line. Mr. Childs, who fished with me once, has one of your reels, says that nothing would induce him to go back to the old crank reel. Yours truly,

GEO. F. GALE.

Oil-Tanned Moccasins,

SPECIAL ANNOUNCEMENT.

THE
PITTSBURGH FIRE ARMS CO.

Would call attention to their new double

Hammerless Breech-Loading Gun.

This new gun is made under the Anson & Deely patent with automatic safety bolt, so constructed that the triggers are effectively bolted whenever the lever is moved to open or close the gun, thus preventing any possibility of accidental or premature discharge.

The breech action is top lever, double bolt, with Westley Richards' extension rib, making the strongest possible breech fastening. The barrels are of fine Damascus, choke-bored on the most approved system for close, hard shooting. The stocks are of English walnut, with pistol grip and horn butt plate. The fore ends are made with the Deely & Edge patent snap fastening. The frame and guard handsomely engraved and case hardened. The proportion and symmetry of the gun is perfect. Illustrations and prices furnished on application.

Send stamp for our new 48-page illustrated catalogue containing descriptions and prices of all new and useful improvements, including the new Parker Gun with top lever, Ligowsky Clay Pigeon Trap, with rules for shooting clay pigeon matches, also a compilation of the game laws, showing the open season for game and fish in every State in the Union.

Address all communications (not forgetting to enclose stamp) to

PITTSBURGH FIRE ARMS CO.

Pittsburgh, Pa.

WILLIAM READ & SONS.

DEALERS IN FINE GUNS, 13 FANEUIL HALL SQUARE, BOSTON.

AGENTS FOR

W. & C. SCOTT & SON.

Furnished by us to Capt. Bogardus who for years has used none other than the SCOTT GUN, and won with it the championship of the World.

None genuine unless bearing the full address, W. & C. SCOTT & SON.

Their New Gun.

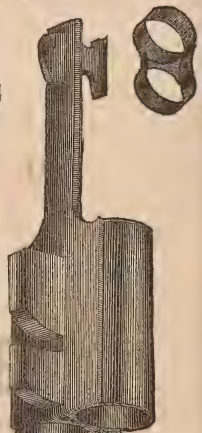
$85.00 With Latest Improvements.

Description.—Top snap, double bolt, extension rib, pistol stock, rebounding locks, snap fore stock, large solid strikers, low hammers when cocked, horn butt plate, Damascus barrels, choke bored. 20-bores, 5¼ to 6lbs.; 16-bores, 6½ to 7lbs.; 12-bores, 7 to 9lbs.; 10-bores, 8 to 11lbs.

To meet a want for a really fine, good breech-loader at a medium cost, Messrs. Scott & Son have now put this gun into the market at above price (a great reduction from the figure such quality has hitherto been offered at), and the demand thus far shows that it is thoroughly appreciated.

Every Gun Warranted in Shooting and Sent on Trial.

Scott's Hammerless, with Crystal Apertures and Block Safety Attachmemt, All Sizes, Constantly in Stock.



If to be sent C. O. D. on trial, inclose in every case $3.00 as a deposit for expressage in case gun is not taken, which, if too much, we will return the difference. If you send whole amount with order, we will include at no charge, a waterproof gun case; and if gun does not suit on receipt, you can exchange, or we will return your money on return of gun, less expressage. Hence there is no risk in inclosing whole amount.

SEND STAMP FOR OUR GUN CIRCULARS AND SECOND-HAND LIST.

SOMETHING NEW!

The Pieper "Diana" Gun.

This is the only gun of European manufacture made entirely by machinery. The system is entirely new, and actual tests have shown that for accuracy and strength it has no superior.

The reinforce lumps and bolt loop are of one piece of wrought steel. The tubes are finished to gauge and are put together *without heat* so that they are perfectly straight and always shoot to center. This is only found in very high cost guns made on the ordinary system, as the best barrel filers are necessary. The locks are finely finished and of the best steel, and all the joints are closely fitted; all the parts are interchangable.

A public trial was made in Cleve, Prussia, in August, 1881, to which the best continental makers sent their finest guns. The trial was for closeness and penetration. 4 is excellent, 3 is good, 2 is fair, 1 ordinary. The gun of Mr. Roedel, of Prague, was made on the Pieper system. The result was as follows:

	30yds.	45yds.	60yds. Total.
Size of shot.	2 4 6 8	2 4 6 8	2 4 6 8
H. Pieper, Liege	3 3 4 4	1 4 4 3	4 4 4 4—45
Roedel, Prague	3 3 3 3	4 4 4 4	3 3 4 4—42
W.W.Greener, Birmingham	3 4 4 2	4 4 3 3	3 2 3 3—40
N. Bodsen, Liege	3 4 2 4	4 3 3 4	1 1 3 1—38
C. Bartels, Wiesbaden	3 3 3 4	4 3 4 4	1 3 2 3—37
Sackreuter, Frankfort	2 3 3 4	4 4 3 3	3 3 1 3—36
Camphausen, Crefeld	1 4 2 3	3 3 4 2	3 3 3 3—34

	30yds.	45yds.	60yds. Total.
Size of shot.	2 4 6 8	2 4 6 8	2 4 6 8
A. Jannsen, Liege	2 3 3 3	4 4 3 3	1 3 2 1—32
Beermann, Munster	3 2 1 2	4 4 2 4	2 2 3 2—31
Brunn, Birmingham	3 3 2 2	3 3 4 4	2 3 2 3—30
Witte, Zutphen	3 4 3 3	1 1 1 1	3 2 3 2—27
H. Jansen, Wesel	1 2 1 2	4 3 2 2	2 1 2 3—25
Heuse-Lemoine, Nessouvaux	2 3 1 4	1 2 3 2	1 2 2 2—25
Cordes, Bremerhaven	2 1 1 1	3 3 2 1	1 2 2 1—20

Attested by the Jury, Klimm, Royal Inspector of Forests, Keyssler, Royal Inspector of Forests, Heise, Inspector of Powder at Cologne, G. Hahn, record keeper. It will be noticed that the Pieper guns are especially effective at long range.

Mr. H. Pieper has appointed the undersigned sole agent for the United States and Canada, and offers the goods at prices far below their real worth, in order to speedily introduce them into this market.

Discontinuation
—OF—
"THE BLUE STAR KENNEL,"
—OR—
THE COCKER SPANIEL KENNEL,
FRANKLIN, N. Y.,
As a Public Kennel.

Health and increasing private business compels that on and after November 1st, 1882, the above kennel will be closed as a public kennel. Present kennel stock must be reduced, and after the above date a private kennel of four or five choice specimens of this breed will only be kept. Private breeders, public breeding kennels and sportsmen will find this a chance rarely offered to secure extra grand cocker bitches with best of pedigrees, both broken, and grown and unbroken, at prices below actual value. Correspondents enclosing stamp will get printed pedigrees and prices of stock offered as per above. Address M. P. McKOON, Proprietor Franklin, N. Y. aug31,tf

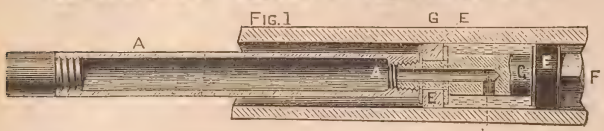
Sportsmen's Goods.

Climax Gun Cleaner.



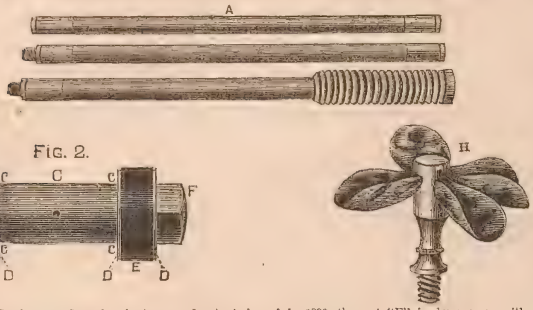


Fig 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

In offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.
2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.
3d. The case with which it can be adjusted to fit the barrels, loose or tight.
4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

DESCRIPTIVE CIRCULARS AND DISCOUNTS TO DEALERS GIVEN ON APPLICATION.

UNITED STATES CARTRIDGE CO., Lowell, Mass.

[ESTABLISHED 1863.]

UNITED STATES CARTRIDGE COMPANY,

LOWELL, MASS.

Our paper shot shells are made with great care upon new and improved machinery, and the paper is subjected to a process that renders the shells waterproof, pliable, and capable of withstanding large charges of powder without bursting, and are reloadable from four to ten times, if desired. They also keep their smooth shape stiff, inside and out. We offer them as equal, if not superior, to any other makes, and warrant them in the full sense of the word.

The Parker Gun.

Again Victorious at the late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. Send for Catalogue.

Hotels and Resorts for Sportsmen.

"THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as fee for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1882, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 3d, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

Kay's Chip

—OR—

EXPANSIVE SHOT CONCENTRATOR,

With Perforated Case.

In our latest device for concentrating shot, we have substituted a special wire for expansion, where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.

By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device halls the shot by the expansion of the wire after leaving the gun.

100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $2.50 per 100.

Address all orders to A. B. KAY & CO., Newark, N. J.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 (fine); burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, SHIPPING and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder, U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

OUR NEW MODEL

THREE BARREL GUN.

FIG. 5

PRICE, $75 to $250.

FIG. 2

This gun is light and compact, from 9 to 10 lbs. weight. The rifle is perfectly accurate.

L. C. SMITH, Maker, Syracuse, N. Y

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, SEPTEMBER 28, 1882.

VOL. XIX.—No. 9. NOS. 39 & 40 PARK ROW, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications upon the subjects to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

SUBSCRIPTIONS

May begin at any time. Subscription price, $4 per year; $2 for six months; to a club of three annual subscribers, three copies for $10; five copies for $16. Remit by registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States and Canadas. On sale by the American Exchange, 449 Strand, W. C., London, England. Subscription agents for Great Britain—Messrs. Samson Low, Marston, Searle and Rivington, 188 Fleet street, London.

ADVERTISEMENTS.

Advertisements of an approved character only inserted. Inside pages, nonpareil type, 25 cents per line. Special rates for three, six and twelve months. Reading notices 50 cents per line. Eight words to the line, twelve lines to one inch. Advertisements should be sent in by the Saturday previous to issue in which they are to be inserted. Address all communications,

ANSWERS TO CORRESPONDENTS.

FARMERS AND FIELD SPORTS.

"Happy the man whose only care
A few paternal acres bound,
Content to breathe his native air
On his own ground."

AND happier still is such a one who has a love for the rod and gun, and with them finds now and then a day's freedom from all cares by the side of the stream that borders his own acres and in the woods that crest his knolls or shade his swamp.

As a rule none of our people take so few days of recreation as the farmer. Excepting Sundays, two or three days at the county fair, and perhaps as many more spent in the crowd and discomfort of a cheap railroad excursion, are all that are given by the ordinary farmer to anything but the affairs of the farm. It is true that his out-door life makes it less necessary for him than for the man whose office or shop work keeps him mostly in-doors to devote a month or a fortnight of each year to entire rest from labor. Indeed, he can hardly do this except in winter, when his own fireside is oftener the pleasantest place for rest. But he would be the better for more days of healthful pleasure, and many such he might have if he would so use those odd ones which fall within his year, when crops are sown and planted or harvested, and he need not stay at home. A day in the woods or by the stream is better for body and mind than one spent in idle gossip at the village store, and nine times out of ten better for the pocket, though one come home without fin or feather to show for his day's outing. One who keeps his eyes and ears on duty while abroad in the field can hardly fail to see and hear something new, or, at least, more interesting and profitable than ordinary gossip, and the wear and tear of tackle and a few charges of ammunition wasted will cost less than the treats which are pretty apt to be part of a day's loafing.

But barring the dearth of the objects of his pursuit, the farmer who goes a-fishing and a-hunting should not be unsuccessful if he has fair skill with the rod and gun. For he who knows most of the habits of fish and game will succeed best in their capture, and no man, except the naturalist and the professional fisherman and hunter, has a better chance to gain this knowledge than the farmer, whose life brings him into everyday companionship with nature. His fields and woods are the homes and haunts of the birds and beasts of venery, from the beginning of the year to its end, and in his streams many of the fishes pass their lives. By his woodside the quail builds her nest, and when the foam of blossom has dried away on the buckwheat field she leads her young there to feed on the brown kernel stranded on the coral stems. If he chance to follow his wood road in early June, the ruffed grouse limps and flutters along it before him while her callow chicks vanish as if by a conjuror's trick from beneath his very footfall. A month later, grown to the size of robins, they will scatter on the wing from his path with a vigor that foretells the bold whir and the swiftness of their flight in their grown-up days, when they will stir the steadiest nerve, whether they hunt from an October-painted thicket or from the blue shadows of untracked snow. No one is likelier to see and hear the strange wooing of the woodcock in the soft spring evenings, and to the farmer's ear first comes that assurance of spring, the wail of the Bartram's sandpiper returning from the South to breed in meadow and pasture, and then in hollow trees that overhang the river the woodducks begin to spoil their holiday attire in the work and care of housekeeping. The fox burrows and breeds in the farmer's woods. The raccoon's den is there in ledge or hollow tree. The hare makes her form in the shadow of his evergreens, where she dons her dress of tawny or white to match the brown floor of the woods or its soft covering of snow. The bass comes to his river in May to spawn, the pike-perch for food, and the perch lives there, as perhaps in his brook does the trout.

All these are his tenants, or his summer boarders, and if he knows not something of their lives, and when and where to find them at home or in their favorite resorts, he is a careless landlord.

His life will be the pleasanter for the interest he takes in theirs, and the skill he acquires in bringing them to bag and creel.

THE FOREST AND STREAM PRIZE AWARD.

AT the last convention of the New York State Association for the Protection of Fish and Game, the FOREST AND STREAM offered a cash prize to that society, to be awarded under the following conditions;

To be given to that club, belonging to the Association, which shall show the best record for the past year in the work of game protection, *i. e.* (1) the promotion of a better observance of the game laws; and (2) fostering and increasing the supply of fish and game. The award to be determined by a committee of three, to consist of the President of the Association and two others to be appointed by him. The records of the competing clubs to be made in writing and submitted to this committee. The award to be made on or before August 16, 1882.

It was explained that in considering the record of the clubs in respect to "the promotion of a better observance of the game laws," it was designed that the committee should take into account, first, the prosecution of offenders against the law and the prevention of such offenses; and second, efforts intended to effect a better appreciation of the true spirit and intent of the game laws and game protection by the community at large.

The committee appointed to make the award was composed of the president of the association, Mr. S. T. Murray, of Niagara Falls, and Messrs. William Pool, of Niagara Falls, and John B. Sage, of Buffalo. Having been unable to make a decision within the time named in the original conditions, the committee, with the acquiescence of the FOREST AND STREAM, extended the time to September 10; and, as was stated in our issue of the 4th inst., then awarded the prize to the Onondaga Fishing Club of Syracuse—a decision which will meet with general approval throughout the State.

The Onondaga County Fishing Club and its record are splendid examples of what such an organization should be and do. The club is composed of some two hundred gentlemen of good standing and much public influence. For years past it has been known as an active, wide awake, fearless and determined society, and as such has won the respect of the decent portion of the community, and the fear of the rest. Those who were familiar with the condition of affairs in Onondaga county five or six years ago and the general spirit and practice of lawlessness which reigned among the fishermen and fish pirates in those waters, will appreciate the magnitude of the task assumed by the Onondaga Club and the credit due them for the present improved condition of affairs. The club has, since its formation, prosecuted successfully in the courts more than two hundred suits against illegal fishermen, having won two of these suits on appeal. They have destroyed more than two hundred fishing nets illegally set, and have sent the lawbreakers to jail. Their persistent efforts have been rewarded by a gratifying success. They have practically broken up the illegal fishing which once threatened total ruin to the fisheries of the county.

The principal work of the club the past year, we are told, "has been more particularly the stocking of waters, assisting or opposing the passage of proposed laws, and in calling the attention of the public and other clubs of the State Association to the necessity of enforcing existing laws. The result attained since our organization is such as the farmer expects when he plows the ground and sows his seed in the fall—a good crop the following spring; and our well-stocked waters are evidence that our earlier and our continuous work was not in vain."

The record is one of which the Onondaga Club may justly feel proud, and other clubs emulous. Were there a like active and determined society in each county, game protection would soon cease to be a by-word among the people. There are clubs enough now belonging to the State Association to thoroughly enforce existing game laws, provided these clubs cared to do it. Unhappily, however, there appears to be a most discouraging apathy regarding such endeavors. Indeed, so far as we have been able to learn from the officers of the Association, the Onondaga Club was the only one which presented for the committee's consideration any exhibit of game protective work during the past year.

THE FIERCE STORM of last week was looked forward to by rail hunters as the so-called "equinoctial" always is. It was expected that it would bring with it a high tide and consequent good shooting, and so shells were loaded, pushers engaged and all preparations made. How good the shooting was we have not yet learned, but it is certain that very high tides occurred in this vicinity. The terrible ravages in New Jersey, caused by the unprecedented rainfall, certainly turned the thoughts of the people of that State away from the pleasures of shooting. All lowlands were overflowed, houses were floated off and cattle drowned. But few lives were lost, but the damage to property was very great. The railroads suffered severely, bridges being broken and tracks washed away in many places. The Philadelphia & Bound Brook line was the only one over which traffic from Philadelphia to New York was uninterrupted, and the trains of the Pennsylvania Railroad were sent to this city over the tracks of that road.

NON-RESIDENTS IN NEW JERSEY.—Last week we published a letter from an officer of the New Jersey Game and Fish Protective Society, presenting, from his standpoint, the disagreement now existing between that society and the West Jersey Game Protective Society. To-day we print a letter from a prominent member of the latter society, giving his side of the case. The question involved is an important one, and happily the decision is not to be arrived at by the uncertain and unsatisfactory medium of newspaper controversy, but by recourse to the courts. While extremely deprecating the unfortunate absence of that harmony which should unite two such societies in their work for a common end, we shall await with no little interest the court's decision of the point at issue.

GEORGE W. CHAPPEL, President of the Long Island Sportsman's Association, died on Wednesday, September 20. Mr. Chappel was quite well-known to the sportsmen of Long Island and of New York State. He was senior member of the firm of Chappel & Storer, wholesale fish dealers, Fulton Market, and was forty-nine years of age.

WE PUBLISH ELSEWHERE a very noteworthy correspondence between the St. Lawrence Gun Club and the District Attorney of St. Lawrence county. The letters are exceedingly creditable to both parties, and afford an encouraging evidence that the game interests of that section are in good hands

THE NEWPORT HUNTERS OF THE ANISE-SEED BAG have incurred the displeasure of some of the members of the S. F. P. C. A., and it is hinted that next season the bag may be relegated to the bourne where Rhode Island pigeon shooting disappeared some years ago. We very much doubt, however, if the society will succeed in suppressing fox hunting. If it does, what will be the next thing to receive attention?

MAJOR JOSEPH VERITY says it is better to catch a trout than to catch sight of one.

MATCH AFTER THOUGHTS.

THE British team are now homeward bound laden with victory and the good wishes of their recent antagonists. Nobody finds fault with their work, for they won by superior marksmanship, and because for years past they have been working intelligently and diligently at the very problem in shooting of which the late match was an exemplification. In another column will be found some opinions upon the match from observers and critics. Some of the conclusions reached may be open to contradictions, since they were drawn from insufficient or erroneous data, but there is a general agreement that the American team were beaten because they were not properly armed for the match. Transform the rifles and in all probability the result would have been a victory for the now defeated team. It was in large measure a success of rifle and not of men.

Sir Henry Halford, in his speech before the officers and guests of the Thirteenth Regiment, in the dinner given the teams at Manhattan Beach, on Tuesday, September 19, hit the key-note of explanation when he said that, while it would not become the American shooters to lay the blame on the rifles, since they would at the same time expose themselves to the charge of being poor workmen quarreling with their tools, yet he could frankly tell them that the reason for their defeat was to be found in that direction. He rightly said that it was nonsense to suppose that as good men could not be chosen from our National Guard as were to be selected from among the Volunteer force abroad. Experience counted for something, and other things being at all equal would decide a match, but the most experienced marksmen in the world cannot undertake to manage the vagaries of a rifle which, being leaded in the barrel, cannot be relied upon to place two consecutive shots anywhere near the same point on the target.

The visit of the British team has been on the whole a very enjoyable one. They have suffered no mishap, have had no sickness, and after the long run of American victories with the rifle they seem to have turned the tide in favor of the British arms. The reception given the team by the officers of the Seventh Regiment, on the evening of Saturday, the 16th inst., was a very pleasant affair and enabled the visitors to gain an idea of what may be done in the line of building magnificent armories for these associations of civilians under military regime. Sir Henry and his team members could not but note that there is a plenty of young and enthusiastic men in the ranks of the Guard and that they are not likely to sit down under defeat for any length of time.

With Monday the 18th came a run up the river to West Point, and this great school for officers of the United States Army was inspected by the men who possess supereminent ability in at least one duty of a soldier—that of hitting what is aimed at. Of course the metropolis is not properly visited in summer without a trip to Coney Island, and by the courtesy of the officers of the Thirteenth Regiment the British team was enabled to have a glimpse of Manhattan Beach. To be sure it was one of the waning days, but the people turned out in a great multitude, and there was a popular as well as a merely military welcome to the cousins from over the water. On Monday night last the New York Rifle Club took the Britishers in hand and showed them how pleasantly marksmanship and merrymaking may be blended; and while the Englishmen were familiar with balls and bullets of all sorts, the New Yorkers "balled them off" in a way which made the British crown swell with the morning light, and would have made a rifle match on that morrow a great skylarking affair.

There was a good "send off" at the departure of the team in the characteristic American way, and many a hearty promise that the honors so well won by the Britishers were not to be kept by them, without a vigorous show of battle on the part of the Americans. Our guests go home fully aware that they will have need of their best men to meet the team which will go over in June next, for unless the officers of our National Rifle Association display more than their usual ability in how not-to-do-it, there should be no difficulty in sending over a properly disciplined and particularly a properly armed team.

THE MENHADEN QUESTION.—In regard to the question of the scarcity of menhaden and the influence of the continued capture of these fish, we give the following, as a contribution to the literature of this subject. For some weeks past Mr. E. G. Blackford, of Fulton Market, has been shipping menhaden to the many fishing clubs which use that fish for bait for striped bass. He has sent from twenty to forty barrels per week to clubs as far East as Martha's Vineyard, a thing which is very unusual. All along the coast, to the east of New York, are clubs of wealthy gentlemen who fish for the striped bass, or rockfish, as it is called south of New York, and these clubs have heretofore obtained their bait near their fishing grounds, instead of sending to market for it. No better evidence of the scarcity of the menhaden on the Massachusetts coast is needed. Weather it is safe to draw the conclusion that the factories are to blame for it is something we do not care to say, at present.

NOTWITHSTANDING THAT THE FOREST AND STREAM has been permanently enlarged to twenty-eight pages, the subscription price remains the same as before.

ADIRONDACK SURVEY NOTES.

XI.—THE ADIRONDACKS OF MURRAY.

THE marvelous Adirondacks of which we have all read in "Adventures in the Wilderness," are indeed a fairy land—a land which is at once alpine in character, and one where without paths or other means of travel save by boat and carry, the most delicate ladies and fragile invalids may venture with full faith that in a few days they will rival the guides in appetite, and in as many weeks will exceed them in strength. In that land the school girl, throwing aside her chewing-gum and substituting trout for her former lunch of slate pencils, and venison for pickles, returns to her home a perfect Di Vernon.

In Murray's Adirondacks the poor consumptive, who has but four cubic inches of lung left to oxygenate his enfeebled blood, arrives on a stretcher, and is carried into the woods more dead than alive, and after breathing nature's extract of spruce, balsam, hemlock and pine for twenty-four hours, arises, burns the litter he was carried on, and declares that he feels a new lung sprouting at the lower end of his windpipe. At the end of a month his yell delivered from the top of Owl's Head is heard in Plattsburg, eighty miles as the crow flies. On his return to New York he finds his new lungs so much better than the old ones of those who have not visited "Murray land" that he secures an engagement in the Bowery to shout the charms of the fat woman, the beautiful Circassian girl, and the big snakes. It is a fact that if you question one of the gentlemen engaged in the last-named occupation, and who are vulgarly termed "side-show blowers," you will find that he was formerly a victim of consumption, who has been restored by the advice of Mr. Murray, and is now living on the labors of a new pair of hand-sewed water-and-whisky-proof lungs, that are made of the best damascus twist, clinker-built and copper-fastened, six-strip bamboo, semi-hammerless, and warranted a yard wide and all wool. The man was the son of poor but wealthy parents, and after reading Murray he pined for the pines and bawled for the balsams and never spruced up until among the spruces and hemmed by the hemlocks, and free to roam in the aroma of Mr. Murray's woods. He left his track on Brown's tract by reluctant consent of his parents who feared that he could not stand the Raquette. He went. This was early in June, and the guide rolled the invalid in his liverpad and placed him in his gun case. But the healing properties of the pines healed up his lungs and grew some new ones in a few hours, when he crawled out of the gun case and took on so much fat that he can never get back to its protecting tube. Another Adirondack convalescent is a cannonball tosser in a circus, and has married the fat woman, and daily sees his athletic progeny tumbling in the sawdust of the arena while he gathers in more shekels from the combined attractions than the manager does. (See Murray's book, page 14.) This, I am aware, is an extreme case, and, as such may seem exaggerated; but it is not.

In Murray land "the lumberman has never been. No axe has sounded along its mountain sides, nor echoed across its peaceful waters." (Page 17). Why, no; those stumps that you see are all the work of beavers. To be sure, it does look like the work of an axe, but then you know the beavers have learned how to take a tree down and not leave it filled with tooth marks as they did a century ago. That second growth of white poplar, birch and other deciduous wood, which follows the clearing off of the evergreens in so many places, has just sprung up to give variety to the forest, and the lamming of the lakes is merely to give water to the canals and not to drive timber down, and those tracts of land that the lumbermen have bought of the State for five cents an acre will never be cut off; they only bought them to look at.

Here I must have dozed, for I heard a voice which said: "L'Adirondaque d' M. Murray is for one man who is blasé, one very fine place where he find the refreshment without the fatigue of the tramp, as he so truly tell us in his most excellent book (page 51.) Here one is front à front a dame Nature, and can be so fainéant, so idle as he may please. Here the divertissement of the hunt and the fish is all performed from the boat which your valet he carry on his back over the portage. The most delicate lady do not catch the cold in l'Adirondaque, for it is one impossibility where the lampness and the miasma come not. Fatigue is unknown, and one enfant of five summers can put forth all the exercises which one needs in le grand wilderness."

"Die Adirondacke des Herrn Murray haben in dem monat Juni ein little black fly, aber er ist nicht as the mosquito so bad, as you may on page 55 learn. The men who have in the newspapers of this insect written have the black fly much exaggerated, und you will find that Herr Murray has of him a good and a truthful account given, und he so truly says that the bite not severe is nor is it ordinarily poisonous, obgleich there may exceptions be. It is of the insect family one of the most harmless and least vexatious, und ist ein monster which in the feverish imaginations of men exists only. Die stories von die bears ist ridiculous, also, animals that more timid are and harmless exist not, und when the bear nach your camp come, a stick oder a piece of bark von die tree will scatter them so like the cats which on the back shed come. All what bad is, ist sehr übertrieben by die newspaper fellows. In die Adirondacke can man who no experience has, und who all his muscle gains when he pounds on his pulpit, take himself in his boat down some rapids where his guides who much in the woods are dare not follow."

"In la Italia we have no so fine wildernessa as in la Adirondaka. I comme from la city, where I keepa one fine standa for de pea-nuta. In de first tima, a prima vista, I thinka so granda, so fine, but de new brooma, you knowa, he sweep so clean, as we say, 'di novelle tutto par bello,' but I lika much. Here can one see so granda sights, one younga girl she come in canoe with light at night, and John and me see she was one espirita, John call ghosta. I was so scara at first, but we chasa her, and when I catch her dressa I found nothing but empty air. I tell John she is 'dolce cose a vedere, e dolci inganni,' or somethings so sweet to see-a and some sweet deceptions. I was so much impressed with-a her vision that it is with much grief, con dolore, that I go back-a to the city, where the small boy he ask-a me, 'Say, mister, how mucha you-a sella de banan?' But if you no believe-a him, ask-a John."

"Begorra, av it's fun you want you should g'up in the Adirondacks. You should have seen me an' Martin take turns holdin' av a deer by the leg an' he the tail. It was a dark, foggy night, d'ye see, an' after I shot the spalpeen—the deer, not Martin—he lay still till I kem and then, bad cess to him, he strived to get on his legs again, and I tuk a grip on his hind leg an' hilt wid all the grip that I had willed to me be my ancestors, the O'Caseys, who were famous in Tipperary for grip. There's Larry O'Casey, now, Aldherman in the Ninety-siventh Ward in New York, has a grip on the b'yes, who all make their headquarters in his saloon, and ivery man av them is good for a dozen votes apiece, and so Larry has a powerful grip on the Boord av Aldhermen, d'ye see? But I forget the deer. He kicked until I thought I was in bed with a man who had the delirious triangles, and was a-kickin' the clothes all aff me, until I was forced to let go, when Martin O'Flaherty grabbed the creature be the b'yes, and with a will he stuck a good holt, av it don't pull loose.' 'Phat's that?' says he. 'Spit on your hands, Martin,' says I. 'Go to the divil,' says he. 'Go there yourself,' says I, an' wi' that the buck gave a lep, an' Martin kem down on his back, crying 'Och! murther! me eye is out an' the hole stopped up wid mud,' and that was the last I heard av the buck till we found him dead, with his head in the marsh, where it had run be rason av his bein' overbalanced when his tail pulled out.'"

Here I awoke and found the book had dropped from my hand and I had been dreaming. At least this is what I ask those who read this to believe, whether I do or not. If you don't believe it, ask John.

One impression remains. In his chapter, "When to Visit the Adirondacks," Mr. Murray says: "July is the best month for jack or night shooting." I have been over the ground of night shooting, and have no more to say of it, but I would like to have Dodge or some other game protector catch him shooting deer in July. Now, having gone over Murray's Adirondacks, I will have to touch upon the idea that some others entertain of that region. F. M.

The Sportsman Tourist.

FAMILIAR LETTERS.

II.—ANOTHER OLD ADAGE.

IN a former "Familiar Letter," the old adage that "All work and no play makes Jack a dull boy," formed the trellis over which we trained our remarks, which blossomed with truth and good counsel.

In this thirsty, sticky, dogday weather, we are thinking, dear FOREST AND STREAM, of the many "slips" which many have found "'twixt the cup and the lip" during the summer now past.

There are "slips" moral, "slips" spiritual, slip-ups and slip-downs, but the prime "slip," which we have in mind, is the "slip" physical, which may possibly drag in its train the whole catalogue of "slips" in general.

Imagine with me a royal fellow, who, from ambition or necessity, is devoting himself, body and soul, day and night, to his life work, one who finds in his daily work the greatest pleasure, for it is possible to combine the most serious and sustained effort with the liveliest satisfaction, and such combination is most always the winning factor in success.

We can easily conjure up such an one, can we not? and feel like enrolling our royal selves in such a noble army of martyrs.

The price of such devotion is wear and tear, however, and unless we take heed, we are liable to make a fearful "slip" just here. The thirsty, needy, ambitious "lip" craves the "cup" of success. Shall such a "slip" dash it to the ground?

Our imaginary worker cries "no," and seeing the need of rest and recuperation, decides to secure it in his little "vacation" that he may return to his work "like a giant refreshed."

Do you not see by this time, my dear journal, that my mind is dwelling upon the many ridiculous and absurd "slips" made just at this point? Without a "slip" here, one may quaff at this cup and drink to the full to pleasure and profit. But a "slip" made, and as with Tantalus, the raging thirst is unquelled, and it is "all up" "'twixt the cup and the lip."

How to spend a vacation free from the "slip" of disappointing results is to some a hidden secret. Because at the outset, drawn within the maelstrom of some fashionable resort, where conventionality hampers and frets, or where continued long hours and a really superheated life consume, the "slip" is made at once. One easily trips over the equally dangerous mistake of casting lot, for a while, in some smaller community at less expense, but where the dangers of surface drainage and kindred evils make the "slip" a costly one.

We want you to join us, in fancy, dear FOREST AND STREAM (for you are good company and we like your society), and see if you cannot give our imaginary hero a few hints which may open his eyes, while we draw a pen picture of a few days of our "vacation" this summer. We are eager to ask this, be-

cause in the after results we find no "slips"—the draught was refreshing and health-giving.

Fancy our family (which includes two bright, eager boys of 12 and 13 years), located in a charming "cottage by the sea." We want you to picture for yourself all the surroundings—the house standing under the shade of friendly foliage—green fields sweeping down to the shore, half a pistol shot away—romantic rocks and "cold gray stones" against which the restless sea purls its gentle ripple, or dashes its ponderous swell and savage billow, at pleasure—the little "cove" with its sandy beach, where little folks may learn, and older "boys" are eager to swim—the boats at moorings drawn up on shore—the old windlass sticking up out of sand—the fishcars and lobster pots—bits of stranded wreck—and the whole line of shore paraphernalia. Can you not see it? with the blue water and level horizon, dotted with white sails beyond all? And this place, *five miles from the station*, and a mile or two away from the nearest neighbor, save a few good souls who are fortunate enough to cluster around this particular "point!"

Here is rest, quiet, freedom, health! Here is the opportunity—you do not need the programme. You can see us, pater-familias and young fry—all young together digging our heels into the sand—lying on backs or taking running jumps at the very edge of the blue water on the hard beach—fishing from rocks or boat—making miniature piers and establishing miniature navy-yards—anchoring buoys and light ships—tying the whole list of "sailor knots."

The sun shines bright, but the breeze is cool. The face grows brown and red, but it is not with "fever" or "biliousness." Sleep is sound and appetite hearty, and vigor is instilled into the veins with every hour's enjoyment.

We must call your notice, however, to an old friend of yours and ours that arrived early one morning, and as she let go her anchor and her cable merrily ran away, fired her gun of salutation—to that good old boat the Nahma. She lies there, just within the "cove," riding easily and waiting to contribute her part to the prevention of any "slip" of ennui or weariness. Later, as "Capt. Bill" pulled off in the yawl, we all rose up and "called him blessed." The same old, honest friend, the same old trustworthy grip!

We do not now mean to outline more than the skeleton of this vacation, because you are to suggest to our worker that it is a frame worth draping in his own way and according to his own fancy.

One day a merry party of children, among whom "the Commodore" renewed his youth, sailed out and joined the yacht race of the N. Y. Y. C., exchanging salutes with the commodore of that fleet.

Another day, scudding along under a breeze that carried away balloon-jibs and foretopmasts as we ran out by "Watch Hill."

Another day, cruising to and fro in "The Race" with twenty other sail, all after the first bluefish.

Another day, ashore on Gull Island, startling myriads of gulls, and careful as we stepped along the shore, to avoid crushing either eggs or little gulls to untimely end.

And every day full of anticipation and gain. The moderate pipe, nothing stronger than "claret cup," and early hours all contributing to the increasing fund of good. Do you see any "slip 'twixt the cup and the lip" here?

If we could together, dear FOREST AND STREAM, prevent some of our royal brotherhood from making a bad "slip," which wastes his opportunity, if not worse; if we could extend a hand to pull up from their knees those only partially down through ignorant "slips" in this matter of putting a vacation where it will do the most good, we should be happy together, would we not?

If then you find any of this class, just give them these hints, which have made happy days and happier afterdays, for you and for me. B.

MAINE NOTES.

THE article, "A Swallows' Roost," in your issue of the 14th inst., calls to mind the movements of a flight of swallows here, nightly observed by quite an audience of villagers, during the months of June and July. On the side of the stream near the village stands an unoccupied tannery, the brick chimney of which is about forty feet high, the opening at the top being a foot square.

At sunset the swallows are observed coming from every direction, and circle about the chimney until their number aggregates hundreds. They circle about in one direction for several minutes, following all the curves and angles of one leader, and then reverse the direction, seemingly with the view of ascertaining if they are all present, or else for a general inspection by the elders. When they first arrive they circle at considerable heighth, gradually dropping lower with a spiral motion which is clearly observed, making occasional attempts to enter until they reach the desired angle, when they drop into the chimney in one solid black column, not from the center, as observed in the article referred to, but from one end. It takes several minutes for them all to get in, and the rapidity with which they pile into that narrow opening makes one think that those on the bottom must be considerably disarranged in feathers before they can get out of the way. I am unable to give the technical name of this swallow. I am of the opinion that they use the chimney only as a roosting place, and that they breed in some other locality, as they are first observed here about the 20th of April, but do not occupy the chimney until six or eight weeks later, and migrate earlier than the other varieties of swallows.

Mr. E. M. Stillwell, who takes so much interest in preserving our game and stocking our lakes with fish, very kindly caught and delivered to me forty fine black bass, which I liberated in Crooked Pond, two miles from town, of easy access by water. As the pond is quite small, admirably adapted to their propagation, and many of them were of a pound weight each, we may reasonably expect fine sport with this gamy fish in a short time. The professor caught one of them a few days after they were put into the pond, but liberated him as soon as landed, after having his usually placid demeanor considerably shaken up.

Our ruffed grouse are scarce. Woodcock, so far as I have observed, are fairly plenty. I shot four within sight of the office yesterday, gone less than a half hour from my work. The dog flushed seven more returning, but as parties come here from abroad here to shoot woodcock, I was generous enough to leave them unmolested. In this locality I mention I have never succeeded in flushing more than three or four in former years. It may be that the severe drouth of the summer months has driven them nearer the streams, and that higher ground may not have its usual quota. Deer are quite abundant, and apparently increasing every year. I have observed their tracks all about the shores of the lake, within sight of the village. Mattanawcook Lake is quite a resort for several varieties of ducks—black, wood, and blue-wing teal, specimens of which I have already secured in numbers sufficientfor several good meals. Wilson snipe, ring-neck plover and yellow legs are numerous just now and very fat.

F. C. P.

LINCOLN, Me., September 20.

IN CAMP.

GEORGE, I could live forever thus,
Away from noisy din of town,
And with you Nature's beauties share,—
But in that case I could not wear
My bonnet, George, nor my new brown
Silk gown.

How guileless are these simple folk,
Compared with dwellers in the hum
Of city life. How chaste! How pure! -
But George, that horrid guide, I'm sure,
Smelled very strong of gin, or rum
And gum.

How sweet to hear the katydids
Replying to the cricket's chant.
Of Nature's music there's no lack.
Oh, George, there's something down my back!—
Feel here, love, see if find you can't
An ant.

No dainties here tempt us to death,
But food enough to satiate
In plain, health-giving, hearty fare.—
It grieved me, though, to see McNair,
To test its heat, on griddle-plate
Expectorate.

What soothing music's in the fall
Of raindrops, beating light as dew
On canvas tent a lullaby.—
Good gracious! Such a leak! Oh my!
My waist is very near soaked through!
Ker-chew!

SENECA.

BELOW QUEBEC.

SECOND PAPER.

THE picturesque town of Gaspé is situated on the forty-seventh parallel and nearly 400 miles east of Quebec, which city is at present one of the chief terminal points for all merchandise and passengers from England to the Canadas. Its harbor, however, like that of Montreal, is blocked up by ice during a large portion of the year, and transatlantic communication, therefore, virtually ceases from the middle of November to the middle of May. The expense and perils also arising from navigating the St. Lawrence River to such a long distance from the seaboard, are an additional drawback to free intercourse, since the cost of towage and pilotage on this land-locked highway swell the bill to a high figure, not counting the accidents and wrecks, which are only too common at any time of the year on the St. Lawrence. It is for these reasons that Halifax is preferred as port of entry, and has grown in size and extent of commerce. The Intercolonial Railroad, built by the Canadian government, unites that city with Quebec, and by its rapid transit greatly facilitates commercial traffic. It is an inexplicable oversight, however, that a branch road after the pattern of the American narrow gauges, such as are in operation all over Pennsylvania, has not been long ago constructed, whereby Gaspé, only about 180 miles distant from the intercolonial station of Campbellton, could have been brought into direct railroad communication. The advantages of such an enterprise are too many and too obvious to be neglected. Gaspé basin is in the first place a natural harbor, unsurpassed in point of safety, depth, extent, and absence of all obstructing reefs and shoals, by any other along the whole coast line of the Dominion. No pilot is ever needed, day or night, in all kinds of weather, and the Great Eastern, once inside, could float safely everywhere in it. By reason of its proximity to the Gulf of St. Lawrence, and the not far off never frozen ocean beyond it, Gaspé has at least six weeks longer of spring and fall navigation than Quebec, which is blocked up by ice when navigation eastward near the ocean is fully opened. By employment of proper machinery the harbor of Gaspé, which is only fifteen miles from the open basin of the Gulf, could, with but small expense, be kept open still longer. This is actually done elsewhere, as at Detroit River and the harbors of Milwaukee and Grand Haven, which though continually in danger of being closed by a solid sheet of ice during severe winters, are yet kept open with ease, as they are near the large basins of Lakes Michigan and Huron. It is almost needless to point out in addition how easily during midwinter, when all navigation westward of Halifax is suspended, large consignments of freight could be forwarded to Gaspé by such means as the above referred to narrow-gauge road. Large cargoes could be thus readily shipped off under favorable circumstances as early as April, not counting lower rates of shipment by reason of shorter distance, expense of pilotage and towage. Swift ocean steamers, as the Parisian, which but lately made her passage from Quebec to Queenstown in five days, could accomplish the same in four days from Gaspé, and thus lessen considerably the risks and inconveniences from which many passengers suffer through prolonged Atlantic travel. They could in short be landed quicker and transferred, and save at least one day in their passage from land to land, in eight months out of twelve.

These incidental facts, though somewhat out of the line I have chosen to pursue in our present vacation trip, naturally force themselves upon our attention. As we take a passing glance at the map on the cabin table of the St. Lawrence, where the prominence of the peninsula of Quebec, jutting out far into the spacious basin of the Gulf of St. Lawrence, is too conspicuous to be overlooked. Gaspé may surely hope, in view of its favorable geographical position, for an early revival of her former good times, when its spacious bay was whitened, not fifty years ago, by hundreds of coming and going fishing crafts, and when the cheery yo-heave-ho of their sturdy crews was echoed by the towering hills, which rise abruptly from the base of this beautiful fiord. All around it death-like silence reigns now supreme. A Rip Van Winkle trance seems to have come over its dreams of a brighter future, and we may look from the veranda of Mons. Le Boutillier's stately residence, at most any time of the day, over its deserted waters, on which only a few small crafts are mirrored. Never a sound here interrupts the stillness of the morning and evening hours; the very oars of the clumsy old-fashioned ferryboat seem to be muffled, and we could almost fancy ourselves for a moment fully a century behind our stirring time, if it were not for the graceful relief of the steamer La Canadienne lying almost directly under our feet at an anchor. She is one of the three government vessels which patrol, in the interest of fisheries and maintenance of order and law, these distant shores where such an official as a constable exists only by proxy. The firms of Le Boutillier and Collas, however, carry on still quite a healthy trade abroad, and from time to time send their ships with full cargoes of dried codfish, which are said to be of better quality here than elsewhere, as far as the southern ports of Europe and Brazil.

There are also three beautiful rivers—the York, Dartmouth and St. Johns—which empty their cold crystal floods into the winding estuary of Gaspé basin. Since all of these swarm with salmon and large sea trout, they have attracted for years a score of salmon anglers to them, who have never yet failed in making great catches. The St. Johns and York rivers have been for a long time the favorite fishing quarters of Messrs. Curtis and Barnes, of Boston, and some of the catches made by Lord Dufferin upon the York River have equalled those on the Cassapediac, which has always had the repute of being the most productive of all Canadian salmon streams in point of both number and size. The lease of the York River has of late been transferred to Mr. Thos. Murdock, of Chicago, who has enjoyed the last and present summer's fishing in his commodious log-house camp, erected at the very edge of one of the best salmon pools. The Dartmouth had thus far never yielded much sport, but unexpectedly proved to be the best of the three during the past summer, when young Mr. Evarts, a son of the ex-Secretary of State, obtained a gratifying score of nearly sixty salmon in less than twenty days of fishing. This indeed may be termed gratifying results for one, who modestly ranked himself still as a novice in the art of casting a fly for this royal game.

We had the pleasure of passing a day at his encampment, where he assiduously indulged in this seductive pastime, with the aid of two trusty canoe men, whose help is indispensable in all of these rapid rivers. From a comfortable seat fashioned by nature's hand from a curving root jutting out horizontally from the high and steep cliff near the great falls of the Dartmouth, we could survey at leisure the full extent of the operation and even see in full sight the great dark looking shoals of salmon lying in unbroken phalanx on the bottom of the pool. They hardly betrayed any signs of animation and appeared much more like a broken ledge of rocks than a compact mass of flesh, if one or another of their number had not turned over from time to time its glistening silvery side or ventured to take a leap for the tempting fly trailing on the transparent water above its indolent companions. Although the casting was good enough to do credit to any expert, I had not the pleasure of seeing a salmon hooked and landed, as it was midday before a start was made. Morning and evening are here as elsewhere the best hours. Salmon averaged this year about sixteen pounds on the Dartmouth, which is considered a very small size, and it is strange that this same happened this year in most of the rivers which had previously yielded on the average large-sized salmon.

Gaspé is admirably suited to idle away a few weeks, and affords a recreation from the toil and weariness which the close confinement to business in our large cities entails. The bracing air, fresh from the ocean, and tempered to suit even delicate constitutions by the heat radiated from the land, is pure and invigorating, and the few visitors who spend their summer here report great improvement of their health. The dull, flat and uninteresting surroundings of such Canadian watering places as Cacouna, Metis and others are a serious drawback to those commons, while here in every respect the reverse obtained.

But there must be society, balls, picnics, orchestras, dresses and fashions to satisfy the crowd. Without these attractions the charm of their summer seaside paradise would vanish, as the follies and vanities of the fashionable world must follow its train. There is an excellent boarding house kept at Gaspé by Mrs. Dumaresque, where a few boarders can be accommodated, who may enjoy there, along with a well-set table, all of the pleasures which seclusion and freedom from the restraints of artificial life confers.

Our own time, however, is too short to permit even a temporary rest. The mail schooner Kate, anchored in full view from our window, is ready to sail on her next trip to the north shore, and we have to hurry to complete our necessary preparations. She rivets the last and only link of communication between this outpost of civilization with the few settlers along the northern shores of the Gulf of St. Lawrence and Anticosti Island; is a rather comfortable craft of about 80 tons; and has fine accommodations for about half a dozen passengers. She is not a very fast sailer, but makes two trips each month during the summer, and runs until the beginning of November. We have known her master, honest, obliging Richard Miller, for years past when we travelled part of the time along her sailing route, and as he calls on this present trip at St. Johns River, one of the highest tributaries running into the Gulf, we are glad to avail ourselves of her opportune departure, as we have a cordial invitation to join two English sportsmen, Messrs. Garland and Bland, who are again this year the lessees of the salmon fishery of the St. Johns.

A brisk land breeze, which prevails night and morning at Gaspé during summer with as much regularity as in the tropics, soon carries us past the frowning headlands of Snip's Head, where the high, steep rocks face the sea abruptly and rise up vertically to a height of over 400 feet, affording by their stern and bold front one of the most picturesque headlands along this coast. Beyond them, to seaward, are visible the blue outlines of Anticosti, the nearest land of which is only about thirty-five miles distant. Here, at the Southwest Point lighthouse, jutting out from the otherwise even trend of the island, the Kate makes her first stop to deliver her mail.

This cape has for sundry reasons a rather hard reputation in point of safe anchorage and landing, and most of the vessels running along here take good care to give it a wide berth. There is a sufficient lee for southeast winds, but when the breeze changes around to the northwest a tremendous sea dashes against the solid rocks upon which the lighthouse is built, and justifies the fears in respect to danger vessels are exposed to when too near inshore.

As I expected to revisit yet this summer this interesting spot, I merely contented myself with a view of the round white tower standing out in bold relief from the low reef and forest-clad hills back of it. The lighthouse is marked conspicuously with two broad, red horizontal bands, to enable the navigator to recognize it quickly at first sight. There is thus no reason to confound it with that of the west end of

Anticosti, which has red stripes longitudinally painted upon its white background. It seems strange that so many years had to roll by before such simple means were adopted in guiding vessels during the thick fogs which so often hide Anticosti from view, and that wreck upon wreck was suffered to strand upon these bleak shores. They are the grave of many a hapless mariner whose terrible sufferings, frequently ended at last by freezing to death, are still within the vivid recollection of some of the old settlers upon the island. For sake of additional precaution, the West and Heath Point lighthouses, situated respectively upon the eastern and western end of Anticosti, are now provided with signal guns, the boom of which for miles away warns the befogged vessel of the proximity of their dangerous jutting out reefs.

We entertain, however, at present no particular apprehension about any possible mishap. The months of July and August are especially this year marked by beautiful and clear weather, and although a brisk northwest breeze, which raises in a hurry a rough sea, compels the Kate to run for Ellis's Bay, the sky looks all along as blue as smiling Italy, and the sun sinks as lovely behind the wooded cliffs back of Ellis's Bay as ever poet's fancy pictured. The short swell upon which the Kate had been tossed like a cockle shell subsides as quickly as it rose, and after a comfortable night in this best harbor on Anticosti we weigh anchor again at sunrise and head with a fair wind for the St. Johns River.

Anticosti Island is fully visible from the mouth of it, as it is divided from the north shore by a narrow strait of hardly thirty miles in width. The sea around it swarms with life during spring and fall, when its migratory birds arrive in immense flocks, and when in the former season seals come in thousands upon the drift ice, which is carried by the northern currents through the Straits of Belle Isle into the basin of the Gulf. But now there is a breathing spell and animated nature takes her vacation. We saw, however, along the north channel many porpoises and several large whales, which some of our crew, who are professional whalers, asserted to be sulphur bottoms. Their spouting and mouthing, which latter means their feeding, could be distinctly heard for a couple of miles. Sometimes one or another would rise close alongside, though only to dive instantly when they discover their mistake. The large black-backed gull (*Larus marinus*), called here appropriately saddle back, the common herring gull, the silvery white and black-winged solan goose, better known here as gannet, the eider duck and scoter, a few guillemots, and a great number of puffins make up the average species of birds we saw here hovering over these silent waters during the summer months. The latter bird is called here parroquet and breeds in great numbers, along with a little colony of the solan geese and herring gulls, upon a little island named after it. The schooner passes the same almost within rifle shot, and a great cloud of birds hovering over it indicates at a glance that it is their breeding ground. In aspect it is like a huge square tower of about thirty acres in area with vertically rising sides formed of limestone. It is the westernmost one of the long chain of the Mingan Islands which closely skirt, like a broken necklace, the main shore of Southern Labrador. To judge by appearances they have been separated from it by the immense denuding forces, the effects of which are everywhere engraven upon these carved out coastlines of the Gulf of St. Lawrence.

It is only eight miles from here to the mouth of the St. Johns River, and a gentle breeze from the southwest soon finds us at last anchored outside of its shallow bar.

This great artery runs in an almost parallel direction with the generality of the great rivers which drain the southern slopes of the heights of land. Among them the Moisie, Mingan, Romaine, and Natashquan are the most notable. Moisie and St. Johns are also the principal highways, of which the Montagnais Indians avail themselves for making their annual hunting and trapping expeditions into the but little known interior of the great Labrador peninsula.

Nothing definite concerning any of these is known, excepting the Moisie, of which an exploration was made in 1861 by Prof. Hind, the results of which have been published in two interesting volumes of explorations of the Labrador peninsula. It is yet very difficult, if not impossible, to gather any reliable information concerning the aspect and character of the great primitive wilderness between the shores of the Gulf and those of Hudson Bay and the Straits of Belle Isle. This region can only be penetrated by canoes along the great water courses, but even then it is no very easy task to obtain expert guides to accomplish such an undertaking, and do the work thoroughly.

The Indians are very reticent, as they fear competition and intrusion on part of the white trappers upon the only reservation and hunting grounds for game and fur, which constitute their only means to eke out a miserable existence. Even such old settlers as Mr. Scott, who is a well-informed sportsman, and has been for a half life time the agent of the Hudson Bay Company's post at Mingan, knows relatively nothing concerning the game of the interior of Labrador, not to speak of its physical and geological features. All that there is known to him or any of the white settlers along the Gulf coast is this that the Mountaineer Indians leave the coast, bag and baggage, for parts unknown about beginning of August, and return next spring toward the latter end of May, loaded down with fur, whenever trapping has been fair. They depart with merely an excuse of an outfit in the way of provisions, and state that they manage until late in September to subsist without taxing their scanty stock of powder upon the myriads of waterfowl breeding upon the countless shallow lake-like ponds which dot the interior.

I have heard it stated that only one white man, a Catholic missionary, ever penetrated the Labrador peninsula from the Gulf shores to Esquimaux Bay on parallel 56 deg., of which route he made a rough chart, the only one in existance. The whole distance traversed by him hardly exceeded 250 miles and was accomplished, with exception of the several portages well known to the Indians, entirely by water, along the course of rivers and lakes. This region then is still one of the few spots which invites the adventurous explorer, who may be the first to put his foot upon this primitive wilderness marked off with large letters on the government map as unexplored region. To the ornithologist it would be doubly interesting, as these regions serve undoubtedly, by reason of their remoteness and undisturbed condition, as breeding grounds for the innumerable flocks of geese, ducks, and waders of all kinds, which make each early spring their appearance for a few short weeks only along the shores of the Gulf of St. Lawrence, to resume their flight in a northerly direction. But my present journey is not one of exploration. For such a comprehensive undertaking larger preparations and means are needed than I can command at present. A passing glimpse at the portals of the mysterious lands beyond, recreation from exhausting indoor occupations, along with the prospect of an occasional treat in the way of trout fishing, have allured us again to these shores. Already do we feel the invigorating effect of the pure and heavily oxygenated air, which gives us the refreshing, constant luxury of an air bath, as applied inwardly and outwardly, through lungs and skin. L.

AN AFTERNOON ON BOG RIVER.

SEATING ourselves on the little "Rushton" that had borne us so many miles, a few strong strokes of the paddles sent us gliding swiftly from our camp landing toward the outlet of the pond where the trail we were to take began. A scene of rare beauty was before us. To the left, rising high and rugged hundreds of feet above the water, shone the bare cliffs, rain washed and sun beaten, of Jac's Mountain, resembling in their broken masses the crumbling turrets and battlements of some old feudal castle, and where the scanty verdure grew, or perhaps a stunted pine or shrub clung to some crevice, one could easily fancy portcullis, tower, or oriel window, moss grown and ivy covered. From the base to the water's edge was an unbroken forest, and the waving tops of a hardwood ridge was always suggestive of a cool retreat. To the right rising to the west, a rolling series of hills rose one above another higher and higher till their peaks were hid in the mists and clouds in the distance, while tamarack, beech, maple, spruce and birch presented ever-changing shades of green, which undulated before the varying breezes like the ocean billows; and the rustle and sighing of the leaves and branches was not unlike the murmur of the sea on a smooth coast.

A narrow sand beach, skirted with a fringe of emerald-green, spear-like grass, shone like burnished gold in the sunlight at one end of the pond, while the farther end, and that towards which we were heading, was bordered with low hanging bushes, and tamarack and balsams indicate swampy ground and oozy soil, a safe retreat for deer or bear from dogs or men, for few would care to penetrate its boggy recesses, made almost impenetrable by dense thickets, masses of fallen timber and creeping vines and roots.

All was peace. High over head two hawks were sailing with ever-widening circle. A crane stood among the rushes waiting for his dinner to appear. Far up the mountain side, perched on the highest limb of a dead pine, sat a great bald-headed eagle, watching doubtless for some unlucky rabbit, bird or fawn to feast upon. A mother duck with her brood of young scurried away and hid among the lily pads and reeds, while a great northern diver, startled at our approach, dove beneath the surface to reappear a quarter of a mile away, where he shook his wings and uttered his shrill cry ere he sank again in quest of his fishy prey. As we entered the little cove formed by the outlet, two startled deer raised their heads, and after one frightened look bounded over the bushes and disappeared, and the crane, with a harsh, discordant cry, rose with great flapping wings and dangling legs and flew away over the tree tops.

A carry of a mile or more brought us to a great marsh surrounding a lake whose principal attractions are acres of lily pads, oceans of mud, through which it is almost impossible to force a boat, and a preponderance of every known species of the insect tribe that harass the unwary traveller, and famous for the fact that it is one of the best feeding grounds for deer in the country, and was once the breeding places of the moose.

After reaching the shore of the lake we had to go nearly a mile before the water was deep enough to float the boat, and as for the major part of the way we sank ankle deep in the tenacious mud, our minds were in anything but an amiable condition, nor was our temper much improved by the myriads of winged pests that swarmed around us. After searching vainly for a spring which the guide book located in a clump of balsams, we quenched our thirst with a few sucks of a lemon, and launching our boat passed down the lake and entered the channel of the river whose source is the lake just mentioned. The river is very tortuous, and in some places so narrow one can almost touch either bank, while frequent sand bars and shoals render navigation, when the water is low, exceedingly laborious.

A moth skimmed lightly over the water, almost touching it. A sudden rush of water, a splash, a swirl in the water and a few bubbles show where a trout is taking his meal. With a backward stroke of the paddle the boat is checked, and a moment later the flies are trailing across the wake just left.

Once, twice, three times they are drawn across the pool without a rise.

Drawing back for the fifth cast the rod suddenly bends, and with a snap the lure is taken, and then the sport begins.

He is hooked on the dropper, a Rube Wood, and as he makes his first turn another trout seizes the stretcher, and both break water at the same time, the first a "beauty." That was a glorious fight!

Now rushing toward the boat, anon heading for the fallen tree whose top just appears above the water, which if they reach tackle would part like a thread, again sulking, they seek the bottom.

But they struggled in vain, for the little 7½oz. rod had stood many a fight with trout and bass, and nobly responded from tip to butt to every call, and soon both lay gasping out their lives in the bottom of the boat. The first one weighed 1 lb. 9ozs., the second a trifle over 13ozs—not large, to be sure, but gamier than many I have caught weighing twice as much.

A little below the river widened, forming a large pool, and from this, in less than half an hour, sufficient were secured for supper, but none over a quarter of a pound in weight.

As fast as the trout were caught the guide dressed them, and then, when enough had been caught, the rod was put into its case and the gun taken up instead, for we were in a country teeming with game.

As we turned a sharp bend in the river an otter slid down the bank and disappeared under the fringe of alders skirting the water's edge, and a fair-sized trout lying on the bank showed he too had been after his evening meal.

Soon we came to an apparent landing on the right bank, although almost hidden by the dense alders. We pushed the boat's prow through the thick bushes, and, after some scrambling, I managed to reach the top of the steep bank, and found some evidence of a former camp from the charred wood and two or three peeled barks lying on the ground, so concluded we had better stop here for supper, as the country was as new to my guide as to myself, and neither knew how far it might be to the next camping ground.

Supper was soon ready, composed of trout, fried pork, tea, flapjacks and potatoes, and how good it tasted only those who have worked hard in that pure bracing air can appreciate

The meal finished, the guide busied himself cleaning up, while I pushed off in the boat to explore the river below.

Presently I came to a place that had been burned off, making a field of several acres, and among the stumps that were left four deer were quietly feeding, but a careless "flunk" on the side of the boat with the paddle caused them to spring away into the woods with "whistles" and snorts of alarm; but it was just as well, for the season was not quite yet open, and provisions were not so scarce that I was obliged to wage war on does and their young, but had a buck appeared I fear my conscience would have been rather elastic, for I was waiting with eager expectation for savory venison stews and tender steaks; but for the nonce I had to content myself with trout.

While watching, and, I confess, hoping, a buck would appear, I heard a low mutter of distant thunder, and that warning was sufficient, and hastily putting the boat up stream, soon reached the landing, and there found the guide waiting for me anxiously, for, very carelessly, I had omitted putting the blankets and rubber coats in the pack, as the day was so warm and bright I did not think we would need them when we left the camp, and that was now some five miles away, and it was after six o'clock and would soon be dark. So speed was necessary if we expected to sleep in our own shanty that night. We applied our paddles with a will, but soon a few big drops of rain splashing in the water, and the sighing of the wind in the trees, while the black clouds were piling up and flying overhead, warned us our prospects of a ducking were very probable.

Soon there came an ominous lull, and knowing what was soon to follow, we drove the boat ashore, lifted it from the water, inverted it, and resting one end on the ground, propped the other up with the paddles and crawled under. We were just in time, for the boat quivered and rocked with the wind and rain driving against the bottom, which we had placed so that it would take the brunt of the storm, while we were almost deafened by the roar of thunder, the whistling wind, and the crash of falling timber, and the water was beginning to stream in miniature rivulets under the boat and render our position anything but comfortable. But we had no alternative but "fighting it out on that line," and when, after an hour's confinement, we crawled out, cramped and wet, we could not help laughing at the sorry spectacle we presented with our muddy and bedraggled appearance, and the water-soaked condition of our clothes. We went up the river till we came to a slight rise of ground on which a clump of balsams grew, and landing there we built up a rousing fire, and crawling beneath their thick branches, laid down together and slept till the next morning's sun, peeping over the distant hills, drove the darkness and shadows away and awakened us to the beauties of sunrise in the mountains. And not even a sneeze worried us with the fear that perhaps we had caught our "death o' cold" from sleeping on the bosom of Dame Nature with no protection save rugged health, pure air and youth on our side.

An hour and a half later we were at our own home camp, and the flag floating from its mast at the landing waved us a genial welcome. ONONDAGA.

Natural History.

BREEDING QUAIL IN CONFINEMENT.

THE following account of an experiment in breeding quail in confinement is written by Mr. John J. Willis, president of the Westfield, New Jersey, game society, and was published in the *Monitor* of that town:

I am not the first man who has tried, and been successful, in this line. Fifteen years ago, I saw young quail hatched and grow to full size in New York city. Mr. A. C. Lawrence, of Ninth street, has made a success of the experiment, and that is where I got my first ideas on the subject. Mr. Lawrence's arrangements consisted of wire netting, extending from the fences of his court yard on three sides, or about fifty feet in length, three feet high, and the same width, partitioned off for three pair of birds. In the inclosure were planted dwarf evergreens, and suitable boxes in which the birds could take shelter in wet or cold weather.

I started my experiment in my small conservatory. During the winter I kept the birds confined in a small space thereof, inclosed by wire netting. As soon as I was able to place my flowers out of doors, I raised the sashes and placed wire netting so as to cover the open windows. Beside giving them a box of road dust to wallow in, I furnished them with plenty of good soil to scratch and peck at, and then opened the cage and gave them the liberty of the whole room. Having become familiar with the place during the winter, and accustomed to seeing me in the room to feed them, they made no effort to get out by flying against the glass, and in a week were as tame as chickens. The hen bird was one of two that I purchased last fall, and hatched under a bantam. The cock was one of a lot that our game society purchased for stocking our preserves, and came from Indian Territory. He soon became as tame as the hen, notwithstanding the fact that he took advantage of an open door on three occasions, and escaped. Each time, as soon as I discovered his absence, I shut up the hen and opened the window, and each time my gentleman returned to his mate.

Quail should breed as early as June, but I saw no signs of mine doing so before August. As soon as I observed nest building indications I cut a large bog of long grass and placed it on the floor in a corner, surrounding it with living ferns, and other plants, to furnish a hiding place. I also collected a quantity of fine, short, dry grass, and soon had the satisfaction of seeing a pair of quail build their nest. I do not believe that one person in a thousand knows how they do it. They at once selected the place I had fixed for them, and the cock carried the material to the spot, where Mrs. Quail arranged them to suit herself. Herein is the peculiar part of it: the bird does not carry the material in his bill directly to the nest, but standing with his back toward the nest, picks up a straw and throws it over his shoulder, repeating the operation until it reaches the nest. After the nest was completed I found it entirely inclosed by the grass, both top and sides, leaving two round openings, one of which seems to have been made for use as an entrance, and the other to admit light from the sun.

In a day or two I had the pleasure of seeing the first egg, and it was interesting to watch and listen to the continual consultation the pair seemed to carry on in a low chatting tone. In a whole week there were but three eggs laid, and a day after, when I found one of them out in the middle of the floor with a hole in it, I was discouraged and feared my experiment had come to an untimely end. This, however, must have been an imperfect egg which they wanted to get

rid of, as the hen went on laying an egg every day until there were nine, when she commenced sitting about August 26th. Every morning the hen comes off to feed, and take a dust bath, and returns in a few minutes not to leave again until the next day. The cock bird now spends most of his time near the cages of my mocking bird and robin, seemingly taking no interest in his own household, but the moment one enters the room he utters a low warning note that is answered by the hen, showing that like many married people, they understand each other better than others give them credit for. He does not seem to enjoy his present companions, or the prospect of his becoming "daddy for nine," but sits quietly most of the time on one foot, with ruffled feathers waiting like "patience on a monument (not) smiling at grief," but simply passing the time that must necessarily intervene before his hopes can be realized. Having read Darwin, who can say that Mr. Quail's mind is not occupied at this time with the same hopes and fears to which we human beings are subject under the same circumstances.

Communications in FOREST AND STREAM on this subject always interest me, and while I get many "points" therefrom to guide me in my operations, I could in several instances have made practical suggestions, that would possibly have made complete success where there was but partial success recorded. But an active business man, however much interested, finds little time to indulge in hobbies, and less to write criticisms of others' communications.

THE GASPER-GOU.

Editor Forest and Stream:

My old friend, Mr. D. B. Wier, of Crockett's Bluff, Ark., writes me concerning the gasper-gou, and asks me to reply through the columns of FOREST AND STREAM. I have never seen this fish from Southern waters, and consequently cannot say from personal observation whether or not it has been correctly determined as the sheepshead of the Illinois and the Great Lakes, (*Haplodonotus grunniens*, Raf.) As I understand that the fish has been submitted to Prof. Goode of the U. S. National Museum, and returned by him with this identification, I have no doubt whatever that the sheepshead and gasper-gou are specifically the same. Such peculiarities of the Southern form as have been mentioned, might be reasonably attributed to climate, local conditions, peculiarities of food, and so on. Until within the last four or five years this fish has not been eaten in Illinois, as far as I know, but the large numbers of them caught by seine fishermen have always been left to die upon the banks. Lately, however, a demand for the fish has sprung up, and it is now generally offered for sale, both in the local markets along the Illinois and Mississippi Rivers, and in St. Louis, under the name of "white perch." At Alton I found the fishermen this summer dressing only the smaller specimens and rejecting those over a foot in length. At Pekin, however, all the so-called white perch which are large enough to pay for dressing, are regularly shipped and marketed.

The food of this species in the Illinois River, as determined by a careful study of the contents of twenty-five stomachs from fishes, ranging from an inch in length up to the full grown adult, consists chiefly of insects and crustaceans until the species is about half grown, while the old fish lives almost entirely on mollusks, including the thick-shelled varieties which other mollusk-eating fishes cannot master.

S. A. FORBES.

STATE LABORATORY OF NATURAL HISTORY, Normal, Ill.

A FINE DISPLAY IN AQUARIA.

AT the great Industrial Exhibition now in progress in Cincinnati, there is a good exhibit of aquatic life in the department of aquaria which is thus described by the *Commercial*, of that city:

The display in this interesting department is located in the south area which separates the main building from the south wing. The tanks are arranged along facing the cascade in Floral Hall. It far exceeds the display of any former exhibit. These aquaria are under the auspices of the Natural History Department, of which Mr. W. A. Collord is Chairman and Prof. F. W. Clarke and E. A. Kebler are associates. Charles Dury is manager.

It is the purpose of this article to give a brief account of the more interesting species on exhibition. The first tank on the west end contains a group of fifteen "fringe or double-tailed carp" (*Cyprinus auratus*). Nothing in nature can excel the beauty and grace of this group, as they float slowly about through the clear water of the tank. They are fed daily on bread and worms. These fish are from Messrs. Muth and Eckardt, of Mt. Healthy, and are one year and four months old. The second tank contains gold fish (*Cyprinus auratus*) of selected varieties, which are less than four months old. They are also from the Mt. Healthy fish ponds.

Tank 3 has in it two of the Bavarian goldorfe (*Idus melanotus*). This is a newly introduced and beautiful fish, very hardy, and especially adapted for ponds and ornamental waters. These specimens were imported by Messrs. Muth and Eckhardt, and were shipped in the patent transporting tub invented by R. Eckardt, of Lübbinchen, near Guben, Germany. Out of twenty that started per steamer Elbe from Bremen, nineteen arrived in fine condition. The water was not changed during the voyage. Captain Willcigerod, of the Elbe, takes great interest in acclimatization of valuable food animals and gives them care and transportation gratis. The "goldorfe" grows rapidly and is omniverous

Tank 4 contains dogfish (*Amia calva*), ring perch (*Perca flavescens*). The dogfish is a pirate without a redeeming quality, the terror of other fishes, and a nuisance to the fishermen. Its flesh is pasty, soft and worthless. When it falls into the hands of the Lake Erie fishermen it retires from the interview in a pulverized condition. The other occupants of the tank (the perch) are an excellent pan fish, and give some sport to the angler. These specimens were kindly presented by D. T. Howell, Superintendent of the State hatchery at Toledo.

Tank 5 contains the "blue-spotted sunfish" (*Chanobrettus cyanellus*). This is the familiar pond fish.

Tank 6 contains the "pumpkin seed" (*Pomotis auratus*) a beautiful sunfish from the lake. It is in bad company, the "long-nosed gar" (*Lepidosteus osseus*) only surpassed in general worthlessness by the dogfish. These gars were presented by Mr. Henry Douglas, of the Sandusky hatchery. The "pumpkin seed" are from Mr. Howell.

In tank 7 are black bass, (*Micropterus salmoides*) the gamest of North American fishes, and of great value as a food fish, presented also by Mr. Howell.

Tank 8 contains eels, (*Anguilla rostrata*). These specimens are from Troy, on the Hudson River, N. Y.; they travel up the river at night and keep close to the shore to avoid swift currents and hungry enemies. The eel-catcher takes advantage of this habit, and sets his traps, which consist of bunches of willow switches tied together at one end. Into this the little eels squeeze themselves in fancied security to rest. When the fisherman makes his rounds he rudely disturbs them by slipping his wire under the bunch, and they are caught. It is in this way the thousands are taken to stock rivers all over the country. The transportation is safely effected by using a box 11½ inches long, 9 inches wide and 5 inches deep; this will carry two thousand eels. It is lined on the bottom with canton flannel and filled full to the top; the lid is then nailed on, and through a small hole in the top ice water is allowed to drip. In this way they can be transported without losing a single one. This year, eel-ladders, to enable eels to ascend rivers obstructed by mill dams, have been introduced in Germany. Mr. D. T. Howell has planted many thousands of this valuable fish in the waters of this State. He kindly presented these specimens.

In tank 9 are the peerless brook trout (*Salmo salvelinus fontinalis*), from the Castalia Springs, Erie county, Ohio. These springs belong to a fishing club, and the fishing privilege is confined to its members. It swarms with beautiful fish, some of which weigh as high as four pounds. These specimens were received through the kindness of Messrs. Post, Ferris and Douglass, of Sandusky. In tank 10 are fringe-tailed carp, four months old, from the breeding ponds at Mt. Healthy. Tank 11 contains small bass from the large lot recently distributed by the Cuvier Club from the Sandusky hatchery.

Tank 12 contains leather carp (*Cyprinus nudus*).

No. 13 contains mirror carp (*Cyprinus rex cyprinorum*).

No. 14 contains the common carp (*Cyprinus carpio*). These three species are the famous food carp of Europe, and are being largely introduced in this country. Almost any ponds are suitable for them. They grow with a rapidity almost beyond belief. The fish spawned on May 9 in Messrs. Muth & Eckhardt's ponds are now from four to eight inches long. They grow even more rapidly when fully fed.

Mr. Watkins, superintendent of the fisheries of Minnesota, mentions in FOREST AND STREAM of six-year-old carp that weighed twenty pounds. In the same paper of January 27, 1881, is an article on the growth of the carp in America, by Mr. Mather, the celebrated expert on fishculture. He quotes a letter from Baron Von Behr, President of the German Fishery Society, giving some interesting facts in regard to the growth of the carp. Mr. Mather shows that the carp grows faster in America than in its native country.

The leather carp, not having scales, bears transportation better than the other two, for where the scales become knocked off the fish is liable to fungus. Raising carp is destined to become in this country, as in Europe, a great and profitable industry for the farmers and others having ponds. The writer was invited to go carp fishing in one of Messrs. Muth & Eckhardt's carp ponds. Several very fine ones were taken, weighing from three to ten pounds. The fishing came to an end by a very large fish getting away with the fishing line, hook, bob and sinker. They bite readily, and come out of the muddy water shining like a mirror. In these ponds are also the blue carp.

In tank 15 are some *Cyprinus auratus* of the same age as those in tanks 2 and 10, but retarded in their growth from overcrowding in the pond, there being more fish than food. It is the intention to keep adding choice specimens to the display.

At the east end of the aquarium is an alligator case, in which are three fine little specimens, exhibited by H. C. Stewart, of the Vienna bakery. In the same area Mr. Klepper, of Covington, exhibits some beautifully arranged ornamental aquariums for private house decoration. Mr. Klepper exhibits a number of fishes best adapted for such aquariums. In his collection are specimens of the spotted Triton (*Diemyctyus viridescens*) and the large darter or log perch, *Percina caprodes*, not represented in the other collection.

OPOSSUMS IN FLORIDA.—KITES.—Seeing several items in late numbers of the FOREST AND STREAM relating to opossums I will add my mite. I spent July and August at my place, near Mosquito Inlet, and while there we were troubled by opossums eating our scuppernong grapes and pineapples. I set a box trap and caught fourteen opossums and a skunk within a month. Here is how it was done: The first night a female opossum was caught. Some time after killing her I noticed movements around the "pouch," and upon examining the same found seven young ones, no larger than rats, hanging to teats inside. Two nights after that an old female got in the trap, but got out again by partly lifting the top and squeezing out of the side. In doing this she left two small rat-like 'possums behind! That is what I call a rare occurrence. How many more she carried away with her I don't know. She tried hard to get them out, after getting out herself and missing them. After this four old ones were caught, the largest weighing about ten pounds. Opossums are smaller here than those further north. This is the case with almost all animals in Florida. "W. A. M.," of Tampa, Fla., seems to entertain an idea that the kite, or swallow-tailed falcon hawk, is a rare bird in this State. They are seen on the east coast, where I believe they also breed. This is the most graceful of all birds in its flight. In fact, its soarings, circles, darts and scrolls might well be called "the poetry of motion." It appears to fly so easy, without any effort and scarcely a movement of the wings, yet it is as swift as an arrow. I have noticed that it eats its food—consisting principally of snakes—while on the wing.—C. H. C., (Jacksonville, Fla.)

BREEDING OF QUAIL.—Fishkill-on-the-Hudson, Sept. 16. —*Editor Forest and Stream:* "J. E. S," in his article regarding Iowa game, in FOREST AND STREAM of August 31, is undoubtedly right about an occasional brood of quail being scarcely able to fly in October, although "Ches. A. Peake" thinks it altogether improbable. A friend and I were out after woodcock on the seventh of the present month, and we came across a brood of quail that had just left the nest, as some of them had pieces of the shell sticking to their backs; and as quail are not able to fly under the most favorable circumstances, such as mild dry weather, an abundance of food, etc., in from three to four weeks, it is not probable that so late a brood as this will take wing before the middle of October, and certainly will not be fit to shoot before quite the last of November. It is not an uncommon event to find quail only two-thirds grown in November, and yet I saw a covey of these birds a week or more ago that were quite mature. This, I think, is a good indication that they raise more than one brood in some localities when the season is favorable.—GEO. F. ALDEN.

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

THE RANGE OF THE SHOTGUN.

Editor Forest and Stream:

For heaven's sake do not turn loose upon your unoffending readers the "long-range shotgun liar." Hoopsnake and trout liars are harmless enough, but the former class are vicious and wholly incorrigible. At least, if they are to have a hearing, make each one set up a soft pine board at the exact range at which the bird is claimed to have been killed, mark upon it size of same bird, and then fire at this target five charges, such as were used to kill the bird, and then report the result "upon honor," and whether or not any of the shot, if they struck the shape of the bird marked out, "stuck" in the board.

I remember a test once applied to one of these fiends. He claimed, and was ready to make oath, that he had killed one of the birds in his bag—a quail—at some fabulous distance, I do not remember exactly what; but a bet was at once made of a wine supper for the party, that he could not take one of his birds, pluck it, set it up at the same distance at which he claimed to have killed his bird, and in ten shots hit this target, or if he did, that the shot would stick in the bird, he to use the same charges he had been using all day, etc., some of which he yet had. The bird was twice hit, but neither time did the shot pass through the skin, and he paid for the supper, and he has never since killed birds at extreme ranges. My dear sir, I did not pay for that supper, though I helped to eat it.

I am well aware of the fact that many birds are killed at extreme ranges for a shotgun, have often seen it done, and have made such shots myself, but never at such ranges as I have often heard tell of.

A few shots at a proper target will soon teach almost any man what the killing power of a gun is with a given charge, and just about how far it will kill every time, provided always it be properly held of course.

The smaller number of shooters know to within very narrow limits just what a gun is capable of doing. One of this number never makes one of these astonishing long shots. But the larger number of gunners know little or nothing of the actual powers of their guns, and the less they know very naturally the further they can and do (*t*) kill game, the actual powers of the gun to the contrary notwithstanding.

Estimated distance as a rule is never correct in such cases.

S.

It seems that "Dell," of Sank Center, Minn., is not a believer in the "twenty-rod gun." He is right. No one who has ever tested his gun at "patterns" will assert and prove that it will kill "every time" at above fifty yards. In fact, the best of them often "miss" at less distances, and to kill "every time" is practically impossible. If a man asserts ownership of such a wonder put him down as a "Saxon," for they, it is confidently asserted, "will kill anything at any distance."

J. E. S.

OSCALOOSA, Ia.

A WILD GOOSE CHASE.

"HERBERT'S a brick!" was my very emphatic exclamation as I laid down my old file of a sporting paper containing a report of an ill-starred "Turkey Hunt in Missouri," my pointer slumbering on a mat at my side, and my pipe smoked out by energetic puffing occasioned by the zest with which I had enjoyed the narrative.

"Yes, Herbert's a brick. He's not ashamed to acknowledge that he has had days when he came home with an empty game-bag. Let your Nimrods and your Acteons and your dapper fellows who swear by Diana and sport breech-loaders laugh. Who cares?"

Perhaps the reader may, if he be a person of suspicious habits, begin to suspect that the above ebullition proceeds directly from a fellow feeling. I am free to say that it does. But apart from this I quite agree with Herbert in the sentiments with which he closes his letter. He says: "Who is the next one to relate the incidents of an unsuccessful day? Pass him along. It may be an agreeable change. We have been surfeited with the right and lefters of the unerring shots and the plethoric bags which they always empty before us. Let us have the other side for a while—just for variety." Those words have a true ring, and have given me courage enough to stand being laughed at for relating a ludicrous experience of my own which occurred some years since, and which I jealously guarded as a secret from my most intimate friends. The story is not exactly of an unsuccessful day's shooting, but rather the unsatisfactory termination of a very successful one.

It was a bright October morning, crisp and keen, and the village, as viewed from the old bridge which crossed "the lake," as the people called it, never looked more bright and cheery. The smoke curling in faint columns from the chimneys of the farm houses proclaimed the preparation of the morning meal, as with my old friend Charley W——, I stepped into the boat for our long-talked of duck hunt. The boat was about ten feet long, and was covered with hooks, from which hung huge masses of sea-weed, completely covering it. At the bottom was an improvised mattress, on which we reclined at full length, or as nearly so as we could. A hole in the stern through which an oar was run and turned by Charley formed our sole power of propulsion. We had proceeded slowly along for some three miles in the direction of a well-known feeding place, when a warning from my friend admonished me to look sharp. Lying flat for some ten minutes we had drawn so close to the shore that the danger of running aground was imminent. We could see the ducks swimming around not three hundred yards off.

Our progress was slow, painfully slow. Yet, we were getting nearer; we were conscious that the appearance of the boat resembled a huge patch of floating weed, and were satisfied it would never alarm the ducks. Nearer we approached. They had not, as yet, noticed us. The time had come. "Pick your birds," whispers Charley. They were getting suspicious. A large drake gave a start and away they fly, and our guns bring down two as fine birds as you would wish to look upon. Hastily gathering our game, we move on at a more rapid pace than before. I was elated; it was my first duck. And tell me of the sportsman who can forget his first duck—the wild, ecstatic thrill it gives him? Its memory is as perennial as "love's young dream." From diffident I became boastful, and I fear with an undue display of asperity, declared duck-shooting to be

"a very simple matter anyhow." I was already a spoiled sportsman. My pride was short-lived, for though no one ever threw his heart into the sport with more enthusiasm, though no one ever tried harder than I, yet I emptied barrel after barrel without effect, and my first duck was my last. Charley, on the other hand, modest, unassuming, whose head could not be turned by good fortune, had been doing splendidly. Eleven big, plump fellows had fallen under his cool, unerring aim, and I am ashamed to admit it, but envy added to my desperation.

We had paddled about for a long while without a shot, when the noise of another flock told us that our day's sport was not yet ended. Cautiously my friend moved the boat along, and as we turned a bend we found we were approaching a flock feeding. This was the last chance, probably, and I burned to redeem myself. I chafed at the slow progress of the boat, but at last we were close enough to see something of our intended game. The flock was a large one. But, good heavens! what is that swimming among them? A large bird, the size of a goose. My blood was up. Here was a prize. I gathered myself for a shot. I would shoot him down where he was. My piece was at my shoulder, when Charley called out in a hurried, "Don't shoot that, it's only a loon; take the ducks." It was no use. My limbs were in a tremble. That "goose" I must have. He was game worth the candle. My heart was in my throat. Slowly I drew up my gun. I covered him fairly. There was a ringing crack and down went the goose. The ducks took flight and were off, but not until my friend (as I afterward ascertained, being at the time too excited to hear or see anything) had brought down a couple of them.

The final capture was enough for me, and notwithstanding Charley's entreaties to "go ashore awhile and stretch our limbs," I was determined to get home as quickly as possible. And home we went.

It had been agreed upon in advance that we divide the spoils equally. At least Charley had generously proposed it, having a pretty correct estimate of my abilities as a shot. But the huge goose had interposed as a weight most difficult to balance. From the beginning of the division Charley had said nothing derogatory of "the goose," as I persisted in calling it. I inferred somewhat from the way he spoke when I was covering it with my piece that he did not regard it with any great favor, but the appearance of the bird—it was such big game—caused me to overlook that. "Well, old boy," said Charley, and he never had a more sober face in all the years of our acquaintance, "you have made the great shot of the day, and I congratulate you. Now, of course, 'to the victors belong the spoils;' you want the loon—I beg pardon, 'the goose,' though it is a loon, and having such a prize, I suppose I can rely upon your generosity rising to the level of your success, and that you will allow me the greater share of the ducks." Feeling under obligations for his invitation to the day's sport, I was, of course, ready to accede to anything he might propose. But my joy at having the big bird was complete. What were a few paltry ducks to me? "The goose" was equal to a half dozen ducks in size. What a dinner he would make! My mouth watered at the thought of it. We made what seemed a very fair division. Charley took all the ducks, save two very large ones, which went in with the goose as my share.

We wended our way though the village feeling very well satisfied with the results of the day. Occasionally some of the people meeting us would stop and congratulate us on our good fortune. It might have been fancy on my part, but I have often since recalled it, that something very like a grin would pass over the villager accompanied by an elevation of the eyebrows, but this, upon looking at my friend, soon gave place to a smile as well as a shower of compliments on my skill and good fortune in bringing down such a leviathan.

"But we'll never eat it," was the despairing rejoinder of my esteemed maternal parent as I carried my trophy home. "Such a small family. And what will you do with the ducks—they won't keep? You'd better let me give them to Mrs. B." The ducks went to Mrs. B., "the goose" went down stairs, and after being subjected to a picking in which, according to the statement of the expatriated descendant of the great O'Neil, who reigned over the realms of the cuisine, "He parthed wid his feathers as if he loved 'em."

Sunday came, and with it some friends from town. As it was said, "it takes a goose some time to roast," my goose was put into the oven early. Having been in the required time, he was taken out, but on the statement of the above mentioned descendant of the great O'Neil that he wasn't quite done yet, he was returned. A half hour later and the same result. The dinner hour had arrived. My maternal parent expressed a fear that he "was a little old." The table was set, everything was waiting, and, it was easy to see, our guests were getting hungry. Again was the "goose" brought out and pronounced "not done." Mother apologized. Among our guests were old Dr. S., a man of epicurean taste, and rather crusty temper, whose only genial minute was when he was well fed and wined. As might be imagined, the Doctor was getting rather tart. Once more had the goose been brought out, only to be put back. "I never saw such a goose," was my mother's despairing remark. Things were getting desperate. It was nearly three hours after our usual dinner hour, and our visitors and our ourselves were nearly famished. At last the goose was declared ready, and all hands adjourned to the dining room with unwonted celerity. The goose was served. It needed but a casual observer to notice that upon each one tasting it, they did so with rather a drawing down of the corners of the mouth, and divers other expressions of disrelish. That the goose was a failure was evident. One would have thought the old Doctor was taking a dose of castor oil to see him swallow it. "Where did you shoot this goose?" he managed to ask. "About a mile from N.," I answered. Then there was a silence. "What variety of goose was it?" timidly queried Miss G. "Charley called it a 'loon'," I replied. "What's that!" gasped the Doctor. "A loon," I repeated. Heavens! to see his jaw drop. He would not touch it. It was noticed, and the suspense was maddening. "Why, Doctor, is not a loon considered as good as the ordinary goose?" inquired my mother. "I should say not, madam; why, I never heard of its flesh being eaten before in my life."

Confound the old rascal! The table fairly rose. The gentlemen looked surprised, then grinned, while the ladies fairly screamed, and one or two were on the verge of asking the question, "Is it poisonous?" The whole company seemed like a demoralized army requiring a Napoleon to restore them to their normal condition. But a regard for good manners held them in check. That "goose" was removed, dinner was resumed, but was a failure. But though the horror soon gave way to the comical side of the matter and I came in for a share of bantering, it was all I could do to conceal my mortification. That evening Charley came around to inquire "how the goose tasted," and I fear my answer was more forcible than polite. "I couldn't help it," he said laughingly, "the joke was too good, and I had to let it take its course. You would have given me all your ducks had I insisted, but that would have been carrying it too far. I could foresee the result, and left you the ducks, not thinking you would ruin yourself by giving them away. But never mind, old fellow, I'll give you a chance to redeem yourself. I am going out next week, and you must come along, and I promise you a string of ducks that will make these people recall all they have said." And he did. I brought home enough to stock a village butcher. But it was no use. The story got abroad, and go where I would, some malicious imp of a village would put himself to great pains to inquire if I had "shot any geese lately."

Time has passed rapidly since then, or, to use the words of the playbills, "a period of ten years is supposed to elapse." In the interim I have purchased many works on ornithology, and to-day Charley W. nor any other man can "do" me so far as to let me mistake a miserable loon for a "goose."

VIGILANT.

MT. HOPE, N. Y.

THE ST. LAWRENCE GAME CLUB.

OGDENSBURG, N. Y., Aug. 26, 1882.

L. O. Lang, Esq., District Attorney:

DEAR SIR.—The undersigned, a committee appointed at the last meeting of the St. Lawrence Game Club, to memorialize the district attorney of St. Lawrence county upon the subjects of its organization and purposes, respectfully represent:

The St. Lawrence Game Club was incorporated in the year 1881, under and pursuant to the provisions of chap. 267 of the State of New York, passed in the year 1875, and in May, 1881, it was organized by the election of officers, as provided by its constitution.

In the first year of its existence its attention was necessarily principally given to the consolidation and detail of its organization, and but partial attention could be given to the whole field of its labors.

At the last annual meeting of the club its organization was perfected, and plans of action adopted. We inclose you herewith a copy of the circular letter issued by the president of the club advisory of its organization and purposes, and also a synopsis of the statutes of the State for the protection of fish and game, with the names and residences of the officers of the club. These papers have been extensively circulated, and the information they contain made general.

As you are aware, the purposes of our association are to protect the fish and game of our county against the lawless and wanton destruction practiced by classes and persons who resort to our forests and streams in disregard of every consideration but that of personal greed or the gratification of a morbid passion for wanton and indiscriminate destruction.

Our society had its inception in a general sentiment of reprobation, excited by the annually recurring raids made upon the best animal products of our forests and streams by those within, and from beyond our county limits, during prohibited seasons, practicing methods of pursuit and capture, and using appliances unlawful, inhuman and exterminating in their threatened persistence.

We are happy to inform you that our organization and its purposes have elicited earnest and sympathetic expression from the law-abiding, and the substantial contributions to its treasury evince a general determination to make its efforts effective.

It is matter of congratulation that the demoralizing and degrading violation of the statutes of the State for the protection of fish and game within our county becomes a matter of so general and earnest concern as to substantially guarantee its suppression.

The enforcement of these statutes is in the enlightened interest of our whole people. It concerns the professional man, the tradesman, the artisan, the farmer, the laborer and the backwoodsman struggling with the difficulties and privations incident to border life.

The invigorating, healthful diversion to be found in field sports contributes most essentially to the economy of manly development and culture, and our overworked population in every condition of life and form of industry eagerly covets its relaxation on the waters and in the magnificent forests of our favored county. They are the common domain of the people, and a wise legislation which expends annually large sums for the protection and preservation of their best products has made most stringent laws against their spoliation.

As you are especially charged with the enforcement of the criminal parts of the statutes popularly known as the game laws, our club will at all times confer with you for the purpose of affording such efficient assistance as may be possible, and will keep you fully informed of the results of its detective efforts.

Soliciting for our association and the public interests it represents your kindly and attentive consideration, we are

Yours respectfully,

JOHN WEBB, JR.,
WILLIAM PETERS,
J. MCNAUGHTON,
Committee.

OFFICE OF THE DISTRICT ATTORNEY,
BRASHER FALLS, St. Lawrence Co., N. Y., Sept. 14, '82.

GENTLEMEN.—Your memorial, bearing date August 26, has just been laid before me, and I desire to say to the St. Lawrence Game Club through you that I concur in every sentiment expressed in your communication. I have heretofore had occasion to consult with members of the club relative to complaints against persons charged with violations of the game laws, and in each instance I have found the members quite ready and willing to impart and secure valuable information touching such violations, and in each instance have I been satisfied that they were actuated solely by a wholesome desire that the law be executed according to its spirit, that the worthy object contemplated by it might be realized, and in no instance have I detected a disposition to gratify personal animosity by indictment or criminal punishment, which too often actuates complainants. While the purpose of the St. Lawrence Game Club continues to be thus honorably to secure punishment under the law, in order that the purpose of that law be accomplished and the game of our forests and the fish of our streams be protected from lawless, wanton and indiscriminate destruction, it shall have my cheerful co-operation. The time has come when in this State there is need of those strong penal statutes and a vigorous enforcement of them which has been found necessary in other States to protect game against destruction at unsuitable seasons and by unsuitable means. I trust that the penalties imposed by the last criminal court in this county will serve to admonish persons who have heretofore treated the "game laws" as a "dead letter," that the St. Lawrence Game Club, the criminal courts and the prosecuting attorney of the county are awake to the necessity of a vigorous enforcement of such laws as the Legislature has given us for the preservation of game. The last grand jury of the county was fully conscious of this growing necessity, as will appear later.

After the pains which your club has taken to advise the public of the provisions of the law by printed circulars containing a convenient digest showing the acts which incur liability under the statute, together with the action of the last Court of Sessions, there can be no excuse for persons who hereafter violate its provisions. When it is well understood that violators of these statutes will be treated like other persons guilty of crime, I believe all good citizens will approve of your efforts; and if there is no relaxation of your vigilance in detecting violations, the corporation known as the St. Lawrence Game Club will be a recognized public benefactor. If other counties will by similar organizations and like vigilance strengthen the arm of the State in its efforts to fill up the wasted supply of game in our forests and fish in our streams, the public will very soon be compensated for the money which is annually appropriated for the purpose.

Again assuring you of my hearty co-operation in your efforts to secure the enforcement of the law, I am, gentlemen, yours very truly,

L. C. LANG,
Dist. Attorney, St. Lawrence County.

To William Peters, John Webb, Jr., J. McNaughton, Committee.

NON-RESIDENTS IN NEW JERSEY.

Editor Forest and Stream:

In the last issue of your paper I notice an article entitled "The Facts of the Jersey Case," in which there is a garbled and prejudiced account of the relative merits of the West Jersey Game Protective Society, and "The New Jersey Game and Fish Protective Society," signed by the "N. J. G. and F. P. S.," at Plainfield, N. J. As a member of the West Jersey Game Protective Society, I desire to let the sporting community know, through your valuable paper, the truth, and the law in New Jersey touching this subject.

In 1873 the Legislature passed an act conferring upon a certain number of gentlemen and their successors a charter for the purpose of the propagation and the protection of game in the six lower counties in this State, viz.: Atlantic, Camden, Cumberland, Cape May, Gloucester, and Salem. Also compelling non-residents who desired to shoot in the above-named counties to pay $5 for a certificate, which certificate or "license" entitles the holder to full membership in the society. Each subsequent year $2 is charged. The proceeds arising from this sale of certificates are applied to policing the district above referred to, and in stocking proper localities with game and fish. Since the organization of the West Jersey Game Protective Society the officers have put out over 5,000 quail, 500,000 salmon, and about 15,000 black bass. The officer employed to look up all infringements of the game laws is employed by the year, and whenever authentic information is received, is sent to that locality. As a consequence, shooting out of season, trapping, etc., are nearly all broken up.

The officers of this society are Major Walker, of Vineland, N. J., president; Judge R. T. Miller, of Camden, secretary, and Geo. E. Taylor, of Camden, treasurer. All money is paid by order from secretary on treasurer, and vouchers filed in all cases. At the annual meeting there is a committee appointed to audit the accounts of the secretary and treasurer, and if, as your correspondent informed you in the last issue, "no returns are made either by financial exhibit or stocking with game," it is very strange that some of the members have not taken action about the matter before. Each certificate sold has a corresponding stub, for which the officers are bound to account, and if there were no return made, how would it be possible to run an institution of this character? I know whereof I speak, for on more occasions than one I have been placed on the auditing committee, and never yet have I known the officers to be short one penny.

Now, as to the "N. J. G. and F. P. S.," of Plainfield, N. J. This society was organized under a general law passed in 1879, for the protection of game and fish, "and carry ing out the laws of this State for the protection of the same." This act, it is claimed, gives general jurisdiction over the whole State to societies formed under its provisions. There is nothing in the act (which is short, containing but four sections) that repeals either in express terms or by necessary implications any other act, either general or special. A simple power is given for the formation of societies, and to regulate, by constitution and by-laws, the membership fee and the general regulation of its affairs. But no power is given any society formed under this act to charge non-residents one cent for shooting within the limits of the State of New Jersey. (See laws of 1879, p. 169.) Now if this be true, and I can see no reason to doubt it, why should the "N. J. G. and F. P. S." be incensed over a plain violation of law?

This brings us to the point which will certainly be decided in our courts, viz., Can a general act, without any repealing clause, abrogate or repeal a special charter? It has been held in this State in innumerable cases that it could not, and decided the same in New York and some of the other States. It is a principle that must be familiar to every man of common sense and reason, the power that grants cannot take away nor curtail unless by express enactment. This has never been done, consequently the W. J. G. P. S., (called by the writer of the communication to your paper the "West Jersey"—that letter, aside from the bare facts of the arrest and the appeal, being a base fabrication and as false as the writer is prejudiced in favor of his society) still holds exclusive jurisdiction over the six counties before enumerated.

I have interviewed the secretary in reference to the correspondence between the two societies and was informed that it resulted in a letter being sent to the New Jersey Game and Fish Protective Society, by the direction of the Board of Directors, to the effect that any non-resident found gunning within the territorial jurisdiction covered by their charter without a certificate from the West Jersey Game Protective Society would be arrested and fined. To my personal knowledge agents of the N. J. G. and F. P. S. have been soliciting non-residents and others to join, holding out as an inducement that they only charged $2 while the "West Jersey" charged $5. The membership of the "West Jersey"

numbering over 1,200 at this time, has never been greater nor has the society been in a more flourishing condition. There is plenty of money in the treasury to fight this case with.

In conclusion I challenge the New Jersey Game and Fish Protective Society to show the public or myself any one instance where they have ever spent one cent for the protection or propagation of game, where or they ever spent one penny to enforce the law, either in this locality or any other.

A MEMBER SINCE 1875.

CAMDEN, N. J., Sept. 23, 1882.

The following is a report of the last annual meeting of the West Jersey Game Protective Society, held Sept. 20, 1882:

The annual meeting of the West Jersey Game Protective Society was held last evening, at the office of the secretary, R. T. Miller, Esq., 106 Market street, where about seventy sportsmen of Philadelphia and the six counties of New Jersey, which come under the W. J. G. P. S. district were present. Major Thomas W. Walker, the president, called the meeting to order, and requested the secretary to read the minutes of the last meeting; $600 being appropriated for game which had been distributed throughout the different counties.

George E. Taylor's, the treasurer's, report, was then read, and showed that there was a balance of $535.88 in his hands, which spoke well for the financial standing of the society, and that $1,618 had been collected in fines and for certificates, and $1,082.12 expended for game, and for police and officers for protection of game and arrest of offenders. Richard T. Miller moved that a committee be appointed to audit the secretary's and treasurer's accounts. So ordered. The chairman appointed George Emlin, Charles Dougherty and Charles A. Bragg. Mr. Weaver moved that the committee be allowed to have the books to make a thorough search and report at the next meeting, which was carried. The committee also stated that several persons had been arrested for violating the game laws, and brought to justice, although some depredators had escaped. The committee was then discharged.

Secretary Miller then wished to know what action should be taken about the conflict of the laws between the two New Jersey societies, he contending that the W. J. G. P. S. had the sole right to issue certificates for gunners to shoot in the six lower counties, as power was given them by a special act of the Legislature and which had never been rescinded. Mr. George Emlin said that he had seen the secretary of the New Jersey Game and Fish Protective Society a short time since and told him they were not acting right in issuing certificates to people to shoot in the six lower counties, but they could do as they pleased with the other counties, but did not get any satisfaction from the secretary, and he now moved that the new committee to be appointed on prosecution be allowed to engage counsel to push the cases we have on hand, and, if necessary, to use every dollar in the treasury to see how we stand, and see if we are in the right and have the law on our side, as we must protect game and our own gunners. In a short time we would be overrun with pot-hunters, as the New Jersey Society only charges $2 while we charge $5 for the privilege of killing game. The motion was then put to a vote to prosecute all cases brought before them, and especially the case of Mr. Welsh, who was arrested a short time since while shooting near Woodbury without a W. J. G. P. S. certificate, but with one of the N. J. G. and F. P. Society's. This motion was carried unanimously.

Mr. Weber then asked how it was that the secretary had power to send their agent to make arrests without the consent of the Prosecution Committee. Mr. R. T. Miller always understood he was an ex-officio member, and as the other members were so far away he always acted as he thought would be for the good of the society. On two occasions he had arrested two men, which cost the society $40, and which turned into the treasury over $600. After a long controversy it was decided that the secretary be made an ex-officio member of the Prosecuting Committee.

It was moved and seconded that the fine of Mr. W. Carson be returned to him, as he was an old resident of New Jersey, and that he did not intend to break the law as he had belonged to the society since its organization. The nomination and election of officers for the ensuing year resulted as follows:

Directors—Camden county, H. Vannuxem; Gloucester county, Joshua C. Richards; Cumberland county, Thomas W. Walker; Salem county, Mr. Brown; Atlantic county, John R. Beebe; Cape May county, Major W. B. Brown; Philadelphia, Mr. L. Coleman. President, Major Thomas W. Walker; Treasurer, George E. Taylor; Secretary, Richard T. Miller. Committee on Prosecution—Gilbert Griffin, Harry Matton, C. A. Bragg.

RAIL SHOOTING.

THE rail shooting has not been good as yet. I think the late spring has a good deal to do with it, in breaking up the first nestings. It certainly has had that effect on the clapper-rail, or mud-hens. On August 28 I was shooting mud-hens near Atlantic City, and saw great numbers of birds entirely too young to fly. Some of them could not have been more than three or four weeks old, and others just able to raise from the trash. I could find comparatively few fit to shoot, all either too young, or else old birds with the young ones. We caught several young with our hands in the floating trash and grass, and saw one female with twenty-three young with her. They were swimming in clear water from one bunch of grass to another, and the old one did not offer to fly, though the boat was shored within ten feet of them. It was very interesting to watch them. They were certainly all of one brood, though the number surprised both the boatman and myself. The meadows were entirely covered with water, and the young and old mud-hens suffered from both guns and sticks in the hands of boys and men who should have known better. The professionals respected the very young and the old birds with young, though the others suffered. I got thirty birds, which was as many as I had use for, in about one and one-half hours, and in drawing one of the birds at home I found in its craw a short-tailed meadow-mouse. The body of the mouse was at least two and a half inches long. Is not this new food for the clapper-rail? J. N. DE H.

PHILADELPHIA, September 18.

Quite a number of blue-winged teal were shot this week in our river. Now that they are beginning to show themselves we may expect more. In reporting that the West Jersey Game Protective Association were arresting some resident sportsmen for shooting without a lisence, my informant did not give particulars, and I am glad to see the note brought forth an explanation from a correspondent. He said nothing about the case of Mr. Carson, who was likewise fined and who did not make appeal.

At the head of Raccoon Creek, or at that portion of the stream just above Swedesboro, N. J., there is now a large extent of marsh and meadow subject to overflow at high water. I am told that there are many rail there by a resident of Swedesboro, but that it takes a high tide to get on this ground. It would be well for some of our shooters to be on the spot when the water comes. I will guarantee a big score. The Raccoon Creek runs into the Delaware at Bridgeport, N. J. Ten or twelve miles up the creek is the place I refer to. Let some one try it. Teal will be found there also. HOMO.

PHILADELPHIA, Sept. 21.

PHILADELPHIA, Sept. 23.—Easterly wind and rain at this writing. "Everybody" is starting for rail, and the biggest tide of the season is expected. The rail (a big flight) came during the week. John Krider loaded two thousand shells yesterday. This is but a drop in the bucket of what will be shot this afternoon and to-morrow, although it is Sunday.—HOMO.

FORESTER'S PHEASANTS.—The editor of the Rochester *Journal* tells "a story regarding Forester, which we have never seen in print. It was told the writer by a Rochester man, who lived for many years in Newark, N. J., and when a boy saw Forester frequently, and remembers him stalking through the streets in full shooting costume. Forester imported a lot of English pheasants, probably with a view to increase the list of game birds of America. The pheasants, however, did not thrive, and all but one of them died after a short residence in America. Herbert's residence, the Cedars, was in the vicinity of a cemetery of which the superintendent was an Irishman named Pat Hart. Now Pat lived in the cemetery grounds, and was something of a sportsman himself, and one morning when Forester's last pheasant chanced to get out of its enclosure, and flew into the cemetery, Hart, without knowing anything about its history, shot it. Some one carried the news to Forester, and that night, when Hart happened to be away from home, Forester, who had evidently drained several of the bowls that inebriate, rapped at Hart's door, and when informed that 'the man of the house' was not at home, expressed his intention to shoot him for killing his pheasant. Hart's daughter ran off to warn her father of his impending danger, but Forester and he did not meet that night. In a few days they came across each other, when both were sober and Herbert had modified his views as to the punishment due for the death of the pheasant. 'Mr. Hart,' said he, 'it's well you were not home that night, for I meant to shoot you.' 'I'm glad I wasn't,' replied Hart, 'for one of us might have been shot, but it wouldn't have been me!'"

MUD-HENS.—It is undoubtedly true that these pests do in a great measure interfere with the ducks' efforts to find an abundance of food; for, while a shot fired over a lake will cause the former to leave for a time, the mud-hens remain and help themselves to the best the place affords. They eat night, noon and morning—they seem to live for no other purpose but to eat—and it stands to reason that this incessant poaching must early in the season cause the ducks to seek new grounds. Upon no other theory can old sportsmen account for the disappearance each season of ducks from their favorite haunts. Of course, it seems like cruelty for men to shoot the mud-hens for no other reason than that they are gluttons and persist in "hogging" all the succulent grasses and roots that grow in the marshes, instead of dividing with their more decent half-brothers, the ducks. But then they are perfectly useless creatures, anyhow, while the ducks furnish mankind with both food and sport. On the theory, therefore, that only the fittest should survive, perhaps it would be as well to adopt the suggestion of "Hoosier," and drive away or kill off these pests of the duck-grounds. Each year the supply of ducks is being lessened, while the coots are increasing. A few years ago Riverside Lake afforded splendid duck-shooting, but for the last two winters it has fairly swarmed with mud-hens, and scarcely a duck could be seen after the first few weeks of the season. And so it is in many other places, wherefore sportsmen should take the hint and go for the invaders.—*Sacramento Bee.*

GRASS PLOVER.—Ferrisburgh, Vt., Sept. 17.—In a recent number of FOREST AND STREAM some one asks what the "grass plover" is. Here that name is given to Bartram's sandpiper (*Tringa bartramia, Totanus bartramius*), which is also called upland plover and by some killdeer plover. In Rhode Island it is or used to be called grass plover, and the name was brought here from there. A good many breed in our fields, and their long-drawn, plaintive spring cry is frequently heard in May and June. As soon as the young birds are strong upon the wing, in August, the most of them depart, so that few remain with us till they are in full flesh and worth shooting. On almost any still August evening the chuckling note of these migrants may be heard, as high overhead they face southward. To the sportsman it sounds like a chuckle of derision. Now and then a straggler is picked up in September, and such a one is of more than twice the weight of an August bird. As far as my observation goes they leave us earlier than they used to thirty years ago, and not nearly so many breed here.—R. E. R.

A NEW OTTER TRAP.—An animal trap, especially adapted for catching otter as they slide down their "snow slides," has been patented by Mr. Erastus H. Hamilton, of Community, N. Y. The body of the trap is made with two jaws and a flat U-shaped spring in the usual manner. A series of sharp, strong teeth are held by rivets to the under sides of the jaws, in such a manner that they project from the adjoining edges of the jaws, and lugs that project each side of the teeth serve to hold them more firmly. A platform, secured on top of the pan of the trap, stands higher above the ground than the ends of the teeth when the jaws are set open. The trap is placed in the "snow slide," and as the otter passes over it on his belly, the platform is pressed down and the trap sprung. As they slide rapidly, and the fur is soft and yielding, they slip out of ordinary traps, and the jaws must be provided with sharp teeth to catch them. —*Scientific American.*

NEW YORK.—Long Island City, Sept. 22.—There have been several large flocks of golden plover on the hills in this neighborhood during the past week. Several were shot and proved to be very poor, hardly fit to eat. I saw some black ducks about a week ago, and a flock of about thirty teal was in the swamp a few days since.—SWALLOW.

CAMP COOKERY.—New York, Sept. 22, 1882.—*Editor Forest and Stream:* Will you please to tell us in as early an issue of your paper as possible how to cook, if it can be done, game and vegetables, especially green corn on cob, duck and fish without a camp stove. Have heard of such things being done under hot coals after the blaze has died out of a wood fire, and that the food cooked was thoroughly enjoyable. Attempted it this summer and made a first-class fizzle of it; am going to try it again, and would like to get a few hints from one who knows. Is there a work on the subject? Can think of no article that would be more appreciated by your numerous readers than such a one.—DR. D. F. EASTON.

GAME IN MEXICO.—Since the completion of the Mexican Central Railroad from El Paso to the city of Chihuahua, a great many people are visiting the latter place. Perhaps some sportsmen will do so, and for their benefit I write. Between Laguana and Encinillas—I think a distance of twenty or thirty miles—there are numerous ponds where myriads of ducks congregate. In the mountains near by there are a great many deer and bear—some Apache Indians, too. Sportsmen going into the mountains should go prepared for an Indian fight, and keep a good lookout for redskins.—GEO. W. BAINES, JR.

IOWA.—Troy Mills, Lynn County, September.—Quail are more plentiful than they have been for years. Chickens are very scarce. Woodcock are almost unknown. Duck shooting gives promise of being good this fall; quite a number nested in this vicinity. Squirrels and rabbits fairly plentiful. Ruffed grouse have been scarce for a number of years; do not see one where a few years ago could see a dozen.—J. A. B.

WESTCHESTER COUNTY.—West Chester, N. Y., Sept. 20.—The game in Westchester county isn't all poker, old sledge, etc., after all. To-day while walking along an unfrequented road near Van Nest station, I flushed a ruffed grouse within easy gunshot. He didn't fly far, and by roundabout work I got within thirty yards of him again. He was a this year's bird.—SENECA.

ONTARIO.—Kingston, Sept. 20.—Quail are plentiful, and we expect to have a fine time with them when the law is out. The fox and gray squirrels are scarce, caused by their being hunted unceasingly. Prairie chickens and partridges are seldom seen here, but are plentiful thirty miles west. Rabbits abundant. Are expecting ducks soon.—TALLEQUAN.

HARVESTING WOODCHUCKS.—A self-binder, cutting wheat at Vermontville, Mich., elevated a full-grown woodchuck, tied him up in a bundle, and choked him to death.—W. W. ARNOLD.

NEW HAMPSHIRE.—Bradford, Sept. 22.—Game was never so plenty in this section as at present. Partridges, plover, woodcock and gray squirrels in abundance.—G. L. M.

"SOMETHING NEW."—Photographs of the crowned heads of the world, finest assortment of Mrs. Langtry, and all the other English beauties, and also all actresses and other celebrities. CHARLES L. RITZMANN, 943 Broadway, New York City.—*Adv.*

Sea and River Fishing.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

FOREST AND STREAM ANGLERS' TOURNAMENT.

THE following circular has been issued:

An Anglers' Tournament will be held in or near New York city, about October 16. There will be contests in casting the fly, as for salmon and for trout, together with bait casting for striped bass, as practiced on the sea-coast. The tournament will be open to all persons from any part of the world, without favor. It will give especial attention to the encouragement of amateurs who have never before cast in public. It will have no connection with any other sports. The committee of arrangements is composed of gentlemen who are interested in angling as an art, and they now invite contributions suitable for prizes. All donors are assured that full credit will be given them on the lists, and that the press will be afforded full facilities for reporting the contests. The committee believe that this will be the best conducted tournament ever held in this or any country. You are respectfully invited to present something for competition before Oct. 2.

All communications on this subject may be addressed to Mr. Fred. Mather, Fishery Editor of FOREST AND STREAM, New York.

(Signed.)

FRANCIS ENDICOTT,
President Richmond Co. N. Y. Game and Fish Protective Association, Chairman.
JAMES BENKARD,
President South Side Sportsman's Club of Long Island.
WALTER M. BRACKETT,
Vice-President Massachusetts Fish and Game Protective Society, Boston.
EUGENE G. BLACKFORD, N. Y. Fish Commissioner.
S. M. BLATCHFORD, Squibnocket, Club, New York.
MARTIN B. BROWN, Wawayanda Club, New York.
HENRY F. CROSBY, Willowemoc, Club, New York.

PROF. ALFRED M. MAYER,
Stevens Institution of Technology, Hoboken, N. J.
BARNET PHILLIPS,
Secretary American Fish Cultural Association, New York.
GEO. W. VAN SICLEN, Willowemoc Club, New York.
Committee of Arrangements.

The date of the tournament is fixed for Thursday October 19, weather permitting. The prize list is not yet made out. The sentiment of several individual members of the committee seems to favor making no allowance for length of rods, and to make the extreme distance cast the only point to be taken into consideration in awarding the prizes in most of the classes. Those who have expressed themselves on this point seem to think that this is the only point that spectators are interested in, and the one that usually influences judges most in making awards. Until the committee meet, however, it is impossible to say what rules will be adopted. In our last issue we noted the fact that a prize would be offered in a class for rods weighing less than five and a half ounces. The firm which offer it have amended the conditions so

"five and a quarter ounces or less; rods to be made with ferules and reed bands, and of either two or three joints, and made of any material, provided that it is a complete rod; two flies only to be used on leaders six or nine feet."

We learn that the Commissioners of Public Parks have granted the use of the lake at 110th street. We will examine the water named and report upon its character and fitness at the next meeting of the committee. No admission fee will be charged to visitors, as there is no intention to make money out of the contest, and the entrance fee for contestants will be placed as low as possible. In our next issue we expect to name the place where the tournament will be held, and to give the rules which will govern the different classes.

DRUM, CROAKER AND SHARK.

I DO not fail to enjoy festive fish stories, nor do I miss the gambols of St. Clair's poetic pen, or the witchery of "Nessmuk," who wants to go around the world in a small canoe; albeit my pen has been silent for some months. But on Saturday I spent a day in deep-sea fishing, which would have gladdened dear old Izaak Walton's heart. The day was complete. It was a very "bridal of the earth and sky," and followed naturally the east wind of a "halcyon and vociferous" congressional convention.

Spicer Leaming, Esq., one of Philadelphia's most genial and gentlemanly lawyers, who can build his own boat as correctly as he can construct a brief in the Common Pleas, invited us to try the croaker and the drum. The recollection of a fifty-two pound red drum caught off Cape May (my hour's struggle with that gamy fish—is not the chronicle of it all written in last year's FOREST AND STREAM?) still lingers pleasantly in my mind. And when Spicer said, "Let us drum on Saturday," I replied, "I came to the side of the sounding sea on purpose." Spicer added to the party Morris Cresse, who had given twenty of the best years of his life to the life-saving service on the Jersey coast, and, when not going to sea in ships, Morris had played a stout and successful rod and line on the black and red drum, the black sea-bass, the mackerel, as well as on the sweet tempered and unoffending shark. With Morris Cresse came Sydney Townsend, as agreeable and devoted an angler as ever stood in the surf.

The mackerel business which necessitates rising at 4 A. M. and sailing all day and not catching a scale for a week at a time, had rather disgusted me, and I agreed with Cap. Fig Foster (who conveyed the Flotsam-Bacon) that there may be rewards for the "early bird," but it is nowhere written that any unusual luck shall fall on the early rising fisherman.

So 7:30 A. M. saw us four and no more plowing down the thoroughfare toward Sewell's Point in the little cat-rigged Mistake, made and completed from keel to truck by Sydney and Spicer, called the Mistake because she was cut in two and her stern made over again. By half-past eight we were passing over the bar, always a dangerous place, where the channel is only twelve feet wide, marked by a buoy constructed of a cedar log with a six-inch rag on a standard, fluttering in the breeze. No wonder Shelley loved the sea as Byron did, and as the white wings of the Mistake caught the Favonian breeze, I cried out with joy akin to Xenophon's soldiers, who, running away from the Persians, hankered for the sea, and finding it, exclaimed, "Be thou greeted, thou infinite sea."

As we looked ahead to the croaker ground, two miles away, I bethought myself to gaze on the voluminous lunch basket, and I will "sum up" by saying there were of *edendi et bibendi*, thirteen kinds of liquors and solids—mostly solids—for Spicer would permit the use only of the juice of the purple grape which had seen the sunny sky of Italy, and the bottles were marked "for medicinal purposes," and surely a liquid like that could not displease the most fastidious temperance advocate, not even my dear friend H. Dewalt, Esq., of temperance fame. The great painter who vainly sought to portray the anguish of that historical father who condemned his son to death, drew his artist brush over the "stern parient's face." So I draw my pen over the sad havoc of that lunch! To my dying day I will never tell you whether it was the pear, the apricot, the plum, the watermelon, the cantelope, the peach, the quince preserve, the sardine, the spanish bun, the toothsome sandwich or hard-boiled egg which let slip the dog of war on my digestion, and kept me in bed half of Sunday, able to feed only on pepsin, quinine and boiled milk! And, dear Spicer, "an' thou lovest me," unless thou meanest, best and most genial disciple of sweet Izaak, to be guilty of the "deep damnation of my taking off," O! Spicer, lunch me no more.

But to return to our objective "sardine," to wit, the croaker and the drum. A council of war was held at Sevell's Point, and Cresse carried the day by declaring that we would try the croaker first, and the red drum.

Now the croaker is a queer fish, not game to bite or to haul in, but still, as we think in West Jersey, a good table fish, also a fish of unknown origin, unless, as the savant of our party decided, "a weakfish loved a Cape May goodey not wisely but too well, and the result was a croaker." Certainly appearances indicate as much, for the croaker "croaks" like a weakfish, bites like him, less his game propensity and his spots, which seem to be born of his similitude to the mountain trout; and the croaker bears also many resemblances to the toothsome Cape May "goodey," or "Lafayette," as you call them in New York.

At 9 A. M. the anchor of the Mistake caught-on, and the croaker race began between Spicer Leaming and J. M. S., as to who should catch the most croakers inside of an hour; stake, two bottles of Rocderer. J. M. S. scored his first croaker at 9:10 A. M., and then the fun grew fast and furious. Spicer caught his first fish 9:12 sharp time. Cresse varied the monotony of increasing croakers by hauling up a weakfish which had been swallowed by a twenty-five pound man-eating shark; but at sight of Cresse the "shirk" dropped fish and hook, and in less time than I can write it, had fastened himself to my bottom hook. I played him with reasonable skill for ten minutes, till I felt "the nakedness and the vacancy" of the briny deep and the shark had levanted with both hooks and the lower end of my line. Sydney kept piling up croakers in the bottom of the boat, and Cresse called "time." Spicer had bagged fifty and J. M. S. fifty-six croakers, easily winning the champagne, which is to be a case, *solvendum in futuro* the next time we sail the ocean blue. J. M. S. was correspondingly happy, for Spicer is a "high hook" fisherman. We counted one hundred and fifty-seven croakers and two sharks, and pulled up the "mud-hook," as Spicer calls the anchor.

We were soon on the drum ground, a mile off Sewell's Point, and hooked two or three drum, but were not successful in landing any.

The mullet, the red drum's favorite fish, has not yet reached the Cape May waters, and the menhaden steam fishermen caught eighty red drum in one day, and by depopulating the waters of the food fish, seem gradually driving away the mackerel and the other big game fish. Let us hope Warner Miller, United States Senator, will compel these steam slaughter houses to keep off the coast during the months of July and August, and give the angler a chance.

Spicer had a lance ten feet in length with which we speared the reluctant sharks when we hooked them, and after a lively fight we bagged one man-eater weighing fifty pounds. But all things have an end, and at four o'clock, after drinking "the wine divine," the sea air, for eight hours, strengthened, exhilarated, rested in body and in mind, we, all unwillingly, turned the prow of the Mistake homeward.

Sydney, Cresse and J. M. S., meditating a "slaughter of the innocents," the drum, this week, say regretfully "hail and farewell" to Spicer Leaming, our captain, who unites in his own person the graces and courtesies of lawyer, fisherman, artist and gentleman. May he be triumphant ever, whether his contests are with Venus (the Goddess of Love born of the sea foam) or on the tented fields of Coke upon Lyttleton. Spicer, we hold thee in grateful remembrance, and we owe thee one perfect day on the beautiful sea.

CAPE MAY, N. J., Sept. 19. J. M. S.

THE MENHADEN QUESTION.

THE influence of the capture of immense quantities of menhaden for oil, on our food fishes, is now attracting the attention of Congress. We have referred to this matter on several occasions and in our issue of September 14 we gave a synopsis of what the committee appointed by Congress is doing. The daily papers have also taken up the question, and the following letter was sent to the New York *Herald:*

NEW YORK, Sept. 10, 1882.

To the Editor of the Herald:

In this day's issue of the *Herald* appears an editorial headed "Fighting the Fish Commission," which does great injustice to the menhaden industry, on whose behalf I request the insertion of this communication in answer to the strictures and charges of your editorial made against the largest fishing interest of the country when capital involved, vessels owned, men employed and value of its productions are considered in their bearing upon manufacturing business, agricultural results and food producing factors throughout the United States. There is at present a strong effort made by certain classes of people to have legislation adverse to the menhaden interest, based upon wrong impressions, ignorantly entertained, that menhaden fishing is destroying food fish or the food of marketable fish, and the object of this rejoinder is to explain away the fallacy of such theories, as follows:

In the first place, fish are migratory in their nature, hence legislation will not keep them in any given locality.

Second—Fish which are used as table food, such as salmon, cod, herring, porgies, shad, eels, weakfish, blackfish and flounders, do not require menhaden for bait or for food, while the principal catch of commercial mackerel are caught in waters where the menhaden have not been seen in years—viz., off the coast of Maine and Gulf of St. Lawrence

Third—As to the charge that we catch "food" fish for fertilizing purposes, the absurdity of such a charge will be easily seen when it is known that table or food fish is worth from $3 to $10 per barrel in packing houses or markets, while any kind of fish for fertilizing purposes is only worth from sixty-five to seventy-five cents per barrel.

Fourth—The menhaden fishermen do not, as you assert in the editorial in question, "catch up millions of small fry that should remain undisturbed," for the simple reason that our nets are not less than two inches and one-quarter meshes, and that any fish of less than twenty-one cubic inches will pass through. Nor can these same seines retain or hold a catch of game fish, for the twine is too fine. On the contrary, we destroy the most destructive enemy of food fish—the shark. It is a matter of record that this season the fishing menhaden fleet have killed off the coast of New Jersey these past four months over 6,000 sharks, varying from 20 pounds to 300 pounds each.

Fifth—No evidence or assertion when thoroughly sifted can or will prove that the catching up of menhaden fish has anything to do with keeping or driving off food fish from the coast. On the contrary, the greatest catches of menhaden are made along the coast when there is a dearth of bluefish, bonitas, Spanish mackerel or sharks, and when these are plentiful along the shores the menhaden, following the first law of natures—elf-preservation—give their enemies a wide berth. It is these very predatory fish, who destroy and feed upon all the small fry, your editorial accuses the menhaden fishermen of catching.

Sixth—As to the proposition to (hamper) regulate menhaden fishing on the ground of protection to the menhaden, this is absurd, from the fact that the menhaden is found with spawn during the fishing season from spring to early winter, and when the waters become cold they disappear and are not seen again until spring.

It will be observed from the foregoing the broad assertion is made that the menhaden fishermen interfere in no way with market or food fish, and further, that, taking the number of people engaged in supplying this kind of provender, there are as many fish caught as ever, but the consumption of same has vastly increased, as it should. But if menhaden fishermen, with steamers and with proper nets, should embark in catching food fish, one day's good fishing would suffice to glut the markets of the United States for a week with food fish.

A few words more in conclusion. The menhaden interest has at this present season $5,000,000 invested therein, ninety steamers, over 200 sailing vessels, giving employment to some 5,000 people, and exceeds in value the cod and mackerel fishing combined. Its products in oil and guano reaches millions in value every season; its fertilizer is equal, ton for ton (dry), to the far-famed Peruvian guano, which it is largely superseding in these United States. Would not the civilized and commercial world stand amazed at the Peruvian government if they should be guilty of such a gigantic stupidity as to destroy their nitrate or guano deposits? The legislation to prohibit menhaden fishing would be just as stupid, forcing the planter and the farmer to purchase mostly from abroad the ammoniacal ingredients which gives the early development to the growth of cotton, grain, grass and vegetables.

Agriculture is the strength of the nation, land is growing poorer from over tillage, natural and manufactured fertilizers are increasing in demand yearly to help meet the increasing demands from mother earth, and yet it is calmly advocated to legislate out of existence an industry which produces largely the two most important ingredients of vegetable life—ammonia and phosphate of lime—and from ignorant prejudice and in the supposed interest of would-be sportsmen or summer visitors along the coast (principally of New Jersey) put an end to a business having such a direct bearing upon the great staples of the country.

Respectfully, LOUIS C. D'HOMERGUE,
Secretary United States Menhaden Oil and Guano Association.

In an editorial comment upon this the *Herald* says: "The writer truthfully says the business involves millions of capital and employs thousands of men. The extent of a business, however, is no indication of its propriety. Neither is there any force in the argument that because some fish are migratory it is useless for legislation to try to retain them in certain localities. Fish return at regular intervals to the places where they have fed, and if they can find food they remain there for a certain time; if the food is lacking they depart in haste. All fish remain longest where food is most plentiful. It is quite true, as the writer suggests, that if food fishes are caught in the menhaden nets it would be foolish to make them into oil and fish guano when they would be far more valuable for market purposes, but it is also true, although the letter is silent on the subject, that in the taking in of a large catch such food fishes as are among the menhaden are so badly bruised before they can be separated from the general mass that they are utterly unfit for market. We could instance a single case of a boatload of fish, taken by a crew in search of menhaden, that contained thirty or forty tons of weakfish; about one-tenth reached market, the other nine-tenths—more than a day's supply for New York—were so unsightly that they went to the oil mills with the general catch.

"It is stated that the greatest catch of menhaden usually occurs when the food fishes are scarcest along the coast. Exactly so. The menhaden come in shore to escape the fish that eat them; then is just the time they should be let alone, to lure the fishes to where they can be taken.

"It is undeniable that the shore fisheries have been steadily declining since the menhaden began to be taken in large quantities, and that fish that once were cheaper than any kind of meat are now often more costly than spring chickens. The great population along the seacoast cannot afford to foster the menhaden fisheries at any such cost. If menhaden must be taken let the boats go further out to sea; they can do it and still do a profitable business. Or let their fishing season be restricted."

Our own view of the case is that this little fish, which forms such an important portion of the food of our valuable species, is not allowed to breed to a sufficient extent. As soon as the first menhaden appears in the bays of Long Island the seines are hauled, and the fish, poor in flesh, are thrown on the land for manure. When they appear in greater numbers the oil men begin at them, and the fish, full of spawn, are boiled down for oil. We believe that if the fish was protected until after it had spawned there would be enough of them to feed the fishes and to satisfy the oil factories also. If the gentlemen of the Menhaden Oil and Guano Association will kill the fish that lays the oily egg, where do they expect the next crop from?

BLUE-BACKED TROUT.

OUR readers will find the above-named trout in our list of "Fish in Season in October," and the following account of this little-known fish will be found of interest. It is taken from Suckley's "Monograph of the Genus Salmo," in the second report of the U. S. Commissioner of Fish and Fisheries.

SALMO OQUASSA, GIRARD.

Blue-back lake trout; the Oquassa trout.

Syn.—*Salmo oquassa*, Grd. Proc. Boston Soc. Nat. Hist., vol. iv., p. 262. (Read before the society Oct. 20, 1852).

Special characters.—[Condensed from Dr. Girard's description and the examination of eight specimens]. Length, from eight to ten inches. Body subfusiform, slender, graceful. Head proportionally small, conical. Mouth smaller than in *S. fontinalis*, from which it also differs in the structure of the opercular apparatus. Fins placed in the same relative positions as the latter, but larger, excepting the adipose, which is considerably smaller. Margin of the caudal somewhat forked and undulated. Scales much like those of the brook trout, but larger. Lateral line similar in both species.

Colors.—A bluish tint extends all along the back from the head to the tail, so that when seen from above the fish appears to be entirely blue. Sides and abdomen silvery white in the female, and of a deep reddish-orange in the male, spotted in both sexes with the same hue as the abdomen. Dorsal and caudal fins brownish blue, bordered with pale orange in the male; the pectorals, ventrals, and anal of a fiery orange, blackish-blue at their bases, and margined with white.

Habitat.—Moosemeguntic, Kenebago River, and Lake Oquassa, Maine.

According to Dr. Girard this is a lake species of great delicacy and beauty. It is found on Lake Moosemeguntic, making its appearance from the depths about October 10, and coming near the shore, ascends the Kenebago River in shoals. Half a mile from its mouth the Kenebago receives the outlet of Lake Oquassa. The trout then leaves the Kenebago and enters Oquassa Lake, where its voyage comes to a close. After the middle of November it returns to Moosemeguntic, and is not again seen till the following year. It is known to the residents of that region as the "blue-back."

Dr. Girard adds the following remark: "The flesh of the fish is highly flavored and more delicate than the brook trouts in Europe and America. It resembles that of *S. umbla*, of the Swiss lakes, both in the peculiarity of its habits and its delicacy. *Salmo umbla* is a lake trout, an inhabitant of the deep, making its appearance near shores January and February to spawn, and never ascending the brooks or rivers, tributaries of the lakes."

Diagnosis.—From *S. glaceri* [land-locked salmon], by lacking black spots; by its smaller scales. From *S. fontinalis*, or the common brook trout, it can be distinguished by the uniform color of the back; its unspotted fins (tail included); slightly larger scales; small, conical head; slender body; small size of the light spots along the flanks, and by the colors, as given.

A unique field whistle is manufactured by Mr. F. G. Farnham, of White Mills, Pa. It is made on the same plan as a trombone, and the tone can be changed from soft to loud in an instant. See advertisement in another column.—*Adv.*

FINNY REPRESENTATIVES TO THE COURT OF HAWKINS.

SINCE the remarkable letter of acceptance to the Governor of Tennessee by the newly-appointed fish commissioner for this portion of the State, the latter gentleman has been the subject of much comment and the cause of many amusing stories being told; among them the following struck me as pretty good, though perhaps a slight shade too sarcastic, related by a gentleman occupying a high position in the legal world:

"I have read and heard much of animal sagacity, but I never considered fish as remarkable for intelligence, and certainly not for gratitude; yet what I am about to relate rather inclines me to the opinion that these aquatic creatures have been grossly slandered, and that they are entitled to both of the qualities I thought them not possessed with. My informant is a worthy man, though poor, and he swears that on a recent trip in canoe from Huntsville to Nashville he was astounded at the appearance of myriads of fish in the Cumberland. There were, said he, cats, buffalos, shad, jack, bass (black and white), perch, suckers, redhorse, and even the diminutive steelbacks, silversides and crayfish. At night their cavorting and playful sess created so much noise that he could scarcely sleep; his mind wandered, and at last fatigue overcame him, and a deep, heavy sleep followed, but even then his mind was not permitted to have repose. Dreams tormented him, until at last the climax was reached. He rose to a sitting posture, and, with eyes wide open, he says that the entire mystery was explained. Two enormous fish, one of the game variety known to him as the salmon, and another, no less in stature, but of the shiny cat species, arrayed themselves before him, as though he represented the highest earthly tribunal, and addressed him as 'Most potent prince.' Was it a delusion or a reality? he asked himself, and finding it the latter, he worked up all the courage he could, and answered:

"'What will you with me monsters of the deep?' The noble salmon, feeling assured from my dignified manner, replied, 'We have noticed for the last two days and nights your highness's presence, floating calmy down our placid stream, in your barge of state, and surmised that you were an emissary either from our most noble executive, or his tender-hearted successor to that terror of terrors, Col. George F. Akers. As it is we are willing to confide in you, inasmuch, that we overheard from one of the pot fisher pests of the region, that the gallant colonel had been deposed, and that henceforward, not only would his excellently worded laws, passed for our protection, be forcibly administered, but that his successor, though an angler himself, only used such light tackle, as would give all of my family a fair chance, and that he had forced the noble executive to repudiate the charge of taking by foul and unsportsmanlike manner, brethren of mine hitherto considered of passable pedigrees, and had furthermore disqualified him from troubling even the dainty members of the royalty bred varieties found in the mountain streams of our land, by presenting him with a bare, and consequently harmless rod; that, in consideration of all these acts of kindness and carefully conceived regulations for our future well-being, I, Jack, alias wall-eyed Pike, alias Salmon, issued a ukase from my favorite dwelling place, Caney Fork, to my immediate subjects, to rally at a given day to go in person to the capitol, there to return thanks to the noble executive; at the same time, and under the seal of my dominions and treaties already made, for defence and offence, existing between the denizens of my realm and those of the shiny, short-bodied, or shell-covered natives, to join in acknowledging our heartfelt gratitude for his recent acts. As you see they came, and my shiny friend conceived a most admirable idea, by which to prevent any conflict of races on our expedition, which was for them to wear bright yellow badges, upon which were printed A. H., and for us of the sky-blue blood, similar insignia of azure tint, upon which should be the letters G. F. A. Now, most potent prince, we have told the truth, the whole truth and nothing but the truth, so we bid you a fond au revoir.'

"At this juncture of the proceedings, I realized the unnaturalness of the scene, yet I was awake, I saw the fish, and as Andrew Jackson said, 'by the eternal,' I'll swear to it even down to those badges and the A. H., and G. F. A."

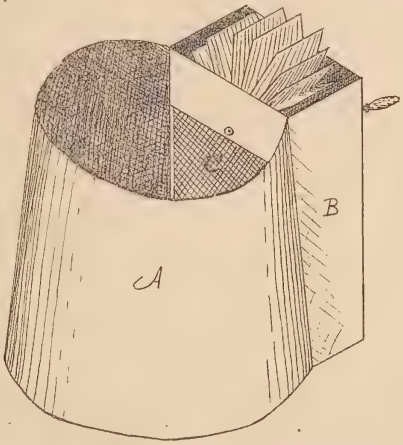
NASHVILLE, Sept. 16, 1882. J. D. H.

FISHING NEAR NEW YORK.—I have been a reader of FOREST AND STREAM for some time, yet so far have failed to see any account of fishing in the immediate neighborhood of this city, and this is a subject that must be of interest to a number of your readers who have not the time or means for a trip of a few days to more favored localities. Will you be so good as to let me (and perhaps many other readers) have some particulars and details, so I may know where and when to go to enjoy this sport? I notice in your paper of July 20 that it is illegal to kill striped bass of less than half pound, yet I have seen many such taken in Coney Island Creek, and have no doubt the same happens elsewhere. Again, why is it that some works on angling say nothing of the lafayette? I have caught many of these, and although they do not show much fight, they afford sport when nothing else will bite, unless it is the crabs. By the way, can you tell me how to avoid this nuisance when fishing in such places?—BROOKLYNITE. [Our correspondent must have overlooked our frequent reports of correspondents, as well as our own, on the salt water fishing about the coast, including Long Island and the New Jersey shores. There is really nothing much to say of it except to chronicle the numbers caught, as an index to the fishing. One can find fair fishing at the lower end of Staten Island, and every morning train takes down dozens of anglers. Or he may go down to Sheepshead Bay. In regard to small striped bass the law is disobeyed by many anglers; they are liable to fine, however. The main result of the law is that the fish cannot be sold in market, and so it is useless for the fishermen to haul seines for them and take them in quantity. Works on angling do mention the lafayette, at least Norris and Scott do, and this week a correspondent speaks of the same fish at Cape May as the "goody." Coast fishes have so many names that only one familiar with them all know what is meant by the local names. The crab must be endured when one is fishing near the bottom.

MISSOURI.—Kingston, Mo., Sept. 20.—Henry Botthoff captured a catfish in Shoal Creek, north of town, last Tuesday, which tipped the beam at seven pounds, and was two feet and four inches in length. This is considered a large fish for these waters, as we are thirty miles from where Shoal Creek empties into Grand River, and large fish seldom ascend the stream so high. It was taken with a trolling spoon.—TALLEQUAH.

FLY-FISHING FOR SUNFISH.—Philadelphia, September 25.—Perch fishing in our river is very good. At Betterton it is at its highest and the fish now large. Your correspondent and friend amused themselves a few days since with light rods fly-fishing in the Schuylkill, above Shawmont, for large sunfish from a row boat. When one has nothing else to do it is excellent sport and keeps one in practice for bass fishing. Of course the smallest of flies are used, and when a light leader is attached to a delicate line and casts are made just outside the grass and docks which line the shore where the fish are numerous, the fun is great, when no other fly-fishing can be had. At all events it is a most pleasant way to pass an hour or two near to home.—HOMO.

THE WEAKFISH HAVE GONE.—The Tom's River, N. J., *Courier* says: "The late severe easterly storms and high tides have about put an end to weakfishing in Barnegat Bay for this season, and most of the guests have taken their departure, but with the appearance of the bluefish the hotels will again fill up with sportsmen. Several good strings of bluefish have already been taken, one party of two bringing in fifty one day and thirty the day following, running in size from two to nine pounds each.



A BAD FISH FOR NETS.—E. P. Andreu, of St. Augustine, Fla., on Thursday, in fishing with his net for turtles, caught a fourteen-foot sawfish, with a saw three feet ten inches long. The monster weighed between seven and eight hundred pounds, and drove his teeth many times into the sides of the boat.—*Palatka (Fla.) Sun.*

Fishculture.

AN AERATING MACHINE.

IN your issue dated July 6, 1882, I noticed an article under "Fishculture," by Mr. George Shepard Page, speaking of the transportation of live fish and the method used to properly aerate the water. He says: "This was effected in the simplest and best way known at present, viz., by dipping out of the cans and pouring back again from a height of two feet." I am not prepared to dispute Mr. Page's statement, still it seems very laborious and somewhat primitive.

No one who has had access to our large rivers or to any of the many waters where ply the sidewheel steamers, has failed to note the white streak of foamy water left behind them as they steamed along their course. It seemed to me that this water had become aerated to a certainty, and if so, then the principle might with success be applied to cans for transporting fish. My inclosed sketch explains readily the idea applied.

A is the main reservoir which is to contain the fish. The square box B is separated from the large apartment by the wire netting C, whose meshes should be of such size as to allow a free passage of the water into box B, and yet small enough to prevent the passage or entanglement of small fish. In the box B is hung the paddle-wheel, which is intended to be revolved at a proper rate by an ordinary crank handle. The blades are here represented as being flat and square. Perhaps on trial some other form would be found necessary, a concave shape for instance. A more positive circulation of the water might be found necessary, and a different arrangement of the compartments and bottom be made. This plan may have previously been presented and condemned; if so, I have been unfortunate in not seeing it, and shall but add another one to the list of failures. RHODY.

PROVIDENCE, R. I.

THE McCLOUD RIVER SALMON STATION.

I SEND the following account of the salmon breeding station of the United States Fish Commission on the McCloud River, California, as it stands since its restoration after being destroyed by the great floods of February, 1881:

We have now on the Fishery Reservation a mess house, hatching house and stable. We have also built a bridge 150 feet long across the river, and have added to it, as usual, a firmly built fence or rack that allowed the water to pass down, but prevented the salmon from going up the river.

The mess house is a well built and nicely painted two story house, forty feet by twenty-five feet, containing a kitchen, pantry, store room, dining room, and mess room on the lower floor, with three large sleeping apartments on the second floor. It is well supplied with running water from a spring on the hill behind the house, so that there is always a full tank of fresh cold water in the kitchen, another tank on the second floor to be used in case of fire, and a third on the porch where the men wash. This abundant supply of cold water in this very hot climate is a great convenience, not to say luxury. The mess house rests on bed rock well up above high water mark and is perfectly safe from any future floods. The stable is a well built, substantial two story building, forty feet by twenty feet, with accommodations for four horses. It has two commodious store rooms and a loft. On the north side, where it is protected from the sun in summer and the storms in winter, a shed is built adjoining the barn.

The hatching house is a large, handsome, painted building eighty feet long and thirty feet wide. It stands well above the danger mark of high water, and is provided with forty hatching troughs, each sixteen feet long, and furnished with seven hatching baskets, each two feet long, making two hundred hatching baskets in all. These baskets will carry thirty-five thousand salmon eggs each, giving a total hatching capacity to the house in round numbers of ten million salmon eggs. The hatching house is provided with nine windows on each side, one window in each gable end, and five skylights on the roof, all of which combined furnish a good supply of light even on the dark rainy days in the fall, when the salmon are being hatched for the restocking of the tributaries of the Sacramento. On the east end of the house is a large shed built for the purpose of furnishing room and shelter for packing the eggs intended for distribution.

The water supply for hatching the eggs is lifted to the house by a current wheel in the river. This wheel is a fine piece of workmanship and a credit to the builders. It is thirty-two feet in diameter, is furnished with thirty-two arms and thirty-two paddles, and revolves on a shaft eighteen inches in diameter. It rests on two very substantially built boats, each thirty-six feet long and eight feet wide. On these boats, sustained on suitable supports, the current wheel rests. The boats and wheel are placed at a point in the river where the current has the greatest velocity, which gives the wheel a lifting capacity of twenty-four thousand gallons an hour.

In addition to the structures already mentioned, there is the post office building, which was washed off its original foundation and somewhat injured by the high water, but which has been replaced, raised higher and somewhat enlarged. This is now used as a dwelling house. A small storehouse which survived the flood, and the spawning house for taking the eggs in, complete the list of buildings at the McCloud River Salmon Fishery, as it is now restored. LIVINGSTON STONE.

SHAD ON THE PACIFIC COAST.—On Monday last R. Look caught in his weirs on the east side of the bay two shad, one two-thirds grown and the other full grown. These are the first of these fish caught north of the Columbia River, and the first full grown one we have ever heard of on the coast. Five years ago the eggs were sent from the Atlantic by the United States Fish Commission and put in the Sacramento River, and young ones have occasionally been caught in Monterey, San Francisco and Humboldt bays since that time. Two years ago one or two were caught in the Columbia, and quite a number last year. Now they have reached Puget Sound, but probably in small numbers.—*Olympia (W. T.) Transcript.*

The Kennel.

FIXTURES.

BENCH SHOWS.

January 9, 10, and 11, 1883.—Meriden Poultry Association Bench Show, Meriden, Conn. Joshua Shute, Secretary, 193 Hobart street, Meriden, Conn.

April 3, 4, 5 and 6, 1882. Western Pennsylvania Poultry Society's Fifth Annual Bench Show, Pittsburgh, Pa. Entries for the Bench Show Derby for English setters whelped on or after March 1, 1882, close December 1, 1882. Chas. Lincoln, Superintendent. I. R. Stayton, Secretary, Allegheny City, Pa.

FIELD TRIALS.

November 17.—Eastern Field Trials Club Field Trials on Quail, near High Point, N. C. Entries for the Derby close July 1. For the All-Aged and Members' Stake, November 1. F. N. Hall, P. O. Box 884, New York, Secretary.

December 4—National American Kennel Club Field Trials on Quail, Grand Junction, Tenn. D. Bryson, Memphis, Tenn., Secretary.

December 11—New Orleans Gun Club Field Trials on Quail, Opelousas, La. Entries close December 11. J. K. Renaud, Secretary, New Orleans, La. Entries for the Club Cup close December 1.

THE CHICKEN TRIALS

WE give this week a full report of the running of the All-Aged Stake at the chicken trials at Fairmont.

The heats are given in the order in which they were drawn to run, although with two and part of the time three sets of judges, a portion of them were run simultaneously, and some were run out of their regular order or perhaps were sandwiched in with others. This of course could make no difference in the result, as each heat is a completo race in itself.

While the last heats in the Derby were being finished the running of the All-Aged was commenced. This stake was for a purse of $500, open to all setters and pointers, with $250 to first, $125 to second, $75 to third and $50 to fourth. Entrance, $20. Entries closed September 4 at 8 o'clock A. M. with twenty-eight in. There were twenty-three setters and five pointers, and among them were many of the most noted dogs in the country. Thirteen of them had before run in public, and no less than eight of them were Field Trial winners. There were also several "dark horses" whose wonderful performances were mentioned with bated breath, whose owners confidently expected to sweep all before them. All this presaged a good race, and we were not disappointed, although the extreme heat rendered it impossible for a large portion of the time for the dogs to show at their best. The entries and order of running were as follows:

SUE. P. H. & D. Bryson, Memphis, Tenn.—Black, white and tan English setter bitch, 3 years (Druid-Ruby) handled by H. M Short, Middleton, Tenn.,

against

COUNTESS DRUID. W. H. Colcord, St. Joseph, Mo.—Blue belton, with black ears, English setter bitch. May 1880 (Druid-Princess Draco), handled by N. Nesbitt, Milwaukee, Wis.

FRANK H. James Hunter, Alleghany, Pa.—Black, white and tan English setter dog, 2 years (Don-Cora), handled by H. M. Short, Middleton, Tenn.,

against

BROKER. O. C. Calkins, Chicago, Ill.—Red and white setter dog, 3 years (Druid-Clio), handled by W. B. Stafford, Mankato, Minn.

KINNIKINNICK. Geo. Knowles, Jr., Milwaukee, Wis.—Black, white and tan English setter dog, 2½ years (Reed's Druid-Bessie Lee), also handled by Stafford.

against

BESSIE. Luther Adams, Boston, Mass.—Black and white English setter bitch, 2½ years (Dash III-Countess II), handled by Captain C. E. McMurdo, Shadwell, Va.

BODINE. E. F. Stoddard, Dayton, O.—Liver and white pointer dog, 2½ years (Bow—Jaunty), handled by J. E. Zimmerman, Dayton, O.,

against

MAXIM. Col. W. E. Hughes, St. Louis, Mo.—Liver and white pointer dog, 2½ years (Garnet—Jilt), handled by B. Waters, Canterbury, Conn.

JESS. Dr. W. H. Daly, Pittsburgh, Pa.—Orange and white English setter bitch, 6 years (Wilson's Dan—Le Moyne's Flash), handled by owner,

against

CHRISTMAS BILL. R. T. Vandevort, Pittsburgh, Pa.—Lemon and white pointer dog, 2½ years (Luck of Eden Hall—Ready Money), handled by owner.

PRAIRIE RANGER. Sportsman's Kennel, Geneva, Ia.—White with lemon ears English setter dog, 3 years (Charm—Pearl), handled by Geo. Waddington, Geneva, Ia.,

against

SHADOW. Luther Adams, Boston, Mass.—Black, white and tan English setter bitch, 2½ years (Lincoln—Daisy Dean), handled by Capt. C. E. McMurdo, Shadwell, Va.

COUNT NOBLE. D. C. Sanborn, Dowling Mich.—Black, white and tan English setter dog, 8 years (Count Wind 'em—Nora), handled by owner.

against

LONDON. H. Bailey Harrison, Tilsonburg, Ont.—Blue belton English setter dog, 2 years (Paris—Lill), handled by W. Tallman, Worcester, Mass.

DASHING NOVICE. D. C. Sanborn, Dowling, Mich.—Black, white and tan English setter bitch, 2 years (Dash II.—Novel), handled by owner.

against

FOREMAN. Wm. Tallman, Worcester, Mass.—Black, white and tan English setter dog, 2 years (Dashing Monarch—Fairy II.), handled by owner.

METEOR. Col. W. E. Hughes, St. Louis, Mo.—Liver and white pointer dog, 2½ years (Garnet-Jill), handled by B. Waters, Canterbury, Conn.,

against

PRIDE. Sportsman's Kennel, Geneva, Iowa.—Lemon and white English setter dog, 3 years (Charm-Flip), handled by Geo. Waddington, Geneva, Ia.

GERTRUDE. J. W. Orth, Pittsburgh, Pa.—Black, white and tan English setter bitch, 2½ years (Gladstone-Nelly) handled by owner,

against

MAY LAVERACK. J. J. Snellenburg, New Brighton, Pa.—Black and white English setter bitch, 4 years (Thunder-Spot), handled by owner.

CLEMANTINE D. L. Shuster, Philadelphia, Pa.—Black, white and tan English setter bitch, 2½ years (Dash III.-Cornelia), handled by owner,

against

BIZ. J. S. McIntosh, Pittsburgh, Pa.—Red Irish setter dog, 4 years (Dash-Flora), handled by owner.

SUE AND COUNTESS DRUID

were put down a short time Wednesday in the middle of the heat between Pink B. and Prince Noble, who were given a rest, which they greatly needed, as it was terribly hot. After a half-hour's spin without finding birds they were taken up and put down again on Thursday morning for about the same length of time without result. The first time down they were under the eyes of the regular judges. The second time Messrs. Morford, Starling and Brown had them in charge. On Thursday afternoon Messrs. Sterling and Dew completed the heat. They were put down at 4:15 in grass at the edge of a stubble field. Sue got away at a faster gait than she had previously shown. Before she had taken a dozen strides, she ran into and flushed an old bird, dropping to wing. She then ranged wide and well, running very light and easy. While not remarkable for her style, she was clearly ahead of Countess in this respect. Ranging over the stubble, Countess let out a link, going much better. Nothing was found on the stubble, and the dogs were worked on the prairie. Sue pointed a bird in the edge of some corn, but the bird flushed wild before the judges came up, and she got no credit. Then in the grass at the edge of some weeds she flushed a single bird, both then challenged and roaded some distance, Sue finally locating a turtle. The dogs were then put in the wagon and driven toward a large stubble. On the way some birds were flushed by the teams and marked down, and the dogs were put down and worked toward them. Sue got a little too close and flushed one of them. Countess was more fortunate, and located one of them, although not in a very stylish manner, Sue backing her. Nesbitt winged the bird, which Countess retrieved fairly well. Countess then pointed another, and was handsomely backed by Sue an instant, but she moved a little and the bird flushed, but flew only a short distance. Sue swung for it and made a grand point, which Countess refused to back, but drew ahead and stole the point. Sue drew on a little and located the bird, which was running. Short flushed and killed, Sue retrieving it nicely. The dogs were then put in the wagon and driven south to a stubble, where Countess made a good point. Sue not seeing her, soon after pointed the same bird, which flushed wild; then several more got up near the edge. Countess pointing where they had been, was backed by Sue, who then drew along the grass and pointed, while Countess backed indifferently. Sue roaded into the grass and pointed just an instant before the bird flushed. After a short consultation, the judges ordered up the dogs and awarded the heat to Sue. Down one hour and a quarter.

FRANK H. AND BROKER.

This was a rattling good brace. Broker is the fastest and has the most style, Frank is a most persistent worker with wonderful staying powers; he is by no means a slow dog, and was one of the widest rangers at the trials. He also has an excellent nose, and with plenty of work to perfect his judgment he will be a hard dog to beat. They were at once put down where the last brace were taken up. Frank threw up his head and half pointed, then he alternately roaded and pointed for a long distance in the corn but finally lost it, Broker meantime working all around him but showing no sign of game. Then on the prairie, while going down wind, Frank flushed a single bird and dropped to wing. Broker soon followed suit with a flush, but evidently did not see nor hear the bird as he paid it no attention. Coming together on a mowed strip of prairie they raced along, and as they winded a bird both turned in the air almost as one dog and pointed, just an instant before the bird flushed. Broker partly dropping and Frank on his feet. Both dropped to wing. This was very pretty. Then beating out the stubble the handlers flushed three birds. Broker going round dropped on point, Frank backing in good shape. Short thinking the point false ordered Frank on and he scored a flush. The dogs were given water and a large stubble then worked over. Frank out of sight over a knoll flushed a brace; he then undoubtedly pointed, as Broker, who could see him, backed, and soon three more got up. When the judges came in sight Frank was flat; as the handlers came another bird flushed between the dogs. Then in the grass both dogs pointed a single bird which Stafford killed to order, and Broker retrieved it rather slovenly. Frank then pointed and Broker backed. Short shot to order and brought the bird nearly to the ground, but it recovered and escaped. Frank then scored a flush, both dogs dropping to wing. Then in long grass Broker put up one which was marked down, and the dogs worked in that direction. Failing to find at the first cast, they were swung around again, when Frank made a magnificent point close by his handler. Broker coming up flushed the bird. A bird was then thrown for Frank to retrieve, which he did in very good shape. They were then ordered up and the heat awarded to Frank H. Down fifty minutes.

KINNIKINNICK AND BESSIE.

Thursday morning we divided into two squads, judges, Wilson and Bergunthal with Kinnikinnick and Bessie, who were ordered down at 6:30, in a stubble field about one mile west of the town. We expected to see some good work from this brace, who had both been winners at Grand Junction, last fall, where they did grand work. Both were fast, Bessie showing a trifle the most speed. She also showed the most style. In range the dog had the best of it, as Bessie was a little inclined to be jealous, and did not strike out so free as she ought. Kin. was the first to score, but it was unfortunately a flush. He then pointed another. Bessie backed very stylishly a moment, and then stole in ahead. In the next field Kin. again flushed when he should have pointed. They were then taken in the wagon and driven a mile west to a nice stubble, where Bessie dropped on a beautiful point to a small covey. Kin. came round down wind and flushed a single bird; he dropped to wing very nicely, and the remainder of the covey lay. Stafford killed to order and both were steady. Ordered to retrieve, Kin. did so only fairly, mouthing his bird. Moving on, Bessie, while going down wind, passed by a brace of birds, but catching the scent, she dropped as if shot, and held them. Kin. also dropped on back very nicely. Both handlers shot, but the birds got away, one of them hard hit. This was very well done so far as the dogs were concerned. Two more stubbles were drawn blank, then on the prairie Kin. challenged, and was joined by Bessie. Both roaded in good style, but turning a little to the right of the birds they were flushed by the handlers. In the next stubble only one bird was found, and this flushed wild before Kin. In the next stubble Bessie dropped on a capital point to an old cock bird, who took to his heels; but the little beauty was at home here. Gliding along his trail like a snake, she followed him out, and the Captain grassed him very neatly. Bessie retrieved him very well, taking into consideration his great size. They were then ordered up and the heat awarded to Bessie. Down one hour and a quarter.

BODINE AND MAXIM.

Bodine not being in condition was withdrawn, and Maxim was declared the winner of the heat.

JESS AND CHRISTMAS BILL.

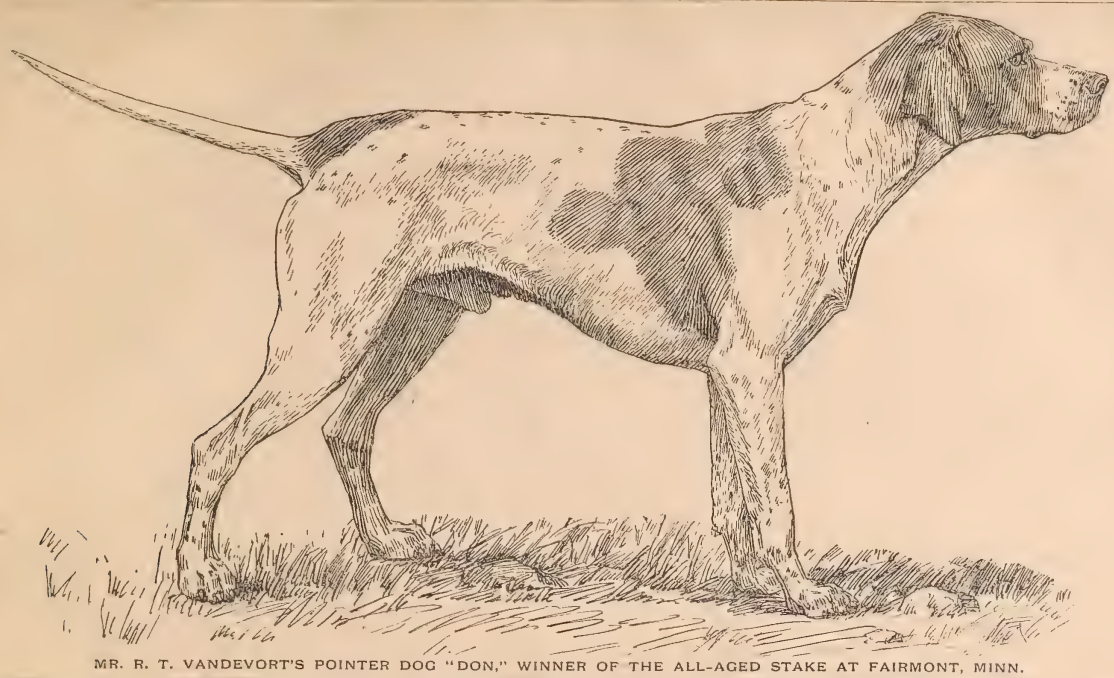
This brace was put down several times under Messrs. Bergunthal and Wilson, and were finally ordered up to go down again, if in the judges' opinion they had a chance to win. Jess was grossly fat and could run but a short time. While fresh she showed some good work. One long point that she made was greatly admired. She was in the grass some forty yards from the edge when she threw up her head and located a bird in grand style. Her owner, known to our readers as "South Fork," walked up to her and the bird rose a long distance away; coolly bringing his gun into position he cut loose and killed the grouse stone dead. Jess retrieved in capital form, carrying the bird to the wagon to order, and jumping in left it and returned to her master, amid the plaudits of all who witnessed the performance. Christmas Bill was reported to be a very fair heeler, yet he did nothing worthy of mention, except a beautiful point on bare ground. When we came up the bird walked away in front of him, while he remained steady. He also backed once or twice very nicely.

PRAIRIE RANGER AND SHADOW

were cast off in the same stubble, shortly after Kinnikinnick and Bessie finished their heat. We greatly admired Shadow at Grand Junction last fall, but he was all out of sorts and appeared to have no nose. She started off at a moderate gait, but soon warmed up and went at a fair rate of speed. Ranger, at once, with a far-reaching stride, but rather heavy action, ranged and quartered well. Both worked across the stubble, then Shadow swung back and challenged in the center of the field. She roaded a few yards, but the birds flushed fifty yards away. The dogs were then taken in the wagon and we went to a large stubble a mile north. Ranger disappeared over a small knoll and flushed a bird, but as he was out of sight we could not say that he was to blame. Working on to the edge Ranger ran into and flushed a covey that he should have pointed. Moving on after the scattered birds, Shadow challenged, but turning to the whistle she flushed a brace. Both dogs dropped to wing. Shadow soon moved and flushed another. Ranger then made game and roaded a long way, but the birds flushed before he had established his point. In the meantime Shadow made a beautiful point, and roaded finely; but urged by her handler she went too far and scored a flush. Working toward the scattered birds, Ranger made a nice point which Shadow partially backed, but as Ranger moved a step or two she drew on down wind, and flushed the bird, which Waddington killed and Ranger retrieved in good form. Shadow then pointed and Ranger crowded ahead and scored a flush. Then each of them flushed one or two, making very bad work. Then to another stubble, both challenged and swung in opposite directions. Ranger struck in the grass and alternately pointing and roading he located a brace nicely. Shadow backed at first, but catching the scent also pointed. Waddington to order flushed them and killed one. This was very well done. Ranger soon again pointed a single bird, which flushed itself. They were then ordered up and the heat awarded to Prairie Ranger. Down one hour.

COUNT NOBLE AND LONDON.

This brace was put down at 5:15 on broken ground, grown up to weeds, near a stubble field. Count Noble is the brag dog of the West on chickens, and, judging from what we saw of him, he would make it hot for the best of them, provided he went all right, but he is headstrong and wilful, and not under good control; he also appears to be jealous of a strange dog, and committed many errors that an aspirant for field trial honors cannot afford. But when he did go all right his wonderful speed and powerful nose, combined with his rare good judgment in locating the favorite haunts of the birds, made him indeed a formidable antagonist. His style when on point or backing is faultless. London is a very handsome animal, of good form, and for a dog who has had but two weeks' work on game he did very well indeed. He is fairly fast, and although his range is rather circumscribed, he quarters his ground in good shape; he is also quite stylish when on game, and appears to be under good subjection. When cast off Count went like a shot and was out of sight in a knoll. When we came in sight Count for us was half pointing, but at once commenced roading the trail of a covey, soon establishing his point and locating them handsomely, dropping flat as his handler came up. Sanborn requested Tallman to shoot, which he did, but without ruffling a feather. This was a beautiful piece of work for Count. Following up some of the birds which settled in high grass he made a finish, for which he was not to blame, and soon another got up near him. Meantime London challenged, and was carefully roading out a brace, when Count swung to his right and dropped. London, an instant later, caught the scent and also pointed. Tallman flushed and again missed. This was very well done. Moving on one or two more birds got up, Count dropping to wing. Then across the slough and stubble Count made a nice point, London backing him. Nothing was found, although some birds were flushed soon after about fifty yards from where he pointed. Further on, Count again false pointed, while London on the sidehill made an elegant point, and then roaded quite a distance, but nothing was found. A little further on Count dropped on point. London brought up, did not see him, but threw his head in the air a second and moved on; this also proved false. Then in the corner of the stubble, three or four hundred yards away, Count made a magnificent point, and Judges Bergunthal and Sanborn went toward him. But before they had got half way he moved on and flushed the birds. In the next stubble Count dropped very prettily to a single bird, which Tallman missed. He then ran into some corn, and not making his appearance, Sanborn went for him, and soon a bird was seen to flush and Count was heard begging pardon. Then on through grass to the road, the dogs were put in the wagon and driven to a large stubble. A single bird flushed just as the dogs were getting out, and Count soon flushed another, although he pointed just as it rose. He dropped to wing and London backed him. He then pointed, but this was almost a flush, as the bird got up at once. He then ran over another one, and had London got in a little good work he would have stood a good chance to win, as the Count was evidently having one of his poor streaks. But this was not to be, for Count, swinging into some grass, pointed, London backing nicely. They were then ordered up and the heat awarded to Count Noble. Down one hour and a half.



DASHING NOVICE AND FOREMAN.

At the close of the heat between Jess and Christmas Bill, on Friday morning, Dashing Novice and Foreman were put down in a stubble. Novice won both the National and Pennsylvania Derby, at Grand Junction last fall, when she captivated all with the gamy manner in which she run her heats. She has been worked but very little on chickens, nevertheless she did some very good work. She is fairly fast and one of the most indefatigable workers that we ever saw. She has a rough style, but gets on her birds in a gamy manner that is very taking. Foreman is very nearly her equal in speed, having improved very much since we saw him at Grand Junction; he quarters his ground much better than Novice, but does not range so wide as she. He is an elegant mover and quite stylish. Both got away at their best pace. Novice on top of a knoll winded a brace and should have pointed, as the wind was in her favor, but she kept on a little too far and flushed them. Then across a mowing to a large stubble Novice swung to the left and Foreman to the right. When nearly in the middle of the field Foreman caught a little scent, and throwing his head high in the air, stopped a moment and "felt" for them; then casting still further to the right, he unluckily, as it proved, went the wrong way, for Novice swinging back dropped on a beautiful point to a covey that were lying about thirty yards to the left of where Foreman challenged. She drew on a short distance and located them very nicely. Tallman, to order, flushed and killed one, which Novice refused to retrieve. Then crossing a slough to another stubble Novice dropped on point, but moved on in time to escape penalty for a false point. Then through some corn both dogs were charged to order, while Tallman took off his coat; while doing this a single bird flushed close by, then a large covey got up and flew out on the open prairie, both dogs remaining steady.

The dogs were then put in the wagon and we drove toward the scattered birds, which had been marked down. Casting them off Foreman swung wide and made a beautiful point, which Novice honored; he soon, however, moved on toward the birds, which he evidently had winded, while Novice took a turn to the left. As Foreman came to some high grass a single bird flushed wild in front of him; he dropped to wing and several more flushed all around him. He undoubtedly winded the scent left by the birds on top of the long grass, but owing to the dense growth failed to locate them. Novice was steady, and thus left a grand opportunity. Taking the dogs in the wagon again a short distance, they were put down in grass, where Foreman challenged, but could make nothing of it. Then through some high weeds into a small stubble, Novice dropped on point. Foreman, who was a little ahead and to one side, at almost the same instant threw up his head and felt of the air, but both soon moved on. Working on through grass Novice slipped into some corn, and not coming back to the whistle Foreman went for and gave her a slight taste of the whip. Taking the dogs in the wagon and driving south to a stubble, they were again put down. Foreman challenged and drew on, but got too close to a brace that he should have pointed, and scored a flush; then while going down wind he put up another one. Then on the prairie Novice was lost for fully five minutes, and was found dropped near where three or four birds had been seen to flush shortly before. She had undoubtedly been pointing them, and probably was not to blame for the flush. Working on in the prairie toward a small pond, Foreman flushed a single bird in the tall grass, for which he was not to blame, as not one time in fifty can a point be obtained under the circumstances. After a short consultation the dogs were ordered up and the heat was awarded to Dashing Novice. Down nearly two hours. Then several volunteers with their dogs were sent into a large cornfield, from which they routed a large covey of birds, but they were not marked down. Punch and Don were now put down. Their running will be found in its proper place.

METEOR AND PRIDE.

Thursday afternoon at 5:40 this brace were put down, under Judges Morford and Brown. We had heard such almost incredible tales of the wonderful performances of these dogs that we were on the tiptoe of expectation, and it was with no small degree of interest that we awaited the signal for them to start. We had carefully examined them before, and with the exception of being a little off in head, Meteor is one of the best-formed animals that we ever saw. He has a thoroughbred, gamy appearance that is not often found. Pride is also an exceedingly well-formed animal, and looks all over a worker. They were cast off on the open prairie, and both raced off at wonderful speed, Meteor at a rate that we never saw equalled by pointer or setter. He moves very lightly and gracefully, and skims the ground like a swallow. Pride is also very fast and a beautiful mover. Swinging back from a wide circuit to where some birds had flushed wild, from the noise of the crowd, Meteor made a handsome point, and Pride a moment later came up and also pointed. Both soon moved on and challenged a number of times where birds had evidently been running, as just then a brace were flushed nearby out of some tall grass. Then on again, down wind, Meteor flushed a single bird. Then over the knoll another one got up wild, both dogs dropping to wing very prettily. A little further on and Pride scored a flush. The dogs were then put in the wagon and driven southeast to a large stubble, where Meteor flushed a bird, and at once pointed another one, which soon flushed itself. He then pointed again and Pride backed him grandly. Waters flushed to order and killed neatly. When Meteor was ordered to retrieve, Pride thought that he would take a hand, and, gathering the bird, he started in with it, but at once dropped it to order and Meteor retrieved it in first-class style. He then swung to the left, and made a capital point, but the bird got away, and although Pride roaded as though he were stepping on eggs, the bird flushed some distance ahead of him. Near the edge of the field Pride challenged, but could make nothing of it. Then across a mowing, one of the judges scored a flush and a chase on a gopher; there was some excuse for this as it really looked at one time as though the judge would bag him. Then in a stubble Meteor pointed and Pride backed, making a beautiful picture; but Meteor discovered his error and moved on in season to escape penalty for false point. Then into another stubble both challenged, but soon moved on. At the edge of the grass a bird flushed wild ahead of Meteor. Then, crossing to another stubble, we met the farmer who had had previously ordered off the party with Count Noble and London, and as he refused to let us hunt his land, and it was nearly dark, the dogs were ordered up, to go down again in the morning. Friday morning was foggy and quite cool until about nine o'clock, when the sun came out, the rest of the day being very hot. Meteor and Pride were put down at 6:40 in a stubble one and a half miles northwest of the town. Both got away at top speed, Meteor the fastest and widest ranger. A bird flushed wild ahead of him, but he did not see it. Then on the open prairie he made a magnificent point on a single bird, and Pride backed in good style. The bird was running, and as Meteor roaded in capital form, Pride crouch-

MR. R. T. VANDEVORT'S POINTER DOG "DON," WINNER OF THE ALL-AGED STAKE AT FAIRMONT, MINN.

ingly backed him, creeping along as he moved on. This was a beautiful sight and greatly admired. Meteor soon pointed again, Pride backing nicely. The bird was flushed by the noise of the teams, and Meteor took a couple of jumps after it, but at once dropped to order. He then pointed again a running bird, and roaded very carefully, but the bird flushed a long way ahead of him. He looked longingly at it, but dropped to order. Both then challenged, but soon moved on. The dogs were then put in the wagon and driven west nearly a mile and again put down on the prairie. Pride got a beautiful point on a covey which flushed fifty yards in front of him. He dropped to wing, and Meteor coming up, backed him in good form. Ordered on, Meteor swung to the right and made a capital point in some tall weeds. The judges, after a short consultation, ordered the dogs up and awarded the heat to Meteor. This was a grand heat all through, and keenly enjoyed by those who were fortunate enough to witness it. Down altogether an hour and forty minutes.

GERTRUDE AND MAY LAVERACK.

This was a short heat, being finished before any estimate of the quality of the dogs could be made. Both started off well, but May was suffering from an injury to her jaw that she had received some days before and was unfit to run. Mr. Snellenburg wisely withdrew her and the heat was awarded to Gertrude. Down ten minutes. This was a disappointment, as May is well known as a rattling good one, and it was expected that she would give a good account of herself. At the conclusion of this heat the first heat of the second series was run, an account of which will be found in its proper place.

CLEMANTINE D. AND BIZ.

This was the first heat run on Thursday afternoon, under Judges Morford and Capt. Brown. Clem had no business in this race, as the red dog could easily run all around her; nevertheless, she is a nice little animal, fairly speedy, and showed that she is capable of good work and is undoubtedly a capital dog for a day's shoot. Biz was in very fair bench show condition and showed that he had not had work enough to harden him. This was owing to the state of his owner's health, which would permit of only a limited amount of exercise. He is wonderfully fast and has lots of style, and possesses a capital nose. He ran in good form at the National Trials last year, beating Count Noble, and a few days later, in the Pennsylvania Trials, beating King Dash. Had he been in condition he would undoubtedly have secured a better place. They were cast off at 4:15 in a stubble field about two and a half miles north of the town. Both started at the word, Clem at a good pace, Biz like a whirlwind. He soon beat the stubble and swung into the grass at the far edge. Catching scent he whirled around and carefully feeling for them he drew on twenty or thirty yards and located his birds in grand style. Clemantine working toward him also made a beautiful point to a single bird which flushed as we came up, both dogs dropping to wing. Biz then rose up and taking a step or two resumed his point. Clem swinging round ran over a bird; just then she saw Biz, and backed him, and the rest of the covey got up. Taking the dogs in the wagon we drove to another stubble and the dogs were put down in the grass alongside. Clem challenged but soon gave it up. Biz, who was going at speed, suddenly turned and made a magnificent point, and held his birds until we came up. Clem backed indifferently. This was first-class work. Then in the wagon again we drove a short distance and put them down on the prairie. Working through the grass and a piece of corn into stubble Biz flushed a single bird and dropped to wing, when a large covey got up all around him. Then working toward some birds that had been marked down in grass, one was flushed by the handlers, both dogs dropping to wing. Then Clem flushed one, and Biz soon followed suit. Biz then pointed, Clem backing him in good form. He moved on, however, and on the sidehill made a capital point, which Clem backed. He then drew on a little and a single bird was flushed and shot at but missed. Then Clem challenged, but flushed before she established her point. Both dogs manifested a little uneasiness, and as Schuster shot the bird they were quite unsteady but dropped to order. They were then ordered up and the heat was awarded to Biz. Down an hour and a quarter. Although frequent resting spells had been taken and water had been freely given him, Biz was much distressed and plainly showed that he was not in proper condition to maintain his tremendous speed for a lengthened period. Pride and Meteor were then put down but did not finish their heat until the next day. The next brace in order were

ROCK AND MAIDA.

This heat was commenced Thursday evening under Judges Sterling and Dew, but as it was nearly dark, the dogs were soon ordered up without having found any birds. On Friday morning they were again put down at 7:30, on stubble, about three miles northeast of town. Rock we had heard of as a wonderful killing dog of great natural ability. He showed good speed and ranged wide, but did not quarter his ground very well; he appeared to have a good nose and a happy faculty of going straight to the birds. He hunted independently and was not under good control. With experience and proper handling he will undoubtedly make a first-class performer. Maida is well known to our readers, as one of the best fielders in the East. She won second in the All Aged Stakes at Robin's Island last year, running a capital heat against Grouse Dale, who had but a trifle the best of it. She ran a very good race here, but Rock's finding powers proved too much for her. When cast off they both got away at a rattling pace, much better than they had shown the previous day. On top of a knoll a single bird flushed down wind before Maida, who dropped to wing. Then at the far side of the stubble Rock ran into one, also down wind. He then made a good point, which Maida, crouchingly, backed very prettily. Shoemaker flushed to order and missed. Both dogs were steady to wing and shot. Rock, a little further on made a capital point which Maida backed grandly fifty yards away. Shoemaker flushed the birds and killed one. In the meantime Maida, in drawing toward Rock, who had moved on a few steps, winded a bird and changed her back to a point, her bird flushed when Rock's did, and Haight shot but failed to kill. Rock, sent to retrieve, did so, but rather slovenly. Then to another stubble; Maida pointed but the birds got up wild, she dropping to wing. Rock, brought up to back, refused, and drew past her and pointed, she backing him. She then moved on and pointed where birds had been flushed from. The dogs were then put in the wagon and driven north to a flax stubble where both pointed a covey. Maida struck the scent a second or two before Rock. The birds were ordered flushed, but before the handlers got there the covey flushed wild. Then in the wagon again to another flax stubble. Maida made a stylish point, Rock refusing to back; she soon discovered error and moved on. Swinging into an oat stubble adjoining this field Rock drew to an elegant point to a single bird which flushed wild, Maida backing him nicely. A little further on Maida challenged once or twice, dropping flat once, when we thought she had them, but she soon moved on. The dogs were then taken in the wagon and driven toward a stubble and put down in the grass. Rock swung ahead and flushed a bird but paid no attention to it. Then through a strip of grass and weeds to another stubble. Rock dropped on point to a single bird, Maida backing him; he roaded out the bird very well, Shoemaker flushing it. After a short consultation the judges ordered up the dogs and awarded the heat to Rock. Down altogether an hour and twenty minutes.

DASH AND BESSIE (DONNEN'S)

were at once cast off. Dash is a slow-moving dog with not much style or range. Bessie goes like a streak and ranges wide, quartering her ground in good shape. She is also very stylish and gamy on her points. Working back over the ground that had just been hunted, Bessie went at a great pace. Dash pottered a long time where the last covey were flushed, but finally gave it up. Bessie, in a strip of wheat stubble, flushed a single bird, which got up wild. She beat out the field in a workmanlike manner, but nothing else was found. The dogs were then put in the wagon and driven to an oat stubble, which Bessie worked out in quick order; then to a large stubble, where Bessie dropped very nicely on point to a single bird, which flushed wild as her handler came up. Dash was brought round and at once challenged and half pointed; then moving on he flushed a bird, which was killed by his handler and retrieved by him in good form. Dash then pointed, but moved on just as his handler claimed a point. Bessie then challenged and roaded some distance, but it was hot and dry and she lost it. The dogs were then put in the wagon and driven to a flax stubble, where both pointed, but the birds flushed wild. Dash then dropped on a nice point, but nothing was found and he scored false. The dogs were then ordered up and the heat awarded to Bessie. Down an hour and a quarter. This ended the forenoon's work of this party, who then returned to the hotel. Meantime the last brace in the first series were running their heat in one direction, and the first brace of the second series in another.

PRAIRIE PUNCH AND DON.

This was the last brace of the first series, and was run under judges Bergunthal and Wilson, who ordered them down at 10:05 Friday morning in the grass alongside some corn, where Dashing Novice and Foreman finished their heat. Punch is a sturdy looking dog, and is said to be a very good one, but he was all off with a severe attack of dysentery. He showed a fair amount of speed and range, quartering his ground in good shape. He is not very stylish, but gets on his points in a gamy way that is very pleasing. Don ran last year at Grand Junction and covered himself with glory by beating Grouse Dale in a hotly contested heat, although he had been worked but a few weeks on game. He had considerable work after the trials, and has been kept at it since the season opened, and was brought out in grand form. His speed has increased and he is under better control than he was last fall. He is a fast and wide ranger, and quarters his ground very well. He also has a capital nose and a level head, and displays a great deal of style. Both dogs started off in good form, and soon challenged. A little further on Don pointed, Punch backing. Then with his head high in air, Don drew on a piece and lost it. Evidently this scent was from birds that had got up some way ahead a few moments before. Beaters had been through the corn and flushed a large covey, and the racket had undoubtedly made these birds wild. Both dogs alternately pointed and backed and roaded a short distance, then Don swung for them, ranging wide, a straggler got up wild ahead of him, and soon another one flushed. He then turned to the left and swung back to the corner of the corn and pointed where a bird had been flushed. He soon moved on a few steps and again pointed. Punch backing him finely. He then roaded very carefully a few yards in the corn and brought up all standing. Vandevort ordered to flush, failed to raise the bird, and as Don stuck to it that there was one there he examined the ground under his nose and saw a crippled bird, which Don, to order, retrieved unharmed. This was very well done. The dogs were then put in the wagon and driven about a mile, when a large covey flushed ahead of the teams and a portion of them were marked down. Driving to their vicinity the dogs were cast off in a valley and worked towards them. Morgan flushed the first bird and killed it, Punch retrieving it in good style. Don then made a cast up the hill and flushed a single bird, instantly stopping and remaining steady. Punch then pointed just as a bird flushed, which Morgan missed; meantime Don challenged across the valley and drew to a point, but the bird was running, and as Vandevort came up he swung round to the right, when Punch, who had been backing, worked ahead and put up the bird. Don then pointed false, then working south he again pointed and Punch backed; he soon moved on, but could not trace them on the dry side hill. Swinging round some corn into a stubble, where nothing was found, the dogs were put in the wagon and driven north to a stubble, where Don made several points but soon moved on. Birds had evidently been feeding there, but it was so hot and dry that he could not follow them. Punch was now about used up, and Morgan wisely withdrew him and the judges awarded the heat to Don. Down nearly two hours. This ended the first series of heats, and as it was about noon a stampede was made for the hotel. The following is the summary:

Sue beat Countess Druid.
Frank H. beat Broker.
Bessie beat Kinnikinnick.
Maxim beat Bodine (withdrawn).
Jess and Christmas Bill (decision reserved).
Prairie Ranger beat Shadow.
Count Noble beat London.
Dashing Novice beat Foreman.
Meteor beat Pride.
Gertrude beat May Laverack (withdrawn).
Biz beat Clemantine D.
Rock beat Maida.
Bessie beat Dash.
Don beat Prairie Punch.

The first heat of the second series was run in the morning; in the afternoon we divided into two parties instead of three, thus giving each party three judges. The first heat between

SUE AND ADAMS' BESSIE

was run Friday morning under judges Morford and Capt. Brown, who ordered the dogs down at eight o'clock, immediately after the finish of the heat between Gertrude and May Laverack. Casting them off in a stubble field Bessie at once made a gamy point and was handsomely backed by Sue. Discovering her error Bessie soon moved on and both struck out at a lively gait, their speed and range being nearly equal. Bessie again pointed and Sue backed. The captain was ordered to flush but failed to find and Bessie was scored a false point. She then alternately pointed and drew on for quite a distance, Sue backing her, but nothing was found, although shortly after birds were flushed near the place. Sue then challenged and Bessie backed, and then Bessie half pointed, Sue backing nicely. Sue then winded a bittern and pointed, but soon moved on into some high grass and made an elegant point to a single bird. The dogs were then ordered up to go further on; Sue came in but Bessie was missing. She was soon found on a staunch point, but as they were not under judgment it did not count, although deserving of credit. Moving on Sue ran over and flushed three birds, dropping to wing. Bessie then did the same on a single bird, and as she arose another one got up in front of her; she then flushed a brace. Sue then made an elegant point to a single bird and was handsomely backed by Bessie. Short flushed to order but failed to kill. Bessie then challenged, but the bird flushed before she established a point. Sue then scored a flush and appeared inclined to go on, but dropped at

once to order. Bessie then pointed where a bird had got up, and would not move until ordered on. The dogs were then put in the wagon and driven a mile and again put down. Sue in the grass ran into a covey and flushed one of them. She turned partly around and catching the scent instantly pointed. Short flushed to order and killed a bird which Sue retrieved in good form. Bessie then made a nice point, but soon moved on and ranged like a snake through the grass and located her bird in fine style. Captain McMurdo flushed and killed, Bessie retrieving in first class style. Sue then pointed and Bessie backed. Short killed and Sue again retrieved well. They were then ordered up and the heat awarded to Sue. Down nearly two hours and a half. Then a start was made for town.

FRANK AND MAXIM.

This brace was put down on the open prairie five miles north of town, on Friday afternoon, under Judges Morford, Brown and Dew. Frank we have already described. Maxim is a very good-looking pointer, weighing about sixty pounds. He is not so trim-built as his brace mate, Meteor. He is quite fast, and a wide ranger, quartering his ground very well. He is very stylish on point, and an excellent backer. Indeed, he is too much inclined to back, which, we presume, is caused by working with Meteor, who is much faster. We could but believe that it was this propensity that lost him the heat, for he did capital work, and had he been under independent ownership would undoubtedly have made a better score. When the word was given both were off at a slashing gait. Frank went straight away to the top of a knoll, where he flushed a single bird, which flew but a few feet and dropped in the grass. Frank dropped to wing and remained still until we came up, when Short flushed the bird and killed, Frank retrieving well. Meantime Maxim, not seeing Frank, swung beyond him nearly 100 yards and came to a staunch point on a covey, which he held until Judge Dew and his handler came up, when Waters flushed and killed one, which Maxim retrieved well. This was a capital send off and the behavior of the dogs was warmly praised. Ordered on, Maxim cast to the right and a bird flushed wild in front of him. He dropped to wing; then moving a few steps another one got up and he dropped to order. As his handler came up another one flushed wild. These birds were evidently alarmed by the noise and would not lie. Frank coming up both dogs challenged, and then at a great pace swung for the birds. Maxim ran through some weeds into the grass beyond and flushed one that he should have pointed, as he had the wind. Cautioned by his handler he was more careful, and after beating out a stubble he caught scent in the grass beyond and made a magnificent point. When Waters came up he roaded a short distance and the bird flushed nearly behind him. The dogs were then watered at a lake near by. Sent on again we crossed a slough. Frank challenged and Maxim backed, but they could make nothing of it and soon went on. Then over a knoll two or three birds were flushed by the handlers and judges. Frank swung into the valley and pointed on a mowing, Maxim on the hillside backing him grandly. Frank drew up on the valley for two hundred yards, Maxim backing nearly all the while. Nothing was found, and from appearances we thought that it was caution instead of scent that influenced Frank. The dogs were then given water and we swung round back again across the slough, then Maxim did some pretty work on a turtle, locating him nicely. Waters bagged the game very neatly and turned it over to the judges. Then working through the stubble we turned south across the prairie to another stubble where Frank challenged, and then roading quite a distance came to a point which Maxim backed a long distance in a very elegant manner. Frank soon roaded on and then left it. This we thought a bad case of false pointing. Then beating the ground along the slough again swung north and gave the dogs a plunge in the lake which they greatly needed as it was very hot. Then on again Frank pointed a single bird, but soon moved on a little and located in good shape, Maxim backing him. Short flushed to order and killed it, Frank retrieving fairly. The judges now consulted a while and then ordered them on again, and after considerable work without result the dogs were put in the wagon and we drove south to an oat stubble where Frank pointed in magnificent style, Maxim backing nicely. The gentlemen who owned the land here came up, and stated that he had just flushed a covey there which flew but a short distance. Casting off the dogs in that direction both pointed almost at the same instant, Frank a second or two first on the covey, while Maxim a little to his right was evidently pointing the trail. They were now ordered up and Frank H. awarded the heat. Down two hours and a half. We then drove to another stubble and

COUNT NOBLE AND PRAIRIE RANGER

were at once put down on the prairie near it. Count worked into the stubble and went straight to birds and pointed; moving a little, he again pointed as the handlers came up. Short flushed one thirty yards from him. Count then challenged to the right and Ranger pointed to the left. Count swung around him and flushed a single bird and dropped to wing. Ranger took a step or two, but stopped to order just as the covey got up. Waddington shot, but failed to kill. Then on in the grass Count dropped on point, but nothing was found, and he scored a false point. Swinging round between the lake and cornfield and then turning west, Count dropped as if shot on point to a covey. Ranger, coming up, also pointed. The birds were flushed to order, Waddington killing one, which Ranger retrieved very nicely. Count meanwhile took one jump, but dropped to order. Working on toward the birds, one got up before Count, who dropped and looked as if he expected something. He was not disappointed, as Sanborn gave him a taste of the whip. Ranger then pointed or flushed, we could not tell which, as there was not time enough between them to decide. A little further on and Count had very nearly the same experience, but we thought that he had an instant the best of it.

It was now nearly dark, and the dogs were ordered up to go down again in the morning. Mr. Sterling, who was almost sick, resigned in the evening, and Mr. B. F. Wilson, of Pittsburgh, Pa., was chosen to fill his place as judge. Col. Hughes, who expected the trials would close by Saturday, seeing no prospect of this, withdrew Maxim and Meteor, in order to get some shooting, as he had an appointment with some friends. On Saturday morning Count Noble and Prairie Ranger, under the same judges, were put down at 6:50 in a stubble one mile south of the town. Count at once pointed, then drew twenty yards and again pointed, evidently a running bird. Casting well ahead, he again struck the scent and came to a beautiful point, dropping as we came up. Ranger brought up, half pointed to the right, and as the handlers moved on, the bird got up wild. This was a very fine piece of work for Count. Orth, who was shooting for Sanborn, missed with his second barrel, the first having missed fire. Count then made a long cast on the stubble, where he flushed a single bird. Then working south, Ranger pointed a covey in a patch of weeds, but was not quite steady, and two or three of them got up, closely followed by several more. He dropped to wing, but soon moved on, and another one got up off of bare ground. We then went to a large stubble. Ranger flushed a bird that he should have pointed. He was like many of the other dogs—suffering from dysentery—and although he went well he was not bright, and apparently could not smell them. Then working to the southeast Count was lost in the grass, but soon found dropped on point to a bittern; swinging around some corn he was found, when we came up, flat in the grass, but nothing was found and he scored a false point. Then in a stubble a covey flushed wild. Count coming up dropped on point to a remaining bird, which at once flushed. The dogs were then put in the wagon and driven to another stubble, when both dogs ran past a brace of birds that was flushed by the teams, that they should have pointed. The judges after consulting ordered the dogs up with Count held to retrieve, and called for the next brace, but concluded to go on and finish the heat. We here saw a flock of blackbirds with a snow-white one among them. Count was let go in some corn; not being under judgment, he swung out in the grass and dropped to a covey which soon flushed. Ranger was then put down, but the birds were all gone. Working south through grass and stubble Count pointed an instant, and then reading very fast a short distance, he dropped to a large covey and held them until we came up, when Ranger passed between Count and the birds, making no sign. The covey then got up wild, Waddington shooting but without harming them. They were then ordered up and the heat awarded to Count Noble. Down nearly two hours. The next brace in order were

GERTRUDE AND BIZ.

They were put down at 4:35 on Friday afternoon, under Judges Bergunthal, Sterling and Wilson, on the open prairie, about five miles north of town. Gertrude is a very good moving animal, of fair speed. She is not a wide ranger, but quarters her ground very well. She is quite stylish on point, and is easily controlled. Ranging fast over the prairie, Biz slowed down and drew to a grand point, which he held a moment and then drew on and located a single bird in capital style. Gertrude brought up to back, pointed where Biz first stopped. Meantime, Mr. Sterling, Mr. McMurdo and Orth came to order and made a clean miss, both dogs dropping to shot. Then moving on, the handlers flushed two more birds. Then swinging to the right through the stubble, which was drawn blank, and across a slough through a cornfield to another stubble, both challenged and drew on and pointed, but failed to find. Swinging back, Biz pointed to the right, and Gerty coming up, backed. Biz moved a little and Gerty went on and located the bird, which at once flushed. Orth killed it, both dogs dropping to shot, and several more got up behind them. Gerty, ordered to retrieve, failed to find. Then turning to the right through a cornfield Biz made a long turn in the prairie and came to a grand point; Gerty coming in flushed a bird and dropped; ordered on she pointed a single bird, and Biz, who had held his point, was ordered up to back. His birds had now got uneasy and were flushing all around him. His handler whistled, and as he started found another bird got up. Then a cast was made for some birds that were marked. Biz found one in quick order and pointed, Gerty backing. Biz drew on a little and the bird flushed wild. The wagons were now sent round a slough and the dogs taken across. This was a wrong move, as it was very hot and the dogs were both much distressed. Biz having gone at a rattling pace was nearly blown and needed water sadly. He could not hunt, and Gerty was but little better off, as the best that she could do was to move at a slow trot. It was a long time before the drinks for them, and when they finally reached the wagons they were about used up. After giving them water and a little rest they were ordered on. Both now went very well. Gerty going through a stubble pointed a single bird near the edge in some weeds, Biz backing her nicely. The judges consulted and ordered up the dogs, giving the heat to Gertrude. Down nearly two hours.

ROCK AND DONNER'S BESSIE

were at once put down in the stubble. Rock challenged, but soon moved on. Bessie swung round and pointed nicely. Rock refused to back, but went ahead and stole point. Lewis, to order, flushed and killed. Bessie, ordered to retrieve, Rock rushed in and picked up the bird, but dropped it to order, and Bessie brought it in good shape; she then ran over a knoll and again pointed, drew on and located the bird in fine style. Lewis, to order, flushed it, but did not shoot. This was very good work. The stubble was then drawn blank and tae dogs ordered up, to go down in the morning. Down half an hour. Saturday morning they were again put down at 7:45 in a stubble, where a large covey were seen to flush and fly a short distance. Wording toward them both dogs pointed, the birds getting up as the handlers approached. Then, in grass toward another stubble, Rock pointed and Bessie backed indifferently. Rock soon moved on and drew a long distance, but failed to find; he then swung into the stubble and again pointed, but moved on and scored a flush, Bessie dropping to wing. Rock then made a false point at the edge of the field. The dogs were then put in the wagon and driven a mile, when a bird was flushed and marked down in high grass. The dogs were cast off, and Rock pointed it nicely, Bessie backing fairly. Lewis killed the bird to order, and Rock retrieved it rather slovenly; then in the wagon again to a barley stubble, which was drawn blank. We again drove a mile to a large stubble, where two or three birds flushed wild before Rock, and Bessie ran on to a single bird down wind; Rock, in the grass, followed suit. Then driving to another stubble, Bessie ran into some corn and was lost for some time. Judge Wilson and handler, in search of her, flushed a bird and found her just beyond flat. Then on to a stubble Rock pointed and roaded some turkeys a long way. The judges then consulted, and the heat was awarded to Rock. Down nearly four hours; altogether, four hours and a half.

DON AND DASHING NOVICE.

This brace were put down at 9 A. M. on Saturday under judges Morford, Brown and Dew, on the prairie. Both ranged wide. Crossing a slough Novice swung a long way ahead, and pointed, but was hunting wrong, drawing her grandly. She moved a little too close and flushed one; she dropped but soon moved on and flushed another; then several more got up wild. Don then came up and pointed where they got up, but soon moved on; then casting north he again pointed an instant, then through high grass to a mowing, Don pointed, and then roaded in the short grass a long way, but the bird would not lie and flushed wild; then back to the high grass, Vandevort flushed and killed very nicely at a great distance, Don retrieving it very well. Two or three more birds were then flushed, but the grass was so high that the dogs were not to blame. Then working toward the covey that Novice flushed, Don in the high grass put one up. Then three more flushed near Novice. Don then swung wide to the south, and pointed an instant and moved on; turning back he pointed a single bird, which flushed wild and he dropped to wing; he then swung to the left out of sight and a bird got up. When we arrived he was flat. Don then took the trail and Novice and Vandevort went south. Turning toward each other a bird flushed wild between them when they were a hundred yards apart. Both pointed where the birds got up, and moving on a little they backed each other. Moving on to a flax stubble Don scored a false point; then a long tramp was taken but nothing found. The dogs were given water, which they greatly needed. Casting them off again Don pointed just as a covey flushed wild ahead of him; working toward them a bird flushed near Novice and she dropped to wing; failing to find the covey we swung back. At this time Don was ranging fast and wide, while Novice was going slow, but she pluckily kept on, although she showed distress. Working through a flax stubble Novice dropped on point, Don coming up, backed her. She then moved on some distance and flushed; Don swung to the right and flushed, dropping to wing. He instantly turned and again pointed, and held his bird, which Vandevort flushed to order and killed, Don retrieving it well. Orth coming up, flushed and shot a bird which fell dead two hundred yards away. Novice sent to retrieve brought it fairly well, a short distance, to her handler, who went with her. Then on in grass Novice dropped on point, but soon moved on and flushed three birds, and soon another got up. Don came round and pointed where they flushed from. Novice had got her second wind and was now going all right. The judges consulted and ordered up the dogs and Don was awarded the heat. Down two hours.

SUMMARY.

Sue beat Bessie.
Frank H. beat Maxim (withdrawn).
Count Noble beat Prairie Ranger.
Gertrude beat Biz.
Rock beat Bessie.
Don beat Dashing Novice.
Meteor withdrawn.

Third Series.

SUE AND COUNT NOBLE

were put down on prairie four miles south of town at 4:40 Saturday afternoon, under judges Morford and Dew. Sue let out a link, apparently realizing the situation, and fairly outpaced Count. Considerable ground was gone over without result. Count was the first to find, pointing a bevy of quail, but as this did not count, he then found a covey of chickens and pointed. The birds were running and he moved on. Sue then went in and, locating them, pointed nicely. Short flushed to order and killed a brace, Orth, who was shooting for Sanborn, also killing one. Both dogs were steady, and both to order retrieved well. We were now joined by the other party, who had run out their heat. Casting off the dogs again and working west to a stubble, Count ran through it and flushed three birds, and Sue coming up, flushed a single, all of them down wind. Then over a knoll out of sight, both dogs flushed a nice covey, but we could not see whether they were to blame or not. The dogs were put in the wagon and driven toward the birds and put down near a slough. Count went into some corn and was lost but soon brought back, when he scored a flush in the slough, and then on top of the knoll he put up another one and dropped to wing, Sue coming up, backed him. Short ordered her on and she swung round to the right and made a capital point to a single bird, which was flushed. She then went on and soon pointed another one, which Count flushed. This was capital work for Sue, but very poor for Count. Then working north to stubble, Count made a very stylish point, which Sue backed very nicely. But alas for the Count! The bird had vanished and with it all his fond dreams of victory, for the judges ordered them up and awarded the heat to Sue. Down an hour and twenty minutes.

GERTRUDE AND FRANK H.

were at once put down. Frank started at race-horse speed and beat out the stubble before Gerty fairly got agoing. The dogs were then put in a wagon and driven north to another stubble, where Frank challenged several times, but found nothing; then in grass, he pointed false; then in stubble, Gerty, who was now going much better, scored a flush. She then swung into the grass and made a beautiful crouching point. Orth flushed to order and hit the bird hard, but it got away. Frank then pointed a bird in the stubble, Gerty backing him very handsomely. Short flushed to order and Frank dropped to wing. He then pointed near the edge, Sue backing, Short flushing to order. Frank then ran over a brace of birds close to the edge that he should have pointed. They were then ordered up to go down again on Monday. This finished the work for the day. Monday morning the weather was delightful. There was a shower Sunday morning which had settled the dust and cooled the air, and we started out with high hopes of a good day's sport. Gertrude and Frank H. were put down in stubble one mile south of town at 6:30. That was drawn blank and we worked on south, when both dogs went over a knoll and a bird flushed in their direction, but we could not see what was done. Coming back Gerty dropped on point just as a bird flushed ahead of her; then at the south edge she flushed another one, dropping to wing each time. Frank in the meantime had disappeared, but he soon came out of some corn. Then working south to a stubble, both challenged but found nothing. Then driving a mile east to a small stubble, both dogs ran into and flushed a covey that they should have pointed, as they had the wind. Then at the edge of stubble Frank pointed and drew on, Gerty backing an instant, when she caught the scent and also pointed, both of them locating the birds very nicely. Short flushed and probably would have killed had his gun been loaded. Then around a slough to stubble both challenged where birds had been flushed. Frank then cast to the left and dropped on point, Gerty dropping to order. Frank left his bird, and Gerty, going on, flushed it. A little further Frank again dropped on point to a single bird which Gerty flushed as she came up. This bird settled in some weeds a short distance away, and Orth sent Gerty there, where she made a point, and he flushed and killed the bird, Frank then swung over the knoll and dropped on point to a single bird, which Short flushed to order and killed. Gerty meantime was dropped to the left. They were now ordered up and Gertrude given the heat. Down altogether an hour and a half.

DON AND ROCK.

This heat was run Saturday afternoon, under Judges Bergunthal and Wilson. They were put down on the prairie five miles south of town at 4:30. Don soon pointed at the edge of a mowing and held his bird a long time for Rock to come up and back, which he refused to do, but walked around Don and flushed the bird. This was an excellent piece of work for Don, but very bad for Rock, who was evidently all off, his long heat with Bessie having been too much for him. A little further on Don again pointed. Rock would not back even to order, but went ahead; but he could not manage the trail. Don, moving on, swung for it, and catching it once in a while, he finally got it straight and located it in good shape. Vandevort went in to flush, saw the bird on the short grass, which was loth to get up, probably knowing what to expect. He finally flushed it and grassed it neatly, Don retrieving it in good form. Don then struck the trail of a running bird and pointed, and then roaded awhile, but lost it. He then threw his head high in the air and swung for it. He found the bird but got too close and scored a flush. Rock had not done much, and he now flushed a bird, and they were ordered up and the heat awarded to Don. Down for forty minutes. This ended the third series. Following is the

SUMMARY.

Third Series.

Sue beat Count Noble.
Gertrude beat Frank H.
Don beat Rock.

Fourth Series.

There were now only three in, all of them good ones, and it began to get quite interesting.

SUE AND GERTRUDE.

This brace was put down on Monday morning under Judges Morford, Bergunthal and Wilson, at 7:15, in a stubble about a mile south of where Gertrude and Frank H. finished their heat. Sue is much the faster and wider ranger. She soon challenged and roaded very prettily. Gerty worked in ahead and challenged and then left it. Sue swung for it and ran into and flushed the bird, dropping to wing. Gerty coming toward her flushed another one and dropped to wing; then driving to another stubble, both dogs going at speed across wind, threw up their heads and ran over a knoll, where Sue pointed grandly and Gerty backed her in good style, the birds flushing wild as the handlers came up. Then to another stubble, Gerty flushed a brace, and as she dropped two more got up. Sue then pointed and Gerty backed. Short flushed to order and killed. Sue retrieving very well. She then made a long cast on the stubble and put up a single bird. Then near the edge she flushed a bird and stopped. Gerty came up and both pointed a covey, which Orth flushed and missed; then in high grass the handlers flushed and soon after Sue dropped just as another got up which Orth shot and Sue retrieved, but flushed a bird as she was coming in. Gerty then pointed, the bird was flushed

and both handlers shot, the bird flew two hundred yards and fell dead. Sue then swung around and made a beautiful point to a single bird, which Short flushed to order and killed. They were then ordered up, and the heat awarded to Sue. Down an hour and a half. This ended the fourth series, Don having a bye.

SUMMARY.

Fourth Series.

Sue beat Gertrude.
Don a tie.

Fifth Series.

DON AND SUE.

This was the deciding heat for first prize, and as it proved the last heat of the trials. Sue was given a short rest, and at 9:20 they were put down in a stubble where Don soon half pointed and then roaded on and flushed four birds; then near the edge he pointed grand and Sue backed in faultless style. When the handlers came up Don moved on and did some of the best roading that was seen at the meeting, following out an old cock that had run a long distance, both handlers saluted him as he rose, but cackling and laughing at them he sailed away unharmed. This was a capital piece of work. Then to another stubble. Don almost false pointed, but moved on in season to escape penalty. They then both challenged and Don swung to the left and flushed part of a covey that he should have pointed; he stopped and more of them got up. Sue then came around and flushed another one. This was poor work for both. Then across a slough to stubble Don pointed a covey which put up wild a long way ahead of him, Sue backing him nicely. Don then pointed a single bird, which flushed wild as Sue came up. Don then swung over the knoll and another bird got up wild; one also flushed wild ahead of Sue. Then near the edge Sue pointed, Don instantly backing her. Both moving on, Don stuck to the trail and roaded beautifully a long way, Sue close by him, occasionally challenging; she finally got too close and the bird flushed just as she dropped. Then working toward some birds which had been marked down, Sue flushed a bird that she should have pointed; and the chicken trials were over, for the judges ordered them up and awarded the heat to Don and declared him the winner of the first prize. Whereupon Don, to show that he was deserving the honor, swung out and made a magnificent point to a single bird which his handler flushed. Don is the first pointer that has won first at a field trial in this country. He is also a bench show winner, having won second at Atlanta, Ga., last December, and first at Pittsburgh last spring. He is a very good looking dog, as a glance at the capital likeness of him, which will be found on another page, will show. That he is as good as handsome the history of his performances attests. As we stated last week the other prizes were awarded by the judges. The following is the

SUMMARY.

Fifth Series.

Don beats Sue and wins first prize. Sue wins four-fifths and Dashing Novice one-fifth of second. Gertrude, Count Noble and Adams's Bessie equal third. Biz and Prairie Ranger equal fourth. Don won the special prize for the best pointer in the Free-for-All Stake, and the cup for the best dog in the stake from Pennsylvania. Gertrude and Rock divided the amateur handlers' prize.

MONTREAL DOG SHOW.

THE first bench show of the Montreal Dog Fanciers' Association was held on the 18th, 19th and 20th of September. The building selected for the show was the Crystal Rink; and being of immense size, very lofty, without any inside pillars, it was in every way suitable, and at the close of the show hardly any unpleasant smell could be noticed. The exhibition was the most successful of any yet held in Montreal, 463 dogs being in their places, and only five or six of the entries were absent. Much of the success is due to the untiring efforts of the secretary, Mr. John F. Campbell. The judging was done by two gentlemen whose names I omitted to find out, the awards were generally correct, and there was less grumbling afterwards than is usually heard. The prizes were paid promptly toward the close of the show, and notwithstanding we we were unfortunate in having rain on two days, yet the bank account will, I believe, show a surplus. The exhibit of sporting dogs was not good, for Montreal is not possessed of many blue-blooded setters and pointers, such as you see in the States. The entries for pointers, setters, spaniels, etc., were not numerous, and the quality, with the exception of the Gordons, was nothing to boast of; but in the non-sporting classes were many fine dogs, for in terriers especially Montreal is hard to beat. The dogs had ample space, the large ones being chained all round the building on a platform raised about a foot above the floor, while the small varieties were confined in wire cages on tables running the length of the building.

The prizes were firsts, second and honorable mention, dogs and bitches competing in separate classes.

Greyhounds were represented by two dogs and a bitch with pups, all good, and better than generally seen in this country. Mr. C. Murray's black dog took first and Mr. Jos. Hickson's brindle second; the bitch, also a black, owned by Mr. Creighton, was also awarded a first.

Two large mongrels were shown as bloodhounds, but very properly no award was made in this class.

Foxhounds numbered three, all pups; shown by Mr. John Roberts. They were a good lot, looked like fast dogs, and deserved their first and two hm.

English pointers had seven entries, but there was nothing extra in this class. J. B. Sparrow took first for the best dog, G. B. Arcand for the best pup, and hm for bitch. In hardly any of the classes were the names or pedigrees of the dogs given, so I will not enter into particulars.

English setters brought out nothing to look at. Mr. H. Curtis was awarded second for a white and black ticked dog, and John Dickson for the best bitch, a small orange and white.

Irish setters.—A dog and a bitch were the only two in this class, and both gained a first. The bitch was the best of the two, and is owned by Mr. John Warner.

Gordon setters.—First, Mr. John Hickey's Major, by Marble Grouse, out of Queen Bess II. A very fine dog, medium size, not too clumsy, rich tan markings, and well feathered. He was in good condition, and attracted much notice. Mr. Hickey imported Major from, I believe, Elizabeth, New Jersey, and he has got at the stud some very handsome puppies.

For the best Gordon setter bitch Mr. Robert Blackwood's Young Flora took first. Young Flora is by Mr. J. A. Haldane's (of Lodge Keith, Scotland), dog Ranger, out of Flora, one of the Duke of Richmond's black and tans. She was imported June, 1880.

Gordon setter pups.—Mr. Blackwood's Faustina first, Mr. Hickey's Flattery, honorable mention. Both good, little to choose between the two.

The spaniels were poor in quality in all classes, but Mr. J. F. Cambell took first in Norfolks with a very handsome little dog imported from the Marquis of Bute's kennel.

The class for collies filled well, and the best dog was a small one owned by Mr. Alloway.

Newfoundlands.—The American Consul, Mr. Gianelli, took first with an enormous dog. The others were good also, and I think the winner owed his prize to his size.

Bulldogs.—For dogs, no first was awarded, Mr. H. C. Dean taking second with a white and brindle dog with cropped ears, the other entry being a nondescript.

Bulldogs, bitches.—W. Hammersley's Venus (by Bonny Boy, out of Gypsey), was the only entry and was awarded first. Venus is out of the same litter as the New York Thunder.

Mastiffs.—Mr. Beatty, of St. Lambert, took first, with a very fine dog; J. H. Stewart, second, with a very big one, but poorly marked.

The classes for terriers of all sorts were well filled, some very handsome Skyes, fox-terriers, black and tans, and toys were shown, but it would take up too much space to go through them all. Bull-terriers were very much mixed. J. F. Campbell had a very finely shaped dog in Billy, imported, and J. P. Burns exhibited a good one, but J. R. McLaren's bitch lost first in bitches, under 16lbs., by being over weight. This is a very handsome, game little dog. This class filled well, and attracted much attention.

A Japanese dog, a Chinese hairless dog, and a Russian water dog were objects of curiosity much admired.

The Yorkshire terriers were a good lot, and the judges had hard work to decide as to their merits. The pugs also were pretty equal, and both medium in quality.

The attendance was very good, and the dogs were well cared for by careful men. Most of the entries were from Montreal, but it is to be hoped that at the next show more dogs will be sent from the country. HEMLOCK.

RALEIGH.

DIED SEPT. 20, 1882.

"And will he not come again?
No, no, he is dead;
* * * * * *
He never will come again."—*Hamlet.*

FIRST blithe as the day,
As lovely as May,
And now so still!
Not a gladsome bound
From my gallant hound,
To do my will.

See! yonder he lies.
In beauty's own guise,
With grace enfraught.
Yester e'en he came
At lisp of his name—
He now cometh not.

My pride lieth there,
My hope, my fond care—
Love past telling—
Worthy the utmost
Wert thou, my lost—
All excelling!

How can I leave thee,
And thus bereave me
Of love and truth?
The wide world over,
Maiden and lover—
Give but its ruth!

Seeking far and wide,
O'er land and o'er tide,
Man finds in thee,
O dog, truth and love
Alone, and above
What man's can be!

Thy tongue—O music
Sweet it was! I prick
My ears again
To catch its ringing tone—
Memory alone
Bears its refrain.

Veiling lustrous eye,
Dew-sweeping ears lie,
Thy gay stern low—
Beseechingly I look,
As on a sealed book,
Then—turn and go!

"And will he not come again?"
Ah me! I call in vain—
Low is his head.
Yonder in state he lies;
Him, in my heart, I prize,
With other loves he vies—
There is not dead! O. W. R.

EASTERN FIELD TRIALS CLUB.—At a meeting of the Eastern Field Trials Club, held at Delmonico's last Thursday evening, the suggestion of FOREST AND STREAM was considered, and it was decided that the running of the Trials to be held at High Point will be run as at Fairmont—under as many sets of judges as may be found necessary to confine the length of the Trials to proper limits. This is a wise course, and will undoubtedly prove very satisfactory to all concerned. Mr. Hall, the secretary, tendered his resignation, as owing to the demands of business he is unable to devote the necessary time to the duties of his office. His resignation was accepted, and Mr. Washington A. Coster was unanimously elected to fill his place. Gentlemen who are to run their dogs in the Eastern Field Trials can obtain free transportation for them by applying to Mr. Coster, whose address is Flatbush, N. Y.

BLACK SPANIELS.—Anyone in want of a well-bred black spaniel should examine the advertisement of the Hornell Spaniel Club, who offer some of their celebrated stock for sale. These handsome and gamy little fellows are fast winning their way into favor, and we presume that there will be plenty of customers for them.

PENNSYLVANIA COLLIE TRIALS.—At the Pennsylvania State Fair, Allegheny City, Sept. 16, there was a trial of sheep dogs, in which were entered Champion Tweed II., owned by Mr. Thos. H. Terry, of New York, and Dan, owned by Mr. Wm. J. Walker, of Washington county, Pa. Tweed easily won the first prize.

KENNEL NOTES.

NAMES CLAIMED.

Fleetfoot and Rob Roy. By Mr. L. C. F. Lotz, Chicago, Ill., for black greyhound dogs, whelped May 2, 1882, by his Doubleshot (Riot Act—Sunflower) out of his Dorothée (Roi du Combat—Sciatica).

Fritz, Jr. By Mr. L. C. F. Lotz, Chicago, Ill., for blue greyhound dog, whelped May 2, 1882, by his Doubleshot (Riot Act—Sunflower) out of his Dorothée (Roi du Combat—Sciatica).

Lady Lotz, Atlanta and Fanchon. By Mr. L. C. F. Lotz, Chicago, Ill., for two blue and a black greyhound bitches, whelped May 2, 1882, by his Doubleshot (Riot Act—Sunflower) out of his Dorothée (Roi du Combat—Sciatica).

Cora Lee. By Mr. C. E. Lewis, Suspension Bridge, N. Y., for bitch beltou English setter bitch puppy by Cambridge (Gladstone—Clip) out of Cassie Lee (Paris—Coomassie).

Icicle. By Mr. Geo. W. Fisher, Danville, Pa., for lemon and white pointer dog, whelped July 11, 1880, by Jerry (Sensation—Colburn's Belle) out of Snowflake (Glenmark—Girl).

Nelly Belton. By Dr. Rawlins Young, Corinth, Miss., for black, white and tan English setter bitch, whelped July, 1882, by Belton II. out of Rhoebe III. (Gladstone—Frost).

BRED.

Dot—Royal Gladstone. Mr. J. M. Hunter's (New York) black, white and tan English setter bitch Dot (Bergunthal's Rake—McClellan's Pera) to his Royal Gladstone (Gladstone—Mersey).

Kate Claxton—Gladstone. Dr. R. L. Hampton's (Athens, Ga.) English bitch setter Kate Claxton (Guy Mannering—Flash) to champion Gladstone, Sept. 8.

Florence—Phil. Mr. Winchester Johnson's (Boss, Mass) liver cocker spaniel bitch Florence (Snipe—Cute) to Mr. J. P. Barnard's black cocker Phil (Brew—Kittie).

Feather—Beau. The Riverside Cocker Spaniel Kennel's (Claremont, N. H.) imported liver and white ticked cocker spaniel bitch Feather to their imported black spaniel Beau (Bob—Nell) July 31.

Gem—Beau. The Riverside Cocker Spaniel Kennel's (Claremont, N. H.) liver and white cocker spaniel bitch Gracie (Snip—Zuletta) to their imported black spaniel Beau (Bob—Nell), Aug. 20.

Gem—Beau. Mr. G. S. Tucker's (Peterboro, N. H.) liver and white ticked cocker spaniel bitch Gem (Snip—Feather) to the Riverside Cocker Spaniel Kennel's imported black spaniel Beau (Bob—Nell), Sept. 3.

Blackie—Beau. The Riverside Cocker Spaniel Kennel's (Claremont, N. H.) imported black spaniel bitch Blackie (Rolf—Belle) to their imported black spaniel Beau (Bob—Nell), Sept. 3.

Frost II.—Dime. Mr. C. B. Boxer's (Winnepeg, Man.) lemon and white English setter bitch Frost II. (Gladstone—Frost) to his Dime, Aug. 7.

WHELPS.

Dorothée. Mr. L. C. F. Lotz's (Chicago, Ill.) imported black and white greyhound bitch Dorothée (Roi du Combat—Sciatica), May 2, 1882, six (three dogs), by his imported Doubleshot (Riot Act—Sunflower).

Viola. Mr. P. M. Buckley's (Niagara Falls, Ont.) liver and white pointer bitch Viola (Dick—Fan), Sept. 14, nine (five dogs), by Campfield's Snipe.

Mollie D. Mr. J. M. Hunter's (New York) black and white English setter bitch Mollie D. (Druid—Jolly Mac), Sept. 12, four (two dogs), by his Royal Gladstone (Gladstone—Mersey).

Negress II. Mr. J. F. Kirk's (Toronto, Ont.) black spaniel bitch Negress II. (Kaffir, 10,451 - Negress, 8,373), Sept. 3, four (three dogs), by his Toronto Beau (Kaffir, 10,451—Syman, 10,880).

Bonnie Kate. Mr. J. F. Kirk's (Toronto, Ont.) liver and white cocker spaniel bitch Bonnie Kate, Sept. 12, seven (five dogs), by black, white and tan cocker spaniel Bonnie Charlie; all black, white and tan.

Nell. Mr. J. Colcman Drayton's (New York) brindle greyhound bitch Nell, Sept. 13, seven (three dogs), by his Dick Salisbury.

SALES.

Fleetfoot. Black greyhound dog, whelped May 2, 1882 (Doubleshot—Dorothée), by Mr. L. C. F. Lotz, Chicago, Ill., to Mr. J. M. Fisher, Farmerville, N. Y.

Rob Roy. Black greyhound dog, whelped May 2, 1882 (Doubleshot—Dorothée), by Mr. L. C. F. Lotz, Chicago, Ill., to Mr. W. B. Shufelde, Oconomowoc, Wis.

Fritz, Jr., Atlanta and Fanchon. Blue greyhound dog and bitch and black greyhound bitch, whelped May 2, 1882 (Doubleshot—Dorothée), by Mr. L. C. F. Lotz, Chicago, Ill., to Mr. S. J. Schaefer, Baltimore, Md.

Lady Lotz. Blue greyhound bitch, whelped May 2, 1882 (Doubleshot—Dorothée), by Mr. L. C. F. Lotz, Chicago, Ill., to Mr. J. W. Trafton, Boston, Mass.

Daisy Dean. Liver and white imported pointer bitch, 4yrs. old, by Mr. J. Cummings, St. Paul, Minn.; to Mr. Geo. De Forest Grant, New York, and the Borstall Kennel, Morristown, N. J.

Abbess. Lemon and white pointer bitch, whelped April 27, 1881 (Dan—Psyche), by Mr. H. C. Glover, Tom's River, N. J., to Mr. Je de Henera, Cuba, W. I.

Gip. Imported black greyhound bitch, 3½yrs. old (1st New York, 1882), by Dr. O. P. Coe, Jersey City, N. J., to Mr. H. W. Huntington, Brooklyn, N. Y.

Little Maud. Liver and white cocker spaniel bitch (Brag—imported Feather), by the Riverside Cocker Spaniel Kennel, Claremont, N. H., to Mr. C. C. Raitan, Boston, Mass.

Lilite Nig. Black cocker spaniel dog (Brag—imported Feather), by the Riverside Cocker Spaniel Kennel, Claremont, N. H., to Mr. H. H. Groves, Saxonville, Mass.

Snowflake. Lemon and white pointer bitch, whelped March 18, 1880 (Glenmark—Girl), by Mr. W. J. Percival, Palo, Mich., to Mr. Geo. W. Fisher, Danville, Pa.

Icicle. Lemon and white pointer dog, whelped July 11, 1882 (Jerry—Snowflake), by Mr. W. J. Percival, Palo, Mich., to Mr. Geo. W. Fisher, Danville, Pa.

Rag. Liver and white pointer dog, whelped July 8, 1880 (Viscount—Victoria), by Mr. Geo. W. Fisher, Danville, Pa., to Mr. W. J. Percival, Palo, Mich

DEATHS.

Fritz, Jr., and Atlanta. Blue greyhound dog and bitch, whelped May 2, 1882 (Doubleshot—Dorothée), owned by Mr. S. J. Schaefer, Baltimore, Md., from inflammation of the bowels.

Wasp. Blue Skye-terrier bitch, owned by the Borstall Kennels, Morristown, N. J., Sept. 11, from inflammation, the result of a cold.

Border Lily. Gordon setter bitch, 7½yrs. old (Rowe's Duke—Flirt), owned by Mr. J. E. Fisher, Brooklyn, N. Y., Sept. 6, from puerperal fever.

Raleigh. Chestnut, white and fawn basket beagle dog, whelped June 17, 1882, by Mr. N. Elmore's imported King out of his imported Music, owned by Mr. O. W. Rogers, Billerica, Mass., Sept. 20, 1882, from fits. A very beautiful and promising puppy.

Rifle and Trap Shooting.

WHY AND WHEREFORE!

WITH the finish of the match came a shower of "I told you so," and on every side came explanation after explanation. Said one observer: "It is idle to offer an excuse for the defeat of the American team to say that such a result was a foregone conclusion from the first. In fact, such a result must have seemed more than likely to the originators of the plan of the two competitions this year and next. The matches were not planned in the expectation that through them new laurels would be placed on the brows of American riflemen, but principally to improve military shooting. This result will be accomplished most effectually by the present outcome. The mechanical disturbances will first be overcome, and a military rifle constructed which will meet the requirements of long distance and 'dirty' shooting, as the Metfords in the hands of the British have met them in this match. The National Guardsmen of America will not rest easily under so humiliating a defeat, and earnest work will be done toward recovering the lost laurels. Many after the match, perhaps some could not hold their rifles firmly, others may not have appreciated the importance of keeping the barrels of their pieces plumb; not one could master so well as the majority of the British the things which contribute to success. And so they failed woefully, and had only this consolation; that the victors had contended, not brilliantly, but only better than they with trying conditions. The scores the second day on both sides fell many per cent. below the poorest that have been made at Creedmoor since the preparations for the contest began, but it was a more trying day than any within that period.

Said another critic: "The American riflemen are to be heartily congratulated on having been beaten. Their victories in international contests had made them careless, and target practice, instead of improving, has been actually retrograding for several years. So a few of the most famous shots in the country had wholly withdrawn, and a crushing defeat was precisely what was needed to revive rifle practice at all the ranges. The American militia have first to note that while several regiments contributed to their defeat, an important one was that the British visitors were a team, while the Americans were only a collection of individual marksmen.

"The contrast between an organization like the Volunteers, which, with its adjuncts, has about 200,000 men from which to pick a team of twelve, and the two score thousand American uniformed militia, is great, at the outset; it is increased from the fact that the expense of transporting competitors from distant States to the range at Creedmoor, and there providing for them, practically limits the choice of the American team to New York and its immediate neighbors. Hence the only chance of success was in getting together the selected men early in the year, and subject them to rigid coaching, under which individual faults would be eliminated and the strong points of each turned to the advantage of the team as a whole. But the twelve were definitely selected only a few days before the match. Their British competitors were not only more experienced marks-

men, all having had a national reputation for many years, and several being old international competitors at Creedmoor, but were selected, organized, and trained as a team fully a month before the Americans were chosen. They were subject to military discipline, under the orders of the War Office; they were armed substantially with the same weapon and had been perfectly familiarized with its use; each member was faithful in keeping the full record of his shooting and in giving the team the benefit of his experience.

"The American team, on the other hand, came in spite of efforts of their coaches, never attained the character of a well-trained team. It is often desirable to so arrange the order of firing that a steady and trustworthy shot shall begin in order to best ascertain the conditions of the light and wind, and to give the others confidence; then marksmen of other peculiarities follow in their allotted order, as may be the best. But the shooting of the National Guardsmen had been so variable, from day to day, that such arrangements as these might have been premature. Throughout their preliminary practice they had half a dozen different lots of guns and as many different lots of ammunition. Their methods of loading and lubricating exhibited all varieties. The only thing was that not one of the weapons which they possessed was fit for the conditions of the match. Under great urgency two gunmakers each produced a rifle, a few weeks before the contest, specially intended for it; but many of the marksmen declined to experiment with it, having, indeed, some excuse in their allegation that it was folly to give up familiar rifles and cartridges on the eve of an important match for new ones with which, however meritorious, they would have insufficient time to test."

Another writer, speaking of the match, makes some valuable suggestions and hints in explanation of their defeat. The blaming of the American rifle for the defeat is very proper, for without a reliable weapon all the team's science and all the practice possible goes for naught. One keen observer says:

"The difference between the scores of the two teams is so great that it is really unfair to judge the ability of the visiting team by the figures which have been recorded. Certainly it is not to be inferred from that the Americans nowhere. The victors have not even enjoyed the pleasure of being forced to do their best. From the time when the challenge was received from the National rifle Association of Great Britain there has not been a day when any individual American competitor would not say that there was even a probability of victory for an American team. America has seen no long-range work with military weapons and under the no-cleaning rule. In England, on the contrary, the special problem of making a gun and a reasonable number of shots would not foul the barrel in any serious degree has been worked out by years by a score of armorers. The difficulty was found to be not one of ammunition rather than of rifle, and it was not until the two have been most accurately adjusted that real progress was made. The American men had built up a really very fine long-range rifle which, shooting strong charges, was able to throw a heavy bullet with the greatest accuracy; but after each shot came a scrubbing out of the barrel, and every particle of debris from the barnyard powder was removed. Any of the small-bore riflemen would have laughed at the idea of attempting to get accurate shooting out of their rifles unless the cleaning part was most carefully looked after, and yet, strangely enough, this is just what the members of the American team have to do, and have not done. Not only this, they have been subjected to the additional handicap of shooting with open sight and with no wind gauge. The rejection of the latter was at the express request of the English managers of the match. It seems absurd that, while every rifleman who has a more or less elaborate scheme of "elevations" for carrying over various distances, nothing should have been tried to overcome the effect of wind. There are simple devices for giving the rear sight a shifting motion to meet any cross wind, but military men reject them all, and the match is made up with the restriction of a fixed rear sight. Still, the restriction bore equally on both team, the British feeling secure in the rifles with which they are armed. They are of the finest pattern in all essentials. With barrels as cleanly polished as diamond emery can make them, and with a comparatively light charge of which is large enough to throw the light ball used, but not large enough to fill the sides of the barrel after each discharge with a scum of half-burned powder ready at the next discharge to tear away the metal from the lands, and so to start a point of leading where at each succeeding shot more and more deposit would be made until it were as well to use a section of "gas-pipe" for the barrel of the piece so far as accurate shooting is concerned. The members of the American team had this deficiency, and from the beginning up to and through the match the men were carrying on experiments to discover some way of overcoming these difficulties. With these ill-adapted arms it was not surprising that the scores ran wild, for such arms it was indeed impossible to form that "team system" which should have been perfected in position on the range yesterday. It was not a really difficult day, as days ran on ordinary ranges, and there is no reason why, being once on the target, the entire number of shots, with perhaps one or two exceptions, should not have been put on the paper. The record of each target shows the work of a gun each shot out of which was a sort of experiment in the dark. The marksman was restricted from cleaning, and hence could not tell how far the grooves of his rifle were filled. The idea of having a rifle already fouled and ready for systematic coaching all the outside advice, no matter from whom, was more of annoyance than of benefit. It is no excuse to say that the British team shot almost entirely without coaching assistance beyond a good target pull, while every American had the benefit of the custom abroad. They have tried the team system and failed to make it work. The Americans have had it and with it have won several difficult matches."

It is amusing now to look back and think of the comfort the American riflemen secured from the fact that the Englishmen had consented to shoot the 200yds. range from the shoulder. There was really no test of rifles at this range. The open-sighted military rifle has again and again beaten the fine rifle off-hand work, and the question of holding, which is the only one to be tried, may be readily learned by one who will take plenty of aiming drill at a paper target in a room.

The manner of the selection of the team has also been criticised as having much to do with the defeat of the team. Open competitions where anybody may come in and push his way to the front by effort have a very popular look, but such scoop-net proceedings are not the best calculated to get a strong team which may be unified into a working body. The recent drill week of the militia all over the country will enable the directors of the N. R. A. to invite certain tried gentlemen to make up the team. Then, with ample time at their command, sufficient money and abundant enthusiasm, there is no reason why the very strongest team should not be brought out. The method has also the merit of a direct profit to something of the sort in the making up of the previous small-bore teams.

A review of the scores will show that there was hardly a redeeming feature about the match. There was no stage when the Americans appeared to show what they could have done, and while they represent this country were in nowise fitted to do so, because they had neglected to first secure the best information on the topic in hand. Starting off with a false theory, the team men soon found themselves in a tangle, and with an inferior weapon for their hands unable very well to escape. The team captain, while an excellent shot himself, has shown a marked lack of executive tact, while a fixed faith in a certain rifle has acted as a clog rather than a help to the men under him. The members as a team have spoken freely that they were even shooting each for himself and against his fellows. In the battle of the two days they have proved themselves weak at every range fired over, and everywhere when the teams were firing could be heard the heavy bang of the American rifle spitting out much unconsumed powder for the 90 to 109 rifles firing with the light British weapons, using from 70 to 80 grains of powder and burning it all in projecting the light bullets employed, were a marked contrast. The English rifleman had experimented himself away from the heavy fouling charge, while the American was still laboring with the antiquated system.

The return match of next July upon Wimbledon Common will be a contest in which any American National Guardsman ought to be proud to enter himself. But it is to be hoped that we may by studying the plan of the English shooters. They have given us one lesson, and a very effective one it ought to be. Creedmoor has seen the very best team which Great Britain has been able to muster in this special form of military drill. It is an opportunity for military knowledge and skill to be able to construct and use such a rifle as shall without cleaning send shot after shot accurately over long distances. This is the rising small arm problem, and the recent display of ignorance upon the subject among our prominent American experts is not a pleasant sight. If the return match of 1883 is to be won it will be by making up a team without regard to personal preferences, and by placing in the hands of the team, not the gun which any particular maker may wish to have placed there, but the gun which is specially adapted to the match in hand and which the team of 1882 plainly did not have.

RANGE AND GALLERY.

CREEDMOOR.—The continuous matches of the fall meeting, the conditions of which were given, but which were not made up to the time of our last issue are now tabulated. In the Short-range Continuous Match A. J. Howlett, of New York; A. Lowell, of Boston, and W. M. Farrow, of Newport, are tie on full scores. R. Kohrt, United States Army, and J. K. Gross, Seventh Regiment, with military guns, also have a total of 50, while five of the men have 49, and eight 47. The lowest winning score, and there are eight of them in the 50, is 45.

In the 500yds. match, owing to the fact that the military guns made full scores, the allowance brings them above the highest possible. The leading scores were:

	Score	Allowance.	Total.		Score.	Allowance.	Total.
J K Gross	50	2	52	E T Brown	49	..	49
W Farrow	50	1	51	W Cowell	49	..	49
H Batchelder	50	1	51	H Bates	49	..	49
J L Price	50	1	51	J Hetcher	49	..	49
S V Turney	50	..	50	G Boulter	49	..	49
G Pearse	50	..	50	J N Lancaster	49	..	49
R McVittie	50	..	50	G J Parry	49	..	49
W M Farrow	50	..	50	J Smith	49	..	49
J Cavanagh	50	..	50	J N Dods	49	..	49
J S Shepherd	48	2	50	E M DeRuscha	48	1	49
A Keller	48	2	50	W Underwood, Jr	47	2	49

MARKSMAN'S BADGES.—The National Rifle Association proposes, in view of the expressed wishes of many members of the National Guard, to open the range and matches at 6 o'clock A. M. on Sept. 30, and close at 4:30 P. M. A full complement of scorers and markers will be provided for an all-day match, in which everyone can have an opportunity to shoot in the Qualification Match and win a marksman's badge. An executive officer will be present, and no effort will be spared to make the day a satisfactory one. The conditions make the "Qualification" Match open to members of the U. S. A., N. Y. and N. R. A.; the former being in uniform (jacket, cap and belt) may count scores made as partially qualifying them to shoot for the N. Y. State Marksman's Badge, provided that they use the State Remington rifle; 10 rounds, standing, at 100, kneeling at 200yds., five shots at each distance with any military rifle. The "Champion Marksman's Badge" Match of 1882 is open to all members of N. G. S. N. Y. and N. R. A.; the latter, however, not being eligible to win the principal prize; 200 and 500yds.; five shots at each; Remington rifles N. Y. State model; position, standing at 200yds., any, with head to the target, at 500yds.

BOSTON, Mass., Sept. 23.—At Walnut Hill, today, the marksmen gathered in good force, and found the elements propitious to the seekers for bullseyes. The Creedmoor contest was perhaps the most interesting of the day, but some excellent shooting was had upon the other targets. The scores were as follows, at 200yds.:

J B Fellows	5	5	5	5	4	4	5	4	4	4	45	5
C G Foster	4	5	4	5	4	4	4	4	4	4	42	4
R Thomas	4	5	4	4	4	4	4	4	4	4	41	4
K F Thomas	4	3	4	4	5	5	4	4	4	4	42	4
J A Cobb	4	5	4	4	4	4	2	4	4	4	39	4
C A Jones	4	4	4	4	3	4	4	4	4	4	39	4
S L Victor	5	5	5	4	4	5	5	4	4	4	45	5
R Reed	5	4	4	3	4	5	4	4	4	4	41	4

NEW ORLEANS, Sept. 17.—The Louisiana Military Rifle Association has been actively at work of late, and at a recent meeting the conditions of the Hill trophy were so amended that it may be shot for at 200 instead of at 500yds. The old range committee has been discharged, and a new one, composed of Lieut. Kerr, of the Louisiana Guard Artillery; Wm. Arnold, of Washington Artillery, and L. Gertels, Jr., of the Continental Guards, appointed to make arrangements for the markers, tents, skiffs, etc. To-day the Hill trophy was shot for under the amended rules upon the West End range. The shoot began at twelve, after a good deal of practice had been indulged in, and finished a little after two. The smallness of the scores was due to the heavy wind that was blowing. The only incident of the day was a recontre with the police, who retired defeated. The officer at the lower end of the walk raised the point that the marksman had no permit to shoot in the city, but it was shown that they were in Jefferson parish.

There is a movement afoot to have an interstate match at 200 and 500yds. on next Mardigras.

BRINTON, Sept. 19.—The Brooklyn Amateur Rifle Club shot the twelfth competition in their Champion's Match at 200yds. off-hand. The annexed scores were the leading ones for the day:

A Anderson	5555555—35	G Hunter	4555555—34
T P White	4544442—34	F Burns	4445555—34

THE TRAP.

PROVIDENCE, R. I., Sept. 25.—The Narragansett Gun Club held their sixth competition for badge on Thursday September 21, at their club grounds, Washington Trotting Park, Mr. S. D. Greene, Jr., winning the badge, also a handsome gold cuff buttons offered by a member of the club for highest score in badge match. At our next competition a member has donated a "bag of shot" to winner of the badge. Summary:

NORTH CAROLINA.—Raleigh, Sept. 15, 1882.—One of the pleasantest places in the State to visit is Scotland Neck, and especially pleasant it the occasion be a shooting matchunder the direction of the excellent gun club of that town. The shooting and all arrangements pertaining to it at the match there on Thursday last were a success, we learn. Nothing was forgotten; everything was provided. At the invitation of Mr. A. L. Hassard-Short, the party of fifty visiting sportsmen dined with him, and here, too, nothing was forgotten.

The match was for a horse, buggy and harness, at ten glass balls each, from Carl's revolving trap, screened. Thirty chances at $10 a chance. Each man upon going to shoot at his own trap; 16yards at twenty-one yards. Twenty-four entered. Winner to pay $90 for balance of chances not subscribed.

White	1111011111—9	Ed Engelhard	1111111111—10
Hassard-Short	1111011111—9	H I Clark	1111111111—10
W M Shields	1111111111—10	Ed Engelhard	1111111111—10
W M Shields	1101111111—9	H I Clark	1111111111—10
Ed Engelhard	1111111111—10	Hassard-Short	1111111100—8
Maj Burnett	1011100000—5	H I Clark	1111111111—10
W M Shields	1111110100—8	J J Robertson	1111111111—10
Ed Engelhard	1111111111—10	Ed Engelhard	1111111111—10

Messrs. Engleharl and Robertson used 10-bores, and shot at 21yds. In shooting off all tied again on 3. It being impossible to decide the tie, in consequence of shells giving out, it was decided to divide the purse of $310 between the successful shooters. We doubt if there is on record a match in which 24 shot; 225 balls shot at, and only 21 missed.

Remember if you wish to buy a fine gun and save money, go to C. L. RITZMANN, 943 Broadway, New York.—Adv.

A YACHT BUILDER'S VIEWS.

Editor Forest and Stream:

Your having brought my name prominently before the public several times of late, I deem it proper to reply to some things you say, as they do me great injustice, because wholly devoid of any foundation in fact, while other passages describing the Maggie races are misleading in not giving the whole story. I wish to reply first to your strictures on the construction of our large sloops. You say that "All these large sloops are structurally weak;" that "Julia leaked like a basket;" that "Gracie followed suit." All this may be true, but you go on to say that last fall the "new Pocahontas suffered the same complaint," which is at variance with the facts in the case. The new Pocahontas did not leak last fall. Her pumps were not touched during her trials nor after her return. If all vessels were built as solid and fastened as well as Pocahontas, there would be no leakage from straining in carrying sail.

She was purposely built strong enough to go to sea, to Europe, or anywhere else desired. You speak of through fastening, to which I do not object, if it is the right kind and put in in a proper manner. Gracie, I am told, is through fastened—that is, treenailed, which I suppose is what you mean by through fastened, and no doubt she is fastened in the same way; yet, according to report, they wring and leak. What is wrong? I can say for want of through fastening. But as they are through fastened, that cannot be the trouble. In my judgment, treenail, or wood fastening is wholly defective, particularly in light frames, and is not near as good as long spikes, when the latter are driven home and clinched inside. Tnis is the way Pocahontas is fastened, and she does not and will not wring or leak from carrying sail. The defects of treenail fastening are: First. That the plank in many places do not touch the frames. Second. That when a treenail is driven through and a spike enough in the plank to hold it on. Of course it does not touch the frame in many places, and treenails will not draw it up, for they have no head. In fact, treenailers make no effort to get the plank to fit, "for they don't know any better," and do not, for actually it cannot be seen. Spikes will draw the plank close against the frames, because they have heads, and if long enough they cannot be drawn out, hence you get a more solid job. An inch wooden pin is not as strong as a ½ or ⅝ inch square iron spike. Another defect of treenailing is in the boring the frame and plank for the treenail.

Now the frames for these larger sloops are probably not sided more than four inches. Pocahontas is 6½ inches, and doubled, of course, as they ought to be good for anything, should not be less than an inch. Then, if two treenails are used in a frame, you cut out two inches of the frame, and wide plank would need three or four; then you would have but four, five or six inches of wood left in the frame, according to the number of treenails used. When spikes are used you will see that nearly the whole eight inches of wood in the frame, the frame and plank in that manner cannot but weaken the frame and plank. Fastening the plank on with wood is but a clumsy old-fashion way at the best. More thorough fastening would be necessary if a light frame is used, but the frames should, if not wood. You have much to say of the superiority of workmanship on English yachts over ours. Well, I presume we have no such expensively built boats of our type as Madge and Maggie. And why not? Not because there are not as skilful yacht builders here as equal to the English, but because work cannot be done without money, and our yacht owners will not pay for such work. That is the whole secret. I am told that Madge cost eight thousand dollars. Now, a 40 or 42ft. yacht of our type can be built for about the same amount as Madge. Now, let a yacht-builder ask the would-be owner three thousand dollars for such a craft, and he will hold up his hands in holy horror, and say, "Too high, too high; I can get one in Brooklyn, or somewhere else, much cheaper." And he is very correct in his conclusion, so far as his experience. We have to go without the work, or slight it, or lose money. You look at fashion-ins, and sneer at my work and ability; yet who can do better than I have done—get material together for such a boat, design her, lay her keel and all the plans for everything about her, build her, launch and rig her, and have her ready for sea in two months for the money enough to complete her at that? I had no contract with the owners, but expected to get what she cost; but when I found I was to be cut short, I had to drop many things I expected to put on her. As it was, her owners got thirteen hundred dollars' worth more than they paid for.

No job could be done so neatly, and no plans can be drawn perfect, when in such a hurry. Yet I am sneered at, and all sorts of false statements are made about her, and she deliberately cut out, although her without consulting me, or giving her a decent trial trip, and rendering it impossible for her to go, as her power was taken away. There is no encouragement here for a yacht builder to try to advance in his business, when he cannot get money enough to do so. I wish to return to your account of the Maggie races in Boston harbor. You speak of her beating the Dudine, Hesper and Anna. You say the fast Anna is one of Kirby's build. I but her fourteen years ago. Since then she has been raised, which makes her very tubby, and nothing like I should build now. But you are comparing her with England's latest and best type. Can anything in England beat her that was built as long ago as she was? Beside this, the Anna is but little more than half the size of Maggie. Of the Hesper I know nothing. The Dudine was fast, and had a good record until altered two or three years ago, since which she has not shown much speed. In your issue of August 31, you speak of Oriva beating Active and Addie. Active was never known to be very fast, being nearly always beaten in the fleet she was in, and what I wish to speak of particularly is the Addie, which you say is one of Kirby's build. I hope I am "one of the foremost of my profession," but if I had ever built so slow a boat as the Addie is now, I am afraid it would go against me. I had nothing to do with building her, she is now, for the most part, a little of the old boat left that is not covered up. When I first built her she was the fastest sloop in New York waters, without regard to size. The two largest sloops then in commission were Gracie, 61ft. over all; and Eva, 78ft. Both of these boats had easily exceeded, in a fair wind, the sloops of her own size, as the record will show, when she beat five of the best including Gracie, in a race for the Bennett Cup. She was then but 48ft. water line, and 55ft. on deck. Then she was pieced out all, making her 58ft. water line, but her speed had vanished, she not being near as fast as before, either on or off the wind. Since then she has been raised, and widened, making her about 70ft. on deck, but her speed does not appear to have been improved. Beside this she was first built in 1867, 15 years ago. But you are comparing her with the latest English models, as you do with Anna.

Do not think I have been standing still all that time, but give me a chance, with money enough to carry my plans through, and perhaps you will not have occasion to sneer so much at American builders. I think I have models that are about perfect, but many remains to be done in the way of light construction, in rig, and getting ballast low down. But I would not have the same model or rig for seagoing as I would for smooth water cruising. I would build and rig them to suit the work they are expected to do.

DAVID KIRBY.

RYE, Sept. 6, 1882.

[In speaking of "through fastening" we had reference to through bolting and clinch work, not as Mr. Kirby has taken it, for we agree with him in all he says against treenailing the small frames of yachts. We think Mr. Kirby's remarks concerning the Pocahontas, as no one can be expected to turn out first-class work without being paid for it. We further believe that American mechanics can turn out good work, that is, first-class American yacht builders like Mr. Kirby, but we certainly had the experiment in details, which they have not. It was with a view of furthering better construction that attention has been called to existing defects. Owners are not altogether to blame. They do not understand such things, and builders should make it their business to point out the difference in quality when they make a bid. All our yachts suffer from the same defects—too heavy scantling with very slovenly fastening, badly designed iron work, too light rigging and paucity of outfit. Time will change this, and the visit of Madge and Maggie have given improvements of many kinds. Let us hope that the foreign models and fine finishing shall lead to call attention to our deficiencies in respect to build, rig, and outfit, and the necessity of putting more money into the builder's hands for a really first-class job, their visit will not have been without valuable fruit.

The cost of Madge and cutters generally is still greatly overrated. Quality for quality there should be no difference in the cost of producing cutter or sloop. The former may carry more lead, but with the large displacement now coming into fashion in our sloops even this difference is disappearing. Hull, spars and rig are cheaper in the cutter, because smaller and lighter in proportion to displacement. There is less material more easily wrought in the easy form of a cutter, and there is less area and bulk to her sail plan, and therefore shorter and lighter spars, like strength in both types being presumed. The Madge can be duplicated in England for $5,000, and that means a vessel built of hard woods throughout, fitted and finished in the most superior and complete style, in fact, cabinet work all through, fastened from keel to rail with copper, through bolted and clinch work, coppered outside, special brands of steel wire for rigging, faultless sticks, the most approved blocks in the market and fourteen

sails with all their belongings; tested chain, patent anchors and innumerable special small fittings above and below; everything ready for sea. Compared to such work and such an outfit the great majority of our yachts are only half finished, and not more than a dozen in the country could stand inspection or receive a decent rating from Lloyds. Naturally, to such such disparity in favor of cutters, they may be expected to cost more, for the same reason that a gold stem winder cannot be purchased for the money that will bring a nickel-plated boy's watch. There is much less wear and tear to a cutter than to a sloop, the latter being so much harder on spars and hull. This is probably no news to Mr. Kirby or to any intelligent observer, yet these very points have right along been disputed by hot-headed partisans, who allow well-meant but misplaced "patriotism" to interfere with a dispassionate contemplation of purely mechanical issues, and it is for this reason we have to patience with, and Mr. Kirby must charge many of our hard words to those who are so blind to common sense as to stir up righteous indignation.

If we have condemned the superficial capacities of yacht builders as a whole, we are none the less aware that there are a few deserving exceptions; but, as Mr. Kirby intimates, the few have to sink to the level of the common herd or go begging for a living. If a change in public sentiment in favor of better work is now to be observed, it will end to the benefit of good builders like Mr. Kirby and for bringing about a proper appreciation for good work and distinguishing between it and the shabby cobbling of the "hand-me-down" talent, first-class mechanics may thank FOREST AND STREAM. We have often referred to Lloyd's rules for building, as published in their Yacht Register, and if owners will only insist upon a like but simple step of making those rules the basis of their contracts, misunderstanding would be done away with, and owners who can read can at a glance see what they are offered for their money, and weigh the estimates from different parties in the light of a strict business proposition without being mechanics themselves. At present they pay their money and the builder gives them any kind of a job he pleases, and that it will be the cheapest kind of a job is as certain as sunset.

The views of Mr. Kirby's letter contain information of interest, but does not vitiate anything we have written. Some old boats are a good deal better than new ones, and we question late improvements in the modeling of our yachts. As a class we have retrograded ever since the days of the America in the vain endeavor to build on a large scale, according to notions derived from river sailboats, for which read the modern fleet consists of overgrown toys and machines instead of seaworthy vessels. With all respect to Mr. Kirby, we cannot look upon Pocahontas and boats of her kind as anything else but overgrown and correspondingly costly toys, whose hulls and rigs are altogether at variance with the duties to be legitimately expected from such large yachts. The days have gone by when owners of 70ft. vessels were content with pottering about the Sound, and yachting has taken a firm hold in other ports besides New York. There is no object in building huge machines for such a confined stretch of water. The Sound is fast becoming little else than an approach or fairway to New York, and large yachts at all events should be modeled and rigged with a view to more extended services. We do not encourage or approve of yachts to go to sea [illegible] except as an experiment always attended with danger should she be caught out in bad weather. As for the sailing qualities of such boats at sea, the less said about them the better.]

NARROW CUTTERS AND CRUISERS.

THE *Herald* published last Thursday a very conservative review of the recent cruise of the New York Y. C., to the main conclusions of which no exception can be taken. We must question, however, the comparison by which the bulk of Maggie is made to appear as large or even larger than that of Vixen. The *Herald* arrives at his conclusion by comparing the bulk of Oriva to that of a sloop of like length, the Eclipse, and imputes a similar relation between Maggie and Vixen, overlooking the very material difference in beam and freeboard between Oriva and Maggie. The first has four and a third beams to load line, the latter five, so that the comparison would have to be considerably modified, bringing about just the opposite result. The relation of size between Maggie and Vixen is best shown by the diagrams published in this journal, which indicate beyond dispute that Vixen is considerably the larger of the two. For the sake of supplementing what we have already deduced from direct calculation with a comparison, after the method of the *Herald*, we will select another cutter of known contents. The Muriel, without counter, measures scant 1,240 cubic feet. She is 40ft. load line and 9ft. 6in. beam. Reducing her beam to one-fifth the load line, or to 8ft., her volume would diminish in the proportion of 1421n. to 960n. It would become in round figures 1,000 cubic feet. This would be the bulk of a 40ft. Maggie very nearly. A larger boat would compare with this as the cubes of their load lines. Therefore a 44.7ft. Maggie would be to a 40ft. Maggie as 89 to 64 nearly, which from the above gives us a bulk of 1,385. But the Maggie is proportionately a somewhat bigger boat on her length than the Muriel, her midships showing less hollow to the floor, this excess tapering, of course, towards bow and stern, and reaching from about a foot above the garboards to the lower turn of the bilge. Beyond two-thirds the length it would melt away at both ends to a mere film. One hundred cubic feet, nearly three tons, would certainly much more than cover the excess, two tons we deem quite enough. The cubic contents of Maggie less counter are therefore under 1,500 and probably nearer 1,400 than the next hundred above.

The *Herald* further reverts to the cost of Vixen and Maggie, claiming the sloop to be the cheaper. No doubt she is, but Vixen is a very interior job to the cutter in every respect, and her fittings and outfit are of the most meagre description. Maggie cost, new and complete, $7,000. The sloop Fanita, of about same length and of third-rate build and outfit, except such finishing cabin joiner work, brought $8,000, two years old. Valkyr, a cross between the two types, brought a like figure in her second year. The Maggie is built of selected hard wood throughout, copper-fastened, coppered outside, and very complete in rig and appointments. She cost no more than a sloop of the same class of build, though unquestionably more money than the cheap iron spike and yellow pine job, supplied with three or four summer sails and a fair weather rig, half complete, and iron ballast into the bargain. There is no reason why cutters, even of the extreme type, should cost any more than sloops. They carry a trifle more lead, owing to lighter hull, but they also require less material and smaller rigs, and can be put up with greater facility than a beamy boat. Like quality and the saving, if anything, should be on the side of the cutter. But if you ask Mr. Lloyd's rating for eighteen years in one case and in another are satisfied with a sloop just thrown together, and expect to put half her cost again into extra outfit on your own account, the first mentioned will of course appear the more expensive of the two.

We are very much surprised to find the *Herald* admitting that Maggie has more room below than Vixen. It is so much proof that the objections urged against cutters are based principally upon prejudice sure to wear off upon closer acquaintance. Thus the mam stay of those opposed to cutters has been their supposed want of accommodations below. Yet here we find the *Herald* after actual inspection coming to the honest conclusion that Maggie has larger accommodations below than a sloop of twice her beam. The *Herald* is perfectly sound in this conclusion, as what we have always maintained. The great beam in the sloop is very deceptive. It is a bunion midships, and only from the bilge up. The ends profit nothing by it. The forecastle of a sloop is a kennel compared to the lofty quarters for the crew aboard a cutter, and in the run the rise of the flat floor of the usual sloop cuts out the after saloon or lodger, which room always to be found in a cutter. The centerboard splits up the cabin, and thus it is that figures lie, for the *Herald* has discovered the Maggie's 8 or 9ft. beam to be worth more than the 15ft. of the Vixen, and we believe others will arrive at the same conclusion after due inspection.

The *Herald* does not see much room on Maggie's deck. We believe, however, her gangways each side of the hatches are wider than those of the Vixen, and the gangways form the critical part, so far as working ship is concerned. The great angle of heel of the cutter is a fact only when carrying on in strong blows. A moderate increase to the sloop's usual heel we have never found any objection in practice. There may be "no need to build such narrow boats" in America as long as we sail so low by doubling up the sails, but they can race a 20 with a 10-ton yacht on even terms. But let each pay for what she has in the way of size, and let length remain optional with the builder as much as beam or depth and the problem would in time be decided upon its merits as to such conditions as would alone form would survive, and then we could tell just how much the modern racing cutter owes her proportions to tonnage rules and how much to real superiority of her special form. Length rules reduce racing to question of overpowering rather than outmodelling one another, and under such rules it is quite likely the most powerful hull will maintain the day to the sacrifice of other types which possess more intrinsic merit in their design and are better adapted to the general wants of the community.

Let us hope the process of selection, however, the evidence of the times points in favor of the narrow boat for regular yachting work. Not long ago it was customary to give British cruisers great beam, four to load line was considered about right. Then as obsolete racers of less beam were thrown upon the market, they were bought up and quickly discovered to be much superior to the old and beamier craft. Thus Playmate, Butterfly, Challenge, Sunshine, Floatwing, Ildegonda, Dudu, Buccaneer and hosts of others of four and a half beams, having been driven off the course by five beam boats, were relegated to the "fast cruiser" lot, at which business they were found to give such satisfaction, that in later cruisers four and a half became the standard in place of four, and it was quite common to meet with four and three-quarters even. These narrow cruisers had the advantage of fetching where they pointed, while the beamier fellow—our sloops are good proof—had a way of "pitching into the same hole twice," and were no use in a seaway. And so it came to pass that as experience with the narrow boats accumulated, they were received with constantly growing favor, until at this day we find five beam cruisers laid down without the least compunction about their excessive heeling," "narrow decks," and the common stock of objections still heard on this side of the Atlantic. Julianar with six beams was built for a "comfortable" cruiser. So was the Seabelle schooner with five and one-half beams, and so was the five-beam Maggie on Boston waters.

She was laid down as a specimen pure and simple without regard to speed as a racer, though her owner desired a boat which would "go" in all kinds of weather as long as he chose to rough it. For months he and his family knocked about the British coast in all weather, reporting their little vessel a fine performer under circumstances which would have made a passage in a beamy boat altogether out of question. It must be conceded that our British cousins cruise 10, yes, 50 miles to our one, and that cruising qualifications in their cruising yachts are sure to be questions standing out in bold relief before their minds when building. These alley have solved through long experience in the cutter of small beam and rig, with great depth and low weights. They did not plump on to such narrow boats without other experience, but on the contrary, the beginning was made with plenty of beam, and by the slow but sure process of natural selection and the survival of the fittest, beam is giving way to depth and length in British waters. With this transformation in cruisers tonnage rules have nothing to do, and we may accept that for British waters, at least, the narrow cutter is winning the day as a cruiser as she already has as a racer.

Whether the milder weather and longer swells of the Atlantic we are accustomed to justify steering a course different from the one laid down by our cousins abroad is another matter, to which time will furnish the solution. It is well, however, that a clear understanding should be had of the course found advisable in British experience, so that we may profit thereby to the best advantage and avoid false conclusions.

CANOE RIGS.

Editor Forest and Stream:

The sketches appended hereto will show some devices in rig which I have used with success, adapting them from the customs of aborigines as observed during a residence in Honduras. The leg of mutton arrangement I used as far back as 1860. Fig. 1 shows my improvement on the Creer leg of mutton of Honduras. It combines the advantages of a sliding gunter, and the handy single halliard yardsail requiring only a stump or short pole mast. As the halliards are hauled taut in this arrangement the yard is drawn close up to the mast at the same time it is hoisted, as the sketch will explain, the bead ring

traveler sliding up the mast as the halliards are pulled upon. In the old style without this traveler the yard flies to leeward when the sail is reefed or in lowering away. In Fig. 2 an improvement on the Cincinnati Lord Ross is illustrated. A halliard is attached through a block or sheave at the masthead to the hook on which the lateen yard is hung, and a parral with loop and toggle on yard is passed around the mast underneath the halliards. This enables the sail to be reefed from the foot and keeps the yard in to the mast. This is more simple than the plan without halliards, which cocks the boom up into the air when a reef is taken like a drake's tail, and looks like a carpenter shop device all through. Battens and parrals might be added as in balance lugs. Thus improved I consider the rig the best in use on canoes. When sailing free the yard can be lowered at will. If simply hung to a pin without halliards you must come by the wind to manage the sail, and may capsize in so doing. MULL.

COST OF BRITISH YACHTS.

LONDON *Land and Water* ascribes the cost of modern yachts to the tonnage rule in force in British waters. Though we agree with our contemporary as to the fallacious results obtained by considering beam and length and the necessity of having depth represented in the rule to measure size correctly, we do not think that measurement is responsible for the great cost of the modern racing yacht, but that lead and large displacement are. Now lead has won the day under all rules of measurement, whether the old Thames rule, or length rules, or bulk rules or sail area, etc. Lead is shown by experience to be speedier than iron. No change in the British rule would bring about a return to iron ballast in a first-class racer. As for large displacement, it is manifestly an advantage in a cruiser and if it costs more than small displacement it is because you are getting a larger and abler boat for your money. In racing it is likewise sought after under all rules as soon as builders learn its value. Thus British racing yachts have steadily grown in displacement for the sake of the increased power it gives. But we find this the case under Y. R. A. measurement and in the kitchen boats and American sloops just the same, though the latter are built under length as the standard. Now the narrow deep vessel can never obtain so great a displacement as the broad and deep. Not only will the latter be the more costly in ballast but also in rig since she carries a much larger area of sail than a narrower boat. The most expensive yachts in proportion to real size and accommodation in Great Britain are the Wilderness and kitchen boats built on a length rule. We are rapidly working up to the same end here in America.

If the present British rule were changed to allow more beam, the consequence would be an increase in that direction, which would make up for all the displacement saved in depth and more too, add to the cost of hull and to the size of rig. Certainly the present Y. R. A. "beam and length" rule cannot properly be saddled with the charge of producing expensive vessels, however current such a belief may be. There can be no object in reducing fast boats to the level of slow ones by taxing them for their good points. There is no more sense in asking that outside ballast should be taxed or prohibited than in demanding to have topmasts abolished, balloon sails, paid skippers or anything which is first class, and therefore expensive, outlawed by enactment. Special scrub races may be introduced under any restrictions, but to give the rack a chance at the expense of the meritorious is getting the cart before the horse with a vengeance. British races will all fast enough as soon as the present transitory development of the modern racer out of the old-fashioned plug has been completed. Then outbuilding will cease and racing yachts, capable of making a close match, will multiply fast enough. But first let the highest standard be reached without checking development by legislating against it. There is a limit to length and to depth. When once built up to, "outbuilding" is at an end, and racing will again become what it was in former years. British yachtsmen are not the only ones suffering from paucity of entries. Under all kinds of rules we are troubled here in the same way. As soon as the fastest yachts have given proof of their speed the slow ones naturally stay away, as witness the meeting of our large schooners and sloops. Among the small fry this is not so apparent, for the good reason that the fastest boats are not so well known or recognized since their records are too meagre to furnish convincing proof as yet.

A NARROW CRUISING YAWL.

THE change that narrow beam vessels are more costly than others, though perfectly groundless, is made to confirm that the following data from the *London Field* will prove instructive. They also show how the fashion in cruising yachts is trending with regard to beam. The Leander is a yawl built especially for cruising. Load line, 65ft.; beam, 14ft.; draught, 9ft.; tonnage, 74 tons; displacement, 74 tons; least freeboard, 3ft. 1in. Built to class 18 years A1 at Lloyds. Iron inside, 35 tons; on keel, 9 tons; floors and keelson of angle iron; headroom in cabin, 7ft. 4in., built of hard wood, copper fastened and coppered. Full outfit of sails and appointments. Cost, $170 per ton Y. R. A., or about $8,000. Accommodations are far in excess of those to be found aboard a Mischief or a Pocahontas, as follows:

Large roomy forecastle, caboose at after end, with skylight above for ventilation; main cabin, 12ft. long, laid out in the usual way, with the saloon table running athwart the after end, and with stained-glass window over, which also acts as a ventilator.

There is a large roomy stateroom at the fore end of the cabin, and another at the after end on the starboard side. At the foot of the companion is a hot water stove fitted with curtains, so as to make a sleeping berth when required; abaft this is a lavatory closet, for coats, etc., with a place for shoes, etc. Abaft the stairs is a lavatory, containing lavatory, shower bath, and w.c.; a grating takes up in the floor of the lavatory, down which we stow empty portmanteaus, etc. The lavatory again is fitted with two baths, two large hanging wardrobes, drawers, settees; and, opening out of the ladies' cabin at the after end, is a lavatory and w.c., fitted with a skylight over.

All the accommodation I have named is commodious and good, not cramped in any way for length, floor space, or head room, and is thoroughly well ventilated. Beneath the cabin floor we have water tanks, holding fourteen days' supply, and below the ladies' cabin floor is a bath.

The deck fittings, bulwarks and waterways, are all teak; cabin fittings of teak and pitch pine, French polished, the panels in the main and ladies' being fitted with silk embroideries.

Here is her rig, which is interesting compared to the 52ft. hoist and 65ft. boom of a sloop. Mast, 39ft.; boom, 43ft.; gaff, 31ft.; bowsprit, 36ft.; mizenmast, 39ft.; mizenboom, 15ft. 6in., and gaff, 18ft. Area of working sail, 2,800 sq. ft., against at least, 4,500 sq. ft. for a snugly rigged sloop.

BEVERLY Y. C.—SEPT. 16.

Editor Forest and Stream:

The seventy-second regatta and third championship was originally appointed for Sept. 9, but was postponed to Sept. 11, and again to Sept. 16 on account of calms and heavy rains. The 16th opened with a severe gale from the northwest, increasing in force and making it plain that no boats from Quincy, Nahant or Swampscott could get down to participate. The judges were early on hand, but no boats were to be seen. About 12 A. M. the Peri, under three reefs, was seen to be coming from Manchester, but it was soon evident that she would not fetch across the bay to Marblehead. She seemed entirely smothered, and after a short time turned back, half full of water. After taking in more ballast, another start was made, and this time she got half way across, when the sail blew clean off the gaff, and she gave it up for good.

The cutter Beetle put in an appearance about 11:30, under reefed mainsail and foresail, and cutter Kelpie was anxiously expected. But her Bay Mary was found to be in a bad condition, and she gave it up. The little cutter Lola, however, came up under foresail and a scrap of mainsail at about noon. At 12:00:30 Beetle was sent off over a ten-and-a-half mile course, Lola following at 12:12 over a seven-and-a-half mile course, having been delayed by her fore halyards giving way. Both boats had a warm drive with the wind abeam to Bowditch Ledge beacon, getting it hot and heavy over the last part, Here Lola hauled up for a beat to Curtis' Point. About half way up she was forced to take in foresail and sailed rest of race under a rag of the mainsail. Beetle got off very fast before the wind to Gale's Ledge; then stood out to Southeast breaker, with wind abeam; then close-hauled to Half Way Rock and then a dead beat back. Over the whole course she sailed very fast, and kept very dry, going steadily along in the handsomest manner in the heavy sea at Half Way. As she rounded the rocks a large three-masted coaster passed by going free, under mainsail and jib, while other heavily loaded coasters carried reefed mainsail and jib, so you may judge of the cutter's excellent performance in such weather. At 2:21:30 Lola crossed the line, followed by Beetle thirty seconds later, the little boat being half full of water. Summary:

FIRST CLASS.

Beetle (cutter), A. Hemenway.....2 21 30

SECOND CLASS.

Lola (cutter), C. H. W. Foster.....2 09 30

TILLER.

THE AMERICA CUP.

ARE we to have an international match for the cup next year? It all depends upon those responsible for the conditions surrounding the trophy. The 40-ton cutter Annasona would be in our waters now had those conditions been framed with a view to equity instead of for the purpose of retaining the cup at all hazards by making a challenge next to impossible in demanding great odds for our side not likely to be granted by any one in his senses. Will the New York Y. C. rectify the blunders of the past? If they intend to take action it should be at once, for time is flying. If not the public will know to account for preventing an international contest the British cutter is ready to accept as soon as even terms are offered. We quote from *Bell's Life:*

The latest performances of this marvel have certainly been something astounding. Who would have thought that a 40-tonner could beat boats more than double her size in a strong breeze and sea, and that, too, without time allowance? Yet such was the fact, the Annasona handsomely defeating the Lorna, Mr. Morley's yawl, by five minutes clean. The supports what Duncan, who sailed the little Madge in America, said, that the boat to go across to New York for the America Cup would be a good clever 40-tonner. Mr. Hedderwick meant to go last year, and no doubt would go right off now with his vessel, but the American conditions make it too big a thing for him. There can be no doubt whatever now as to the Annasona's being the boat, and there can be as little doubt as to O'Neil's being the man, holding, as he does, a mate's deep-sea certificate."

SAFE SAILBOATS.

Editor Forest and Stream:

Let me add a few words to your excellent ideas of safe sailing boats. Here, at Evansville on the Ohio, we have a nice harbor for sailing or rowing, but the fault with the mass of sailboats so far is that they are nothing but mud traps. Several attempts have been made to get up a sailboat that would not upset and drown the would-be sailors, but so far no plan has been obtained of safety great enough that all boats whose propulsion is by sail are looked upon as dangerous.

Our river has a variable current of from three to five miles an hour, and our weather furnishes more cats' paws and irregular winds than any place known to me, and the problem of making a river sailboat in which safety and pleasure are obtainable.

The boat is 18ft. over all, 12.8ft. on keel, 5ft. wide, 3ft. deep at bow, and not quite so deep at stern. The mid-section is very nearly drawn in the body profile given in "Canoe and Boat Sailing," shown on page 55 in *The Century* for July, 1882. The sternpost is of oak and plumb, the bow has about six inches rake. Both cuts of the boat are sharp, is cast-iron keel 12.8ft. long, 4in. deep, 2in. thick at top and 4in. at bottom, weighing 225lbs., bolted on with nine ¾in. bolts. The boat is decked 3ft. from each end, and inclosed airtight galvanized iron boxes which fit into the bow and stern, each containing 27sq. ft. of air. Between these inclosed iron boxes we have two "locker" seats each six feet long, on the inside of the hull. This seat is continued across the boat, hence we can comfortably seat half a dozen persons. The mast is of pine, 3½in. in diameter, set perpendicular, just behind the forward airtight box, and is 16½ft. above deck.

The jib extends five and a half feet outboard. The jib is 8½ft. on foot and 16ft. hoist. The mainsail is a leg-of-mutton, so rigged that

the boom will clear the heads of all in swinging around. It is set at about 35 deg. with the mast. The boom is 16ft. long and the sail has 16ft. hoist on mast; one row of reef points on main and jib three feet from foot. The rudder is large, extending nearly two feet, thus giving the extra turning power needed on a short boat, and at the same time making the boat steady. The sails are made of 25yds. of cotton duck, 28in. wide. The boat runs very level, is fast enough, and now my telephone is telling me that a brother practitioner wants me to repeat the sail we had one week ago, when we went up the river about six miles. To get to the place and back we sailed at least twenty miles in a pleasant breeze, going along lively, but best of all, safely. No matter how irregular the wind blew, with mainsail and jib trimmed flat as a board, we could go against it somewhat. The boat, although short, obeys her tiller better than any boat I ever sailed in, and despite the prevalent ideas in favor of long boats, none can run truer than the Sates on a given sailing course. The hull is clinker built, of cedar planks, and very strong and great, sprang to no thing, and with this peculiarity, that I believe no other wood has—it will not shrink nor swell in rain nor sun, nor have we any wood save cedar that will last so long. MEDICUS.

ANNASONA.

THE following concerning this forty-ton cutter, taken from the London *Yachting Gazette* will prove of interest in view of a possible visit of the Annasona next year, should the conditions of the America Cup challenge be put upon the plane of ordinary fairness, as we hope they may be:

"The deeds of bygone forty-ton celebrities have been totally eclipsed by the astounding performance of the Annasona this season, and never before has homer of vessel been so complete been more meritoriously gained. That the Fairlie boat was a *rara avis* her doings last year plainly proved, when, out of twenty-two starts, she won seventeen prizes, value £967; still, few would have been bold enough to prophesy at the close of '81 that another year might see her absolutely at the top of the tree. Compared to her doughty deeds all this season, the feats down in days of yore by the Niobe, Muriel and Myosotis pale to insignificance; yet, after all, the outcome may lead in future—by handicapping or keeping the classes intact, to a means of protection against a light weight wagging with the class ranks. Out of the forty starts, the nineteen prizes, value £1,350; and last year the Samoena capped this performance with twenty-three prizes—sixteen first and seven seconds —out of 30 starts, the gross amount of her winnings being £1,410. The Pantomime, Julianna and Latona have all been mighty stars in their day, and some of the light weights have been credited with extraordinary averages; but Annasona is unique—viz., 35 starts, 29 prizes, 28 being first and one second, and the gross value of the whole £1,550.

"Such matchless feats to be accomplished by their speed against all classes and under every condition of weather; and it will not detract from the merit of the last match in the Channel—that sailed at Torquay last Tuesday—by stating that the forty then went out more with the object in view of obtaining a good sea-boat for Ireland, going in for a stern sea fight. There have been days when power has told a tale, the Samoena having a grand revenge one day in Dublin Bay; and it would be folly to think that—marvel she is—Annasona or any other forty could have saved her time on that tempestuous Monday at Harwich with a clipper like Miranda, Vanduara or Lufra. Apart from being a phenomenal vessel, the unparalleled success of the Annasona may justly be in a great measure ascribed to the faultless way in which she has been sailed. O'Neil's helmsmanship was not discounted by a want of smartness on the part of the crew; in fact, the little ship has been simply worked like a 'hand saw,' as only those who have closely watched the manœuvres know. There has been no crippling of the bowsprit by getting 'the bobstay down early in the morning,' no punishing the lee bow-boule with a disproportionate jib when the third was sufficient, nor has a yard topsail been seen aloft when a jib-header was all that was required to keep the gaff steady. The use of purchases to sheets has been recognized and put in practice on board, and all these things have contributed a share in crowning Annasona 'the pride of the season.'"

ROYAL CANADIAN Y. C.—SEPT. 16.

THE third attempt of the club for the Anderson cup was successful, fully sailed Saturday September 16 by two vessels out of the fleet, the first being unfortunately headed by a shift of wind which was subsequently entirely lost, leaving all but Oriole and Aileen becalmed, and unable to reach harbor before dark. The entries included the same lot of cracks who have met so often of late, Schooner Oriole, Lieut.-Com. Lees, sailing on 56 tons, and rig allowance; cutter Aileen, 32 tons, Mr. Gooderham; sloop Cygnet, 34 tons, Mr. Dennis; cutter Alarm, 37 tons, Lt. Col. Grassett; sloop Madcap, 17 tons, Com. Boswell; and cutter Verve, 10 tons, Mr. Cosburn. The course was from the anchorage off Hanlan's point, on Island around East buoy in harbor, out the West Gap to Mimico buoy, then back to buoy off Island, then out into the lake around a mark stationed five miles off shore, return around buoy off the island, then around Scarboro buoy to the eastward and return through West Gap, Prospect Point channel to finish. Challenge Cup, value $200 and $200 to first yacht home on regular time allowance, $100 to second, $50 to third and $25 to fourth. Open to club yachts only. The match was timed by Captain Shupard, and the fleet went across to a smart one gun start in light but steady puffs from the south.

The stylish Aileen hit off gun fire a trifle the best and was first away. She kept her lead around Mimico buoy, with the big schooner and Alarm going round after her in company, the rest a short distance astern. The wind suddenly dropped and came out from the south, heading Verve, Cygnet and Madcap, and compelling them to work up to the first mark, while the other three had it a good wholesail leading wind for the Island buoy, which they rounded in the same order, and passed out on the inner road into the lake. The sails disposed of the big schooner and eased sheets around the outer mark with plenty to spare. Spinaker was run out in good shape aboard the cutter, and she bowled in to the island again at a good rate, apparently with the prize well in hand. The three sloops went to the eastward with a quartering wind and hauled around Scarboro buoy in the same order, the two 17-ton sloops, Cygnet and Madcap, with the tiny 10-ton Verve, being by this time virtually out of the race, in consequence of their bad luck in being nipped by a shift near the first mark, and thus losing it altogether. No sooner had the leading six trimmed for a close haul home than the wind veered to nearly south east, making it cabin window business for the West Gap. At this the schooner had so much the advantage of her rig that with a consteady freshening breeze she was up to Aileen on the quarter, and finally drove by carrying the streak clear home, winning by 8 minutes and landing the Anderson Cup, the cutter taking second prize, rest becalmed.

CUTTER—LAUNCHED.—The new cutter Wenonah, built by Hegy and Harris, of Greenpoint, for Mr. Jas. Stillman, N. Y. Y. C., E. Y. C., S. C. Y. C., L. Y. C., and St. A. Y. C., was launched Sept. 21. The *Herald* furnishes the following description of this yacht, built on lines and to specifications supplied by Designer Prior, for the Eldonia, of London: With the exception of the Bedouin the Wenonah is the largest cutter ever built in this country. It is the owner's intention to give her a thorough trial before the close of the yachting season. The dimensions of the Wenonah are as follows: Length over all, 72ft.; length on load line, 56ft.; extreme beam, 16ft.; depth of hold, 10ft. 6in.; draught of water, 10ft. 6in. The keel is of Ohio white oak, sided and molded and fastened with copper bolts driven through and clinched on rings of the same material. The sternpost is also of Ohio white oak, as is the apron, the latter sided 6¾ inches at the head and tapered to the siding of the deadwood. The deadwood is well bolted with yellow metal bolts through the sternpost and keel aft and stem and keel forward, the bolts being clinched on rings. The planking is put on outside the keel, stem and sternpost. The planking is put on in two thicknesses, both being worked fore and aft, the inner skin of yellow pine and treenailed to the frames and bent timbers. The outer plank is of white oak and averages 1¾ inches in thickness. The ceiling has been worked to form air spaces between the clamps, and pieces of convenient lengths have been made to fit the air ports. Hanging knees of angle iron have been fitted to the mast beams, the capstan beams, in wake of the running tackle, to the beams at the end of the saloon and to the beam at the afterpost. Knees of the same kind connect with the lower deck beams where it is possible, forming partial iron bulkheads. The inner iron and cross ties are of angle iron 1¼ by 1¼ by 3-16 inches and the gusset plates 3-16 inch thick. The deck is of white pine, worked in long lengths and free from knots or snakes. The joiner work in the cabin is handsome and very substantial. There are two roomy staterooms, a third that is smaller, and two berths aft the cabin, besides the captain's quarters. The saloon is large enough to fit out with settee and the usual fittings in medium size yachts. The galley will be very complete and the room for the bath, ice house, lockers and pantries is all that is required. When finished and furnished the saloon of the Wenonah will be very attractive and the accommodations of the staterooms ample and satisfactory. Pneumatic connections may be made with all the rooms, and an indicator and gong placed in the steward's pantry. There are twenty tons of lead on the outside of the keel and the remainder—the inside ballast—is of lead cut to fit the frames. Two working boats are being made for the yacht—one 15ft. and the other 18ft. long. The whole length of the mast is 66ft. 6in., from deck to masthead, 55ft.; length of topmast, 40ft.; boom, 58ft.; gaff, 36ft.; bowsprit, outboard, 28ft.

TEASE—SADIE.—A capital match was sailed between these two diminutive specimens of the catboat, Sept. 23, in a howling northeaster accompanied by a drenching downpour. Tease, Peter Devoe, owner, is 12ft. 6¼in. long and Sadie, Alfred Wright, owner, is 18ft. 10in. long, allowing the former 5m. 25s. over a fifteen-mile course from off club house foot East Eighty-ninth street, to and around Throgg's Point buoy and return, for $100 a side. Both were sent off to one signal at 2:35. Tease with whole mainsail, Sadie with a reef down. They had a favorite tide through the Gate with a nasty chop blinding the crews with the flying spray. The boat with Ward's Island channel was live work, and required great caution to prevent a capsize. Off South Brothers Sadie weathered on her competitor by a few lengths, but subsequently split tacks, allowing Tease to make a board into Throgg's Point without following, whereby the latter managed to fetch the turning mark first at 6:33:7; Sadie casting around at 6:21:2 and shaking out reef for the run home. Both put in some fearful rolling and dipping bouts. It was dark long before reaching home, the match ending after one hour and three minutes; but skillfully sailed races ever witnessed between small boats. Tease crossed at 7:28:30, Sadie at 7:37:46, the former winning in 4:43:53¼ corrected time, Sadie second in 4:53:23.

NEW CUTTER.—We take the following from the Boston *Herald*: "The new cutter building by Lawley & Son, at their yard in South Boston, for Rear Commodore Charles A. Welch, Boston Y. C., is entirely planked, and presents a very handsome appearance. She is 38ft. 6in. over all, 31ft. load line, 10ft. beam, 7ft. draught. flush deck, with 6ft. under the carlines. The main cabin will be 8ft. 4in. long, with two long transoms on each side of coamers and sliding sash, aft of which will be a fine stateroom 6ft. 8in. long, with modern improvements. The forecastle will be 12ft. long, and will be provided with accomodations for the crew. The frame is of best live oak, two inches square, doubled, spaced 12in. between centers. The planking is one and a half inches, the garboards and topsides pine, four inches wide and runs the entire length without butts. On the keel there is an iron shoe, weighing six and a half tons, firmly secured by iron floors on the inside. The deck will be laid with clear white pine, one and a half inches square. The masts will be 48ft. long above deck, eight and a half inches at partners; housing topmast, 24ft. long; bowsprit, outboard, 16ft.; gaff, 23ft. 6in.; boom, 31ft. 6in.; hoist of sail, 29ft."

SAN FRANCISCO YACHTING.—A race was sailed September 9 by the Pacific Y. C. over the usual course. The gun to go was not heard through the fog, and this was taken from explanation of the fifteen minutes allowed to cross. This has created dissatisfaction, and shows the necessity of indicating the start by two simultaneous signals, one appealing to the ear, the other to the eye, as the discharge of a cannon and hauling down of colors. If one escapes observation the other acts as a substitute. Aggie was the only yacht away on time, the rest being handicapped. Nellie did the best sailing, especially in the windward work, but could not make up for handicap at the start, and as the protest about not hearing the gun was not entertained by the judges she got only second. The wind was light, with a pleasant breeze, and the match in other respects a fair one. Nellie made the best time over the course in 3:32:47; Aggie next in 3:35:37; Ariel, formerly of New York, was third best in 3:41:05; Annie, a New York sloop, fourth; Aggie was corrected time in 3:33:37; Nellie second, 3:42:17; Whitewing and Annie tie at 3:43:41, Ariel 3:07 and Fleur de Lis 3:50:54.

ANOTHER WINDMILL.—There is a ferment of excitement in the Providence *Press* editorial sanctum because a local item in the London *Field*, detailing the winnings of the 23ft. cutter Widgeon, fails to refer to the Gleam's sailing for the same race for a cup generously donated by her owner, Mr. F. A. Gower. As the Gleam is not the Widgeon, and Mr. Gower very kindly declined to take his own cup, he sent over to the Widgeon as second boat, what has the Gleam got to do with Widgeon's winnings? Her record was reported as the best in her lot, and as an open catboat has no class with decked cutters, and Widgeon's record was compared with home boats. Mr. F. A. Gower is fighting another windmill. It should prove to him that the Gleam did not turn the heads of "small English yachtsmen" for the ocean! We cannot believe his humble modesty believe. The Widgeon won the "blue ribbon" in her class, Gleam or no Gleam, for she beat the rest of the boats of the same breed, and no one claimed she won from Gleam or any other machine. Widgeon, by the way, is an old hooker, with a counter patched on and is now off fishing.

STATEN ISLAND REGATTA.—A match was sailed off Staten Island, Sept. 23, open to cabin yachts under 35ft., for prizes offered by Capt. Jake Schmidt, the boat builder. Course, from Bay View House to Fort Lafayette, thence around Robbins' Reef buoy, and back to Bay View House buoy in one hour. The wind was southeast, variable, accompanied by rain showers. Judges, J. B. Gerard, H. B. Holmes and J. Krehmeyer. Time allowance 1m. per foot. Summary:

	Ft. In.	Elapsed.	Corrected.
Metamora, W. H. Progers	35 09	1 25 47	1 25 47
Favorita, Com. Charde	32 06	1 30 10	1 29 40
Lorelei, J. Schmidt	31 00	1 35 06	1 33 06
Alice, Thos. White	31 00	1 35 50	1 33 55
Pastime, C. Wanetto	31 03	Not timed.	

NEW BEDFORD Y. C.—Second and third class sloops sailed a match, Sept. 15, for sweepstakes and cash prizes. The sea was heavy, there had been a storm S. E. Wednesday, her chain plates and parted bowsprit shroud, and Metric shipped a sea in the bag of her jib, splitting it near the foot. All hands were sorely tried by the sea. Corrected times as follows: Whistler, Com. Hawes, 2:10:05; Metric, Jr., Lt. Sisson, 2:10:35; Viva, Lt. Hawes; Isabel, Mr. Chapman, 2:17:37; Painter, D. L. Parker, 2:20:58; Startling, G. W. Parker, 2:33:28, and Noble, G. F. Parlow, 2:37:53. Whistler wins $15 and $30 sweepstakes in second class, Painter taking second prize, $10. Metric wins in third class, $15, and Ariel takes second money, $10.

ANOTHER CRUISING HATCHET.—Mercersburg, Pa., Sept. 18.—In Forest and Stream of September 7, I find a drawing of "Nessmuk" hatchet. I would say it is probably the only one. I saw such a hatchet made many years ago by that celebrated old hunter and inventor, Edward Stables, of Maryland. In 1873 I was in need of such a tool and made one, using the Stables hatchet as a model, but instead of the long bite made the bit short, and put on a heavy weight complete, with handle, is just one pound. Inclose drawing, giving exact size and shape of hatchet and handle, also pocket for carrying same on belt. When the hatchet is in the pocket the handle should be turned so as to rest on the leg in walking.—S. D.

CITY POINT SWEEPSTAKES.—A match open to cats over 18ft. was sailed off City Point, Boston, Sept. 20, from Sailors' Snug Harbor buoy No. 6, thence to buoy No. 7 off Independence, to Sculpin Ledge buoy, leaving it to port, then to No. 6 on Lower Middle and home. Wind variable from S. E. and light. Amy, E. W. Baxter, 20ft. 4¾in., won in 2:20:22 corrected time; Viva, S. A. Freeman, 20ft. 7½in., was second in 1:31:45, though making the course in 2:20:22 less actual time; Viva, a new boat by Hutchins & Prior, 18ft. 5in., was third in 1:35:15, and Druid, Mr. Fowle, 18ft. 6in, fourth in 1:36:45.

MOSQUITO FLEET.—The third race for the champion cup among the little shavers about City Point, South Boston, was sailed Sept. 23. Course nearly three miles. Lizzie, H. J. McDonough, 13ft. 2in., won in 1:02:16 corrected time, beating Saltpan and Saltpan Savage, Mascot, a new boat, F. O. Whitman, 12ft. 2½in., won for the second time in second class, in 1:01:14, beating Herald, Cyde and Egeria. Lizzie and Mascot take the champion cups, Herald taking second prize in her class.

LAID UP.—Although the best time for sailing is now at hand, many yachts are already laying up, and the chances for fall matches in a breeze in which both yachts and crews would be put to a test are small. Rambler has found a berth in Port Jefferson, Julia at New London, to be doctored for next season; steamer Yosemite at City Island; Snow Water at Bristol, R. I.; Agnes to New York; Vanity, Comet, ditto; Haze at Winthrop's Cove, New London, and Ruth at Noank, where she is to be newly rigged for next season.

WAYWARD.—M. J. G. Fowler's sloop, which went ashore Sept. 20 on Gerrish Island, off Kittery Point, N. H., in a fog, is expected to come off. She is being lifted with casks. Skipper Tom Haley reports the fog horn on Whale's back not in operation at the time of the disaster. The new York schooner Princess, which drove on the rocks on the Maine coast, has broken up.

TEASER.—Mr. Holmes's catamaran essayed a passage from Babylon harbor, L. I., to her regular moorings, off Staten Island, last Thursday, but was wrecked on the way, some of the connecting gear giving out in the sea, the two hulls being wrenched adrift. The crew of one were rescued by the Staten Island life-saving crew.

SQUARE SIDER.—The Lawley's, of South Boston, are building a flat bottomed boat for Com. Welch, for use in Florida waters. She is 28ft. over all, 25ft. on load line, 10½ft. beam, with high sides and a 9ft. living space, living 3ft. 5in. head room

VIF.—Charles A. Stevenson, formerly owner of the Osprey, has bought the schooner Vif, in Boston. She is 47ft. on deck, 40ft. load line, 14ft. beam and 7ft. 6in. draft. Hull Y. C. burgee.

DORCHESTER Y. C.—The first of the second series of catboat matches of the club was sailed Sept. 18, off the club house over a five-mile course. Wind moderate southwest. Mobe, A. J. Clarke, won in 1:02:17 corrected time, beating Thisbe; S. A. Freeman, 1:03:43; Water Witch, S. G. King, 1:03:53; and Belle, J. E. Baker, 1:07:02. The second match was sailed next day in a wholesail southerly wind. Won by Water Witch in 53:21, Thisbe 53:54, Niobe 54:21 and Gretchen, E. P. Sharp 59:49.

KEEL CAT.—Colter, of Dorchester, has recently launched a large cat boat for J. E. Baker. Length, 29½ft.; beam, 14ft.; draught, 4ft. She has an iron shoe of 2½ tons. Hoist, 27ft.; on boom, 31½ft; on head, 18½ft. Oak frame, yellow pine plank in one length fore and aft; mahogany fittings. Has 6ft. in cabin, and forecastle for two.

WINTER QUARTERS.—Sloop Kelpie, J. N. Winslow, has been moored for the winter in the Seawanhaka Basin, S. I. Schooner Clytie, Vice Com. Stokes, N. Y. Y. C., has been laid up at Red Bank; Alarm, J. C. Kingsland, at Staten Island; sloop Saloma, C. H. Leland, at Edgewater, S. I.; Vision, J. J. Alexandre, at Bay Ridge.

NAMOUNA.—This steamer, Mr. J. G. Bennett, N. Y. Y. C., arrived in Cowes Roads, Sept. 5, from Dieppe, and after communicating with shore sailed for Southampton before proceeding to the Baltic.

ACTEA.—Mr. David Sears sailed from Yarmouth, Isle of Wight, Sept. 4, for Falmouth.

Answers to Correspondents.

MAC.—The particulars as to rifles used by American team were given in our last issue.

C. G. S. C., Cincinnati, O.—We know of no Kentucky counties wherein hunting is prohibited in 1882-83.

W. E. C., Connecticut.—About Aiken, S. C., and Thomasville, Ga., you will find quail, deer and wild turkey shooting. Either place is an excellent winter home.

S. B. Iron Mountain.—The barrel will fit into any breech-loading gun. It does not have self-acting shell extractors. is made in different sizes to fit different ganges.

SWALLOW, Long Island City.—1. The gun is a good one for the price. 2. For rabbit shooting on Long Island go to Lakeland and vicinity. You will not find good squirrel shooting on the island.

Q., Opelika, Ala.—1. Where is the pulse in a dog? 2. What is the normal beat per minute in a dog weighing about fifty pounds. Ans. 1. On the inside of the knee; or place your hand on the left side of the dog over the heart. 2. 90 to 100 beats.

B., Brooklyn.—1. The price you name is hardly adequate to secure a first-hand double-barreled breech-loader. You may find a good second-hand one for the money. Go to any of our advertisers and you will receive good treatment. 2. For Long Island shooting grounds, see late issues of this paper.

G. R. S., Dumont, Col.—Why is it that trout have spawn in them here this time of the year. I caught a dozen this week and they all were nearly ready to spawn. It is something very strange to me. Ans. The Rainbow brook trout will furnish spawn from October to January, often have eggs in them quite well developed in summer. Your trout are probably spring spawners, unless they may be the "Dolly Varden" trout, and while their eggs may be large, it is a question whether they will be deposited before spring. We wish you would take note of their date of spawning and report to us, giving the name of the trout you refer to, and all the facts.

C. E. W., Troy, N. Y.—Three weeks ago we received a fish weighing twenty-four pounds which was caught at Fire Island and was called a spanish mackerel by all who saw it, including the old fish-woman at the island. It had the appearance of the spanish mackerel, but I have never heard of one being caught that size before. FOREST AND STREAM what do you think of it? Ans. Mr. Blackford informs us that the largest spanish mackerel he has ever seen weighed 8¼ pounds. Last week he had one on his stand of seven pounds weight. Your fish was probably the cero, *Cybium regale*, called in some parts "black spotted spanish mackerel," but known in New York as cero. It is not as good a fish as the true spanish mackerel, *Cybium maculatum*.

LIGHT CANOES vs. BOONVILLE BOATS.

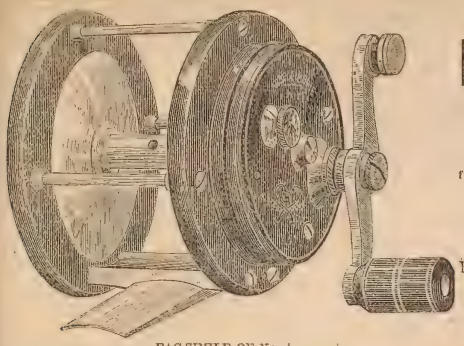
Editor Forest and Stream:

In your issue of August 10 I notice an article on "Light vs. Heavy Canoes" over the signature of "Nessmuk." In this article the writer refers to a letter of "J. R., Jr.," and compares very unfavorably the Adirondack boats or "Long Lake boats," as they are termed, with the Rushton canoes. He further offers to "wager $100 or $200 that J. R. Rushton makes me a canoe to weigh less than ten pounds, less than eight feet in length; that I take the canoe at Moose River House, and paddle and carry the same through the Fulton Chain to Raquette Lake, then on through Forked Lake, etc., to Paul Smith's; come back by way of the Tupper's, Smith and Albany lakes to Ed. Dunbar's on the Beaver; from there, by the Beaver and Seven Mile carry, to Twitchell's Lake; thence to Big Moose, and down by the three carries to Fourth Lake, thence to the Forge House."

This he wagers to do himself; and at the close of his article he adds: "Does 'J. R., Jr.' mean what he says? Will he meet me for a cruise of a month or more at any point between Paul Smith's and the Forge House? I in a twelve-pound canoe, he in such a boat as he pleases?"

Now, while this is not put forth as a challenge to "J. R., Jr." to go over this course, he in a boat and "Nessmuk" in a canoe, yet it is put in such a way as to lead any but a very careful reader to take it as such. It is after all only a good deal of "brag and bluster" about Rushton's canoes and what "Nessmuk" thinks he can do in one of them, and it is also intended as a fling at our Adirondack boats of the "Long Lake model."

I know "J. R., Jr." very well; he and I have camped together in the North Woods years ago, and have met every year on the Fulton Chain for a good many summers. I know that he makes no pretensions as a boatman, in fact I know that he is physically unfit to attempt to row for any distance; his whole life and occupation has been such as to render him unable to do it. So I just thought that it might not be amiss for me to step in and offer to take his place, and give "Nessmuk" a chance to try the relative merits of the two kinds of boats. I feel all the more inclined to do this because for the last thirteen years I have handled the Long Lake boats, and therefore ought to know what they are, and what they can be made to do.



To put it down in plain English, I will agree to go over the course before named ("Nessmuk's" own selection), he in a ten or twelve pound, eight-foot Rushton canoe, and I will go in a sixty pound double-ender boat of the Long Lake model, but built in Boonville, and will beat him through to the Forge House by at least forty-eight hours. But it must be for money, for I cannot afford to have a boat built, and lose the time consumed on the trip. I will therefore make it as he says, $100 or $200 a side, which ever will suit him best.

So much for "Nessmuk." Now I will make another offer. For the same sum of money I will make a match with any other man, who is not a professional, for a six days' race, I to take a sixty-pound Long Lake model boat, Boonville build, and he to take a canoe built by Rushton. The course to begin at the Forge House on Fulton Chain, and to be gone over between Monday morning and Saturday night.

I want it distinctly understood that I am not a professional, as I understand it—that is, a man who makes it his business to row races for money; but the whole drift of "Nessmuk's" communication is so loudly in praise of certain canoes as being the *ne plus ultra* of a boat to sit in, that one is inclined to think that the Adirondack boat is nothing but a flat-bottomed scow as compared with them. This is my reason for this offer.

The Gun and its Development

By W. W. GREENER.

FOR SALE AT THIS OFFICE!

Price $7.50.

THE GREAT SINGLE BREECH-LOADER.

"THE FIELD," 10 and 12-Gauge.

This gun, which from its wonderful adaptation to all kinds of field shooting we have named "The Field," leaves nothing to be desired in the way of a single breech-loader. It is really the only single breech-loader worth having. It has Scott top lever, pistol grip, rebounding lock, and patent fore end, and is beautifully finished. For strength, convenience, penetration, and in fact for all practical purposes it is just as good as the best double-barrel gun. We have sold the bulk of all the single breech-loading guns used in this country for the past four years. The reason is that the top lever action as combined with other features in the "Field" gun is the only correct one, and other single guns are successfully sold only as they resemble ours. Persons with ordinary prudence will not hesitate long as to which to choose, particularly as the "Field" gun costs but a trifle any way, and no more than the imitations. Address

P. O. Box, 1114. H. & D. FOLSOM, 15 Murray Street, New York.

The Maynard Rifles and Shot Guns.

NEW OFF-HAND TARGET RIFLE, MODEL OF 1881.

PRICES REDUCED.

WITH PISTOL GRIP STOCK, TIP STOCK, AND SWISS BUTT PLATE.

For Hunting and Target Practice at all ranges, the "MAYNARD" more completely supplies the wants of Hunters and Sportsmen generally, than any other Rifle in the world, as many barrels can be used on one stock; and for accuracy, convenience, durability and safety, is not excelled. Send for Illustrated Catalogue describing the new attachment for using rim and centre-fire ammunition.

THE ANGLER'S
AUTOMATIC REEL.

MANUFACTURED BY
LOOMIS, PLUMB & CO.,
SYRACUSE, N. Y.
The following letter is from Dr. Geo. F. Gale, of Brattleboro, Vt.:
Gentlemen:—Have just returned from Moosehead Lake, Me. I cannot express the degree of satisfaction and pleasure I have found in the use of your automatic reel. Would not exchange it for all the reels I ever saw for fly fishing. Am confident I saved many fish that would have been lost with any other reel, particularly one large trout weighing three and one-half pounds which I played fifty minutes before he would come to the net. He fought hard and long, making many furious spurts from and towards the canoe, but it made no difference. I kept my finger on the brake and it was simply impossible to get a slack line. Mr. Childs, who fished with me once, has one of your reels, says that nothing would induce him to go back to the old crank reel. Yours truly,
Geo. F. Gale.

Twenty Per Cent. Reduction.

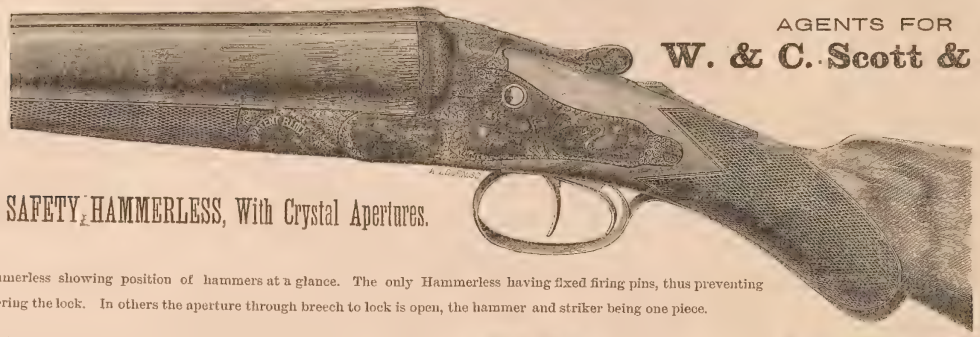
HOW TO ORDER THESE GOODS.



Send stamp for our catalogue and price list, select such goods as you want, deduct twenty per cent., add fifty cents to cover cost of boxing, and send New York Exchange or Post Office money order. If the goods are not satisfactory, we will on return of them to us in good condition, without delay, refund the money less express charges. In sending for catalogue please state the kind of goods you desire to purchase, as we have three catalogues. No. 1 is devoted to breech and muzzle-loading guns, rifles, revolvers, ammunition, &c. No. 2 is devoted exclusively to Westley Richards hammerless guns. No. 3 is devoted to fishing tackle. We advise all to order as soon as possible before the assortments are broken.

AGENTS FOR

W. & C. Scott & Son's

BLOCK SAFETY, HAMMERLESS, With Crystal Apertures.

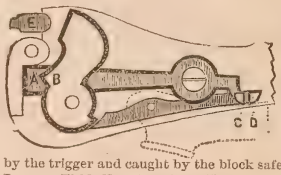
The *only* Hammerless showing position of hammers at a glance. The only Hammerless having fixed firing pins, thus preventing smoke and dirt entering the lock. In others the aperture through breech to lock is open, the hammer and striker being one piece.

1876—PHILADELPHIA, MEDAL AND DIPLOMA. 1878—PARIS, SILVER MEDAL. 1879—SYDNEY, FIRST, AND HIGHLY COMMENDED FOR MANUFACTURE. 1881—MELBOURNE, SPECIAL GOLD MEDAL AND FIRST ORDER OF MERIT.

COGSWELL AND HARRISON, 142 New Bond Street and Strand, London.—"After careful consideration of the merits or otherwise of the various systems of Hammerless Guns now before the sporting public, our opinion, formed sixteen months since, remains unchanged, that the principle of your top lever gun with the safety tumbler-block has many advantages over any other gun we know of at present; we consider with the extreme safety secured, together with the sound principle on which the gun is formed, will make it a general favorite in the future. As far as we are personally concerned we like the principle so much that we have adopted the system."

CAPTAIN BOGARDUS.—"As evidence of the durability of your guns, I have shot one gun over 50,000 times. I used your triplex action in my two recent matches with Mr. Pennel, winning both times; also in my match with Captain Shelley, at which time I scored 84, the highest score on record; and in the international match with Aubrey Coventry, Esq., for £1,000, which I won, killing 70 out of 100—all 30 yards rise."

THE *Field* says:—"The match will be handed down as one of the most exciting contests ever witnessed."



"GREAT PIGEON MATCH.—Captain Bogardus, in his recent match with Mr. Rimmel, of England, used his new W. & C. Scott & Son's **"Block Safety" Hammerless,** and killed 99 out of 100—30 yards rise."—*Forest and Stream, New York.*

C. M. STARK.—"The Scott Hammerless is the very best shooting gun I ever owned or have seen shot both for closeness and penetration."

LATEST VICTORY FOR THE SCOTT HAMMERLESS.—Match between Mr. Chas. Mucalaster, of Philadelphia, and Mr. E. C. Murphy, N. Y., for $1,000 a side.

Constantly receiving fresh invoices of these guns of all sizes.

SEND STAMP FOR OUR CIRCULARS OF DIFFERENT MAKES.

Absolute Safety!

Patent Block Safety Lock.

This gun is always safe from any accidental discharge. In opening the gun for loading, the block safety A, interposes between hammer B and striker E, which is only removed when the trigger is pulled. The drawing is intended to show the hammer as accidentally discharged, other than by the trigger and caught by the block safety.

LONDON *Field*, Nov. 1st, 1879.—"The principle accords with our ideas of what is wanted to make the hammerless gun safe."

Land and Water, Nov. 10th, 1879.—"The great improvement lies in the New Tumbler Safety Block; this being worked by the triggers only, supposing the hammer from any cause should fall, **without the trigger being pulled,** the projection on the hammer falls into the **Safety Block,** and so prevents an explosion. The gun is on the favorite top lever action, and the cocking arrangement is exceedingly simple and smooth-working."

REV. W. J. RAINSFORD, Toronto, Canada, Oct. 2d, 1879.—"I have used many guns, by many makers, and certainly your New Premier Hammerless is the hardest hitter I have put to my shoulder."

CAPT. BOGARDUS says:—"No gun can excel mine in shooting. The Block Safety is perfect."

GREAT INTERNATIONAL PIGEON SHOOTING, MONACO, Feb. 18, 1882.—Grand Prix du Casino, 80 competitors, comprising the best shots in the world. Sig. Guidicini (the most noted shot in Italy), won the 8,000 frs. prize with a pigeon gun by W. & C. Scott & Son.

We call attention to a few of their leading hammer guns, viz: their New Trap Gun; their Star quality gun with Prize Compensating Lump; their New Triplex Lever Grip Pigeon Club Gun. Superior quality in hammers and hammerless. Their highest quality is marked "The Premier Quality" between name and address. No guns are genuine unless marked in full W. & C. Scott & Son.

THE PIEPER SIDE SNAP.

This Gun is made by the *same manufacturer* and on the *same system* as the now celebrated **Diana,** advertised in these columns during the past four weeks. (Orders for the Diana's have come in so rapidly that the factory cannot keep pace with them). One reason they give so much satisfaction is that by this system every gun shoots to center, and shoots just where you hold it. Dealers are asked continually for a good, cheap gun, one that they can recommend. The Pieper Side Snap is the only gun that will fill the bill. Barrels are fine twist, locks are steel, rebounding and good quality, stock is oiled, finest walnut, pistol grip, butt plate rubber, patent fore end.

WHAT OUR CUSTOMERS SAY ABOUT THEM.—"It is the best cheap gun I ever saw."—Thos. Golcher, Philadelphia. "They sell beyond my expectations."—W. H. Colvert, Beloit, Wis. "Every gun sold has given the best satisfaction."—D. T. Seeley, Bradford, Pa. "Have sold the twelve received; send twelve more at once."—E. T. Allen, San Francisco. "I have always been opposed to selling cheap guns that haven't given satisfaction, but the Pieper Side Snap suits me."—F. P. Taylor, Chicago. Numerous others of the same purport.

Samples sent without solicitation have resulted in large orders. *In fact there is no other gun in the market that can compare with it.*

Price List:

No. 586.	12-gauge, fine twist barrels, 8¼ to 9lbs.,	- - - - - -	$30 00
No. 586.	10-gauge, " " " 9 to 9½lbs.,	- - - - - -	30 00
No. 587.	12-gauge, Damascus barrels, double bolt, 8½ to 9lbs.	- - - - - -	35 00

The "American" Side Snap.

The reinfore breech and joint lump are one solid piece of case-hardened iron, fine twist barrel, case-hardened mountings, rebounding locks, oiled walnut stock and fore end. These guns are made by C. S. Shattuck, Hatfield, Mass., and are choke-bored by the "Shattuck Process," which gives the most remarkable results.

Price, 12-gauge, 30 and 32in. Barrels, $14.00.

Discontinuation

—OF—

"THE BLUE STAR KENNEL,"

—OR—

THE COCKER SPANIEL KENNEL,

FRANKLIN, N. Y.,

As a Public Kennel.

Health and increasing private business compels that on and after November 1st, 1882, the above kennel will be closed as a public kennel. Present kennel stock must be reduced, and after the above date a private kennel of four or five choice specimens of this breed will only be kept. Private breeders, public breeding kennels and sportsmen will find this a chance rarely offered to secure extra grand cocker bitches with best of pedigrees, both broken, and grown and unbroken, at prices below actual value. Correspondents enclosing stamp will get printed pedigrees and prices of stock offered as per above Address M. P. McKOON, Proprietor Franklin, N. Y. aug31,tf

The Blue Star Kennel

Also setter and black pointer pups from best bench show and field trial blood. Also beagle pups due Oct. 8, by Flute (sire of winners of first and second at New York) ex Music III. (Flute-Victress). Address Box 130, Ashfield, Mass. sept28,2t

Sportsmen's Goods.

Climax Gun Cleaner.

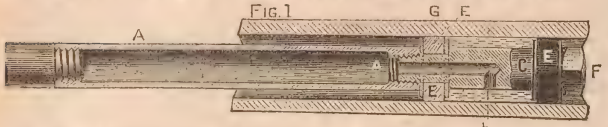

Fig. 1 is a longitudinal section of Rod and Cleaner, shown in position within a gun barrel.

NOTE.—In those made under the improved patent since July, 1882, the nut "F" is done away with, and the rubbers are enlarged or reduced by simply turning the rod by the hand.

offering the Climax Cleaner to the sporting fraternity, we think we can substantiate the claim made, that it is the most practical gun cleaner ever invented, by the following reasons, viz:

1st. It is made in three joints, like a common cleaning rod, and therefore is portable.
2d. Its perfect adaptability to its work in cleaning a gun that has been shot once, or one that has been used all day.
3d. The ease with which it can be adjusted to fit the barrels, loose or tight.
4th. The price, which is no more than that of a common cleaning rod.

Price $1.50. Postage Paid.

IN ORDERING GIVE CALIBRE OF GUN.

The Parker Gun.

Again Victorious at the late Exposition at MELBOURNE, AUSTRALIA.

THE PHILADELPHIA JOURNAL OF COMMERCE says: "At Melbourne they had an excellent opportunity of testing their power beside those of every exhibitor in the world, and they came off conquerors over every other maker. Their highest award comes to them from a country whose reputation for this class of goods has for many years been above all others."

They have been in the hands of shooters for the past sixteen years and stood the severest test, and have won more laurels than any other gun when brought in competition in the field or at the trap. At Coney Island last year, at the New York State Convention, the PARKER won the Pierce Diamond Badge and the "Forest and Stream" Badge for the best average over nearly 200 competitors. "THE FISHING LINE."

TAKE THE

Grand Rapids and Indiana R. R.

THE ONLY ROUTE TO THE

Trout, Grayling and Black Bass Fisheries,

AND THE

FAMOUS SUMMER, HEALTH AND GAME RESORTS AND LAKES OF

Northern Michigan,

THE WATERS OF THE

GRAND TRAVERSE REGION

and the Michigan North Woods are unsurpassed, if equaled, in the abundance and great variety of fish contained.

BROOK TROUT abound in the streams, and the famous AMERICAN GRAYLING is found only in these waters.

The TROUT season begins May 1 and ends Sept. 1.

The GRAYLING season opens June 1 and ends Nov. 1.

BLACK BASS, PIKE, PICKEREL and MUSCALONGE, also abound in large numbers in the many lakes and lakelets of this Territory. The Sportsman can readily send trophies of his skill to his friends or "club" at home, as ice for packing fish can be had at nearly all points.

TAKE YOUR FAMILY WITH YOU. The scenery of the North Woods and Lakes is very beautiful. The air is pure, dry and bracing. The climate is peculiarly beneficial to those suffering with

Hay Fever and Asthmatic Affections.

New hotels with all modern improvements are being erected and will be ready for the season of 1883, as well as many extensive additions to the older ones, which will guarantee ample accommodations for all.

The extension from Petoskey to Mackinac City was completed and opened for business July 31, and daily trains are now running through, connecting at St. Ignace for Marquette, L'Anse, Negaunee, etc., forming the most direct route from Cincinnati, Louisville, Indianapolis, Columbus, Dayton, Pittsburgh, and all Southern, Southeastern and Southwestern Points.

During the season ROUND TRIP EXCURSION TICKETS WILL BE SOLD AT LOW RATES, and attractive train facilities offered to Tourists and Sportsmen.

Dogs, Guns and Fishing Tackle Carried Free at owner's risk.

It is our aim to make sportsmen feel "at home" on this route. For Tourists' Guide a handsomely illustrated book of 160 pages sent free. For Time Cards, Folders and further information, address

Kay's Chip

—OR—

EXPANSIVE SHOT CONCENTRATOR,

With Perforated Case.

In our latest device for concentrating shot, we have substituted a special wire for expansion, where we formerly used Buckram (which was subject to atmospheric changes). Our new Chip can be used to advantage in cylinder and modified choke-bores. For distribution, concentration and penetration they are incomparable.

By the use of this Chip you avoid all slugging or mashing of the shot, as in the choke-bore guns. Our device halls the shot by the expansion of the wire after leaving the gun.

100 in box, sent to any address by U. S. mail, postage paid upon receipt of 75 cents. Buck and heavy drop-shot cartridges $3.50 per 100.

Address all orders to A. B. KAY & CO., Newark, N. J.

In ordering give caliber of gun. Send for circular.

GUNPOWDER!

Dupont's Rifle, Sporting and Blasting Powder.

THE MOST POPULAR POWDER IN USE!

DUPONT'S GUNPOWDER MILLS, established in 1802, have maintained their great reputation for seventy-eight years. Manufacture the following celebrated brands of powder:

Dupont's Diamond Grain.—Nos. 1 (coarse) to 4 (fine) unequaled in strength, quickness and cleanliness; adapted for glass-ball and pigeon shooting. Packed in 1 lb. canisters.

Dupont's Eagle Ducking.—Nos. 1 (coarse) to 3 fine; burns slowly, strong and very clean; great penetration, with a close pattern; adapted for glass-ball, pigeon, duck and other shooting, with either muzzle or breach loaders. Packed in 1 lb. and 5 lb. canisters and 6¼ and 12½ lb. kegs.

Dupont's Choke Bore.—Specially adapted for "Choke Bore" Guns, and particularly for prairie and upland shooting. Burns slowly, strong and moist; does not cake or burn on the barrels, gives both a good penetration and a close pattern; will be found well adapted for glass-ball and pigeon shooting. Made of two sizes, only No. 7 and No. 5, No. 7 being the coarsest. Packed in 6¼ lb. kegs and 1 lb. canisters.

Dupont's Eagle Rifle.—A quick, strong and clean powder, of very fine grain, for pistol shooting. Packed in 1 lb. canisters and 6¼ lb. kegs.

Dupont's Rifle Fg. "Sea-Shooting."—FFg. and FFFg. The Fg. for long-range rifle shooting, the FFg. and FFFg. for general use, burning strong and moist. Packed in ½ lb., 1 lb. and 5 lb. canisters, 6¼, 12½ and 25 lb. kegs. Fg. coarse, FFFg. fine.

Dupont's Sporting, Mining, Sawing and Blasting Powders of all sizes and descriptions. **Special Grades for Export.** Also Rifle, Cartridge, Musket, Cannon, Mortar, Mammoth, Hexagonal, Cubical and Pellet Powder. U. S. Government Standard.

Powder manufactured to order of any required grain or proof.

Agencies in all the cities and principal towns throughout the United States. Represented by

Boats that Will Not Sink.
ANSWERS TO CORRESPONDENTS.

NOTWITHSTANDING THAT THE FOREST AND STREAM has been permanently enlarged to twenty-eight pages, the subscription price remains the same as before.

THE ANGLERS' TOURNAMENT.

THE Commissioners of Public Parks of the City of New York having kindly placed the Harlem Mere, One Hundred and Tenth street, at the service of the Committee of Arrangements, the first annual FOREST AND STREAM Anglers' Tournament will be held there on the 19th inst., weather permitting. The only postponement will be on account of rain, when it will take place the first fair day following. The grounds can be reached from the City Hall in forty-five minutes, either by the Sixth or Ninth avenue elevated roads, or by the the Third avenue line. In the case of the two former the visitor will leave the road at One Hundred and Sixteenth street, and a twelve-minute walk will bring him to the spot. Should he go by Third avenue, then the nearest station is One Hundred and Sixth street, which leads directly into the park a few yards south of the lake.

This tournament will be the best one ever held in this country, and will give people a chance to see what a beautiful art it is to cast the fly to a distance and to do it with delicacy. It will draw the attention of anglers to this style of fishing and no doubt will add many recruits to the ranks of those who use the fly in preference to baits. Should the day be fair many ladies are sure to be present, and as there are a few ladies who cast the fly with skill, there are no doubt others who would like to do so, and here they will have an opportunity to observe the contestants and note their different styles without leaving the city to do so.

Below we give the adopted rules which govern the contests, and a partial list of the prizes—a list which will be completed next week. It will be seen by a glance at this that many valuable prizes are to be contested for, and that the amateurs have not been forgotten. The amateur class we regard as the most important one on the list, being designed to bring out new men, and as this class will be called first, it will give the leading ones an opportunity to enter the other classes if they wish. Many arguments were held at the meetings of the Committee of Arrangements in regard to the rules, especially in regard to the rule, which is held in other tournaments, requiring the contestant to recover his line after casting. It was decided to leave this regulation out of the present rules, the argument being that it was a useless requirement and one that was impossible of enforcement when automatic reels are used. Certainly a person who can cast his line can retrieve it; but all do not do so. Another departure is in making no allowance of distance for length of rod. This, we hold, is the correct principle, for if a man cannot cast with a short rod as well as with a longer one, let him provide himself with a tool that he can use. Besides this, abolition of allowance will tend to show what length of rod is the best. There are anglers who talk of a rod "fitting a man," meaning that a tall man can use a length of rod that a short man cannot. We do not believe this, nor do we believe that a tall, long-armed man has any advantage in casting for distance. We think that a man may be "fitted" with a rod of a weight to suit him, but weight does not always express the drag that comes on the muscles of the arm. Leverage is a more powerful factor, as Mr. Van Siclen has shown, through the figures of Mr. Mitchell. We recently had two rods of exactly the same weight shown us, but the weight was so differently distributed, that one felt to be nearly twice the weight of the other.

There are many questions regarding fly rods which can only be settled at tournaments where the casts are measured and comparisons can be made, and, as a means of educating the public in the beauties of our art, and of training the rising generation of anglers in the way they should go, these contests are of the greatest value.

Two meetings of the Committee of Arrangements have been held since our last issue, and Mr. James L. Valloton, President of the Pasque Island Club, has been added to the Committee. They have decided to consider delicacy and accuracy in the awards of fly casting; but a scale of points, with their value, has not yet been made. Next week we will give the full prize list and the entrance fees. The following is a partial prize list:

Charles Scribner's Sons, publishers, New York, "The Game Fish of the United States," by Kilbourn and Goode	$50 00
W. Holberton, 65 Fulton street, New York, copy of "Standard Trout Flies," colored by hand, in frame	10 00
Frank Holmes, manufacturer, Chagrin Falls, O., "Stranahan Folding Canvas Boat," with seat and oars	30 00
Thomas Sedgwick Steele, Hartford, Conn., copies of "Canoe and Camera" and "Paddle and Portage"	3 00
Fred. Malleson, manufacturer, 136 First street, Brooklyn, N. Y., Split bamboo Newport bass rod, with agate tip and rubber handle	40 00
Fred. Malleson, Split bamboo fly rod	25 00
William Mills & Sons, 7 Warren street, New York, dealers in guns and fishing tackle, a "Leonard" rod, reel and line (in special class for rods of 5¼ ounces and under)	50 00
Members of the South Side Sportsman's Club of Long Island, Cash	100 00
Eugene G. Blackford, dealer in fish, Fulton Market, New York, Cash	25 00
Porter & Coates, Publishers, Philadelphia, Pa., "The American Angler's Book," by Thad. Norris	5 50
Robert Clarke & Co., publishers, Cincinnati, O., "Book of the Black Bass," by Dr. J. A. Henshall	3 00
B. F. Nichols, manufacturer, 153 Mill street, Boston, offers a whole class of prizes of his split bamboo rods. Prices not given.	

Other prizes are promised. Mr. William Mitchell, rod-maker, New York, has offered a rod upon conditions which are being considered by the committee, and Conroy & Bissett, dealers in fishing tackle, New York, have promised a prize, and William Mills & Sons talk of giving a whole class of bamboo rods in addition to the one named above. We can assure our readers that our next issue will contain many additions to the list. The following rules were adopted:

RULES FOR FLY AND BASS CASTING.

SINGLE-HANDED CONTESTS.

1. No rod shall exceed eleven feet six inches in length, and it shall be used with a single hand.

2. Any style of reel or line will be allowed, but a leader, or casting line of single gut, of not less than eight feet in length, to which three flies, one stretcher and two droppers, shall be attached.

3. No allowance of distance shall be made for difference in length of rods.

4. Persons entering these contests shall draw lots to determine the order in which they will cast, and will be ready to cast when called by the judges.

5. Each contestant will be allowed five minutes to cast for distance and will then stand aside until called in his turn to cast for delicacy and accuracy, when he will be allowed five minutes for this purpose.

6. The distance shall be measured by a line with marked buoys stretched on the water, said line to be measured and verified by the judges at least once each day of the casting. A mark shall be made on the ground from which the buoy line shall be measured and the caster may stand with his toes touching this mark but may not advance beyond it. Should he step back of it, unless directed so to do by the judges, the loss in distance shall be his.

7. The stretcher fly must remain at the end of the casting line in all casts. The others are not deemed so important. A contestant may claim time for repairs, which shall be allowed by the judges. Or the judges may order the next on the list to cast while repairs are made, in their discretion.

SALMON FLY CASTING.

1. The foregoing rules shall govern, except that the rods shall not exceed twenty feet in length, and may be used with both hands, and that only one fly will be required.

HEAVY BASS CASTING.

Rods shall not exceed ten feet in length, any reel may be used, but the line shall be of linen not less than twelve threads. The casts shall be made with sinkers, weighing two and a half ounces. (These will be furnished by the committee). The casts shall be made in lane formed by the buoy line and a line parallel to it, and distant twenty feet. Each contestant will be allowed five casts. His casts within the lines shall be measured, added, and divided by five and the result shall constitute his score.

LIGHT BASS CASTING.

The above rules shall govern except that the sinker shall be one ounce, and there shall be no restriction as to lines.

A WORD ABOUT GUNS.—Hardly a day passes that the FOREST AND STREAM is not called upon to tell some inquirer which particular one of the many guns advertised he shall buy. Our invariable reply to such inquirers is, that we do not give such advice. It is our aim to exercise due discretion, whereby advertisements of worthless or dangerous articles may be excluded from the pages of this journal. Having done this, our duty to purchasers ends. Our position respecting the many makers whose goods are represented in our advertising columns, must, of necessity, be one of neutrality; any other would be unfair, and resented by all save the favored party. We can well understand and appreciate the dilemma of an individual who must make a choice among so many different excellent guns as are now in the market. Each interested dealer, as a matter of course, honestly believes that his particular gun possesses peculiar merits, and is superior to all others; and it is also a fact that the sportsman, who has become used to a special gun, comes to regard that particular make as the best. A man looks upon his gun much as he does his dog—it is the best in the world. The gun suits him; he becomes attached to it; there is no other like it; he wants no other—"wouldn't take a carload of them if they were given to him." And so we usually tell the anxious inquirer to buy whatever gun happens to suit his fancy, and the probabilities are, that he will be satisfied with it so soon as he is used to it.

TOURNAMENT NOTES.—General Wade Hampton, who was called by Frank Forester in the dedication of his "Field Sports" "the first sportsman in America," is now in New York, and in conversation with Mr. Endicott, chairman of the Committee of Arrangements of the coming Anglers' Tournament, expressed his regret at being unable to remain to witness that event. He said, however, that he would look anxiously for the report in FOREST AND STREAM, as he took great interest in the contest. The General, like most sportsmen, has devoted more time to angling and less to shooting as he has advanced in life, and he is credited with being the most expert angler in South Carolina. President Arthur is now capturing bass among the Thousand Islands, and watching to see that his boatman does not take him into Canadian waters, where there is an unwritten law that a President may not venture. He has signified his desire to be present at the Tournament, but fears that the politicians would annoy him, and as he is beyond their reach now, he proposes to remain there during his vacation.

BLACK BASS FOR ENGLAND.—Mr. W. T. Silk, a well-known fishculturist, of England, in charge of the fishcultural establishment of the Marquis of Exeter, arrived here on Saturday last in the Germania. Mr. Silk has tanks on board in which to take back black bass. He desires very small ones, of two or three inches long, if they are to be obtained. He called on us and we referred him to Mr. W. O. McDowell, of Greenwood Lake, who will probably assist him to some large specimens, if not small ones. Mr. Silk has taken over these fish in former years, and tells us that both he and Mr. Marston, of the *Fishing Gazette*, have taken the fish in English waters from the former plantings. We wish him success both in obtaining the fish and in their transportation.

The Sportsman Tourist.

CAMP LIFE IN THE GREAT SWAMP.

BY A. MULE.

I WAS sitting one day last summer on my front porch, looking out on the scene before me and thinking, perhaps too seriously, of what was suggested. In one solid mass of living green the clearing swept out in all directions, laughing and glittering in its gay verdure until lost in the dark frown of the yet unbroken forest. Here and there a cabin nestled along the edge of the woods, or sent its little column of blue smoke stealing up from amidst the cotton and the corn; the woodpeckers in the orchard called to each other; the fowls softly gossiped along the fence; the breeze blew a caress from the westward, and everything spoke of peace and happiness. All but the spirit of man was divine, and as I watched the stupid niggers loafing behind sullen mules under pretense of plowing, I felt that something was certainly wrong and out of joint.

What was it? Did we really deserve the reproaches lavished upon us by foreign ignorance? Were we really all lazy and shiftless? Should we not abandon our ways and walk in those of the stranger? Ought we to go and buy sub-soil plows and reapers, and all sorts of improved gear to put into the hands of niggers too careless and lazy to take care of a hoe? Ought we to give up cotton and corn and plant grains and clover and grass, and raise cattle and manure? There was land—just rolling enough to shed its water—with a soil of the very richest loam twenty five feet deep. Did that need clover and grass? There was a range for all the cattle in the United States in the cane-brakes, green and fresh through any winter; there was a mighty stream of richest manure sweeping by our very doors in countless tons, trying to put itself on our fields, and rejected with difficulty, and yet! lo, the nigger and the mule!

Healthy? Yes, no place is healthier where one lives in the clearings and provides good, well-cooked food. What kills people in the bottom is because fools squat down over a nasty bayou to save driving a well, and eat cubes of half-raw bacon, saleratus adulterated with flour, and drink bad whisky. This ought to kill anybody, and, thank God, it has killed a lot, but they learn very slowly.

By George, there he comes. I'd know the old "mar's" gait a mile off—the head to one side, the body twisting along, first one side ahead, then t'other, and the flirts of that big bushy tail, like an ugly woman trying to show off her hair!

In a short while old Shelb. had dismounted and occupied a seat near me.

Now it is a rule fixed—that is, a sort of swamp axiom, a rule without exception—to offer a guest a drink of whisky. Of course I knew this well enough, but as old Shelb. rarely drank away from home, and we were all busy over a basket of peaches, I somehow failed to ask him.

Presently he rose to go, and there was a general protest. I saw something was wrong, and urged him to stay. After much talk he turned red as a gobbler. "Well, then," he said, "why in blazes don't you ask me to take a drink?"

The general whoop that followed and my red face eased his humor.

"Why," I said, "you old catamount, you wouldn't drink if I asked you."

"Anyhow, I like to be asked all the same," said the old fellow.

This matter of diplomatic courtesy settled, old Shelb. and I dropped into the half cross and half affectionate style of our general intercourse.

He was wandering about the country out of pure restlessness. From frost to frost he is totally out of gear. He gets feverish and bilious and almost cross. This is the time he whips his dogs for all the old sins he can remember, and even in a press has added a few licks on general account. He prowls around the house like a wolf, until the old woman fairly runs him out to the stable lot. There he will lean on the fence and fondle his old "mar's" nose and talk to her by the hour. Somebody once suggested a rat-catching, and thereby earned his deep gratitude, for there isn't a rat on his place now, though Shelb. swears they only go off to the Springs for the summer. Of course he gets "bilious." No one knows what a countryman would do if he couldn't get "bilious." Shelb. has two points in view. Not only does he get medicine, but the deep sympathy of his wife, who is apt to be rather careless about touching the old fellow's dignity. She always gives him his pills and watches him while he takes them, handing the water or taking the box with exquisite simplicity and earnestness. Shelb. uses Blank's pills, and no others need apply. These have long been out of market, but he has an arrangement with a drug house in Memphis, who save all their extra pills and sell them to him as "the genuine Blank's Liver Pill." Anyhow they don't kill him, and he believes he would die sure unless he could occasionally get a dose of three of Blank's pills with six compound cathartics, "just to make 'em act, you know!"

He wanted me now to go a fishing. I told him—as he knew—that I detested fishing, but he insisted and I consented. The fact is it was quite a compliment for him to ask me, as he generally prefers to take the woods alone, and I agreed more for that reason than because I cared for the sport. As for the details, he demanded that he have full charge of everything. And so we parted, to meet at his house next day. I was to carry a mosquito net, pair of blankets and myself; the rest he was to provide.

His plan was to go in his dug-out through a chain of bayous and lakes, camping out at night, and returning in a week or two, as we chose. These waterways fill the whole county, so that it is possible for one thoroughly acquainted with them to travel long distances by water. Occasionally a portage may occur, but rarely, as your true Swamper has no longing for that sort of labor.

I found the dug-out already loaded on the wagon, and all fixed for a start.

This craft is a thing to gladden the eye of a connoisseur. On it Shelb. has expended all of his ingenuity and experience, until she is fairly as perfect as that style of boat can be. She was made out of an enormous sassafras he found somewhere in the woods. The tree must have been over four feet in diameter high up from the roots. Carefully shaping and hollowing this where it fell, the embryo boat was then sunk in water for a year, to season and avoid splitting. At the end of this time she was drawn out and set up in his front yard, where he could put the final and lingering touches on her.

As she lay before us she was about twenty feet long, two feet beam, and say eighteen inches deep, with a well-shaped entrance and counter, the bow and stern rather raised; then a sheer given to the whole bout and neatly painted of a dull color between lead and copper, impossible to describe, but as much like an old log as possible. The bow and stern were covered with a sort of deck for about a foot, and heavily bound with iron, screwed on to prevent cracking where the fibers of the wood ran out. The seats were small boxes, about the size of a big brick, and the paddles of the lightest bottle-ash, very thin and broad, contrary to "Injin" rule, which is to make them narrow. A stout setting pole, some ten feet long, with a fork at the end to catch a hold with when pushing through flags and grass, and a big sponge to bail with, finished the equipment of the boat proper.

Under a canvas flap near his seat were nailed small hickory forks to hold his gun and keep it dry, while the box he sat on contained ammunition. Resting on other pieces for the purpose were two beautiful canes for fishing rods. They were about twelve feet long, straight as arrows, and well wrapped with sinews between every joint; no doubt ugly enough beside a fine-jointed rod, but beautiful in the woods and a very coach whip among fishes. No reel, but a set of pretty brass guides led the line back to the butt, where it was tied to a deer's foot, artistically set on. A small box, some fourteen inches square and twelve deep, composed our mess chest, and when examined was a gem of itself. On raising the lid a table for two was completely set out. Salt, pepper, vinegar, sugar, in proper vessels, each buried an inch in its hole; two pannikins for grub; places for knives and forks, and spoons and cups. Everything was in place, awaiting only the food which enlivens to be placed on it. Below this was a drawer for cold meats, bread and other matters. The bottom held our sugar, coffee, etc., etc.—everything that had no bad smell. The cooking utensils were in a bag and the heavy grub ditto. But as old Shelb. is getting restless, we had better start and do the rest of our poking about in camp.

We started. Where we went I decline to say. I have no idea of ruining the country by hundreds of cockney canoeists pushing about in it. Let them find out and pay toll to the lawful mosquitoes like men.

But in half an hour after leaving Shelb.'s house we were afloat in a clear, dark bayou, with the cool breath of the forest just reaching us, and not a sound to be heard beside our own voices and paddles.

Shelb. had turned aside as we came along in the wagon, and now brought out a nest of some fly or wasp as the result. By tearing off the top and gently patting the bottom a number of fat, helpless worms fell out and became bait for fishes. One of these he put on his hook and dropped it into the water. Generally, however, in such a boat each man baits the hook of the other for convenience. His float was made of a combination of goose-quill and white pine, very narrow and scarcely visible on the water. But he saw it well enough, and in a short while down it went. A touch, a twitch, and into the boat came a beautiful little bream. Shelb. at once loosed him.

"What's that for?"

"Luck!"

"Didn't know you were so superstitious."

"Well, I ain't. But fishin' is a queer business and has some strange ways. I allers spits on my hook, and have tried it often, and I'm blessed if it *don't* make a difference. Now, in hunting you can see all around you—see the game, see the woods and the earth; but in fishin' you don't see nothin' but a bob and a line. Now, how do you know what's going on down in the water?"

We continued to float gently along, now paddling a little, now fishing, until time for a lunch. Paddling up to the bank we got out and Shelb. proceeded to prepare some fish for dinner while I looked over the stores. We had sugar and coffee—3lbs. each, a bucket of lard, pilot bread, and flour—some 30lbs., a bag of onions and potatoes. This was to last us indefinitely—not less than a week. A jug I thought whisky proved to be two gallons of molasses, and our stores were practically finished. We had a nice loaf of bread, butter, and other good things out of the old lady's pantry for to-day, and I dipped a cup of water from the bayou.

"Hold on a minute!" said Shelb., bringing out a two-gallon rundlet. "Have some beer?"

"Why, where in blazes did you get beer?"

"Made it. I don't think that bayou water is good at this season, so I just carry along a stock of corn beer."

"I never heard of such a thing, but it does help out awfully. How do you make it?"

"Well, I first bile some corn, say about a quart, then put this in about two gallons water, then a quart of molasses, a half pint of dried apples, and ginger or sassafras or spruce enough to suit. Whenever I take any out I put some sweetened water back again, and so I keep a stock always on hand."

That night we camped at a lovely spot. A sheet of water that glimmered in the setting sun relieved the feelings, which will fire of the deep shadows of the woods. On the lake all was brightness and life. The fish were breaking the glassy surface as they leaped for their prey, the crane frowned at our intrusion as he flew heavily by, and the kingfishers squalled as merrily as usual in their blue suits as they jumped on their finny suppers.

Our tent was what the hunters call a half-faced camp. They all use this style, and claim that it lets the heat of the fire get to the occupants, but I have always found as much smoke as heat got in, and beyond all question prefer the Sibley tent with a wall to it.

The cooking of supper was an easy job, as the remnants of our luncheon supplied it. But after this the old hunter began to bustle about in a way to excite my curiosity.

"What are you up to, Shelb.?"

"Going to bake bread for to-morrow."

"Have you got a Dutch oven?"

"Dutch! no; got better—'Injin!'"

He cleared away a little clean space of earth upon which he placed what looked like, and was, a simple sheet-iron box. In this he placed his dough and shut it close. A little earth covered the box entirely and left only a sort of mound to mark its grave. On and around this a substantial fire was built and the operation was completed.

"Now," said McP——, "the 'Injins' cover their dough up in green leaves simply, and that does just as well, but they don't use yeast and I do; so I have the iron box to let her swell. The only points of difficulty about it is to learn how to proportion the fire so as not to get the bread too dry during the night, and if all goes well we will have hot rolls for breakfast: they can't burn, though they may be too dry."

"Why, Shelb., you are developing genius as a cook!"

"I 'low I orter; I've been at it long enough. I brought you on this voyage more to shew you my ways in the woods than for any sport we are going to have. Livin' in the woods is so simple that very few people ever get the hang of it. Most old hunters get lazy and dirty, and so don't care—while most green hands strain so painfully to be 'knowing' that they leave themselves without either comfort or necessaries. As I hunt a great deal by myself, I try to arrange my plans so as to let most of the cooking attend to itself. Now here is my camp kittle, like you never saw in a camp before. It is simply one kittle inside of the other, and no matter how long you leave it your cooking can't burn. This is worth a great deal to me, yet it only cost a trifle to fix. When by myself I do all my cooking while asleep! When I wake in the morning I make coffee, and the bread and stew is all ready, having cooked while I rested."

"That's all very well for cooking after you've caught your hare, but after all I doubt if any man can travel through the woods now and kill a living as he goes."

"That's because you don't know how. On the contrary, I doubt if there is any county in the United States that won't support a man easily by its contributions of game, etc. You want to kill a buffalo or deer every day to keep from starving—but that is useless as well as impossible. Now, if I was under a press of hunger I should commence to kill the nearest live thing. Everything—except crow—is eatable when cooked right. So I'd kill sparrows, jays, hawks, all sorts of game trash, and in the course of a day pick up enough of them to feed half a dozen men. Put them in my kittle, with proper fixins, and a king wouldn't turn away from that dish. The mistake people make in the woods, as out of them, is, their eyes are bigger than their bellies. A half acre of ground will furnish bread for a man easy, and a very small patch of uncultivated ground supply all the flesh he ought to eat."

"I remember hearing in South Carolina about a Frenchman who lived that way, and lived well. His firewood and rent cost nothing, as he squatted on the edge of a swamp; he planted about an acre of corn and vegetables, and supplied flesh by hunting. He was evidently a gentleman, but there he lived for years, till he died, solitary, satisfied and healthy. His cookery was famous, and no one ever knew whether it was a woodpecker or a dove he was eating. Yes, the cooking is the great thing. If ever brains were needed, it is in camp cooking, and yet anything seems to be thought good enough. Everything is fried, and every bill of rations includes the inevitable bacon; this and slapjacks, also fried, make up the genuine 'all-day-piddley' diet. Now in camp nothing ever should be fried. The facilities for roasting and stewing are too good there to throw away."

"The water kettle like mine here enables anybody to make a good rich stew—a gipsey stew. That is, put in anything you happen to have and stew it all night! Again, Mr. Greenhorn buys ground coffee instead of the grain, and doing his own roasting and grinding.

"Ask ten men why they go into the woods, and nine will say, 'for an appetite.' But just think of wasting an appetite on slapjacks and bacon! But, Shelb., you have to fry fishes?"

The old hunter looked at me indignantly. "Didn't you never eat a chowder out of blue cats? Why a fish of no kind ever was meant to be fried. No, sir, to get the good out of him you must keep him in water, dead or alive; and before we get home I'll have you so full of stewed fish you can't say fry. Ever eat planked shad, eh? Ever get hold of a clayed trout, eh? Nor roast oysters, nor baked crabs, nor baked shad? The people who fry lose too much. But it must be either laziness or ignorance. Now you mark me, and I will feed you well and not fry once on this trip."

The next day was on us; the bass were jumping all over lake, and we had no bait. Shelb. got some long bushy branches off a pecan tree, and tying the twig ends together, soon made a very effective minnow seine. With this we swept a little hole or two and got all we wanted. The fishes bit beautifully, and we soon had what the old fellow called "a mess," then we pulled around the lake and went to camp.

BELOW QUEBEC.

THIRD PAPER.

MR. EDEN, the genial and obliging harbor master of Gaspé, has furnished us with a general letter of introduction to all of his many friends stationed in summer time while fishing is carried on along the various stations scattered along the north shore, and this document insures us upon landing at the St. Johns River a hearty welcome from Mr. Conway. He is the agent at this port of a codfishery established here by Messrs. Collas, of Gaspé, and enjoys his busy summers in a neat and substantially built house near the mouth of the river.

His kind intentions and hearty welcome have, however, been already forestalled by orders given in advance of my anticipated arrival by Messrs. Garland and Bland, the present lessees of the St. Johns. They have a snug and commodious frame house at its mouth, which serves for the double purposes of lodging and store house. In front of it is anchored a large two-masted firmly-decked boat, in which they can extend their excursions to any point along the coast whenever it suits their time and fancy. At present, however, salmon fishing up the river is still in its prime, the cottage is untenanted, and the boat swings quietly to her anchor with each change of flood and ebb as if she had no other mission to fulfill. The man in charge of the camp transfers my luggage to my assigned quarters, the wants of the inner man are duly attended to, and a canoe is ordered to carry me at daybreak up to the fishing grounds, where I am to have again the pleasure of meeting those two genuine sportsmen whose acquaintance I had made during my last year's journey.

It requires at least the aid of two good men with a canoe to stem the swift current and many rapids which characterize the generality of all larger salmon rivers, the St. Johns included. The canoe is built at Gaspé of thin strips of maple firmly braced with a large number of tough, neatly-cut ribs, and in build it resembles a compromise between an elongated clinker boat and the ordinary birch canoe. These Gaspé built boats stand, in virtue of their compact fittings, much more wear and tear than the latter, and will last at least four years if properly handled and cared for when not in actual use.

Their excess of weight is of no special consequence, as there are no portages to be made; and since they are roomy, a couple of men find plenty of space in any of them for their camp baggage and themselves. I am of the opinion that in point of the known luxurious means of transportation, that of canoe riding is ahead of the list, and even the motion of a rocking chair is a jarring one in comparison with the easy rising and falling of the canoe upon the gently yielding

water, which is apt to produce a delicious drowsiness perhaps not unlike that we once felt so often when rocked to sleep in the cradle of our infancy.

Thus I always look back upon the many canoe rides I have as the most perfect enjoyments, and the present one formed, of course, no exception. The day promises to be perfect. The thick mist which had obscured at daybreak land and water, soon lifts before the dissolving rays of the sun which often rises here in the Arctic zone with a brilliancy not surpassed by that of happier climes. Soon the whole landscape, the swift, glittering river with its densely wooded banks, rising here and there in steep vertical cliffs, unfolds itself to view, and reveals all of the peculiarities which characterize the northern wilderness. The geological features of the St. Johns probably differ but little from those of the Moisie described by Prof. Hind in his above alluded exploration of Labrador. There is a low range of granitic mountains, a spur of the heights of land, skirting the whole length of the coast from the Moisie to the Natashquan, falling off in a gentle slope of a few miles toward the basin of the Gulf. For several miles up stream we find a series of evenly steatified glacial deposits of gravel and sand overlaid by a stiff clay, filled with remains of fresh-water shells, which seem to indicate a recent rising of the land. Higher up these deposits disappear, the broad valley which resembles at its mouth the terminal funnel of a huge glacial gorge becomes narrowed in, and the compressed current of the river now foams between high granitic walls often but a few hundreds yards apart. Huge boulders torn from their flanks and carried sometimes into the middle of the river, where even the impetuous current is unable to dislodge them, attest silently, but eloquently, their former agents of transportation. They are no longer in operation, and a narrow river bed occupies the center of the valley filled by a huge slowly moving frozen glacier.

Along the present banks once covered by it, flourishes such vegetation as is indigenous to the southern belt of the Arctic zone. We notice the forest to consist chiefly of spruce which attains here a height of about thirty feet, and form in general a thickly matted impenetrable growth, on account of the closeness of the trees, many of which in their decay have tumbled down right and left, between a network of rotten trunks, branches and roots, not unlike that of a windfall. Wherever the soil favors, particularly along the river banks, there are occasional small thickets of maple and alder with a sprinkling of birch and mountain ash. The latter are now in full bloom, and their white cymes overtopping those of lower bushes of osier, relieve to some extent the wilderness of its rather sombre and monotonous aspect.

There are quite a number of pretty flowers just now in full bloom corresponding in time of their development with our early June, but I notice that many species bloom here simultaneously, which are separated with us by wider intervals of time. The wild strawberry, marsh marigold, spring anemone, dwarf laurel, bloom side by side of the blue bells, epilobium, erigeron and beach peas. All of them must accommodate themselves in order to produce ripened seed to a short summer, and they create thereby the pleasing aspect of a flowery carpet, which, however, only lasts a few weeks, the happy honeymoon of the Arctic zone.

But never a rose without its thorns, and never was there yet a northern wilderness, no matter how embellished by bright flowers, without its great drawback.

This manifests itself here in a threefold way by the intervention of the mosquito, black fly and sandfly. The name of each tribe is legion: they are everywhere, and when the bloodthirsty black fly has completed its mission of torment with the setting sun, the excruciating contralto of the mosquito breaks upon the stillness of the night and adds to the martyrdom; man and beast alike suffer from these dreadful pests. No matter how successfully you may battle even against these two insiduous winged hosts, the sandfly is still in reserve, and sure to come off victorious, unless the traveler in these woods has taken the most particular precautions. Mosquito netting of the finest grenadine in the market is the only effectual safeguard, or better still, light sheeting which, notwithstanding its closeness, causes no discomfort in the delicious cool nights which prevail here even in July and August. This is the only remedy against the sandfly, which in virtue of its countless numbers, microscopic size and hot poisonous sting, is the most dreaded torment. A combination of sweet oil and carbolic acid as strong by admixture of the latter as the skin can bear without smarting, proved to me this summer an unrivalled ointment against mosquitoes and black flies. Not only was this remedy, which has been published a year ago, in *Nature*, highly effective in keeping off by its powerful long-lasting scent, the invading hosts, but it had a powerful efficacy to allay the severe pain of the sting, which lasts sometimes for days after the original bite has been inflicted.

By being properly anointed, and additionally protected by a netting of fine gauze suspended by means of an elastic band from the rim of my hat, I could bid successful defiance to both black fly and mosquito, which, during daytime, hovered often like thick smoke about my head.

The canoe men, notwithstanding their being continally in motion, suffered terribly on this day, and faces were swollen and punctured with deep red spots like a sieve before they could be induced to try the virtues of preparations. Notwithstanding the swift current of the river, they poled up stream very rapidly, at the rate of about four miles an hour, and only rested at noon for a lunch near a small tributary, where I attempted in vain to catch a few trout, but failed to get even a single rise, although the locality has a decidedly encouraging aspect. The reason of this is very obvious. None of the large streams is inhabited by the proper brook trout, but at the right time of the year they are literally alive with immense swarms of the sea trout, which collect on this coast about latter end of May at the mouth, where they remain until beginning of September, when they gradually make their ascent to deposit their spawn. There was thus in July and early August most excellent trout fishing at the mouth of the St. Johns, but the advance of the migratory swarms had not yet commenced. A few large-sized trout are occasionally caught in the salmon pools near the falls, while the angler will cast in vain during early summer his fly near the most tempting ripples and rapids below them. The absence of life in the water is equaled by that along the shores. Not a single note of any bird is heard save that of the occasional tittering of a few kingfishers, which build their nests as with us in deep holes along the banks of clay, or the white-throated sparrow. Further up we notice a few white-bellied swallows and the white-throated sparrows. The former also nest in holes along the banks like the sand-martin, which it seems to represent here. As we advance the rapids, the cliffs converge gradually and form deep gorges, through which the river, increased by depth and in velocity, foams along, forming series after series of white-crested rapids. From time to time we see on these the harbor seal, making its way for the salmon pools, their favorite grounds. Since these animals cannot successfully swim against the rapid current, they facilitate their progress by a series of leaps, which, by their quick succession, attest to their marvellous muscular powers.

The abnormally dry summer which prevailed last year upon the north shore was terminated by one of the most extensive and destructive forest fires which have ever been known upon these coasts. For hundreds of miles inland and close to the seashores this great conflagration raged all August, and all but exterminated not only the wild animals upon which the Indians depend for fur and meat, but also several of the small fishing settlements scattered at intervals along the seashore. Near by, pretty Mingan escaped unharmed, to judge from its seaward view, but only a few hundred yards back of the dark green belt of low spruce trees which fringe the shores, the havoc wrought by this great devastation is painfully manifest by the burned and charred stumps of the trees, the only remnants of a once luxurious forest growth.

The mouth of the St. Johns is but fourteen miles west of that, the Mingan and the houses about it barely escaped destruction. The path forest fires take, runs, however, rarely in a straight line. While some parts of the forest are entirely swept away, others perhaps not a half a mile on either side of the fiery highway remain all standing, and I felt surprised to see often for miles not a single vestige of the conflagration, which I had been assured made a clean sweep. Near the great falls, however, which are but a mile or so above the encampment of Messrs. Garland and Bland, the fire had raged in all its full fury, and seemed to have culminated. As far as the eye could reach, nothing but a sightless charred wilderness remained. So quick was the advance of the flames that the party then fishing there had a very narrow escape and lost nearly all of their camping materials and provisions. Mr. Bland related to me that the tent above his head was lifted bodily off the ground by a vortex of conflicting aerial currents, and carried up with the glowing atmosphere above, where it was consumed. He only owed his own safety to the canoes, which were moored within a few yards of the tent, and conveyed without a moment's delay the anglers and their men beyond the limits of danger.

It may be here perhaps of some interest to those interested in salmon fishing, and the ways and means employed to carry on this sport, to learn how much comfort may be enjoyed when proper arrangements are made. Camping out, so often accompanied by personal inconveniences, becomes by their intervention an enjoyable luxury. We have visited in former years several of these fishermen's camps on the Restigouche, Nipisighuit, York, Dartmouth and Cascapediac rivers, but never approached in point of completeness and practical conveniences that erected for several years past near the falls of the St. Johns by Messrs. Garland and Bland. Both of these gentlemen are what is termed off-hand old stagers, and they have succeeded by their vast experience, extending over many years in nearly all parts of the world, to reach the culmination of ideal comfort in the wilderness. The site of their present camp is within fifty yards of the river, and alongside a little ice cold brook which furnishes in the hottest time of the day a refreshing drink. All trees and bushes near by which serve for convenient lurking places of noxious insects are completely removed, leaving them a large airy space of an acre or more, on which there are three tents, a floored compactly built frame house for cooking purposes and shelter of their men, and a little dining-house. The latter is surrounded on all sides with wire gauze in place of boards, and is thus a perfectly mosquito-proof retreat, where the sportsman can enjoy his meals and a quiet pipe with as much comfort as in any well fitted out sitting-room. Comfortable canvas stretchers and other like contrivances complete the furniture, all designed for solid comfort, not ornamentation.

Their help is the best obtainable at Gaspé, whence they were shipped to the St. Johns. The force available consists of four canoemen, along with Ben, the cook, who has been under careful and critical training for a number of years until he has remodeled and improved upon his former backwood notions and now turns out from time to time as good dishes from the smoky depths of his workshops as could be expected in a well-served restaurant. Nor does the vista of a beautiful river, clear as crystal and often well stocked with large salmon undisturbed by anyone, not even the passing Indian, impair the digestive processes. Fishing used to be excellent but a few years ago. The catch has, however, this year greatly fallen off, both in point of number and size of the fish, and only ninety salmon had been taken from the latter end of June to the beginning of August. This complaint is a general one, with exception of Natashquan, where a score of 365 salmons, averaging fourteen pounds, were made in five weeks by its lessees, Messrs. De Vere and Maurice, both of London, England.

Fishing on these rivers is best by beginning of June, when the salmon ascend, but it dwindles down gradually and becomes unproductive by latter end of July. Morning and night are considered here, as elsewhere, as the best hours for sport. The silver doctor, golden pheasant and Jock Scot are the favorite flies, the latter in particular is considered as the most taking. The casting is made from the shore, which has generally wide, open gravel beaches, or from canoes, which, when handled by two skillful men, are often preferable. The fish captured are turned over to the men, who either salt or smoke them.

We soon feel at home in company with gentlemen, who are virtual true sportsmen in the fullest sense of the word. The older of the twain, Mr. Garland, may claim the attention of the reader by a passing notice. In point of his compact mold and massive physique he fain reminds us of the old Norman type personified in a Warwick or rather the powerfully built Goths so graphically portrayed in Kingsley's "Hypatia." Though near sixty years of age he is still more active and vigorous than many men half of his age, and seems to bid defiance to the encroachments of time in virtue of almost perfect physical health. His experiences might fill volumes if written down, since his travels extended for many years over some of the most famous hunting grounds upon our globe. One of the very first white men who stood at the brink of the great falls of the Zambesi, he has hunted these remote grounds from its mouth to near its sources for the lion, elephant, hippopotamus and rhinoceros, not to speak of the countless species of antelopes, gazelles and other ruminants for which South Africa is famed. There is not a corner of our own Western Territories, from west of the Mississippi to the shores of the Pacific, where the crack of his rifle has not been heard, and his adventures in our own continent alone could fill volumes. Added to these stupendous journeys are several years of residence in South America, when in pursuit of the guanaco he crossed, several times, the snow-crowned Andean ranges, and thus rounded off his practical experiences concerning all of the notable game in our western hemisphere. Notwithstanding all of these achievements, well calculated to instil a due allowance of pardonable vanity, the bearing of this prince of sportsmen remains yet as simple and unaffected as that of a child, cast with the mold of all great natures wherever and in whatever profession we chance to meet them. May he enjoy for many long years to come a well-earned, happy, ripe age, the personification of typical manly sentiments, kind in all of his impulses, and of a cast such as we are wont to often picture ideally but rarely, if ever, realize.

There is one member of the company whom I almost forgot to mention, though his history and daily life are not at all devoid of interest. It is Jumbo the beaver, a prettily little pet six months of age, as tame as a dog and almost as affectionate to his human master as a little child. His mother was trapped by Indians, who captured the six weeks old orphan and sold it at the salmon camp for a trifling consideration. Jumbo has learned since to come quickly when called by anyone belonging to the camp, although he manifests a decided preference for Fred. Beatty, who has taken him under his especial care and protection. He wanders about without having any restraint put upon his movements, and takes regularly his morning and evening bath in the near-by river, after which he makes a careful toilet, dries himself as near as he can, and retires for his night's rest under a blanket in any one of the tents, unless he is put into his box. He has at command a variety of sounds expressive of his feelings, some of which resemble those a petted child is prone to utter. Though by nature amicably and peacefully inclined, he is occasionally aroused to fits of anger, in which he uses his forepaws and deals blows right and left with about as much dexterity as a child could employ. Though his teeth are well developed, he has never yet shown any inclination to bite.

The development of its transmitted instincts, which ought to manifest themselves by a natural tendency to construct dams and like structures is slow, and he is not in the least concerned about the arrangement or accumulation of any loose sticks or branches. The last and only one of his feats in this line is recorded of him when he was finally taken to Gaspé, where he was busy in digging a large and deep hole at the banks of a little creek near the house, where he lived on good terms with a large dog. I am assured, however, by old hunters, that the beaver in a state of nature does not attain to the full development of his constructive faculties until the fourth year, and Jumbo, though in splendid condition and as rounded as an Ohio pig, is only one-third grown and hardly as large as a woodchuck. A series of observations made upon his further achievements and development would be of unquestionable value and shed much light upon what has been asserted and surmised in respect to the habits of this most intelligent creature.

It is here worthy of note that many animals taken from this wilderness domesticate very rapidly. A full grown hairy woodpecker (*Picus villosus*) became last year an inmate of the camp, and grew more bold and familiar than any tame domesticated bird. It would fly off to parts unknown during the day, but returned invariably before night, and had the habit to light in the most unconcerned manner upon the head or shoulder of any man who happened to be near. There is now a tame young raven at the Southwest Point lighthouse on Anticosta which prefers the buildings about the tower to the near-by woods. It flies off for long distances along the beach, but makes frequent calls, particularly when it notices any open window, where it may have an opportunity to indulge in its incurable thievery and hiding propensities.

Our stay at the falls of the St. Johns is, however, brief, as fishing is growing poor. The encampment is broken up for this season, and all moveable materials are transferred to six canoes, which are loaded to their utmost capacity and carry rapidly their cargoes to the mouth of the river, where the general headquarters are fixed. Within gunshot of the house lies our neat small schooner, a metamorphosed quondam fishing boat, the Gasher, which is used for excursions along the coast, when time threatens to grow dull. As there are yet a few weeks to pass, everything is put in readiness and a force of four men selected as the needed complement for the three boats which are hoisted on board. Our destination is a short excursion to the near by Mingan Islands. They stretch for about ninety miles at a short distance from the north shore, which they fringe like a disjointed necklace as far as Natashquan. Unlike the rocks on the main shore they are formed of limestone, evenly steatified and closely resembling by texture and fossil remains those of Anticosti Island, which is separated from them by a strait of about twenty miles in width. There is no doubt but that they were once united with the former, which formed the southern shores of the mainland, of which it was once an integral portion. L.

Natural History.

THE MASSASAUGA'S BITE.

CAN it be thirty-seven years ago this very September, since Charley Vance and the writer were induced to leave Western New York with its grand old forests and abundance of sport, for the rather new and decidedly unhealthy regions of Southern Michigan? *Tempus fugit.*

Every gray-haired lover of rod and gun can call to mind localities which he has been induced to seek by some slight hint from one in whom he had faith, and who had been there. In our case it was "Bart Meyers," a young giant, a crack shot, and a full pattern of a man every way. Bart had done Southern Michigan pretty thoroughly for four months, with a twelve pound Kentucky rifle and his knapsack for his only companions. He expressed the opinion that nowhere on earth could a pleasanter country and greater abundance of fish and game be found than in the region he had prospected.

He particularly endorsed the country lying north of Hudson, Lenawee county, and he thought Devil Lake about the finest spot he had ever struck for a camp. Bass, pickerel, grouse, deer, turkeys, quail, squirrels, rabbits, too plenty. A man was tempted to shoot beyond reason. His story was told late in October; it turned us. All through the winter we talked it up in our little cosy room, and organized our

fishing tackle and oiled our muzzle-loading Billinghursts, and practiced off-hand every mild day, and quite got ourselves in love with Devil Lake and Sand Lake without good reason therefor. All through the spring and long, hot summer it was our one objective point, the stake to which we were steadily working up, and it came to us. The having of such a hearty, healthy object constantly ahead was, perhaps, worth more than we knew.

At last, on a hot day in early September, we took a packet of the old "Red Bird line" for Buffalo. Then, the old clumsy propeller Globe for Toledo. And then came the ride by railroad. The "Southern Michigan," what there was of it, and it was not much. Twenty miles of rickety strap rail, one shabby car, a trifle larger than a wagon, a six-ton locomotive called the "Rocket," a couple of quaint freight cars, very small. Such was the train as made up every day on what is now the grand "Southern Michigan Railway." Just here I want to state the fact that we had leisure to get off the train and shoot squirrels alongside the track going west. And coming back two months later we saw the "Rocket" stalled in the black looking-ditch, because, as a train hand told us, the engineer had tried to crowd her and she jumped the track! Compare that with the "Southern Michigan" to-day. All the same the trip was a pleasant one, and it was not tedious. The eighteen mile ride from the end of the railroad to Hudson was slow but full of interest. The people were friendly to a fault, more than one farmer offered to board us for $1.25 per week, if we could "put up with his fare." Compare that with the way summer boarders are pecked and fleeced at popular "resorts" nowadays.

At Hudson we struck a broad-shouldered, rough-looking old granger, who calmly looked us over in a way we did not like. I thought him rather a backwoods rough—one who, it might be, was disposed to resent a decent hat or store clothes as a personal insult. I was mistaken. When he had listened to us a while he came up to me, gave me a startling slap on the back and said, "You come from Rochester? I am from Syracuse. I've been here ten year. You jest come with me. I live two mile from the lakes. I've got two fool boys who are just your style—want to fish an' hunt all the time." And we submitted to farmer Noyes, and went home with him, and were introduced to his ague-stricken family of wife and eight children. (Alas, that such a sylvan paradise should be cursed with the plagues of ague and malarious fevers. But such has been the lot of more than one Western State.) A brother could not have treated us more kindly. He offered to board us for $1.25 per week, or as much less as we pleased to pay. He owned the only skiff on the lakes; we were welcome to its use. If we wanted to camp, his two boys, Gabe and Bill, would take the team, put us on the best spring, take an old scythe and cut us all the grass we needed, help us make camp, stay with us if we chose, show us the best hunting and fishing grounds, and in a general way, do all in their power to make our stay a pleasure. We accepted the offer thankfully. Gabe took us to a marvelous spring, a model camping ground.

The spring gushed out just below a stiff layer of blue clay, cold, clear and strong. It was shaded by oaks and shrubs, and was one of the finest I have ever seen.

In making camp we missed the hemlock, but we had the long marsh grass, woolen blankets and a square sheet of strong cotton cloth eight feet by ten, well oiled, and safe for a shelter against any rain. It was a pleasant camp, that on Devil Lake.

And how cheap the living was. How friendly and kind the settlers. And what sport! Luckily I have my musty old check book at hand, from which I quote prices as follows: "Flour, $3.50 per barrel; pork, mess, 4c. per pound; butter, 10c. per pound; potatoes no sale, given away; eggs, 6c. per dozen; fine hams, 6c. per pound; board, country hotels, $1.75 to $2 per week; board, among farmers, $1.25 per week, or what you like."

Looking back through the dim vista of forty years and the seven trips I have made to Michigan, I rise to say that, aside from the absence of hemlock, the absence of trout and mountains, and the danger of malaria, Michigan is the finest State for sport in which I have ever camped.

We soon found that it would not do to shoot or fish more than an hour or two daily. You can't relish an excellent squirrel soup, or a pigeon stew, or fried fish for breakfast with each and all the animals rotting about camp, and we kept our camping ground clean and sweet, and burned all offal, brush, and other debris, and killed no more than we could use. Forty rods below our camp was the beginning of a long marsh, grassy, dry at that time, and studded with dead tamaracks, on which the pigeons were constantly alighting. The marsh was a paradise for swamp rattlesnakes, or, in the vernacular, massasaugas, while the sluggish outlet was a hot-bed of the largest water-snakes. The marsh, the outlet, and the timbered land along their borders came to be our favorite hunting grounds. Bass, pickerel and ducks were abundant in and on the waters, while on the bordering dry lands gray, black and fox squirrels, grouse, quail and turkeys, with an occasional deer, were plenty enough to satisfy any reasonable sportsman.

Vance liked to hunt the marsh, practicing at the necks of ducks and pigeons.

I chose the uplands. I liked to clip the heads of grouse and squirrels. We both were fond of fishing, and, let me add, snakes.

Now, it happened at that time that there was quite an animated discussion going on as to the question, "Do snakes swallow their young?" That way the question was stated. *Porter's Spirit of the Times*, then the leading sporting paper of the country, rather favored the affirmative. Naturalists were divided. One or two, with something of national reputation, showed, in a calm, superior way, that the thing was, first, improbable; second, unnatural, uncalled for; third, against physical and organized laws, therefore impossible, all of which was convincing, and not to be gainsaid by a green backwoodsman of tender years, only it happened that I had seen the most improbable and toughest yarns concerning natural history, the first to be verified by actual facts, and I had seen the garter-snake, the water-snake and the rattlesnake each and all of them swallow their young, and I said I will secure a specimen with the young inside of her just as they were swallowed, and forward the thing to *Porter's Spirit*. That will settle the question for good.

It has been my experience through many years that, just when you particularly want a specimen of natural history, that is just the time you can't lay your hands on it. Vance and I hunted the lake, the marsh, the outlet, in vain. We saw hundreds of water snakes, scores of massasaugus, and secured a dozen sets of rattles, but did not find what we wanted until one hot September forenoon, I being in the edge of the grove and he in the marsh; he suddenly sang out, "Come here, quick; here's your snake swallowing its young ones." I was there in half a minute, and here is what I saw. A large massasauga lying on half a sunken log, tail erect, with a low warning rattle, mouth open, and I was in time to see the last baby snake disappearing down the motherly throat; then she dropped off the log and commenced to disappear among the roots of marsh weeds, shrubs, and rotten wood.

The chance was not to be lost. I saw nothing better for it, and seized her near the tail. She hung to the weeds like grim death, and I pulled strongly and steadily. I thought the biting end of her had got into a ragged looking break in the log, and meant to let up as soon as the head came in sight. It came in sight suddenly. It came around the stiff weed stalks like a flash, and shut down on my left hand with a grip I should hardly have expected from such a light pair of jaws. I took in the situation at a second's notice. I was "snake-bit." No use to whine or cry out. I took her by the neck, snug up to the head, with thumb and finger of the right hand, and pinched for all I was worth. She did not choke off worth a cent. Then I jerked her loose, tearing the teeth through the flesh and making a wound that bled freely. In an instant I was sucking the wound with all the strength I could bring to bear, while I held the squirming reptile at arm's length toward Charley Vance, who clipped the head off quietly and neatly. Then we started slowly for camp, I sucking the wound, and all the time pressing and squeezing the flesh toward the bite, to get out all the blood and poison possible. When my mouth was dry as a bone, and I seemed to have exhausted all power of suction, Vance wet a handful of fine cut tobacco and tied it snugly on the wound. Then I sat down by the spring in the cool shade and took to pouring a constant stream of cold spring water on the arm and hand, while Vance, under instructions, made a huge poultice of blue clay. The poultice, an inch thick, and large enough to cover the hand and arm half way to the elbow, was thickly sprinkled with fine salt, and pressed on. It at once relieved the pain, which was getting severe. All this took about two hours. Then Vance suggested whisky. He assured me that a quart would not make me drunk. He had faith in it. I had not. But he filled a gill cup with common corn whiskey, which I drank, and was tight in less than half an hour.

Then Gabe Noyes, who had suddenly played out when I was bitten, came back with his father, the country doctor, and several sympathetic neighbors.

The doctor had a half gallon of whisky and a bottle of sweet oil. It was his notion that I ought to drink the whole business at once. He even hinted death in case of refusal.

I began to see fun in it. I was feeling easier; was already half drunk and disposed to joke. I begged off on the ground that I was a little fellow. I only held a pint, and was already half full. The doctor was a solemn man. If there was a point he didn't see it.

He insisted on his whisky and sweet oil, and I finally took a gill cup of whisky, with a layer of oil on top. I thought then, I think now, that it was bad medicine.

As the sun sank slowly down the west I lost all relish for fun. I seemed to feel the steady tramp of death marching slowly from hand to shoulder, from shoulder to heart, and I was sick—sick all over—sick unto death.

Farmer Noyes looked serious. He sent his son home with the team, and stood by me that painful night. I had faith in the spring, and kept pouring the cold water on arm and hand. Every two hours they made me a fresh clay poultice, increasing the size until at last they reached nearly to the shoulder.

Just at sundown I was taken with a chill and became numb all over. They made a huge fire. They brought in my rifle, and the snake. They cut the snake open and counted the young ones—thirteen in all. They remarked on the coincidence that the number of rattles should correspond—thirteen rattles.

It was a miserable night. I was cold, delirious and sick. I came to realize that a snake bite was a rough joke, but I did not expect to die.

In the early gray of the morning I became unable to stand, and felt like freezing. They made a bonfire that threatened to burn the camp. When the sun was fairly up I made the spring and commenced to pour cold water again.

Then relays of clay poultices. A cup of the strongest black coffee, a nip of hot whiskey and a gill of squirrel soup.

Then, the swelling began to subside. I felt better. Twenty-four hours after the bite, I could say I was safe. It had been worse, more painful than I should have supposed. It may be that the bite of our black or yellow mountain rattlesnake is more dangerous than the bite of the massasauga; and the bite of the large diamond rattlesnake of the Southern States may be still more deadly. I do not know. The bite of a massasauga is bad enough.

The second night was more endurable. I was no longer delirious and had no chills. I slept fairly, rousing up once in about two hours for a fresh poultice. The skin, which had been glossy, with a watery semi-transparent look, began to shrink with a whitish shriveled appearance. Just three days from the time I was bitten I was decidedly convalescent. On the fourth day, just before sundown, I was on the lake fishing. The arm was stiff and swollen, and the fingers somewhat like a row of bologna sausages; but I could manage an oar or a rod after a fashion. On the fifth day the poultices were discontinued, and the only treatment thereafter consisted of two or three daily washings of hand and arm in strong brine—salt and water. In a week I was enjoying the old life well as ever. In six weeks the skin had peeled off nearly to the elbow, and I have never felt any inconvenience since from that little experience. But I found myself a good deal demoralized on serpentology. Whenever I stirred up a rattler with his sharp warning whiz, a sort of electric thrill would dart from fingers to heart, and a disposition to start or jump was irrepressible. It has never left me. I still handle the festive rattler; but I do it with a quickened pulse and beating heart.

Let me add a few words on snake bites. I have personal knowledge of more than fifty cases, and only know of three deaths, (excepting the case of Doctor Wainwright, who, being a doctor himself, and in easy call of the doctors in New York, could hardly be expected to recover). The three cases alluded to were exceptional. In each of the cases the blood was heated, the snake was large and virile, and the bite was inflicted in a most dangerous place. One victim was bitten in the neck, the fangs reaching a large artery. One was bitten on the wrist deeply and far from help. The third, a young woman in the western part of Pennsylvania, was bitten while coming off the mountain with a pail of berries in each hand. She dropped her pails, fell down, and was bitten deeply the second time. She died that evening, and was buried before sunrise the next morning, so rapidly had decomposition taken place.

A young man was bitten near Ansley's last summer, and the treatment resorted to was whisky. He was dead drunk for twenty-four hours, was sick a long time, and recovered with the loss of a finger.

Boy bitten on hand at Lloyds, eighteen miles below here. Two days before a doctor could be had. Simple remedies were applied; salt, tobacco, cold water, etc. The lad soon got well.

Six miles below Lloyds a farm hand, in mowing, cut off about five inches from the biting end of a large rattlesnake. He seized the piece near the head intending to drop it in a hollow stump. The head turned around and bit him on the thumb. He was already well primed with whisky, and his friends proceeded to fill him with the same until he was dead drunk. Between the whisky and the poison he had a rough time of it. For days his life was despaired of, but he finally recovered.

Schoolboy bitten on Long Run, sixteen miles from here. Remedies: sucking the wound, pressing out all the poison and blood possible with salt, cold water, etc.; no whisky. Boy was attending school in a week thereafter.

I could give a score of additional cases but these are enough. They go to prove that whisky is no antidote to snake poison, at least for one in the habit of drinking it.

Perhaps it may not be amiss to offer my own notions of remedies in case of poisoning by the bites of insects or reptiles. First, if the bite inflicted by a poisonous snake is not severe enough to bleed freely, enlarge the wound by use of the knife. Next, if it be possible, suck the wound thoroughly, pressing the surrounding parts towards the wound. For outward application, I believe ammonia to be the best remedy; but it is seldom at hand. Common salt, moistened to a poultice-like consistency, is the next best thing I know. It should cover the wound and the adjacent flesh to the thickness of half an inch or more. After three or four hours, the clay poultice, as before described, and by all means keep up the pouring of cold water. No man will suffer much or long from a snake bite or scorpion sting who adopts the above treatment, provided the application be prompt.

On the Amazon River I found ammonia the one remedy in which all had faith. If that was not at hand, then salt. I knew of many cases there; scorpion, tarantula, coral snake, and even the deadly *surucucu* being included. With the exception of the latter none of them proved fatal. The sting of the centipede was the most obstinate and painful, but it would yield to copious applications of ammonia.

I was stung by the common gray scorpion on the Estrada San Joan, and in one minute had a handful of wet salt on the wound. It was about equal to a first-class hornet sting; the promptness of the treatment saved me much pain.

A physician in the southern part of this State, who has probably treated as many snake bites as any man in America, depends entirely on, first, enlarging and pressing the wound, second, on pouring cold water. He has never lost a case of snake poisoning.

And enough of snakes, poison or otherwise. NESSMUK.

BIRD MIGRATION IN THE MISSISSIPPI VALLEY.

COMPILED FROM THE NOTES OF MR. O. WIDMANN BY W. W. COOKE.

PART I.

Editor Forest and Stream:

The following notes on the movements of our birds were sent me in daily reports by Mr. O. Widmann, 4,024 Carondelet avenue, St. Louis, Mo. In gathering them together I have endeavored, as far as possible, to preserve the exact words of the author.

My plan has been to give in Part First the general statements, and afterward in Part Second a tabulated list of the dates of arrival and departure. The nomenclature is that of the last Smithsonian catalogue. In Part Second the numbers before the name denote the order of arrival this spring. Where several arrived the same day they are given the same number.

Yours respectfully,
W. W. COOKE.

WHITE EARTH, Minn., June 10, 1882.

ST. LOUIS, Mo., Feb. 22, 1882.—*Dear Sir:* Your invitation to help in tracing and timing the birds in their migrations, I accept with enthusiasm, and promise aid to the full extent of my power. The chapter of migration is the most interesting part of the whole science of ornithology, but it cannot be studied to great advantage without the co-operation of others.

There seems to be no part of the globe more appropriate for this particular branch of investigation than the valley of the Mississippi. Migration has been studied for ages, but the work has never been done systematically, with simultaneous co-operation, and therefore there has always been a tendency for speculation to step in where actual observation was lacking.

Having recorded every bird observed during the last four years, I am already in possession of a considerable number of data. Immediately after receipt of your letter I set to work to prepare a list of what I thought the most interesting dates, namely, the first (= F.) and last (= L.) days of transient visitors (= T. V.). The last (= L.) days of winter sojourners (= W. S.) and the arrival (= F.) of summer sojourners (= S. S.). While doing so I found that such does not always give a correct insight into the movements of the bulk of a species, and I tried to remedy this omission by inserting another date, which I named N. N. (= numerous and noisy), as it means the first day when I found the species humerous, probably the arrival of females, which event can as well be heard as seen.

In studying the migration of birds I think we have to consider principally the movements of our common, well-known, conspicuous birds, and that the arrival of rare birds is of little value. The dates of arrival of single individuals do not show much of interest; a full exponent of the movements of a species is only obtained by continuous observation and repeated reports upon the bird's doings.

3, 7, '82.—Last year spring began here on the 16th of April. This year it has already set in on the 1st of March. The meadows were rich green in February. Maples are covered with flowers. Frogs croak since 3, 1. Grasshoppers and butterflies are abroad. Everything is advanced except the bird life, on which this fine spring weather has had little effect.

3, 19.—There was a perfect standstill in everything from 3, 6, till 3, 15, the weather being cool, wet, gloomy, windy,

with slight frosts. Since the 15th we have had warmer but changeable weather, and yesterday a warm spell with mercury 76 deg. Fahr. On our bird life the forwardness of the season has had little effect. There are a few arrivals of such birds as do not generally come at this date, namely, thrasher, *H. rufus*, one seen 3, 13; purple martin, *P. subis*, three seen 3, 16; yellow-rumped warbler, *D. coronata*, one male and one female seen 3, 15; white-bellied swallow, *T. bicolor*, a party of ten seen 3, 16, hunting over a lake. These are the only species, and very few individuals of which I could say that they have been influenced to make their appearance before their time had come.

3, 20.—Yesterday we had warm easterly winds with light rain. Birds seem to be moving now, and new arrivals were numerous, especially chippies. Early peach trees in flower.

4, 2.—From 3, 20, to 4, 1, were stormy, cold windy days, and frosty nights. No great change could be expected, none took place. The first pair of my martins, I mean martins which nest on my premises, arrived on the 22d, and to-night twelve pairs have taken lodgings, these are all old birds, birds of the second year have not yet arrived. To-day we have regular summer temperature, 64–87 deg., at 3½ P. M. thermometer showed 111 deg. in sun.

4, 3.—Another summer day. Great change in bird life. Air full of the song of the thrasher (*H. rufus*). Where there were four thrashers last week there are more than forty to-day, and all in full song from 5 A. M. They must have arrived during the night. This is the day I call N. N. The cowbird and Carolina dove have also increased in numbers, but the principal part of the great change in our bird life lies in the almost total absence of the snowbirds (*J. hyemalis.*) Instead of a hundred, as met with with last week, I could not find ten snowbirds to-day. They have certainly availed themselves of these warm moonlit nights to draw nearer home or probably right into their home.

4, 6.—This morning a heavy rain produced a new start in the advancement of vegetation and insect life. Most trees have small leaves, Thrashers wild with song and seen in pairs. *Pipilo*, males, fighting like roosters.

4, 16.—There has been a great check to the progress of spring, and another perfect standstill in the migration of birds. The first week of this month was a series of summer days. It was astonishing that the arrival of migrants was so insignificant considering the advanced state of temperature and vegetation. The change commenced the 9th. At sunrise of the 11th the thermometer stood at 29 deg., and the morning of the 12th surprised us with a sheet of snow. Green trees and flowers and white roofs! This great change of weather has, of course, a decided effect on the movements of birds. No new species have been seen since the 8th, except a single swift (*C. pelasgica.*) All the birds behaved quite differently from what they did the week before. They did not ascend high trees, they were not much heard to sing, but they kept very quiet and secluded, mostly near or on the ground. Yellow-rumps were seen hopping on the ground among chippies, and the thrashers would not go from underneath their briar bushes. Martins remained in or near their boxes for several days without even trying to seek food until the wind abated on the 13th. They must have been very hungry, as they went out hunting all day the 14th and 15th. They left early in the morning and did not return before sunset, and still continue to do so, while during warm weather they stay in the vicinity of their boxes almost the whole time. The ruby crown kinglet was the only bird that did not lose its good humor during this cold spell; it kept on singing as usual.

4, 21.—We have had fine weather for the last week, but the great wave of migrating birds has not yet reached us. Birds are coming in slowly, only the avant guard has arrived, a few old males, and it needs a good lookout to discover them. Fourteen species were seen for the first time to-day.

4, 22.—Last night commenced dark, overcast, threatening; we had two light thunderstorms; at sunrise partially clear, but soon clouded again. The wind was light southeast in lower stratum, but west in higher stratum; this morning a light north.

The expected wave has struck fully now. The number of birds present to-day is really marvellous. They must have come in clouds. For ten birds yesterday one hundred to-day, but I have no idea at what hour they arrived. They must have come during this stormy, rainy, dark night, when one would expect them least. The few arrivals yesterday had not changed the general feature of the bird life, but now the change is complete, the aspect summerlike. The birds which brought this great change are principally the yellow warbler, the red-headed woodpecker, the two orioles, the rose-breasted grosbeak, the kingbird, the warbling vireo, the white-eyed vireo, the yellowthroats, etc. The increase in numbers of individuals extended to many other species already present, such as robins, thrashers, Peabody's, goldfinches, swifts and others, which increase helped to swell the aggregate number to such a height. In some places the bustle and tumult were so great that it was impossible for me to adhere strictly to my rule of identifying each and every bird.

4, 26.—Last night calm, early morning thunderstorm, then clearing up after ten o'clock. Considerable movements have been going on last night, our lately arrived species have largely increased; ranks of S. S. fill up rapidly. Many other species have increased, even redwing blackbird.

4, 27.—Warm weather continues. Ranks of S. S. filling up more and more. Transients abundant. Bird life luxuriant.

5, 2.—Last five days steady beautiful weather. Northerly winds and cool nights. Bird life has not changed much, although every day showed new species in my record.

5, 3.—Summer again, maximum 70 deg., 10 A. M. 60 deg. Very few trees are without full grown leaves now. Potatoes hand high. Corn being planted.

5, 4.—After a mild, clear moonlit night (60 deg.) a warm (80 deg.) day, south wind, just the weather for birds, and, indeed, the most glorious day of the season for an ornithologist. It is the height of the season. All birds, sojourners and transients are in song. Number of birds, both by species and individual, the highest of the year. Bird song everywhere and the concert in many places perplexingly many-voiced. Great numbers have arrived since yesterday, especially catbirds, olive backs, Tennessee warblers, black polls, white crowns, indigos, black-throated buntings, orchards, etc. To give you an idea of the richness of our present bird fauna, let me say that I have during my morning's walk to-day identified over eighty species. And standing on a wooded bluff which slopes to River des Pères (a creek that forms the southern limits of the city) I have counted fifty species which I could see or hear without moving from the spot. Between 6½ and 8½ A. M. the noise which all these birds made was sometimes deafening, the more so as the Tennessee warblers and blackpolls were almost as bad as the thirteen-year locust last year.

5, 5.—Calm, warm night (67 deg.), sultry, cloudy, hot day (85 deg.), with hard storm of rain and hail this afternoon. General character of our bird life is summerlike. At 3:45 A. M. the catbird, wren, chippy and bluebird were already in song; at 4:50, when I left home, the voices of such birds as Traill's flycatcher, indigo, peewee, cuckoo, etc., showed at once the advanced season.

5, 8.—After that hail on 5, 5, we had a cool, gloomy day, 5, 6, with strong north wind, yesterday clearing up and to-day southeast wind, warm, fair. No new arrivals to be reported, but a considerable decrease of whitethroats, savanna sparrows and yellow redpolls. Yellow-rumps are all gone.

5, 14.—The night of 8th to 9th brought us a series of very heavy wind and rain storms, and ever since that time we have had nothing but cold, gloomy, rainy and windy (west and north) days until to-day, when it cleared up, still cool, but promising fine weather. During the cool weather the birds remained almost silent and kept generally very retired, so that it is not possible to give the state of the bird life with anything like completeness, still no great change has taken place, and no new arrivals were seen.

5, 23.—Cool weather has continued since my last report, with slight hoarfrost on 16th. The vegetation is far advanced, in spite of all cold weather, the foliage too luxuriant for an observer of birds, but the insect world is far behind this season; not even the mosquito has made its appearance. The birds seem to have little spare time for a song, and are slow in building. The martin is my insectometer. The time it spends at home corresponds with the abundance of insects. Does it remain at home the whole day there is plenty of insect food; does it keep away from home all day, then it has to work hard for a living.

5, 28.—When I made my last report I thought migration was at an end, as there were only a few migrants left after the south wind period of the 18th and 19th. How great was my astonishment on the morning of the 24th to find again great numbers of transients, especially Tennessee and black poll warblers. If they came from south or returned from north I cannot tell, of course, but here they were, numerous and very noisy. On the 26th most of them, and on the 27th all of them, had departed again. Some species, especially mourning and Connecticut warblers, pass through here unnoticed in common years, but this exceptionally cool May makes them stay with us in great numbers and quite a long time. They have, for the first time, been common this season, while they are rare in other seasons.

A few other species I have not met with at all this season, for instance *Sitta canadensis*, *Spizella pallida*, *D. blackburniæ*, etc.

The most conspicuous birds in transit during the last few days were the nighthawks. During the daytime they were met with everywhere, hunting over fields, singly or in parties of ten or more, or sitting on trees, fields, fences, etc. In the evening of the 25th, 26th and 27th they migrated north in a very loose but continuous stream, from 6½ to 7¼ P. M. On the evening of the 26th we counted within half an hour, over 200 going over our house straight north. During these cool gloomy days, the water-sheets on the other sides of the river and parts of the Mississippi half were alive with different kinds of swallows and with swifts, but I do not think those were birds in transit, but they were our St. Louis S. S. which go thither hunting low over the water.

5, 29.—Fine day, clear; night has been clear moonlit, but transients are still lingering. Among the species seen was one snowbird (*J. hyemalis*). I hardly believed my eyes; had seen none since 4, 20. No nighthawks to-day; no mosquitoes yet; winged insects are still scarce. Martins do not yet build in earnest.

6, 3.—The season must be considered closed now; spring migration seems to be over as far as this neighborhood is concerned.

[TO BE CONTINUED.]

MONSTERS OF WHITE RIVER.

THIRD PAPER.

NO, Byrne did not die with that congestive chill. But he should have died, there is no doubt of that. For a man that will perch himself on the immediate bank of the White River after the greatest overflow ever known, unacclimated, and silly enough to go paddling and wading around through the stinking overflow on hot days in July after snakes and things, has not sense enough to appreciate the solid business matters of life, and should die "some time or other." Instead of dying as any useful citizen would have done under the circumstances, Byrne gained a little strength, crawled down to the boat and started up White River.

The White River is the crookedest straight river in the world; that is, the general course of the lower river is quite straight, but it winds around through a bottom seven to twenty miles wide toward every point of the compass. Often a steamboat has to travel thirty miles to make ten, and one has a lively time to keep on the shady side of the boat on a hot day. But Byrne reached the mountains all the same, drank of their healing waters, shed his malarious dark yellow hide, flirted with the widows, danced with the girls, danced a cotillion, in which all four of the girls (ladies I should say), none of them over eighteen, were "dipping snuff," (all had a stick in their mouths) while they danced; eat double, triple, yes quadruple rations, and "watermilions," "cantelopes," peaches, etc., between meals.

As he gained strength went up to Fort Smith, climbed Sugar Loaf Peak, interviewed the Choctaw nation, and returned here after six weeks' vacation weighing 149 pounds and ready to tackle anything not larger than a grasshopper, found the swamps smelling not quite sweetly as yet, but found scarcely anyone sick, except right along the margin of the river and overflows, and people living right on the open, fragrant, breezy prairies as healthy as people in any country. In fact this season proves conclusively that the open prairies of this region are as healthy as any part of the State, the mountains not excepted, and besides one finds on them fewer miseries of this Southern life, namely, mosquitoes, chiggers, fleas, ticks, house-flies, scorpions, snakes, etc. The most objectionable features of the prairies are "boss-flies." A small and large green head horse-fly and a great black one are at times very severe on horses and cattle, but these will disappear as the prairies are settled, as they did in the Western States.

Mr. Lee Griffith of this place, last month while walking along a road, with an axe on his shoulder, found a large yellow or mountain rattlesnake, a "mouster" which he proceeded at once to decapitate. This snake proved to be six feet four inches long and thirteen inches in circumference at the largest point. Its rattles had in some way been mutilated, only four remaining. Its skin roughly preserved by my friend Ben is now before me. How gladly would I have given a twenty dollar bill to have this snake saved for me alive and uninjured. He was in good condition, colors bright, and full fed. I have had a lifetime longing to capture a yellow rattlesnake over six feet, but have never found one alive over five feet, except one I captured in Nebraska five feet and one inch; this I kept for three months in a glass-fronted box along with four others somewhat smaller, and during that whole time I could not prevail on any of the five to strike at me, except this larger one, he would strike every time he was disturbed. At the first strike he would leave quite a drop of "pizen" on the glass, from each fang, then the amount decreasing with each strike until the fourth, after which nothing visible would be left on the glass, and this has been my experience with all poisonous snakes, the majority of them not offering to bite, unless held, but devoting all their energies for retreat.

THE "COTTON MOUTH."

The day before receiving the number of FOREST AND STREAM for August 31, while hunting quail on the upland in this vicinity, I noticed my setter pup nosing after something in the grass. I approached and found it to be a snake; seeing that it was a new species to me, I put my foot on its head to examine it, when it flattened out the middle of its body extensively. I thought then that it was the common "spreading-adder," or "viper." (I have refrained from writing of snakes, for the reason that, in nearly every neighborhood, the more common snakes have different names given to them by the people; and, not knowing them by their technical names, I am well aware that it is hard to know what particular snake is meant when called by any name; and I regret this exceedingly, for I have paid great attention to the habits of snakes all my life.) I moved my foot backwards from its head, when it turned its head upwards and sideways and bit the toe of my boot. I plainly saw both its fangs, and the exuded poison spread over my wet boot.

This convinced me that it was not the adder or viper, which are a class of—so far as I have examined them—perfectly harmless snakes, so far as biting a person is concerned. The snakes I mean are such as when irritated flatten out their head and neck exceedingly, some of them at the same time hissing or blowing and striking. Thinking my find was the snake here called "cotton-mouth," said to be quite common, I cut off its head and carried it to this village to have the natives determine what it is called here, and they calmly proceeded to give it three different names, to wit, "cotton-mouth," "spreading-adder," and "upland-moccasin," the last name is by an intelligent colored gentleman. The majority, however, insisted that its right name was "cotton-mouth." I mention this snake simply for the reason that it exactly, in all particulars, answered the description of the "upland-moccasin" (*Ancistrodon atrofuscus*) in the paper referred to, except the tail, which did not terminate in a "small, horny point," or if it did the "horny point" was very small indeed, for I examined its point carefully, it being so very tender toward the point, and I recollect giving this point attention for the reason that several have told me that there are snakes here with such tails, but I accept tales about snakes from no one as facts, simply for the reason that the great mass of people when they catch sight of a serpent, no odds how small, lose every sense except that of fear, and are therefore as a rule incapable of telling the truth about it. Hence snake stories are even wore than "fish stories," therefore I am inclined to believe that Dr. Troost's "upland moccasin" is simply the Arkansaw "cotton mouth." If so, I think numerous specimens can be obtained here,* but for one I will not agree to furnish any with spikes in their tails. I will not flatly dispute that there are such serpents, but, well if any of my readers find such a snake, please cut off the spike and mail it to the snake editor of FOREST AND STREAM. This snake that I decapitated was not at all vicious, not striking the puppy nor at me, until I held it fast. Will some herpetologist kindly publish in FOREST AND STREAM a list of all the serpents so far as known in the United States, with their technical names, together with all their vulgar names and every known synonym? BYRNE.

CROCKETT'S BLUFF, ARK., Sept. 15, 1882.

*I hope no one will gather the idea from these papers that Arkansas is a dangerous country to live in, on account of snakes; for the facts are the reverse. Like all new and thinly-settled regions, serpents are more plenty than in old, thickly-settled regions. It is true that there are a great many water moccasins along White River, but they are not at all dangerous, never taking the offensive or striking unless stepped on or held. I had no idea when I came here that this snake had poisonous fangs, but the evidence is too great to dispute, and curiously, since this question was brought to my notice, I have been unable to capture a specimen, so as to positively determine this point. And, as I forgot it in its proper connection, I will add that Prof. Troost is right as to the upland moccasin having four fangs, in one sense of the word; for the anterior ends of both under-jaws are armed by a long, strong, backward-curving tooth, very like a fang proper, but yet they are teeth proper (for holding their prey), and solidly set on the jaw, and not hinged like fangs proper. The fangs (poisonous) proper of this snake were stouter than those of the rattlesnake, but not so long, poison-sack very large. B.

BREEDING QUAIL IN CONFINEMENT.—Following is a continuation of Mr. John R. Willis's work with the quail. It is taken from the Winfield (N. J.) *Monitor*: "Monday, September 18.—The quail are hatched; how many I do not know. There was an unusual chattering between the pair this A. M., that gave warning of the momentous event, but it was not until I returned from town at 5 P. M., that I was assured of a 'successful result' in seeing a number of empty shells on the floor outside of the nest, and on looking in the nest found that my gentleman was also on the nest, thus seemingly being desirous of appropriating some of the credit due while having done but little, as may seem to us, towards accomplishing it. There is no mistake, however, that he is now thoroughly interested in his progeny. What shape that interest will assume after the birds come out remains to be seen, but if he is inclined to be any way tyrannical I have a prison cell in which to incarcerate him until he learns how to behave. Yesterday, being about three weeks from the time the bird commenced to set, I made all the arrangement I could think of for the comfort and health of the coming 'chicks.' I partitioned off a space on the floor with three-inch boards in which I placed sand and gravel and a sod of fresh grass. I also procured a half bushel of sweepings from the hay mow and scattered them on the floor, and to-morrow A. M. I expect to have the pleasure of seeing 'Biddy' and her chicks out for their first feed. How young quail act when

hatched in confinement I don't know; but as a boy I have seen a nest full of eggs in the evening, and nothing but shells in the morning. I don't suppose I will have much more to chronicle in time for your next issue, and will therefore merely say that if successful in raising the birds until proper growth to determine how to pair them, I propose to present at least three separate pairs to such gentlemen as may satisfy me of their ability and interest in the subject to warrant the gift. I will donate two pair to gentlemen approved by FOREST AND STREAM, as a thank offering for the pleasure and benefits I have derived in reading its many and varied articles of interest to disciples of the gun and rod. September 19.—Eight young quail made their appearance this morning and at once commenced to scratch, eat and drink, run after flies, etc. They are all as lively as crickets and about the size of the end of your thumb. They don't seem to be afraid and pay no attention to my entering the room. The cock bird insists on appropriating all the duties of nurse, and covers the whole of them whenever he can coax them to come. They run out and feed about every ten minutes. Barring accidents I have little doubt of being able to raise them.—WILLIS.

Game Bag and Gun.

OPEN SEASONS.—*See table of open seasons for game and fish in issue of July 20.*

QUAIL SHOOTING IN KENTUCKY.

THE fall of '68 found me established in a border bluegrass county in a district where only foxhounds were recognized as sporting dogs. I always persistently declined invitations to accompany the hunters, lest the infatuation should demoralize me into a nightly follower of the chase. Although the old gentleman is now a "confirmed rheumatic" from the many hours shivered through on the front verandah and yard fences rather than lose a strain of that inexplicably and incredibly fascinating music of a large pack in full cry, I knew that the introduction of hounds to the back yard was no more to be entertained than the establishment of a red fox as the old lady's poultry keeper.

The accepted incompatibility of fox chasing with consistent Sunday Christianity would have rendered it almost blasphemous to join in the chase, and 'twas ever an "I-give-it-up puzzle" to me to figure out the paradox of that individual's unrelenting and uncompromising hatred of the hound species, and the alacrity with which the approaching serenade rushed him into his overcoat and out of the house.

"Posted" was an unknown term there then, as the gentleman from Africa, with ex-army musket, had not developed that remarkable ramification of his genealogical sapling which is now directly traceable to Nimrod and Diana (a thoroughbred cross; unquestionably, however often the black crops out in fresh litters of pickaninnies) as well as demonstrated his utter inability to distinguish a domestic fowl from an untamed quail, or discriminate between the inoffensive pig and the ferocious hare. If "gates" or "bars" were not provided for convenient near-cuts from farm to farm, fox chasers had found panels, the top rails of which would slip, and fences were no bar to riding where you chose, provided you had learned the many routes.

There was a light thirty-six-inch double muzzle-loader in the family, which was at my command, and a brother, whose business engagements prevented his hunting that season, lent me his pointer, consequently, I was in good condition to practice on the thirty-two flocks of quails which I had located within a radius of a mile. Often my wife would count my game and give me the per cent. of misses, having counted my shots. If I started for a half day's jaunt I nearly always mounted my thoroughbred gray, whose saddle has more than once furnished me a rest for a difficult rifle shot, and over whose head I have cut down many a quail from bevies that he'd flush. The whirr of a bird brought him to as staunch a stand as did sight or scent the little bitch that would always rear up to deliver me game killed from the saddle.

I soon learned that if a quail, sighted over those long barrels, appeared no smaller than a June bug, my chances were worth the trial, and before the season closed I could almost average two birds to every three shots, on which I've improved little or none

In '69 the crop was nearly up to that of the previous year, and proof of my suspicious descriptions of that "happy hunting ground" increased my popularity amazingly with the boys whose lots were cast in the persecuted districts.

On a clear frosty morning in November, '69, I had started, alone, for a friend's farm nearly four miles distant. When about a mile from home, I met two buggies loaded with guns, ammunition, dogs, and four as true sportsmen as ever pulled trigger or reeled a line. They were bound for my headquarters, where it was proposed to sojourn until they were surfeited. Three were entire strangers, whom I have not since met, nor would I now recognize, and whole-souled, handsome, eloquent Dick, the friend of my early manhood, who had brought his friends forty miles to enjoy our sport, can repeat the cheery introductions of that morning only when we shall all have met on the "other side."

Doctor was a dignified old practitioner and farmer, who wore spectacles in the field, and whose prudence kept him a "feetle" in the rear after the first volley into a bevy on the rise, consequently his score at the end of the hunt was expressed by a single figure. Harry was a genial young Benedict of my age, and we were well-mated as ordinary shots—apter to get a bird with the second barrel in a snap contest. Will was rapidly merging into venerable bachelorhood, if there be such, and was an exemplary church-going farmer, of whom it could be truthfully said that there were literally few hairs between him and heaven. He used a common old muzzle-loader, for which he paid twice its value, because it suited him, and had an old red and white setter that would hardly have been demoralized on a warm trail by a bladder of dried beans tied to his tail.

That old bachelor was the best field shot that I ever saw, and I sincerely believe the equal of any of whom I ever heard. If to-day what he was in '69, I'd "put up" on his grassing as many as any man living, under the same circumstances, sooner than back a favorite which I absolutely knew would not be pulled.

Dick had a seven and one-half pounds Mortimer muzzle-loader, built to order, for which he paid $150 in London, and barring the circumstances that he was occasionally demoralized when contending with one of the best wing shots, whom he refused to acknowledge his superior, was an extraordinary shot.

As an opportunity offered to send word of their arrival, I turned them for the fields to which I had started, and they were soon reached. Buggies and horses secured, hunting gear was rapidly donned and the dogs left to exchange cards as we crossed into the nearest cover. We were not half across the field when a flock was flushed out of range. We followed them into an adjoining woodland, when Harry walked up a brace and made a handsome double before a point was made. Every fellow seemed on his mettle and resolved to take no desperate chances, neither any undue advantages, and the greater part of that covey was bagged without a miss, and every gun made a score. Harry's advantage of a couple was mentioned, but after the next covey was put up, and the Doctor insisted on acting marker, Dick and Will got down to their work and pressed rapidly to the front by scoring a bird at every shot, till gun barrels were so hot and pockets so full that a resting and cooling spell was but suggested to be adopted, and it also occurred that the panting dogs needed water. It was tacitly understood that Dick's whole soul was bent on making a larger bag than Will, of whose modestly-worn laurels he had heard much, and with whom he had shot but once, and that a recent occasion, when Will's guest. Dick had used his friends gun while the owner substituted the most convenient, and his generously permitting Dick to tie him on their afternoon's shoot, had deluded him into the belief that he could demonstrate to Will that at least one other sportsmen was about as nearly dead certain of grounding every fair shot as he.

After being enlightened by Harry a glance at the situation disclosed the fact that Will was as thoroughly aware of what was in the wind as if Dick had declared his intention, but not a word escaped either till that night around the fire, and a casual observer of their marvelous shooting could have suspected no more than that they were paired against a rival couple shooting over other grounds, with whom they were to compare their combined scores at close of the hunt. The woodland was surrounded by corn and stubble fields, and every bevy that we found pitched into that excellent cover, and when a halt was called about 2 o'clock, we were so near our horses that 'twas resolved we should start for home in time to have quails at supper. My lunch, though plenty for two, didn't grow in the subdivision (nary fish in the collation), and a passing visit to a couple of flocks of which I knew the location near our route was voted enough to conclude our first day. We got thirteen from one, and enough from the last bevy to swell our bag to seventy-eight. The last bird flushed was an old cock, which Harry covered as it made a bee-line for Dick, whose lurches and yells to "don't shoot! don't shoot!" and the Doctor's racket to avert the peppering, at probable cost of an eye, which he had been dreading all day, made the scene a rather nervously exciting one till Harry lowered his gun, when it was demonstrated that Dick was the only one of the four cool enough to stop the author of all that hubbub on as beautiful a cross shot as is often made. The accidental discharge of my gun during the day in such close proximity to Dick's head as to temporarily deafen him, tended little to relieve the Doctor's apprehensions of accidents, and when Harry deliberately covered the unfortunate with both barrels at full cock, not fifty yards off, it did appear that Dick was doomed to slaughter. A dozen for supper had been forwarded by a passing neighbor, and the suggestion of some one that he recognized the aroma of broiled quail was a reminder of the long fast which, while it lengthened faces, it both accelerated and lengthened our strides supperward.

The veranda reached and the strangers welcomed by the most hospitable host and wife, a count was first on programme. Dick couldn't count more than twenty-seven, while Will piled up even thirty, and not one of the party could refer to another than the single miss which he declared he had made.

Doctor was the only man who bagged a bird every shot. He had three. As the incidents of that day determined him to continue his adopted course, his score at close of the hunt amounted to less than ten. It was deemed an occasion for setting out the landlady's quart bottle, full to the cork, of medicine, and as a contributor to the combined flavors of mint and nutmeg its quality was affectionately tested and conceded "most excellent," without shadow of dissent. The thoughtfulness of that motherly hostess had suggested the contingency of the visitors reaching the field unprovided with lunch, and a hint to hurry up preparations for early supper put an unceremonious end to all discussion. My memory extends to the good old days when the wedding feast, in fare, and a round of parties (supper and dancing always, except at a parson's house) were the order of marriage festivities, and till the recent innovation of levees and ax-grinders' entertainments, those feasts were the unrivaled standard of culinary excellence. On such occasions I have ever been acknowledged a first-class gastronomer in a go-as-you-please contest with fingers, knife, fork and spoon, but that particular supper saw and went one better any spread that I ever attacked.

Were they not in bad taste (!), details of the dishes would prove too distressing for me to voluntarily attempt them at this late day—so vividly remembered—and I must pass on to less melancholy matters by briefly adding that a fried oysters' accompaniment to broiled quails make a mouth-watering impression on memory never recalled without my becoming "too full for utterance" before first swallowing—one of those oysters in imagination.

Dick had enough cigars to last through a protracted siege, and every brother accustomed to bituminous fuel knows what peculiar zest a cheerful wood fire lends to cigar and anecdote after a successful day's shoot over good dogs and with congenial companions. Dick voluntarily acknowledged to his determination on entering the field, and Will smilingly assured him that he had only confirmed a suspicion which was aroused early in the day. In discussing next day's route it was proposed to go back over the same ground, when the old bachelor informed the audience that 'twas doubtful if those birds were reassembled after an interval of two nights. It was a point to nearly all, which was soon verified by some of the skeptical.

Dick and Will selected birds for breakfast and next day's lunch, despite the landlady's remonstrance, then drew the remainder and suspended them above the reach of thieving carnivora. The dogs and guns were looked after, and a motion to retire early met a ready second, as it was desired that an early start should be made next morning. All were astir in time to hear the birds calling in every direction, and by sunrise a mount for each was at the door, and in consequence of a hint from the old bachelor as to the great convenience of such an attendant, the obliging host had instructed one of his sons to accompany the party, horseback, with a grain bag, and carry all the game, as well as open gates, lay down fences and bars, and hold the horses during an engagement. It was the most acceptable addition to our party that could have been made, and almost as indispensable with me now as my dog. A game bag is a nuisance, shoulder straps and strings from belts always permit birds to flop around most annoyingly to me, to omit great stress on often finding only a birds head left in the loop, and though not an anomalously lazy sportsman, I generally manage to have an attendant to help me, even if I can't drive a better bargain than a promise of half the game. I have always exhibited highest appreciation of the boys' culinary accomplishments in camp; never object to location of the tent, nor grumble at the side of the bed assigned me; invariably complimented the good judgment they displayed in taking care of the minnows and their skill in dressing the fish; always kept an eye out for the best pile of driftwood and reported its location; never refused to stand up in the boat and point out the easiest chute up through shoal water, and the safest down—have even sprawled out in prow of the craft like a lizard on a log, and aided in pulling through by the twigs overhanging the bank when no other alternative; never in a single instance that I can recall, when solicited, hesitated to undertake that most difficult undertaking, when the fresh water was provided, to compound toddies in accordance with the caprice of every member; and I defy any man to prove that I was not always ready in any emergency, with the best advice in stock. Nevertheless, notwithstanding, all that I have modestly offered in self-vindication, I have the first time to have escaped in a party of four or more, one of those sore-headed, meddlesome, hard-to-please fellows, who tried to hurt my feelings by having some confidential chat with one of the boys about me, in which I'd overhear something about getting there by nigh-cuts; if but one good minnow in a bucket of fifty, I couldn't put my fingers on any other; and much more of that kind, to invariably wind up with something about "a darned shirk."

I'm not over sensitive, and I know that full justice is rarely rendered any of us here, our solace should be in hope of "future rewards." But, to the second day's hunt. But a few rods from the front gate we left the road through the yard of a half finished dwelling house. Even the horses were started by the rise of a flock from under their very feet. The dogs had passed the gate before we turned in and were behind us, and the birds so frightened that nearly half of them alighted on and in the house. Is it not a fact that quails alight on the nearest tree or fence from the demoralization of sudden fright? I don't remember to ever have seen a quail fail to alight on the ground, when the bevy had lain to the dogs till put up by the hunter.

From that yard we passed into a field where three flocks were found, and everyone sought the shelter of a small locust grove, in which the grass had fallen in such a tangle as to necessitate kicking out many of the birds. The rapidity of shots reminded the ex-soldier of a brisk skirmish during the "recent unpleasantness," but there were at that time no valiant home guards to "rush to the fray" and confiscate the ordnance (?) as had been.

In that grove was the only manifestation of the old bachelor's loss of temper. While reloading after killing one with each barrel, Harry and I winged but one of four that sailed off under circumstances that made their escape so shameful, for even tyros, that he couldn't hold in, and the lecture wasn't lost on either of us, for we kept on the alert the remainder of the day, for the chance of a split (?) with the old fellow when beside him. There too was bagged the only woodcock seen by any of the party. That went to the old bachelor's credit.

When each fellow had made his deposit in the grain-bag before leaving that grove for stubbles new, Will was so far in the lead that hope deserted Dick, and that night he pronounced the bachelor a "world beater."

The next covey we found afforded an instance of the unreliability of the average hunter as a marker. The birds flushed out of range, and every one dropped within view on the opposite hillside. "I saw 'em go down!" from two or three of the six markers led to a comparison of opinions. Developments proved that the old bachelor was the only one who had accurately located them, some of us being badly off. I confess that I can't, in weeds three feet high, kill two birds at a right angle, and turning to gather the first go within twenty feet of either, unless accidentally marked by some conspicuous object, and I have more than once left both after a disgusting search; consequently I generally stay home if I can't persuade or bribe someone into going along as marker and game carrier. It naturally occurs to the reader: "Why doesn't he have a good retriever?" My wife has always taught my puppies to retrieve and turns them over to me satisfactorily broken, but I have invariably neglected that accomplishment so long before taking them into the field that it has been of no practical value to me in a majority of my dogs. How many sportsmen have yet to learn the impropriety of endeavoring to aid a retriever further than to approach the spot where the bird fell and take a stand until the dog has found the game, or the trail, if a runner? It was long after the hunt of which I write that I learned it of an old friend whose residence necessitated his hunting alone in his younger days, when wing-shooting was regarded an impossibility by the majority, and pointers and setters were curiosities to most of our dog fanciers. I am indebted to him for more valuable suggestions during the four years that we hunted and fished together than a lifetime experience would have taught me. He is one of the few sportsmen who carry their philosophy into the fields, and when vexed by effects trace them back to their causes, that they may avoid recurrences.

In connection with that bevy which developed the unreliability of five of us as markers, occurred two incidents which I doubt not are as fresh in the memory of every other member of the party living as in mine. Two birds arose before the old bachelor and started for the adjoining field. The first was beautifully grassed, but before the second could be covered it had settled behind an intervening post and rail fence and was rapidly whizzing out of range when, to the astonishment of all, that remarkable shot dropped to a sitting posture and killed the bird through a crack that would but comfortably admit the thrust of a foot in climbing. The greater part of the charge of shot was lodged in the rails. It was the handsomest feat that I ever saw in the field. The wonderful performances with guns and pistols on the stage, as per programme, soon appear commonplace from the realization that they are but recitations of lessons conned and rehearsed till they become mere deliveries by note. Such performances in the field elicit always warmest applause and highest admiration from the display of readiness in emergency and quickness to circumvent unanticipated obstacles.

The other was the fall of a bird. Flushed high on the

hillside, he wheeled and made for the cove across the hollow, from which he had been first put up. His line of flight was almost directly over three who happened in line up and down the hill, each of whom in turn saluted him with one barrel as he passed over.

The height at which he was hit and the impetus he had gained in winging his frightened stampede to cover and possible escape carried him at an angle of forty-five degrees to the opposite hillside nearly one hundred yards, on a line, as we had to walk. On striking the ground he bounded like a ball.

Comments on the occurrences just related led to a discussion of the dogs' performances, and there was general and legitimate boasting except by the old bachelor, whose praise was of the others' dogs. Dick's pointer was a lemon and white, wiry little fellow that went like a skyrocket, and gave his master much trouble by frequently ranging too far when out of sight and freezing too staunchly to game to be called off, consequently in high cover it was sometimes a tedious job to find him.

Dick boasted that he would stand as long as game would lie, and that he had never been guilty of a false point. When we crossed into a neighboring field that dog was discovered on a point, and when all had gathered around him the universal verdict was, that the dog had lied the very first opportunity that offered, to prove that he was his master's equal in even that essential accomplishment. Dick, as well as a crack shot, was a celebrated angler, that could drop a minnow into a tub of water nine times out of ten, at seventy-three feet, when in trim—so reported by average authority—I never fished with him. The grass had been grazed off so short that within a circle of forty feet around that dog there was no more visible cover for game than on the bare floor of a room, and after tramping around and kicking everything within an improbable range of a dog's nose, we proceeded to give it to Dick unmercifully, even the charitable old bachelor deeming it a fit occasion to add a genteel tap. "This is the first time that I ever knew him to do it, sure!" was pronounced a rather transparent screen behind which to endeavor to hide. The dog remained as immovable as a piece of statuary, and the others held a steady but wondering back. The fun was becoming uproariously enjoyable to all but Dick, who supported a small tree with his back while submitting to the demand that the dog be left to work out the mystery.

I'd rather own a true-to-life picture, photograph or painting, of that particular scene, than a gem from the brush of an old master. It was a stunner to all, and noticeable that his nose almost touched the ground, and that his eyes were fixed as if he saw the game just under his nose, but had he stood upon a billiard table there could have appeared no greater impossibility of there being a bird where his nose and eyes indicated. But it was there, covered by a leaf in a depression made by the tread of a heavy ox when the ground was soft, and there it remained till Dick kicked at the spot on which the dog's eyes were riveted. That bird fell to Dick's gun and was bagged, and the exultation of the dog's owner was shared by all. I have seen birds lie to dogs when not even a spear of grass intervened, but I think that was the most extraordinary instance I ever met.

That was an eventful day's hunt, for in addition to those so prosily narrated, there were many other laughable incidents similar to those happening in the almost every day's hunt of all.

Hares were counted game the second day, and the hoisting of a white flag guaranteed no protection as the day before, when every gunner had to pocket all his game. Early in the afternoon it was decided to finish filling that bag—about which there had been some chaffing before we started—with hares and go home. When we reached the house our pack horse appeared to be just from mill, and the game was actually estimated by the bushel. The two days' score of quails was 156, a coincidence I shall never forget so long as I remember that hunt. Seventy-eight each day, nearly half of which were killed by that old bachelor, who burst fewer caps than any but the Doctor.

Next morning a high wind prevailed and Harry and the Doctor left for home. The bachelor, Dick and I revisited the scene of the first day's shooting and found the birds by singles and pairs, and not a bunch of more than half a dozen, just as we had been reassured that morning. By noon we had bagged just twenty-five, and after lunch we separated with pledges to repeat the hunt every fall, but the Fates decreed that our first and last meeting. With that season my connection with the neighborhood terminated, and the boy who accompanied us as game carrier—now the head of a family and the best wing shot in the country—has often told us that game has never been so plentiful as the two seasons of my residence there. KENTUCKIAN.

IN THE NORTH CAROLINA MOUNTAINS.

COMPLYING with a promise hitherto made, I beg the indulgence of your readers, whilst I give a brief account of a recent trip to the mountains of this State, made partly for recreation and partly to enjoy whatever of sport the forests and streams might afford. I will premise by saying that the results, as a hunting experiment, were far from being so satisfactory as I was led to anticipate by the glowing descriptions which had been given by friends who were, doubtless, sincere in their declarations.

Leaving home at 3 A. M. on Saturday, the 9th, our party, consisting of X. K. C., well known as "The Old He-Fisherman of Waccamaw," W. B. Barker, a genial denizen of Quhele (to avoid misprinting this consult the "Fair Maid of Perth" as to the name of one of the clans engaged in the battle), Teecel, his son Pick, and the writer, reached Charlotte in time for breakfast at the Central Hotel. Owing to railroad connections, we had to remain until 1:30 P. M., when we took the Charlotte & Atlanta Air Line for Spartanburg, S. C., at which point the road from Columbia to Hendersonville crosses. We arrived at Spartanburg in due time, and transferring ourselves and luggage were soon on our way towards that lovely range of mountains which "divide the waters from the waters," and is known as the Blue Ridge of the Appalachian chain. After a run of two hours we had come to the foot of the chain, and having to ascend a long and steep grade from the immediate valley of the Pacolet, as the track was wet we were obliged to exercise our patience until additional locomotive power could be obtained. This came at last, and slowly we ascended for several miles, until Saluda, a summer resort, was reached. This place is east of the ridge, and situated on a high range near Tryon Mountain, between the waters of the Pacolet and Green rivers, both of which flow into Broad River, a tributary of the Santee. Thence we began descending towards Green River, and crossing that by a sinuous course we soon passed the summit and came to the waters of the French Broad, which are discharged into the Gulf of Mexico. In about a half hour the whistle sounded, the brakes were put on, and the pleasant town of Hendersonville, 2,500 feet above tide water, sent its cheerful lights to gladden travelers and betoken that the end of the journey by rail had been reached. We got quarters at the Virginia Hotel, and remained there until Monday about midday.

It was rather more cheerful to us, with our surroundings, than was the "Wet Sunday at a Country Inn," so beautifully described by Washington Irving. But that Sunday was a decidedly wet one. There was no cessation of the waterfall from daybreak until Monday morning, and when some one of our party inquired if a portion of our companions, who were Baptists, could be expected to call to see us, "the Old He" consoled us by saying, "Ye need not expect it; for they are opposed to sprinkling." We kept our rooms, of course, and passed the time reflecting that it was far better for the rain to fall while we were under the shelter of shingles, than when protected only by one of Hennemeway's tents. Besides this we consoled ourselves that we should probably escape a wetting while in the woods, because of the fact that the clouds were then discharging a large part of the vapor which the atmosphere held. And we were right, for we had a cloudless sky during our search for game among the head waters of the French Broad and the Savannah.

About eight o'clock on Monday morning the clouds broke up, and at twelve we were seated in two old-fashioned "kivered wagons," to each of which was hitched a pair of very philosophical mules, and started on our journey to Transylvania. After traveling about fourteen miles we reached a farm house, and getting such accommodations as it afforded, "put up" for the night. Besides those heretofore named, we had for companions Rev. Mr. Wordan, his sons Will and Jim (one of the best shots in the State), Bob Laird, Bart Bomack, Charley Ledyards, and the drivers. Two beds and the floor afforded us the chance for sleeping, and I presume this luxury was fully enjoyed. Next morning we left and soon reached the French Broad, finding it much swollen by the recent rain. Crossing on a bridge we reached the western side, and ascended to a point eight miles southwest of Brevard, the county town. The valley is a beautiful one, and the lowlands quite productive. On the east side of the river, and five miles below Brevard, is the farm of Mr. Loundes of South Carolina, one of the best cultivated and fertile in the western part of the State. He is a raiser of fine stock, and lives at his place from May until November, when he goes back to the city of Charleston. Passing Brevard we stopped at a farm house about one mile distant, where the wife of the proprietor kindly gave us a good supply of delicious milk, which, with corn pone and ginger bread, made quite an agreeable lunch. The owner of the premises has a large young orchard of apple and peach trees, hoping to derive from the products at no distant day a handsome revenue. I trust he may do so, for no better apples are raised on the face of this earth than those which grow in the mountains of this State. If he can escape the blight in his pear trees, I see no reason why they may not be made profitable, provided always that some better means of getting them to market shall be supplied than now exists, and the cost of transportation is not so high as to consume the value of the article.

While our mules are enjoying themselves at rest and partaking of their lunch, several of our party concluded to walk on, with the view of finding some game. So, taking Jim Wordan's old Jeff and Ledyard's Argo—our only dogs—we started forward. Jeff is a pointer on the shady side of eight, and was once hard to beat at grouse. But he has been sadly damaged, not only by the weight of years, but by being used as a squirrel and "possum" dog, which occupations have caused him to prefer the smell of those "varmints" to that of the bird called in our mountains the pheasant. So, pretty soon after reaching the woods, Jeff vindicated his character by treeing a squirrel, which I had the pleasure of tumbling with my sixteen-bore Webley, loaded with two and a half drams of gunpowder and one ounce of No. 9 shot. Argo, who is young and needs some training, backed Jeff handsomely, but failed to bark at the quarry. The hills being rather steep for my inagile limbs, I got to the highway, much preferring its gentle grades. Jim Wordan and Bob Laird, however, crossed, and I soon heard several guns in rapid succession. When they came to the road they had two grouse, one killed by Jim and the other somewhat in dispute. With one squirrel and two grouse as our only trophies we pursued our way until we got within two miles of Miss Mary's, where we proposed to stop. At this point several of us took a "nigh cut" through some woods and fields, hoping to get a shot at grouse or quail on the way. No grouse was found, but we started a large covey of young quail, about two-thirds grown, from which we succeeded in getting ten. It was my fortune to have shot three times, getting a bird at each shot. When the sun was nearly down we reached "Miss Mary's," where our wagons were found, and received a kindly welcome by her and her brother, the owner of a splendid farm on the river. A good supper, a pleasant chat and tired bodies made us enjoy the beds, to which we retired at an early hour.

Next morning we were off, and after traveling five or six miles we left the river and commenced a slow ascent of the adjacent mountains. Winding round and round we reached an elevation of five or six hundred feet above the river, and soon came to the margin of a clear, rapid brook, the roar of whose cataracts, just below us, could be plainly heard. It is called Flat Creek. Going up this for about a half mile we pitched our tent and then started out to see if we could add to our stock of provisions. A part of the crowd had previously taken a "drive" and started a buck, which escaped unseen. We got about ten squirrels and three grouse—the grouse not being in packs, but separate. Having a scanty supply of rye straw upon which to spread our blankets, the ground was too hard for my hips—and I got but little refreshing sleep. We concluded that the promised land had not yet been reached, and after spending one day on Flat Creek with but poor success we pulled up stakes and started for Hog Back Church, on the beautiful Toxaway River, a tributary of the Savannah and situated at the foot of the mountain bearing that classical name.

We soon reached the crest of the ridge, and after traveling about two miles, reached the Toxaway, crossed it, and spread our canvas. Just as we had stopped one of our party flushed a grouse within fifty yards of the camp, and on being notified, four or five of us, with the two dogs, started in pursuit. Argo soon flushed it without being seen. On he went, and the bird again flushed in a thicket, and I got a glimpse of him as he sped away. Following the course, old Jeff soon came to a stand and Teecel and Laird being in advance, approached. Soon the whir was heard. Laird let off his Westley Richards, missing, and Teecel knocked him over with his 16-bore Scott. Crossing a small branch, and going down it, a young bird was flushed, which I saw perched upon the limb of an oak. I approached within about thirty yards and feeling sure I could kill it with my Tolley as it sat, and not certain I could do so if it flew, I determined that meat was needed and clipped it over. The dogs stood another, which rose wild, and not being able to find it or any other, we returned to the camp. Having succeeded in getting a good supply of straw and hay, our tent floor was amply provided, and the canvas and the church gave us comfortable quarters. Next day we got a few squirrels, and three or four grouse, and by the aid of a boy, a nice string of about forty trout out of the adjacent stream. Concluding that owing to the want of dogs, if not for other equally good reasons, we should not be able to load down our wagons with game, and having "seen the elephant," we determined to pack up, leave the pellucid waters of the laughing Toxaway and the frowning crags of the Hog Back, and get back as early as possible to the haunts of civilization. And so, after eight days' abscence we got to Hendersonville, and then by train, soon saw "the thrifty wifie's smile" at home and heard the prattle of the "weans" as they welcome back their "dads."

The country we saw is a beautiful one, and no doubt grouse in considerable numbers inhabit the woods. The people say there are plenty of them. But we had no good dogs. If we had been so fortunate as to have been supplied with them, I think we could easily have bagged several dozen each day by the use of energy and muscle and steady shooting. Indeed, I am told that in the woods, within a few miles of Hendersonville, there are plenty of these birds, and there is no use of traveling so far as we did in order to find them. I believe the statements.

Nearly all the streams which enter into the French Broad, especially when they are rapid and the water is cool, abound in trout, and an angler who is not afraid of water can catch as many as he wants, if he knows how to do it. I give it up, I can't jerk quick enough. As to their flesh, I must be pardoned for saying that I have often eaten fish equally good, and much larger in the section in which I live, and especially upon the banks of Lake Waccamaw.

We had good health and good appetites, invigorating atmosphere and delicious water. Of the last named article the mountain streams afforded an abundant supply, cool and pure enough for any man whose taste and stomach have not been ruined by profuse additions of Kennebec and North River. WELLS.

"MAINE COAST SHOOTING."

IN your issue of Sept. 14, under the heading of "Maine Coast Shooting," comes an article from F. K. Hamilton, who gives us a very enthusiastic account of the shooting to be obtained at Camp Ellis, situated at the mouth of Saco River, Maine.

Now, having during the past resided quite a number of years in that neighborhood, and knowing the tide waters, the marshes, flats and sand-bars for a number of miles around that vicinity, I think a few remarks would be acceptable to such of your many readers who have any intentions of visiting there. Mr. Hamilton, in his account, tells us of the extraordinary shooting to be obtained at that place; and, to use his own words, he says that a "Mr. Jones, of the Natural Historical Society of Boston, has lost his head over the place and is out with a gun at all hours, and recently he bagged eighty birds before breakfast." He does not tell us whether Mr. Jones ever found his head again or not, but from his silence on the subject we suppose he has recovered it again, which is very fortunate for him, as well as the Natural Historical Society of Boston. Neither does he tell us what particular kind of birds Mr. Jones bagged, nor does he tell us whether he shot the birds or not; but as he was out at all hours with a gun and had lost his head too, this makes it difficult to express an opinion. He tells us also that the ducks had not arrived at that date. This we already knew; and taking into account his date of writing, I infer that they were some variety of the bay birds which are due about that time. Many years ago, before the building of the Boston & Maine Railroad along the beach to Old Orchard, we used to have, during August and September, excellent bay bird shooting. All along the beaches from Blue Point, across Little River to Old Orchard, along to Bay View, over Goosefair River, and along to the Saco River, this used to be the favorite feeding ground of the bay birds, from the yellow-leg down to the little sandpiper.

Almost anywhere along the seven miles of beach I have alluded to, we used to plant our sink boxes in the sand, and over a small flock of decoys we used to call down flock after flock, only to have them wheel and go, leaving the dead and crippled to the tune of our old muzzle-loaders. But all this is changed and gone; the railroad has opened up the beach to easy and convenient travel, all along the beach hundreds of cottages and monstrous hotels contain their thousands of guests and summer residents, all forming a constant confusion and driving the birds from their old haunts. Little River, below Old Orchard, has been filled up by the railroad company, and turned from its course also; Goosefair River has been treated in the same manner, and much of the old breeding grounds of the birds is destroyed. The construction of the breakwater at the mouth of the Saco River has destroyed most of the feeding ground in that locality by the formation of a number of constantly shifting sand bars which contain no food, where there used to be fine shooting.

And now with its villages of hotels and cottages all along the sea wall among the sand hills, the railroad running along the beach, and the constant travel and confusion, taking all into account, when we hear from hotel proprietors such phenomenal scores, these accounts are entitled to our suspicion.

Mr. Hamilton says also that on the farther side of the river there is to be found heavy hard wood timber, where the red squirrel challenges serious attention. I was not aware that the small red squirrel challenged much attention from sportsmen, except the destructiveness of the little rascal, whose depredations among the nests of the ruffed grouse, quail and woodcock are a matter of serious consideration. I dare to place myself on record in making the statement that if there are any red squirrels on the opposite side of the river from Camp Ellis that all the timber from Hills Beach up the river to Westbrook is hunted over almost every day by a number of that part of the population known as the small boy, of which I have no doubt there are a great many in the large cities of Biddeford and Saco, only a few miles up the river.

Mr. Hamilton also tells us that the wild pigeons are shot in great numbers. We have traveled the blueberry lands

from the old Eastern Railroad down to the beach in all seasons of the year hundreds of times, also the great tract of land situated a few miles from there on the other side of the river, and during quite a number of years' careful observation I saw but very few wild pigeons.

And again, we are told in glowing terms of the waters being black with wild ducks, some of which can be shot with a shotgun from the piazzas of the hotels. The ducks must be very accommodating to come to bag in that curious manner. Let any one ask the old duck-gunners around there how often they set out their decoys and lay in wait among the rocks over the mussel beds, or in some sink box sunk in the sand bars or spits, and then listen while they tell you that day after day they have to take up their decoys, shoulder their twelve-pound muzzle-loader and break for home without a bird. These stories will sound rather strange after hearing of their being killed in considerable numbers from the verandas at the hotels.

Years ago we used to shoot over a great extent of marshes; commencing at Blue Point and running back for miles were the great marshes of Scarborough, with which we were well acquainted. Above Old Orchard were the Googgins marshes and rocks, where from the bogs of the one, and while hidden among the kelps and rockweeds of the other, we once had fair shooting. Further up the beach was old Goosefair River, upon which could always be found a few scattering birds, mostly dusky duck and teal. Further up the beach you came to Bay View, just back of which along the edge of the woods on one side, and the sea wall on the other, was a long, narrow pond, known as Long Pond. This pond during bad weather was a splendid place for the black duck to resort for fresh water and nest. Among the flags and rushes at its upper end we have had fine shooting there in windy, stormy weather, but would you believe it? the pond is all filled up now, and where we then shot ducks in the water among the flags, are standing cottages to-day. Further along over at the river, the breakwater has been built out some two miles, and the once quiet mouth of the river, where the ducks used to rest in seclusion, where there was also the best of feed.

But how is it now? The swift current of the ever-flowing river cuts up the flats on the right side of the breakwater, and on the northeast side is always a choppy sea as well as strong under and counter currents, which destroyed all the mussel beds, as well as causing a constant shifting of the sandbars and spits, and during all this time where are all the ducks? An echo comes quickly back and answers that they have gone to a more favored locality, where they can get food and are not interfered with so much.

Now, to sum up the argument, I will leave all conclusions to be drawn from these articles to the readers of your valuable paper, who have fair play and no favor, hoping that you will excuse this long letter, which I hope to see published to do justice to sportsmen who are constantly having baits held temptingly out to lure them to some locality where the crows have to take their rations along with them while crossing it. D. E. ARBORN

LOWELL, Mass.

HOUNDING vs. STILL-HUNTING.

I NOTICED an article in your issue of September 7, from the pen of "G. R. B.;" in the next issue he is replied to by "Cap Lock," who speaks my opinions exactly. I do some hunting myself during the season for it (but very little with dogs) in some of our northern counties of Pennsylvania, though I have hunted with them some, no longer ago than last fall in Elk county, and am satisfied that hounding the deer will cause them to leave a part of the country. As an instance, one morning about the first of December, we started our dogs, (which were about half hounds) which made a good run, taking a fine buck to the branch, some three miles away. We got no shot at him. It being the running season, he was on the tramp and had passed outside of our line of watchers before we were posted, the dogs had gone in the direction of home; we supposed they would remain there. After some deliberating we concluded to start a fire and have some hot coffee, and a lunch. Contrary to our conclusions the dogs came back about the time we finished eating, so we quickly got in positions for another chase, and one of the party brought down a fine two-pronged buck (no shotguns used in our party) weighing over 100 lbs. Getting him off the mountain occupied a good part of the day so we hunted no more. I noticed more deer sign during the day than I've seen for years on the same amount of land; they were feeding on beech nuts, which were very plentiful, and by the different sized tracks I knew a good many deer were using them. Our next day's hunt was off to the south. It was snowing heavily all day, we killed nothing though we started some deer. Our prospect for the next day was very encouraging; we started in good season for the top of the mountain, where we found about five inches of snow, in good condition for tracking. On the scenes our first day's hunt, a tract of country between two runs, which were nearly two miles apart, and wider further north, we hunted over a tract of country five miles long, by about two in width, before we found a sign of deer—they had all been frightened out by our dogs of two days before and had not yet came back. I don't pretend to know how long before they would have come in again, but when we did find sign, there were so many tracks that we couldn't follow them. After trying it for a while we gave it up as night was coming on, and we were wet through from the snow, started for home.

A good deal of ecstacy is gone into by many hunters over the music of the hound's. I think imagination goes a great way in that direction, it's all fudge and nonsense, and "nothin' in it," it's very pleasant to hear them coming in our own direction, or toward some of our friends, but suppose they're taking the game in an opposite direction, or suppose the dogs belong to some one else, running over a track where we intended still-hunting on that same day, where would the music be for us? I think hounding deer is taking a mean advantage of them, but to stand on the crossing with a shotgun requires a great stretch of imagination to be considered sport; I cannot see where it requires any skill. I do not object to any one using a half bred dog for deer, a mixture of shepherd and hound is very good, they will run only fifteen or twenty minutes, they make very little noise in the woods, and are soon back again if the deer is is not killed. They are used for what is called ridging deer. A hound will run a deer for miles, until completely tired out and then stay at the first farm-house he comes to, and then have to be hunted by his owner, possibly a day or two, and I think three of every four deer killed before hounds, are killed by strangers, mostly at streams at which they run to cause the hounds to lose their trail and if they do escape the dogs, there they generally stay hidden near the stream for several hours, giving persons time to come long distances and kill them.

Still-hunting I think is the only true way of hunting deer, it gives a person an opportunity of matching his skill against the cunning of his game. If he can catch it standing he can generally bring it down, unless by some accident such as his bullet being turned from its course by a twig, which, even it small, will turn the ball sometimes clean out of its course. If the deer discovers him first, and his only chance is hitting him on the jump, it calls for his utmost skill, if in an open country and a strong wind going, he must make allowances for its deflection of the ball, he must think of his elevation for distance, for the speed the deer is running, and as their run is but a series of jumps, he must make his calculations very nicely, or he will shoot over or under him, and he should keep one eye on the tail, for if hit, that is clapped down at once. And right here I should like the opinions of my hunting friends, when is the easiest time to strike the deer. Some say pull to hit him just as he strikes the ground with his fore foot; I always pull to catch him in the air. If any friend of mine were to kill a deer with shot of any size, I never want to know it, it would lower him very much in my estimation; a shotgun might do very well, and could be tolerated in the hand of old age, when the eyesight had grown dim and the limbs had lost the elasticity of youth, and the nerves their firmness, and the rifle has to be laid aside, but whose love of the hunt is as strong as ever—in such a case the shotgun is just the thing. Now let "G. R. B." from this use his gun only on flying game, at glass balls, or even pigeon matches. Let him procure a .44-calibre rifle and go into practice, and my word for it, he will never use anything else. FORTY-FOUR.

BUCKS COUNTY, Pa.

PIGEON SHOOTING IN MINNESOTA.

MANY an Eastern sportsman who is familiar with the majority of game birds found near his home, knows but little about *Ectopistes migratorius*, the wild pigeon of North America. Along the coast of the New England and Middle States this bird though once abundant is now becoming very scarce. Pigeon Cove, a small village situated on the extremity of Cape Ann, Mass., once famed as the home of the wild pigeon, has now become something of a fashionable watering place, and it is needless to say that in this locality the bird has disappeared. In New Hampshire, where they are said to be fairly abundant, I have never killed but one, and though there are places in the interior where pigeons can be shot, even in large numbers, many devoted followers of the gun know the bird only as seen in the markets or rising from the trap. To such, a short description of our pigeon shooting may be of interest

Leaving St. Paul and going northward by way of the Northern Pacific, a pine belt or "big wood" is reached which extends to the Canadian frontier. All through this timber little openings are found, and such of them as are low and swampy, particularly if encircled by scrub oak trees, are, in the proper season, very apt to contain pigeons. Near Brainerd, distant 136 miles northwest of St. Paul, these marshy openings are very numerous, and from the 15th of August to the same date in September many pigeons are killed. Perhaps for the reason that it is easy and affords excellent opportunities to those who prefer motionless marks to flying ones, pigeon shooting in this locality is very popular. The birds are usually quite tame and can be approached with ease and shot from their perch on the limb of some dead oak tree. But if one will but give them a fair chance and flush them before shooting, their peculiar wavering and rapid flight, which can only be likened to a flash of lightning, gives almost unequaled opportunities for fine marksmanship.

The best hour for shooting is early in the morning, from daylight to perhaps nine o'clock. Though rather tenacious of life, pigeons may be brought down with a touch of No. 8 shot, and I prefer No. 10.

With perhaps the exception of the golden plover no bird can be "strung" to better advantage than the pigeon. To string a bunch of birds nicely, a long pliable twig, with a crotch at the large end, must be obtained. Sharpen the small end and pass it through the birds' throat just at the base of the under mandible. As each bird slips down the twig the long slender bodies fall naturally and gracefully into place, and on the march home, as you swing in your hand a bunch of fifteen or twenty pigeons, glistening here and there with the morning dew, and with the deep ruddy color of the breast glowing in the warm light of the morning sun, a prettier sight can hardly be imagined.

BRAINERD, Minn. GEORGE HUGHES COUES.

PHILADELPHIA NOTES.

THE severe storm of last week, and the prevailing easterly winds of the greater part of it brought in big tides to the Delaware River. Many rail were killed, but great individual scores it appears were not made. Seventy, eighty and ninety birds to the boat is as large as I have heard of. All who were out seemed satisfied, and almost every one who shoots rail took advantage of the high stage of the water. Friday and Saturday, the wind shifting to the west, caused a marked falling in the tides, and consequently rail shooting was poor. The cool weather since the clear up has brought many blue-winged teal into the river and creeks flowing into it, and a number are being killed over decoys in the early morning.

A few black ducks begin to show themselves, and since the late storm I learn of snipe having been shot on our meadows. Reed birds are fast disappearing, and those that have not taken their departure are wild and difficult to be got at by those who are fond of shooting them.

Last week Judge Leisenring, of Mauch Chunck, while on a visit to his yacht Sans Souci, at Barnegat Bay, made a large catch of bluefish. I mention this because the week previous, when your correspondent was there, the bay men were not expecting another run of bluefish, and reported the last about gone.

There will be many quail this season on the main land about Barnegat, N. Y. Parties who visit the bay for duck shooting should not fail to take their light guns with them and tarry a few days with Bob White before going on to the beach. Mr. George Vannote, if not able to go out with them, would be glad to direct parties.

Philadelphia sportsmen read with a great deal of satisfaction the account in FOREST AND STREAM of the motion made at the last meeting of the West Jersey Game Protective Association to return to Mr. Wm. Carson the amount of his fine. Not only had Mr. Carson been a member of the association for years (unfortunately he had allowed his license to run out), but when arrested was returning from a shooting trip on the property of a friend, by whom he had been especially invited. Mr. Carson so informed your correspondent, and I have discovered he has the general sympathy of the shooting community here. All along the New Jersey coast during the storm of the past week thousands of mud-hens or clapper rail (*Rallus crepitans*) were killed, and bunches of fifty and one hundred are this week offered for sale in Philadelphia. The bird as compared with our own sora and Virginia rail is worthless for the table. Not a few, however, were sold to the uninitiated as kingrail (*Rallus elegans*), which they much resemble at first glance. My experience with mud-hens is that not one in five will jump when a boat is pushed upon them, no matter how high the tide is, but prefer to escape by either diving or sneaking away with but a small portion of their bodies out of water, and many are thus potted. The kingrail, on the contrary, if there is water enough, can readily be put up and shot on the wing. HOMO.

SEPTEMBER 29.

TENNESSEE NOTES.

IT is singular how easily boyhood recollections are revived, even when time has dealt its devastating blows. At least such was my experience this A. M. at seeing Col. Jos. W. Woodfolk armed and equipped, and followed by Clarke Pritchett's Lewellyn and his own handsome white pointer, starting out for his first day this fall after Bob White. I forgot my size and poor eyesight, and had the least temptation been thrown in my way doubtless I would have made the effort to have one more of those delightful field days so heartily enjoyed by me a quarter of a century ago. Col. Joe is a fine, manly looking fellow, and untiring in the field; besides this, he is a dead shot and a rare sportsman. The beauty of this locality as a sporting field is that birds are found in abundance in the immediate vicinity of the city, and the labor of getting on the grounds so insignificant that when the sport begins the sportsmen and dogs are perfectly fresh. Hermann Burkholz bagged a few birds yesterday, and would have gotten more, except that his dogs were too wild, and the youngster, Snow, interrupted the older ones even when they settled down to work.

Joe Clarke's brown setter is in splendid condition, and it hunted over by a No. 1 shot would find all the game he could kill. Jack Bentley has a pretty fair dog, but I never saw him in the field, and hear that he is not quite as good as his looks indicate.

Captain Marsh Penckard is one of the leading fox hunters about here, and is admitted to be one of the most graceful and daring horsemen of the hunt. Mounted on his peerless fencer Beloxi, no timber is too stiff or high for him to take, and on the flat it would take a rattler to keep apace with him. The captain often times relates to me some of his exploits after Reynard, which I furnish to the readers of the FOREST AND STREAM. He becomes enthusiastic when speaking of Col. Johnson's pack of hounds, thinking as he does that in no part of the world is there a faster or more reliable one of its size; they will catch the gray every time, and nine times in ten make the wilier red fox wish they were not in the land.

Col. Duval McNairy leaves in a few days for the river counties of Arkansas, where he proposes devoting two or three months to bear, deer, and turkey hunting. Game in those localities is reported abundant and the colonel is an adept Nimrod, hence I will look forward to his game book for some startling bags.

The clans are now being called together by Col. G. F. Akers for his grand hunt down in Trigg county. Dr. Bell of Louisville and Col. Griffith of the same city are preparing the camp equipments, Col. Geo. S. Wharton, Matt and Joel McKinney the hounds and horses, while Col. G. F. A. is off to Indiana to make some additions to the canine forces. Our crops were so abundant and prices have been so good, that the farmers throughout the South are in a better condition to indulge their natural tastes for field sports than any day since the war. The game will consequently suffer this year, but those who come among them to participate in the various sports will have a grand time of it.

Even the colored brother is getting his ax ground, 'coon sacks repaired and the yaller dog fed preparatory to their night chases for "possum" and "coon." William Hobbs went out last night (the first cool one this fall) and captured two "possums," one of which was so absurdly fat that he could scarce waddle. "Maybe somebody won't be happy over his savory carcass."

Squirrels by the hundreds are found feasting on the heavy mast of this prolific season. Rabbits are numerous, and if our people do not benefit by the advantages so lavishly bestowed upon them, then no one but themselves will be to blame. J. D. H.

NASHVILLE, Sept 23, 1882.

NEBRASKA.—Fairfield, Clay County, Sept. 25.—This locality is about thirty miles south of the Platte, and a few miles further east than Grand Island, and is a magnificent and fertile prairie country. Prairie hen and quail, plover and jack rabbits, with the various varieties of geese and duck, in their season, constitute the game of the country Prairie hen shooting is reported to have been good, but at present it is not and for the past three weeks has not been in consequence of the birds having been shot off and those remaining having become wild. Good hunters, early in the season, used to bring in from a day's shooting anywhere from fifteen to twenty-five birds, while now they would scarce get half a dozen. There has been a good deal of shooting done, but a greater trouble has been, many expert hunters began, as has been practiced heretofore, to shoot in July, out of season, and continued to do so while the birds are young and tame, and are easily decimated. The prairie hens are found everywhere, but as a general truth, I think, not in the greatest abundance. There are quite a good many quails, yet they are not abundant enough, I think, to make their special pursuit very desirable. This region is a favored locality for the several varieties of ducks and geese, both in the fall and spring and often for a considerable period, they scattering in abundance over the country everywhere to feed in the corn and grain fields. An advance flock here and there of geese made its appearance on the Missouri and on the Platte some little time since, and the first flocks of brant and geese this fall made pioneer trips over this section on Sept. 22. The country here now is very dry, and the coming of a good rain which will leave water in the low places on the prairie will at once bring the best of duck and geese shooting. Twenty miles southward a few bands of antelope are yet found, and in the same section a few deer in the coverts along the creeks, but the last of the turkeys disappeared three or four years since. A few coyotes yet linger, having burrows in the sides of the hollows.—F. M. WILCOX.

NEW JERSEY GAME SOCIETIES.

Editor Forest and Stream:

Referring to the quarrel between the West Jersey Game Protective Society and the New Jersey Game and Fish Protective Society, I say that I am not a member of either, though sympathizing with the ostensible objects of both. Of the operation of the latter named society I know but little, but of the W. J. G. P. Society I know considerable. I believe that the charter of neither society will stand the ordeal of a high court. I have read the charters of both, but not recently, and according to my recollection they are nearly identical. The W. J. G. P. Society was originally composed of residents of New Jersey, almost exclusively. At the present time, and for several years past, it is almost exclusively a Philadelphia society, indeed I am informed that for years past very few if any residents of New Jersey are members of the society, except the necessary officers, which of course renders it a close corporation of the most odious kind. It is the universal opinion throughout southern New Jersey that this society has not benefited the game and fish interests of this region to any appreciable extent. One statement of your correspondent from here must be glaringly false. He says that the "Society officers have put out over 5,000 quail, 500,000 salmon and about 15,000 black bass." I do not believe that they put out one-fourth the amount of game and fish claimed. It is extremely doubtful if any such quantities have been put out in the entire State by all authorities combined and in all previous time. To do so, would require more money than the W. J. G. P. Society ever had. I am assured that this society never paid a dollar for either salmon or bass, but did pay out a small amount for putting out some of these fish furnished by the State or U. S. Fish Commission, or both. It is possible that they may have put out 1,000 quail, though old members of the society do not believe it. They charge also that those which have been put out, have been placed mostly in isolated out of the way places known to only a few who have manipulated the affairs of the society, and that these few have had the entire shooting of these birds to themselves.

According to your correspondent, the membership of this society is over 1,200. Now under their charter, everyone of these members becomes an officer of the courts of New Jersey, empowered to make arrests for any violation of the game and fish laws of the State; and yet said laws were never more openly and extensively violated than since the existence of this society and at the present time. In this paragraph I will call attention to a single matter in the report of the last annual meeting of this society, held as late as Sept. 20, and which seems to be published by you in connection with the other communication referred to in the "financial standing" of the society as reported by the treasurer, is the item of $1,618, collected in fines and for certificates. Now, according to your correspondent, there should have been over $2,400 collected on memberships alone, even though all were old members. How much was collected in fines? The report mentions two arrests alone which turned into the society's treasury over $600.

It is reported that the society is shy about arresting anyone who is likely to carry a case to a high court. It is hoped that the other society or some individual able to do it, will test the legal status of this preposterous "close corporation." I believe it rests on a frail foundation, but I am

No Lawyer.

Camden, N. J., Oct. 2, 1882.

Editor Forest and Stream:

It would seem, from a communication appearing in the last issue of the Forest and Stream, headed "Non-residents in New Jersey," that my comments on the sportsmanlike (?) actions of the "West Jersey Game Protective Society," appearing in a previous issue of your valuable paper, have infused new life into that organization, for have they not held a meeting, elected some new men in the Board of Directors, turned out the sympathizers with the right, and made a statement of their doings? Let us hope they will yet see the error of their ways and conduct their organization, as it should be, in the interest of true sportsmen. I do not desire to take up valuable space in your paper by a long review of the case in point—the alleged authority of the West Jersey Game Protective Society in prohibiting members of other game protective societies from shooting in the lower counties of this State. That question will be settled by the courts shortly. It is the ungentlemanly insinuations of the writer I desire to briefly note. In speaking of my previous communication, he asserts that "that letter, aside from the bare facts of the arrest and the appeal, being a base fabrication and as false as the writer is prejudiced in favor of his society." Now what that base fabrication is, I am at a loss to understand. I asserted that which had been told me, not only by members, but an officer of his society, in reference to the laxity in which the affairs of the society were conducted. I am glad, however, to note that the new officers of the West Jersey Game Protective Society (according to account of their last annual meeting) have infused new life into the organization.

I have no prejudices for any one society, that is a mistake, as all who know me will attest. I have always asserted that, as the objects of game protective societies were (or should be) for the protection of game birds and fish, their members should have but that one idea at heart. No mercenary motive should actuate them—no matter whether one organization, by their by-laws, exacted an initiation fee of $5, or $2, or not one cent from non-resident or other members. The New Jersey Game and Fish Protective Society, from its inception, thought that $2 a year from members was a sufficient sum to carry out all the ideas it was organized for. No extravagant salaries are paid its officers, and there is a sufficient sum in its treasury, with plenty of willing hands ready to assist pecuniarily in the carrying out of the objects it was organized for. As to the challenge made by the writer "to show the public or himself any one instance where they (the N. J. G. & F. P. S.) have ever spent one cent for the protection or propagation of game; where or when they ever spent one penny to enforce the law, either in that locality or any other?—I would simply state that, to my personal knowledge (and I too have audited accounts), the New Jersey Game and Fish Protective Society have during their four years of existence offered and paid rewards for the arrest and punishment of violators of the game and fish laws, and have arrested and caused to be imprisoned and fined, in several instances, parties shooting and fishing illegally. But as the writer might think this a "base fabrication," I suggest that both societies publish a detailed statement of receipts and expenditures since their organization.

A Member of the N. J. G. & F. P. S.

Plainfield, Oct. 3, 1882.

Editor Forest and Stream:

The annual meeting of the New Jersey Game and Fish Protective Society was held in their rooms, Plainfield, N. J., Wednesday, Sept. 20, 1882. There was a large attendance and much interest manifested in the welfare of the society. The secretary made a lengthy report, setting forth the doings of the society through its board of directors the past year. In it appeared that the board had held thirteen meetings the past year, and had accepted sixty-three new members. The total number of members was 321 at that date. A commodious room had been secured since the last annual meeting and furnished in comfortable style, wherein meetings of the board of directors and society were held. There had been six persons arrested the past year by members of the society for alleged violation of the woodcock laws in shooting on the first day of July, and on the supposition that the parties were non-residents. No evidence was adduced to prove that they had shot any woodcock on the day in question, and as all proved to be residents of the State or members of a game protective society, they were discharged from custody. The action of the members was encouraged by the arrested parties, the result being a gain of five new members to the society.

Information was received that one of the non-resident members of the society, Robert A. Welch, of Philadelphia, had been arrested by an officer in the employ of the West Jersey Game Protective Society while shooting on the marshes in Gloucester county, and taken before a justice in Camden county, who imposed a fine of $50 on him for not bearing on his person a certificate of membership from the latter named society. Welch, according to instructions given all non-resident members of the N. J. G. & F. P. S. had refused to pay the fine, and gave notice that he should appeal from the decision of the justice, giving bonds to appear before the Camden Courts in October, the return day for causes for trial being the 16th day of that month. It was at once resolved that counsel to the society look after the case and defend it to the end, even if it became necessary to carry it up to the highest courts. Voluntary contributions were at once offered, amounting to $350, to enable counsel to defend and contend for the rights of the society. Such contributions were, on motion, accepted, should it be necessary to go beyond the funds of the treasury for such prosecution.

The treasurer's report to the board of directors previous to the annual meeting, showed a balance in the treasury of $107.80. With dues paid in since, the society has on hand about $300.

A large number of black bass fry have been planted in streams in Union, Somerset and Middlesex counties the past year, under the supervision of and expense by the society.

The following officers were elected to serve the ensuing year: Directors—James S. Vasseller, W. L. Force, M. W. Schenck, J. W. King, Isaac Brokaw, J. D. Ten Eyck, Wm. E. Jones, Wm. B. Dunn, Edward P. Thorn. President, James S. Vasseller; Vice-Presidents, Percy C. Ohl, John J. Holly, Roderick Robertson; Secretary, W. L. Force; Treasurer, Wm. E. Jones; Counsel, Wm. B. Rankin. According to the by-laws honorary vice-presidents may be elected each year. The following named gentlemen were chosen: Frederick Volckman, Gen. Wm. H. Sterling, George R. Suydam, R. M. Stelle, James R. English, Rinaldo S. Little.

In the act to incorporate the West Jersey Game Protective Society, the sections relating to non-residents are as follows:

6. And be it enacted, That if any person or persons non-residents of this State, shall kill, destroy, hunt or take any doe, buck, fawn, or any sort of deer whatsoever, or shall kill, destroy, hunt or take any partridge moor-fowl, grouse, quail or woodcock, at any time, or shall catch any speckled trout, or speckled river trout at any time, within the counties of Camden, Gloucester, Atlantic, Salem, Cumberland and Cape May, in this State, without complying with the by-laws of this game protective society; then the person or persons so offending shall forfeit and pay the sum of fifty dollars each, for each and every offence, to be sued for and recovered, with cost of suit, in any action of debt, by any person before any justice of the peace of the county wherein such offence shall have been committed: and in default of the payment of the forfeit money, with cost of suit, any person or persons so offending shall be in the common jail until the same shall be paid; one-half of the forfeit money shall be for the benefit of the person prosecuting for the same, and the remainder paid to the collector of the township wherein the offence shall have been committed, for the benefit of the township: Provided, Nothing in this act shall prevent residents of this State from taking game or fish subject to the existing laws of this State.

8. And be it enacted, That the fee for membership in this society shall be five dollars, to continue for one year, and a yearly payment hereafter of two dollars per annum shall constitute a continued membership, except in cases of forfeiture of certificate.

9. And be it enacted, That the secretary may admit persons to membership, by letter or otherwise, upon payment of the membership fee, and shall issue to the person becoming a member of this society a certificate of membership, which shall hold good for one year from the date of the certificate.

10. And be it enacted, That every member of this society shall be empowered to make arrests of any person or persons who may be found violating any of the provisions of this act, or infringing any of the laws of this State made for the protection of game and fish, and bring him or them before a magistrate for examination.

11. And be it enacted, That the secretary of this society shall, on or before the 1st day of July and the 1st day of September of each and every year, furnish to each of the directors in the several counties named herein twenty-five printed lists, containing the names of non-resident members of this society, with their places of residence.

12. And be it enacted, That it shall be the duty of the directors to leave at least two copies of the lists of non-resident members of this society with each township clerk in the county in which he resides.

13. And be it enacted, That it shall be the duty of the clerks of the several townships in the counties herein named to file the lists of non-resident members at their offices as places of business as soon as they may receive them from the directors of the counties in which they reside, and to furnish them to any person for inspection upon application, by the payment of the sum of twenty-five cents.

14. And be it enacted, That any person loaning, transferring, or giving away his certificate of membership shall forfeit the same, and shall not be re-admitted to membership in this society except upon payment of the sum of twenty dollars to the treasurer for a renewal of his certificate; and any person using a certificate of membership (not his own) for the purpose of enabling him to kill or take any game or fish mentioned in this act, the person so offending shall be subject to a fine of one hundred dollars for each and every offence, to be collected in the same way and manner as prescribed in the seventh section of this act.

15. And be it enacted, That whenever the funds of this society shall amount to three hundred dollars, the said directors, together with the president and secretary, may, at such times as they think proper, employ a game agent or agents to purchase game, birds or fish to be placed in the counties herein named, at such points as they may determine.

16. And be it enacted, That the funds obtained from non-residents for certificates of membership shall be used for no other purpose than to pay the legitimate expenses of the society, and for the purpose of stocking the several counties named with game or fish, as the directors may from year to year determine.

17. And be it enacted, That there shall be no salary attached to the office either of president or directors of this society, only so far as is necessary for the payment of their traveling expenses to and from the meeting of this society; but the secretary may receive such compensation for his services as the by-laws of this society may provide.

18. And be it enacted, That this act shall take effect immediately.

Supplement to an act entitled "An act incorporating the West Jersey Game Protective Society."

Be it enacted by the State and General Assembly of the State of New Jersey, That hereafter any persons or persons, non-residents of this State, who shall kill, destroy, hunt or take any doe, buck, fawn, or any sort of deer whatever, or shall kill, destroy, hunt or take any partridge, moor-fowl, ruffed grouse, commonly called pheasant, pinated grouse or prairie chicken, or other kind of grouse, quail, woodcock, Wilson or gray snipe, reed bird, rail bird, or rabbit, at any time, or shall catch any speckled brook trout or speckled river trout at any time within the counties of Camden, Gloucester, Atlantic, Salem, Cumberland and Cape May, in this State, without complying with the by-laws of this game protective society then the person or persons so offending shall forfeit and pay the sum of fifty (50) dollars each, for each and every offence and may be proceeded against in any county of this State wherein such person or persons may be arrested, or wherein such offence shall have been committed, and in default of the payment of the forfeit money, with costs of prosecution, any person or persons so offending shall lie in the common jail until the same shall be paid; one-half of the forfeit money shall be for the benefit of the person prosecuting for the same, and the remainder paid to the collector of the township wherein the conviction may be had, and all acts or parts of acts inconsistent with this act hereby repealed. Provided, That nothing in this act shall prevent residents of this State from taking game or fish, subject to the existing laws of this State.

The act under which the New Jersey Game and Fish Protective Society was formed reads as follows:

CHAPTER CCXXXIV.

An Act for the Protection of Game and Game Fish.

1. Be it enacted by the Senate and General Assembly of the State of New Jersey, That from and after the passage of this act, no person or persons non-residents of this State, shall kill, destroy, hunt or take any doe, buck, fawn or any other sort of deer whatsoever, or shall kill, destroy, hunt or take any partridge, moor fowl, ruffed grouse, quail, woodcock, Wilson or gray snipe, reed bird, rail bird or rabbit, at any time, or shall catch any speckled brook trout, or speckled river trout, black bass or bass or salmon, at any time in this State, without complying with the by-laws of the game protective societies, organized or to be organized under the laws of this State, the persons so offending shall forfeit and pay the sum of fifty dollars for each and every offence, and may be proceeded against in any county in this State wherein such person or persons may be arrested, or wherein such offence shall have been committed, and in default of the payment of the forfeit money, with costs of prosecution, any person or persons so offending shall lie in the common jail until the same shall be paid: one-half of the forfeit money shall be for the benefit of the person prosecuting for the same, and the remainder paid to the collector of the township wherein the conviction may be had, and all acts and parts of acts inconsistent with this act are hereby repealed; providing, that nothing in this act shall prevent residents of this State from taking game or fish subject to the existing laws of this State.

2. And be it enacted, That any member of any society for the protection of game and fish, organized under the laws of this State, shall be empowered to make arrests of any person or persons who may be found violating any of the provisions of this act, or infringing any of the laws of this State made for the protection of game and fish, and bring him or them before a magistrate for examination.

3. And be it enacted, That the county clerks of the several counties of this State be, and they are hereby directed to keep in their respective offices a record of the members of any game and fish protective societies organized under the laws of this State, and shall upon the payment of twenty-five cents furnish to said members as aforesaid, a certificate under his seal certifying to said membership.

4. And be it enacted, That this act shall be a public act and shall take effect immediately.

Approved April 4, 1878.

Section 7 of the By-Laws of the Society reads as follows:

7. The annual dues shall be two dollars for each year, to be paid by each member in advance, the first such payment to be made to accompany the application for certificate of membership, and subsequent payments to be made annually in advance upon the commencement of each succeeding year of membership; and in case of non-election such first annual fee shall be returned forthwith to such applicant.

Non-residents desiring to become members of this society, in accordance with the provisions of Chapter CLXXXIV of the Laws of the State of New Jersey, must comply with the provisions of this section.

Woodcock and Partridge Shooting.—The season is now here when the woodcock and partridge, or ruffed grouse, are in their finest condition, and what better sport can there be, or what better music to the sportsman on a clear, frosty morning, when the air is like champagne, than the clear, ringing whistle of the woodcock, as he jumps up from under the alder; or the louder buzz and roar of the partridge, as he scatters the dry leaves like a whirlwind. Be steady, now, for it requires a cool head and staunch dog to insure success. I recall many such a morning in this, the best of all seasons, when I have had rare sport,

"When the maple boughs are crimson,
And the hickory shines like gold,
When the moons are sultry hot
And the nights are frosty cold."
